- The unpaved section of Rocky Pond Road...contains corrugations and pot holes that limit speeds to approximately 15 miles per hour.
- ...the stopping sight distance on the unpaved section of Rocky Pond Road is limited in certain sections due to steep grades and the horizontal alignment of the road. Spot measurements...in the vicinity of the Brookline/Hollis Town line, revealed that distances were only 75 to 100 feet due to the horizontal and vertical alignment of the road. Minimum sight distance recommended by AASHTO is 200 feet for a road with a posted speed limit of 30 miles per hour.
- Existing town subdivision regulations require that new subdivision roads be paved and have a width of 22 feet. The existing width of Rocky Pond Road varies from 15 to 20 feet.

Without this development, Road Agent Clarence Farwell has no plans in the next few years to do road improvement work on Rocky Pond Road. He stated that if money is available from these developers to upgrade the road, he would begin by widening it starting from the western portion of the road and moving eastward towards the Hollis line.

## Fire Protection

The Town of Brookline Land Subdivision Regulations, section 4.5.01, requires that

"In any subdivision whenever sufficient natural water supply is not available for fire protection, artificial water storage facilities or water holes of at least 50,000 gallon capacity shall be constructed...so that no building lot is more than 2,500 feet from such water supply..."

This subdivision is about 4,000 feet away from the nearest dry hydrant which is located on Old Milford Road. Fire Chief Ray Key has concern about the safety of building outside the area of fire protection, as stated in a letter sent to the Planning Board.

Sections 4.2.01 and 4.2.02 of the Subdivision Regulations both reflect the need for fire protection. Section 4.2.01 addresses the character of the land to be subdivided; "All land to be subdivided shall be, in the judgement of the Board, of such character that it can be used for the building purposes without danger to public health or safety..." Section 4.2.02 states that land of such character that it cannot be safely used for building purposes because of exceptional danger to the health, or peril from fire,...shall not be plotted for residential occupancy...."

If the applicant can resolve these issues so that transportation and fire protection are no longer problems, the plan can be approved. One option would be to make off-site improvements to Rocky Pond Road, or have money set aside to be used by Clarence next year. If suitable fire protection cannot be located within 2,500 feet of this development, a contribution to the Fire Department for additional hose or other equipment upgrade may be possible. Fire Chief Ray Key will consult with the Engineers and have an answer for us at our January meeting.

PLANNING BOARD MEETING

December 21, 1993

PRESENT: Peter Webb, Chairman, Voting  
Richard Napolitano, Vice-chairman, Voting  
Joe Kagenski, Voting  
Chris Hegarty, Voting  
Judy Cook, Selectmen's Representative, Voting  
Margaret Olson, Alternate  
Dennis LaBombard, Alternate  
Bob Sykes, Alternate  
Brian Kirschner, Alternate  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

- 7:30 PM Planning Board Business Meeting  
Chairman Peter Webb opened the meeting. Minutes of the December 14, 1993 meeting were reviewed. On page 3, add to the conditions of approval the following: "8) Public compliance hearing scheduled for September 20, 1994."
- MOTION Rich made a motion seconded by Chris to approve the minutes as amended. Yes vote was 5-0.
- 7:35 PM Planning Board General Business  
1) Discussion of proposed zoning changes for March 1994 Town Meeting; and Master Plan update changes.  
Jeremy said he had changed Page 2, Application, to reflect the exemption of all existing subdivisions); and Page 3, #4, change the number of building permits to 10; and in the Sunset Clause he added "November" as the annual review date. Phil Chandler presented PB members with some graphs which he had compiled using data researched from the annual town reports. His data showed that the increase in the number of houses did not show a correlation to the number of students. He showed the number of students per house was actually going down. In 1972 there was .8 students/per house. In 1992 there was .4 students/per house. He said he felt the building of houses during the last 10 years has brought the tax rate down. Phil felt the problem is with the rising cost per student, and pointed out that the cost per student has doubled in the last 10 years. He concluded that the way to reduce taxes was not to limit the amount of building permits per year. He suggested that all new schools be

amortized over a 20 year period instead of 10 to help even out the tax rate, particularly if the town were going to have to bond for more than one new school. He suggested the Land Use Change Tax be increased to help generate more revenue as land was being subdivided and developed. Rich countered that it is the PB's belief that the student population will exceed the capacity of the elementary, middle school, and high school in the near future; and the town will be funding 3 new schools at the same time. Phil said he had factored 5 million dollars over a 20 year period at a 6% interest rate. He noted that Brookline's growth has averaged 6% over the last 10 years with an average of 55 new house built per year. He had focused on whether adding houses will increase the tax rate, and his conclusion was that any tax rate increase will be marginal. Rich said the taxes paid per year on any house in which there are students does not cover the cost of education; and that other town services are being affected as well by the amount of growth that Brookline is experiencing.

8:20 PM

PB members and those in the audience discussed how individual lots (those not created by subdivision) would be affected by a limit on the number of building permits. Joe questioned whether the original lot in a subdivision would be exempt from the limit. Answer: Include it. Individual lots will be included in the total # of annual permits. Peter asked whether the PB should consider building rights? Rich asked if any one person should be able to acquire all the building permits for the year? Margaret said she doesn't feel that all building permits should go to any one developer or to the first subdivision approved each year, and suggested a daily lottery system would prevent this from happening. Chris said by requiring phasing on new subdivisions, can the PB tell the developer when he can expect to be able to get building permits for his development? Rich said he favors a percentage of the pool being given to each developer rather than first come first served. Chris voiced an opinion that market conditions dictate how fast you can develop and sell your lots. Joe said there were implementation problems with phasing. Roads, utilities, and bonding are the most expensive items of development. The length of the cul-de-sac roads cannot exceed a certain amount, and problems arise when only certain sections of the road system are built or bonded. He said the PB needs to arrive at a clear and fair phasing plan method to be easily implemented. Russ Heinselman said he wasn't convinced that limiting the number of building permits was going to control growth, and asked if what the PB was proposing was going to achieve what they wanted it to?

Discussion then focused on how to calculate the annual number of building permits which could be issued to achieve a 3% annual growth rate. This number would apply to all lots not exempted from the restriction (new subdivision plans accepted by the PB after November 24, 1993). Rich said at the last meeting we gave an exemption for all lots not just the ones covered under the 4 year exemption. Dennis calculated those remaining 160 exempted subdivision lots equals out to 58 new students in the school system. Russ said the logic used for the annual review needs to be clearly spelled out in the ordinance. The method of adjustment to be used at the annual review must be put in writing.

Peter expressed concern that the PB was being too restrictive to incoming subdivisions.

Tom Moran noted that taxes are paid on subdivision building lots; and with this ordinance it could mean you can't build on these lots for which taxes are being paid for an indefinite number of years.

Russ said there was a potential that someone could never build on a lot that he owns and pays taxes on if he was not lucky enough to get one of the 10 permits given out each year. He mentioned that Hollis vests building rights on their lots under their growth control ordinance.

Phil Chandler said he feels people who own a lot are not being given equal treatment under the law. This ordinance favors certain developers over the rest of the towns people. Rich suggested not giving a blanket exemption to all existing lots. He made a motion for the PB to consider a conceptual plan as follows:

9:15 PM  
MOTION

- 1) Not have a permanent exemption of all subdivision lots.
- 2) All subdivision would have 4 years from the date of their approval to be developed. Those approved in 1991 would have one year of exemption. Those approved in 1992 would have two years, etc.

This plan would phase out existing subdivisions over a 4 year period. The annual limit of building permits would then be set at a number that would achieve a 3% growth rate.

Rich's motion for conceptual consideration died for lack of a second.

PB members then attempted to write a formula into the growth ordinance to come up with the number of building permits that could be issued annually on new subdivisions accepted after the 11/24/93 date.

Jeremy suggested that instead of a difficult to understand formula being incorporated into the ordinance for people to vote on, the PB might wish to have a minimum and a maximum # of allowed building permits per year. These numbers could be adjusted at the annual November review based on the previous year's growth.

10:05 PM Chris made a motion to put the mechanics in place to adjust the number of building permits in the pool based on the actual number of permits issued. Minimum of 10 available permits per year.  
Joe wanted to have the formula documented so that future planning boards will be able to justify the numbers used if challenged.

MOTION Peter made a motion for Jeremy to reflect in the next draft of the ordinance for the January 4, 1994 public hearing wording to incorporate Chris's motion. Margaret seconded this motion. Yes vote 5-0.

(Jeremy and PB secretary went into the Planning Board office to draft the changes. See attached Page 3, 12/17/93 draft version.)

PB members read the revised wording on Page 3 and approved the changes made. This will be the draft presented at the January 4, 1994 public hearing.

10:50 PM Joe made a motion to adjourn the meeting. Rich seconded the adjournment motion. Affirmative 5-0 vote was cast.

Next public hearing on proposed zoning changes will be held on Tuesday, January 4, 1994.

Submitted by:

Sandra L. Fessenden, Secretary  
Brookline Planning Board

Made part of the 12/21/93 P. Bd. minutes  
(Self)

Requirements

1. The number of building permits which may be issued to any individual, partnership, or corporation in any calendar year shall be limited to the following:
  - a) The total number of building permits which can be issued in a calendar year is shown in section 4. If the total number is not issued, then those can carry over to the next calendar year.
  - b) The building permits shall be distributed on a first-come-first-served basis. If there is a greater demand than supply, then a waiting list shall be established. Any permits which expire shall be given to the people on the waiting list (also first-come-first-served).
2. A building permit expires and becomes invalid if construction, which is deemed to be installation of footing and foundation, has not started within six (6) months from the date of issuance (as explained in the Brookline Building Code).
3. A lot can be transferred with or without a building permit. Building permits are tied to lots and cannot be transferred between lots.
4. The number of building permits to be issued annually is computed as follows:

As outlined in the Master Plan, in recent years, Brookline has grown faster than all other nearby communities and the region as a whole. The Master Plan describes the fact that the three schools (Brookline Elementary, Hollis/Brookline Junior and Senior Highs) are all near capacity. In order to prolong the capacity of the schools and to meet the other purposes of this article, only 10 building permits can be issued annually. In addition to the existing lots in town which are exempt and the projected natural increase, this reflects an annual growth rate of 3%. The 10 building permits is a minimum which can be adjusted annually by the Planning Board based on all building permits issued in the previous year.

Sunset Clause

This article expires at Town Meeting 1997, unless the following occurs:  
An annual November review by the Planning Board to determine if the population and growth data, in conjunction with the CIP, justifies the continued application of this ordinance. If, after making findings, the Board feels that this article is no longer appropriate, it is no longer effective. If, after making findings, the Board feels that this article is both appropriate and necessary to meet the purposes outlined above, this article would be effective for another year, when another annual review shall occur.

**TOWN OF  
BROOKLINE, NEW HAMPSHIRE**

P.O. Box 360  
Brookline, NH 03033

PLANNING BOARD MEETING

January 7, 1992

**PRESENT:** Peter Webb, Chairman, Voting  
Rich Napolitano, Voting  
Judy Cook, Selectmen's Alternate, Voting  
Joe Kaganski, Voting  
Margaret Olson, Alternate, Voting (left at 10:15 PM)  
Dennis LaBombard, Alternate (Voting after 10:15 PM)  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

7:30 PM Public Hearing, Proposed Changes to Zoning Ordinance  
Peter opened the meeting. Discussion began with Item #2-  
Amend Article VIII-Definition of Family. Jeremy explained  
this change would broaden the zoning definition of family.

Item #1-Add New Article #XVI-Sign Ordinance- would restrict  
the number and size of signs allowable in Brookline. PB  
members and members in the audience discussed each item.  
Marcia Farwell questioned whether subdivision signs will be  
allowable under this ordinance, whose land are they on, and  
who is responsible for their maintenance. She stated many  
commercial property owners are not town residents.  
Eddy Whitcomb said signs are necessary for advertising and  
over-restriction by the town hurts the businessman.  
Tom Moran asked if when a proposed sign meets the ordinance,  
would the PB have to review and approve it at a PB meeting.  
After much discussion by PB members and those present, it  
was decided there was a consensus to change the proposed  
sign ordinance to provide for subdivision signs (ex. Wallace  
Brook Estates, Mountain Road Estates, etc.)

Discussion then focused on the size and location of signs.  
Peter said from this conversation it was agreed that the  
PB limit the number of rather than the size of signs.

8:20 PM The following were suggested changes to be made to the Sign  
Ordinance for the second public hearing, Jan. 21, 1992.

**MOTION** Joe made a motion to change Section C. Size #2 to read as  
follows: "Commercial and industrial buildings are allowed  
one free standing sign per building. Individual occupants  
are allowed a wall sign." Peter seconded the motion. Vote to  
change 5-0 yes.

\*THREE  
Amended 2/14/92 (JLF)

MOTION Peter made a motion to add to Section C. Size, #5. "Signs of less than ~~two~~ square feet are not regulated by this ordinance." Rich seconded the motion. Yes vote 5-0.

MOTION Joe made a motion to change E. Prohibited Signs, #4. to read as follows: "Signs in the road right-of-way." Peter seconded the motion. Yes vote 5-0.

MOTION Rich made a motion to delete from Section E. Prohibited Signs, #5 the words "or disturbance to" from the sentence. Peter seconded the motion. Yes vote 5-0.

MOTION Margaret made a motion to delete Section F.-Review & Approval. Rich seconded the motion. Yes vote 5-0.

MOTION Joe made a motion to add a Section F.-Subdivision Signs to read: "Permanent and temporary subdivision signs are allowed only with Planning Board approval." Margaret seconded the motion. Yes vote 5-0.

MOTION Judy made a motion to change the added definition #32- Wall Sign to Article VIII to read: "Any sign which is painted on, incorporated into, or affixed to the wall or roof of a building." (Joe had amended Judy's motion to delete the remainder of the sentence after the word "building") Rich seconded the motion. Yes vote 5-0.

9:00 PM

**Item #5-Prime Wetlands**

Libby Wehrle introduced Nancy Rendall of N.E. Environmental Associates who had compiled the research data to qualify areas for designation as "prime wetland". She explained that the town, after an affirmative vote at town meeting, needs to submit to the N.H. Wetlands Board a report and detailed town map of the prime wetland areas.

Dennis asked if the definition of "wetlands" is changed by the federal government would any of the areas we may be considering for prime wetlands be affected.

Nancy answered the areas of very poorly drained soils would remain categorized as wetlands; and there should be no prime wetland areas in Brookline affected by a definition change.

Milner Wallace questioned the accuracy of the outlining of the Fresh Pond/Wallace Brook prime wetlands. He said the map as outlined, goes right through his septic leach area.

Nancy answered the town tax map was used, and accuracy to within 50 feet would be allowable.

Peter inquired about having a relief mechanism if a boundary dispute evolved. Nancy said the N.H. Wetlands Board will investigate any such problem. Libby said subdivisions in Brookline need an on-site survey if wetlands are involved.

Eddy Whitcomb remarked that the town already has a 125' setback in the wetlands ordinance and asked if the prime wetlands designation is really necessary. He wanted to know if there would be any tax relief for a land owner if he is unable to use portions of his property because of the prime wetlands designation. Discussion followed regarding changing the proposed ordinance to give relief from errors in mapping so that costs such as on-site soil studies and public hearing costs will not be generated unnecessarily. Jeremy suggested putting in a similar paragraph to that in the aquifer ordinance. Ordinance to be amended by "Article VIII, Section 2.3-Wetlands Incorrectly Delineated".

10:00 PM **Item #3- Amend Articles II,III,IV,V, & VIII. Commercial District and Industrial District**-Jeremy explained the proposed separation of the Commercial and the Industrial districts and permitted uses in each. He said the PB had attempted to remove all residentially developed lots in the present Industrial/ Commercial district; and had looked for areas where commercial district land could be expanded. Discussion followed regarding the permitted uses; and the difficulty of categorizing certain businesses into either commercial or industrial. It was noted that Lot K-75 was being changed to the residential district, even though the same owner operated Donovan Engineering on the adjoining property K-76, and had purchased K-75 for future expansion. Also changed was K-81, James Bourassa's property which has been used commercially for several years.

(Margaret left the meeting at 10:15 PM. Alternate Dennis LaBombard became a voting member at this time.)

10:50 PM Dennis made a motion to combine the Industrial and Commercial districts into one with "Uses Permitted" being those listed in the proposed Industrial District. Lots K-75 and K-81 will be added back into the I/C zone. Judy seconded the motion. Vote was Yes-4; No-1 (Rich).

Rich expressed his view that he would rather withdraw the entire Industrial and Commercial zoning proposal than to make the substantive changes being made tonight without full membership of the Planning Board being present.

10:55 PM **Residential/Agricultural District.**  
MOTION Joe made a motion to add to Section B. USES PERMITTED, a #6. (the existing #5 in Article V of the current zoning) to read as follows: "Farming and forestry activities are permitted when incidental to primary residential use, but any use injurious, obnoxious, or offensive to the neighborhood is prohibited."; and to reflect in the new definition of "Home Business" the same wording as in current #12 of Article VIII Definitions "Home Produce and Products (such as crafts, food products) may be bought and sold and exposed for sale." Peter seconded the motion. Yes vote 5-0.

11:00 PM **Item #4-Amend Article IX-Earth Removal (by petition)**  
Tom Moran asked the PB to disallow the petition reasoning that 95% of the land area in town will be disallowed by this zoning article to remove gravel. He said the remaining 5% of within the Industrial/Commercial zone will not provide an opportunity for earth removal because of either existing residential or commercial development; or the lack of any excavation material on the remaining undeveloped lots.

A brief debate followed. Because of the lateness of the hour, Peter said this would be an item for discussion at the January 21st public hearing.

11:10 PM **MOTION** Rich made a motion to adjourn the meeting with Peter seconding the motion. Vote 5-0 to adjourn the meeting.

Next Planning Board meeting and Public Hearing on zoning,  
Tuesday, January 21, 1991.

- 7:30 PM** Second Public Hearing, Proposed Changes to Zoning Ordinance  
Peter opened the meeting and gave a brief synopsis of the changes from the first public hearing on January 7, 1992. Discussion began with **Item #1-Sign Ordinance**. The following changes were made for clarification reasons:
- MOTION** On a motion by Rich, seconded by Joe, with a 5-0 yes vote, **C. Size #5** was changed to read: "**Signs of less than three square feet are not regulated by this ordinance.**"
- MOTION** On a motion by Peter, seconded by Rich on a 5-0 affirmative vote, **E. Prohibited Signs #2** was changed to read: "**Wall signs that extend above the roof peak of the building.**"
- MOTION** Rich made a motion with Judy seconding (vote 5-0 yes) to change **Article VIII Definitions, #33** to read: "**Wall sign- any external sign which is painted on, incorporated into, or affixed to the wall or roof of a building.**"
- MOTION** On a motion by Dennis, seconded by Rich with a 5-0 yes vote, **B. Illumination, #2** was changed to read: "**A sign can only be illuminated between midnight and 6 am if it is advertising an on-site business that is open at that time.**"
- 8:00 PM** Peter made a motion to have the Planning Board approve **Item #1-Add New Article XVI Sign Ordinance**. Joe seconded the motion. Vote was 5-0 yes.  
**MOTION** Rich made a procedural comment that this ordinance now has removed regulation on the size of signs.
- 8:05 PM** Peter made a motion to have the Planning Board approve **Item #2-to Amend Article VIII, #33-Delete existing definition of Family and replace with new definition of family.**  
**MOTION**
- 8:05 PM** **Item #3-Amend Articles II, III, IV, V, and VIII**. The change from the previous hearing left the Industrial/Commercial zone combined as one; gave location of district with area of

\* IT WAS THE CONSENSUS OF THE PB THAT SINCE EXISTING RESIDENTIAL PROPERTIES ARE A PERMITTED USE, NO VARIANCE WOULD BE NEEDED.  
Amended 2/4/92 (DCF)

expansion; deleted areas of residentially developed lots (S. Main Street); and gave a list of uses permitted and the lot requirements. The Residential/Agricultural zone added a permitted use for home business; and amended Article VIII, Definitions to include a definition of home business.

Questions followed regarding expansion of grand-fathered residential properties within the I/C zone. \* ~~It was unclear whether a variance would be required to make changes or additions to residential property within this zone since these properties would become non-conforming uses.~~ delete

8:40 PM  
MOTION

On a motion made by Judy and seconded by Dennis, a 5-0 yes vote changed **Article IV, Industrial/Commercial District, B. Uses Permitted, #11** to read as follows: "Residential dwelling units existing prior to March 14, 1992."

MOTION

Rich made a motion seconded by Peter to change Item #3, Amend Articles II, II, IV, V & VIII to combine **A. Industrial District** and **B. Commercial District**. Yes vote 5-0.

John Ganos, owner of J-20, asked why lot J-19 (Bibco) had been removed from the I/C district. PB members reviewed the map and checked PB minutes. Although a memo prepared by Jeremy on 10/22/92 had grand-fathered a commercial use of this lot, PB members agreed removal of this lot from the I/C zone had not been discussed at any previous meeting. Joe felt a boundary correction of the map was a clarification change.

8:55 PM  
MOTION

Rich made a motion to change **A. Location, d)** to change the northern boundary to **Lot J-19** instead of Lots J-20 and J-22. Peter seconded the motion which carried by a 5-0 vote.

9:00 PM  
MOTION

Peter made a motion to have the PB give approval to **Item #3-** to amend Articles II, III, IV, V, and VIII. Judy seconded the motion. Affirmative 5-0 vote.

9:05 PM

**Item #5-Prime Wetlands-** Dennis said the designation of "Prime Wetlands" will not result in more restrictive setbacks than the existing wetlands ordinance. Orville Fessenden asked whether the map or the list of lots in the ordinance would be the controlling factor, since his lots J-51 and G-52 had been listed but were not on the wetlands map as being in the prime wetlands. Libby answered that the map is the control document. Clarence asked the difference between the wetlands conservation district and the prime wetlands. Libby said prime wetlands were the poorly and very poorly drained soils as defined by the S.C.S. soils map. Jeremy said a clause to correct any areas incorrectly delineated had been added to Article XIII, Section 2.3. The date for the Brookline Prime Wetlands Report had been corrected from December 1991 to January 1992.

MOTION Peter made a motion to have the PB approve Item #5, Add Article XIII Section 2.2 and Amend Sections 2.1 and 2.3 to include Prime Wetlands. Judy seconded the motion. Yes 5-0.

9:15 PM Item #4-Amend Article IX-Earth Material (by petition). Nancy Brodeur questioned the wording of the petition for the warrant article. PB had asked Town counsel who said the wording must be exactly as presented to the selectmen and planning board. Nancy voiced her personal opinion that she had not meant to stop the small excavation projects in Brookline; and felt that clause B in Article XII, Board of Adjustment could be used to permit excavation in the Residential/Agricultural zone by special exception if it meets ZBA and PB criteria. Jeremy pointed out that Article IV, Industrial/Commercial District, B.Uses Permitted will be changed with the adoption of the proposed zoning changes, limiting excavation to the I/C district. Nancy said she supported and signed the petition, but wanted to have small excavations allowable in the R/A zone by special exception. Clarence Farwell asked whether a variance or special exception will be needed to excavate in the R/A district since the petition is worded "Are you in favor of amending Article IX-Earth Removal so as to prohibit earth removal projects from the R/A District.....". He felt a variance would be required not special exception. This would preclude any sand being removed in Brookline for Town use for sanding purposes. He questioned if municipalities were exempt from rules governing excavation. State Representative Betty Hall said the mechanism of the state law was to continue to permit the ZBA to allow excavation by special exception in conformance with the local ordinances. Tom Moran presented a map colored to show the areas of sand and gravel deposits in Brookline. His feeling is that the word "prohibit" in the petition requires a variance; and a variance requires 5 conditions relative to the land to be satisfied for ZBA granting. Areas of sand and gravel found in the I/C district in the areas not already developed are very small-Route 13 next to Texaco station, back of J-20 (John Ganos' lot) and south of Averill Road near Leppanen's property (J-44). Tom said current zoning with the aquifer ordinance, wetland ordinance including the prime wetlands district is making the process of excavation more difficult. This petitioned change will preclude gravel excavation from most areas in town (95% of land area in town). Phil Chandler questioned Tom's source of reference and asked the amount of cubic yards available in the I/C district (Tom had not calculated an amount). Phil contended there was enough gravel for the town's use in the I/C zone; and gravel can already be excavated in the residential areas when it is incidental to subdivision development. Betty Hall noted the state law sets the minimum standards; and said she felt the state law will prevail in areas of concern to Phil because the state is more restrictive than

the town. She also believes a special exception would be required rather than a variance to excavate gravel in the residential zone.

10:00 PM  
MOTION

Peter made a motion for the PB to vote not to approve the petition as presented in Item #4. (A yes vote means to disapprove the petition). Dennis seconded the motion. Peter polled the board for their opinions and votes. Margaret said she feels the PB should approve this petition and be looking to expand the commercial zone in undeveloped areas to allow for gravel removal. Chris said he doesn't believe in changing an area of residential zone to a commercial zone for excavation. **Dennis-Yes vote.** This petition would prohibit excavation in the R/A district. If passed it becomes zoning law and would require a variance. He feels it is too restrictive. **Judy-Yes vote.** She does not want gravel operations in residential areas and feels the existing ordinance and regulations take care of the scale of excavation projects. **Joe-Yes vote.** With the latest changes to RSA 155-E the restrictions by state law will hold, along with the town's present regulations. The state spells out gravel operations as commercial activity. **Peter-Yes vote.** Residential areas are not restricted to the residential zone. He feels present zoning and regulations are sufficient. **Rich-Yes vote.** Supports motion and is agreement with Judy's reasons.  
**PB vote 5-0 to disapprove Item #4.**

10:10 PM

**Bingham Lumber Co., Inc., N.R.S.P. Case #1992-A:H-90**  
Don Bingham presented plans to build a 28' X 40.6' addition onto the office building. He said they would be adding 1 new person to the office work staff. Dennis questioned whether the septic system would be adequate for additional office personnel. Don had the septic system design which has an 800 sq. ft. leachfield, and noted there is already a small existing kitchen area. Dennis calculated the number of people would not overload the existing septic system. Jeremy had prepared a memo for PB members. He mentioned the addition was a single story building. The parking lot and septic system were the outstanding issues to be checked. Don said the parking area is 130' in length. Width is 40' at the widest end, and 32' at the narrow end. Rich asked for 1 "as-built" plan which would show everything as it exists along with the new building and parking lot.

10:20PM  
MOTION

Rich made a motion to accept the plan pending the following items being done:  
1) All fees paid  
2) Approval block added to the plan  
3) Plan showing all buildings and enlarged parking lot  
Judy seconded the motion. Yes vote 5-0.

10:20 PM

Rich made a motion to approve the site plan as presented. Peter seconded the motion. Vote 5-0 yes.

10:25 PM Planning Board Business Meeting

- 1) Bob Bourassa, Talbot-Taylor Estates-Review Road Bond  
Bob presented PB members with an agreement to restrict the sale of lots and issuance of building permits on all lots which are on an unbonded portion of road.
- MOTION Rich made a motion to delete from the last sentence of the agreement the words "or until November 30, 1992, which ever first occurs." Judy seconded the motion. Yes vote 5-0. (Peter deleted and initialed this). The date (January 21, 1992) and the amount of road bond posted (\$183,645.00) were added to the agreement at the appropriate locations. Bob will have all other members of the partnership initial the changes and bring the agreement back to the town office to have it be recorded at the Registry of Deeds.
- 2) Tom Moran had three items for PB members to review.
- 1) A copy of Birch Hill I subdivision showing all the bounds which have been set. The silt fence has been placed; and in the spring the finish pavement on Kinney's corner (off-site improvements) will be done. All issues for road acceptance at town meeting have been addressed. Dennis will recheck the subdivision for the PB.
- 2) Birch Hill, II and Mountain Road Estates, II Recreation Agreement-Tom said the agreement is being updated to reflect the effective dates of payment to run with the recording of the mylars. He had prepared a memo to indicate this.
- 3) Oak Hill Estates-Tom said his intentions are to subdivide the ball park out of lot K-66-20 and convey the rest of the land to the town. He also wants to do a lot line adjustment to lot K-66-18. He will be meeting with the Conservation Commission to discuss these items.
- Rich asked what the final disposition of the ball park area will be. Tom said he is looking into different options to be the most beneficial to both himself and the town.

10:47 PM Project Status Reports

- 1) Bear Hill Estates- Joe Kagenski reported that he and Clarence Farwell had met on-site to review the as-built plans of the road. The issues are as follows:
- a) Captain Seaver Road exceeds the 8% grade-it is 8.3% . Some shoulder work remains to be done.
- b) As-built "red-line" plans are being presented instead of mylars. All modifications are being done in the town right-of-way.

c) A maintenance bond needs to be in place. Developer has asked for a shorter bond period because the road has been in place for 2-3 year. ( After discussion, PB members felt a 1 year maintenance bond should be required since the final pavement was placed in early December 1991.) Clarence will be asked to come to the February 4th session with the plans and his report.

11:00 PM Rich made a motion to adjourn the meeting with Peter  
MOTION seconding the motion. Vote 5-0 to adjourn the meeting.

Next Planning Board meeting Tuesday, February 4, 1992.

**TOWN OF  
BROOKLINE, NEW HAMPSHIRE**

P.O. Box 360  
Brookline, NH 03033

PLANNING BOARD MEETING

February 4, 1992

**PRESENT:** Peter Webb, Chairman, Voting  
Rich Napolitano, Voting  
Joe Kagenski, Voting  
Chris Hegarty, Alternate, Voting  
Margaret Olson, Alternate (joined meeting at 8:25 PM)  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

- 7:30 PM** Planning Board Business Meeting  
a) Margie & Terry Sherlock-Draft of Article on proposed zoning changes. PB members and the Sherlocks reviewed the draft article they had prepared. Members will make their suggested changes and get them to the Sherlocks for the final copy. It will be published in the Milford Cabinet, the Brookliner and Our Place. PB members expressed their thanks to the Sherlocks for their work on this project.
- 7:40 PM** Bonding Issues  
a) Robert Petersen-Petersen Road  
Bob Petersen presented the PB with a letter of credit from the Center Bank of Bedford, N.H. There was some discussion as to whether the \$30,000. amount was the amount recommended by road inspector Clarence Farwell. There wasn't a current road bond estimate on file. Clarence was called and asked to come down to the meeting. He said that \$30,000 will be an adequate amount of bond at today's prices. He will write a report indicating the road is at the "sub-grade" level of construction which would allow a building permit on the lot Mr. Petersen has sold to his daughter and son-in-law.
- 8:20 PM** MOTION Rich made a motion to accept the letter of credit subject to town counsel's favorable review. Chris seconded the motion. Yes vote 4-0 to accept letter of credit.
- 7:50 PM** Review Minutes of the following PB meetings  
a) December 17, 1992- Page 3-spelling of \*"trafficked" was questioned. Rich made a motion to accept the minutes amended to correct the spelling. Peter seconded the motion. \*NOTE-The word as spelled is correct according to the Merriam-Webster dictionary. Yes vote 4-0 to accept minutes.

**MOTION** b) January 7, 1992-Page 2, change to read:"Signs of less than three square feet are not regulated by this ordinance." Joe made a motion to accept the minutes as amended. Rich seconded the motion. Vote 4-0 yes to approve minutes as amended.

**MOTION** c) January 21, 1992-Page 2, Paragraph 2, Sentence 2, change to read as follows:"It was the consensus of the Planning Board that since existing residential properties are a permitted use, no variance would be needed." Rich made a motion to approve the minutes as amended. Peter seconded the motion. Yes vote 4-0 to approve minutes as amended.

**2) Project Status Reports-**

**MOTION** a) **Bear Hill Estates-** Clarence reviewed the "as-built" plans presented for Phases I and II and the portion of Phase III to the junction of Capt. Seaver Road and Mosher Drive. He pointed out that one portion of Capt. Seaver Road exceeds the maximum 8% road grade (8.3%); but he felt the road as built gave better driveway access to the lots. He said developer Mike Tamposi wants a waiver from the PB on presenting as-built mylars for recording. Clarence said all changes were made within the town's right-of-way and did not involve changes to individual lots. Mr. Tamposi is asking acceptance of Bear Hill Rd., Mc Daniels Dr., Wadsworth Dr., and Captain Seaver Road at town meeting this year. He will keep the insurance bond in effect through December 31, 1992 (date recommended by Clarence) as a maintenance bond. PB members felt that the maintenance bond should be posted for a year after final payment was placed (early Dec. 1991). Rich made a motion to accept the plans as presented. Joe seconded the motion. Yes vote 4-0.

**8:55 PM** b) **Lorden Realty-"Elevations"**- Clarence expressed his desire to have the PB review the road construction plans for this subdivision and eliminate the cape-cod berms and entrance "island". He wants the drainage system to be reviewed. Rich said if the drainage needs to be changed, the PB should conduct the same thorough review as previously was done during the review and approval period. He stated the type of drainage system proposed by Lorden's engineering firm was of some concern to the PB, who hired an engineering firm to conduct an extensive review of the water flow and drainage calculations to make sure the system was workable as designed. Clarence pointed out that road inspector Bill Duncklee had concerns about the lack of drains underneath the road. Bill feels the groundwater will seep into the road bed and cause problems if drainage is not corrected now. Clarence would like an open drain system, at least on the first section of road to the top of the hill. Peter suggested Alan Lorden, Bill Duncklee and Clarence be at the next PB meeting to discuss the situation.

- 9:00 PM 3) Bonding Issues  
b) F.D.I.C. Letters of 1-24-92- PB members reviewed the four letters nullifying 4 surety bonds involving 3 subdivisions and 1 non-residential site plan. Peter said the PB at the November 5, 1991 voted to request the building inspector to withhold building permits from all subdivisions and non-residential site plans which failed to provide the town with a bond or other security for the construction and/or maintenance of the road system. The PB should vote whether they wanted to do the same on these four projects.
- MOTION On a motion by Peter seconded by Rich and an affirmative 4-0 vote, a letter will be sent to the building inspector requesting that building permits be withheld on Eddy Whitcomb's Scabbard Mill Brook Road subdivision.
- MOTION On a motion by Joe, seconded by Rich, with a 4-0 yes vote, a letter will be sent to the building inspector requesting that building permits be withheld on Martin and Lawrence Ruggiero's Lakin Road subdivision.
- MOTION On a motion by Peter seconded by Rich and an affirmative 4-0 vote, a letter will be sent to the building inspector requesting that building permits be withheld on Lorden Realty's "Elevations" subdivision.
- MOTION On a motion by Peter seconded by Rich and an affirmative 4-0 vote, a letter will be sent to the building inspector requesting that building permits be withheld on Fresh Pond Realty's non-residential site plan on "Post Office Square".
- 9:12 PM PB members reviewed the letter they had received from attorney Rolf Goodwin regarding road surety issues and the holding of mortgages by the town for road bonding. After a brief discussion a decision was reached based on Mr. Goodwin's recommendation against the town holding mortgages as surety; coupled with Mr. Petersen's proving that bonds are available in the current banking market.
- MOTION On a motion by Chris it was voted that: "The policy of the Brookline Planning Board will be to not accept land as surety for bonding purposes." Rich seconded the motion. Affirmative vote 4-0 to adopt this policy.
- 9:15 PM Planning Board General Business  
a) Membership status-positions to be filled for members and alternates. Former PB alternate Robert Sykes was present to say he is interested in becoming a Planning Board alternate and is willing to serve on the Nashua Regional Planning Commission as a commissioner or alternate commissioner for Brookline.

**MOTION** Rich moved to recommend Robert Sykes to the selectmen as a Planning Board alternate. Joe seconded the motion. Yes vote 4-0. Bob will also be recommended to serve on the Nashua Regional Planning Commission.

Rich said he is willing to serve as Planning Board member for another 3 year term.

**9:30 PM** There is one three year membership appointment available. Both Chris Hegarty and Margaret Olson stated that they would like to be considered for the position. They left the meeting at this time. After a brief discussion, PB members decided to recommend Chris Hegarty for a 3 year membership on the PB.

**9:45 PM** It was decided that there will be no Planning Board Meeting on Primary Day, Tuesday, February 18, 1992.

**9:50 PM** Peter made a motion to adjourn the meeting. Rich seconded the motion. Meeting was adjourned by a **3**-0 yes vote.

**PLANNING BOARD MEETING**

March 3, 1992

**PRESENT:** Peter Webb, Chairman, Voting  
Rich Napolitano, Voting  
Judy Cook, Selectmen's Alternate, Voting  
Joe Kaganski, Voting  
Bob Sykes, Alternate, Voting  
Dennis LaBombard, Alternate  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

**7:30 PM** 1) Planning Board Business Meeting

**MOTION** a) Review Minutes of February 4, 1992 PB meeting  
Rich made a motion to accept the minutes of February 4, 1992 as written. Peter seconded the motion. Yes vote 5-0.

**2) Bonding Issues**

a) Letter of Credit—PB members reviewed the sample letter of credit as drafted for the PB by attorney Rolf Goodwin. PB asked Jeremy to review it and write a letter of credit draft for the March 17th meeting using Mr. Goodwin's suggestions and matching it up with the subdivision regulations.

b) Thomas Enright, "Wallace Brook II"—Tom Enright was present with a proposal for the PB's consideration. Tom owns 9 lots -2 in Wallace Brook, I and 7 in Wallace Brook, II. He said the sale of 2 lots will generate revenue needed to complete the project. If the PB is in agreement with his proposal, he will put \$20,000 into an escrow account to be used to complete the road. He is asking the PB to first allow him 1 building permit. Under an agreement he has with a house builder, he will receive revenue from the sale of the land when the house is sold (approximately the first of July 1992). He will be able to finish the road at this time, if the PB will then allow him to have 1 more building permit. He feels that at today's prices he can complete the major items (paving, guardrail, loaming & seeding) listed on Joe Cretella's bond estimate dated July 17, 1991 (see attached) for around \$23,000.

Joe said the reclamation of lot J-33-34 was also an item that needed to be completed in this subdivision. The lot had been used to excavate gravel for the road, and the PB

had allowed it to be used as a stump dump. Tom said all that remains to be done on this lot was loaming & seeding, and it would be taken care of. Joe noted that Cretella's estimate is 9 months old, and suggested Tom have Joe do an inspection and write up a new bond estimate. Joe said there have been drainage problems, and asked if they have been corrected after another winter's weather. He said he would like Tom give the PB a written proposal for consideration of this bonding alternative.

Judy said she felt the PB needed a more complete package with a guarantee of when the road will be completed. If the sale of the second lot does not occur, will that affect the final completion of the road? She feels the road needs to be finished as soon as possible.

Peter said a piecemeal approach is unwise for the PB to consider. If one building permit will finance most of the outstanding road items, he is willing to have the PB allow the building permit to be drawn and the major portion of the road work to be done this spring.

Dennis said he was in agreement with Peter's assessment. It would be better to have the major items completed following Tom's proposal, than to have nothing done on the road.

Tom said that he is asking for two building permits, not one, and wanted to make that clear to all PB members. He knows some of the items currently in the bond estimate have been done, and the remaining items can be completed for much less than the \$56,269 on Joe's estimate.

Judy and Joe said they would prefer to see some new estimate figures from the road inspector before making a decision.

Rich said he would like to be out of this arrangement before the second lot is sold and the second BP is issued. He would favor an agreement to be drafted between Tom and the town saying the following: 1) after the second lot is sold, all road work will be done; and 2) a time frame for final completion will be written into the agreement.

Peter asked how the \$20,000. will be held in escrow. PB felt the escrow money should be placed in Tom's name and the Town of Brookline's jointly. Tom said he did not want the release of money held up by the town's requirement of an inspection and written report submitted to the PB before a letter to the bank was written. Tom reiterated that funds will only be spent for road work done in Wallace Brook, II; and he will set up the escrow account accordingly. After discussion, PB and Tom agreed to have Russ Heinselman, chairman of the board of selectmen, authorized to release funds for the Town as the road work is done.

Tom will attempt to get Joe Cretella to make an inspection and write a new bond estimate. PB authorized Dennis LaBombard to be back-up road inspector in the event Joe

Cretella is not available. Tom will come back to the next PB meeting on 3/17/92.

8:40 PM c) Robert Bramley, "Mountain Road, II and Birch Hill, II-revising road bond estimates-Bob Bramley and Tom Moran were present with new bond estimates totalling \$695,000. They would like to have this estimate reviewed against the road construction plans as soon as possible. Road inspector Bill Duncklee is going to be out of town till the end of the month, so the PB will have someone else review the estimate.

8:45 PM Rich made a motion to have the proposed estimate reviewed by Meridian Land Services, Inc. for accuracy of the estimate. Peter seconded the motion. Yes vote 5-0.

Bob and Tom will come back to the PB on March 17, 1992.

8:55 PM 3) Alan Lorden, "Elevations"-Alan was present to discuss the road construction plans for Lorden Lane as regards the divided entrance and closed drainage system. Clarence Farwell was present to ask the PB to consider the removal of the center island and to allow an open drainage system in place of the closed drainage as designed. Discussion followed as to why there was a center island (length of cul-de-sac); and what problems might arise from its removal.

9:14 PM Peter made a motion to eliminate the center island on Lorden Lane and to keep the same 25 foot width of pavement. Judy seconded the motion which passed by a 5-0 vote.

Rich explained for those not familiar with this subdivision that the PB had not required the closed drainage system. Maynard and Paquette had designed the system based on their drainage calculations. These calculations were complex and the town had the plans reviewed by an outside firm. Rich said he is not willing to trade less maintenance problems for an inferior drainage system- closed or open. If a new drainage system is designed, he wants the same thorough review of the new plans as were done on the original ones.

Dennis said that open versus closed drainage is really a cosmetic issue; and that the velocity of water is more of a problem in a pipe than in a swale. The same amount of water flow can be handled correctly by either closed or open drainage.

PB members discussed the fact that the closed drainage has been installed on the first section of Lorden Lane, and it would not be economical to change it. However, Mr. Lorden was told that if he had his engineer design an open drainage system beginning at the top of the hill, the PB will have the system reviewed. If the calculations prove an open

drainage system will handle the water flow off the hill, the PB will consider the change in drainage design.

Mrs. Lorden asked if the PB would consider a phasing of the road construction bond, since their bond has been closed by the F.D.I.C. Peter said he had some concerns with the road configuration with only 1 entrance to the project. He told the Lordens to have a phased bonding proposal written and the PB will review it and make a decision. They will come to the March 17, 1992 PB meeting for further discussion on road engineering and bond issues.

**9:45 PM Planning Board General Business**

PB members discussed the various requests for alternatives to road bonding and the best method of trying to meet each developer's requests fairly. It was suggested that the issue should be discussed further, hopefully with all PB members and alternates present.

**MOTION** Judy made a motion to spend the next work session, Tuesday, April 7, 1992 working on the bonding issue. Rich seconded the motion. Yes vote 5-0.

**10:15 PM** Jeremy had prepared a memo on the possible location of a restaurant at Gazebo Square. He had addressed the septic and water issues, and calculated the parking spaces needed. He also reported that he had been contacted regarding a temporary sales business unrestricted to one site in town. He also asked PB members what subjects they would like to see addressed at this year's law lecture series. The Bonding Issue was the unanimous suggested topic.

**10:35 PM** Rich made a motion to adjourn the meeting. Joe seconded the **MOTION** motion. Meeting was adjourned by a 5-0 affirmative vote.

Next Planning Board meeting Tuesday, March 17, 1992.

March 17, 1992

**PRESENT:** Peter Webb, Chairman, Voting  
Rich Napolitano, Voting  
Judy Cook, Selectmen's Alternate, Voting  
Chris Hegarty, Alternate, Voting  
Margaret Olson, Alternate, Voting  
Dennis LaBombard, Alternate  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

- 7:30 PM** Planning Board Business Meeting  
Peter called the meeting to order. He took Bill and Susan Ingraham's case as the first order of business.
- 1) William & Susan L. Ingraham, 24 Parker Road, Case #1992-1:K-66-19. Bill Ingraham was present with plans for a lot line adjustment between lots K-66-19 and K-66-18. He said the adjustment was necessary because the house did not meet the required 15 foot setback from the property line. The new line is 40 feet from the nearest corner of the house.
- 7:35 PM** Rich made a motion to accept the plans as presented. Peter  
**MOTION** seconded the motion. Affirmative 5-0 vote to accept plan. Abutter Lauren McConnell asked if another lot line adjustment would be necessary to put an addition on the house in the future. Bill said no, there was adequate land.
- 7:38 PM** Rich made a motion seconded by Judy to approve the plan,  
**MOTION** pending all fees being paid and a recording mylar presented. Yes vote to approve the lot line adjustment plan 5-0.
- 7:40 PM** Review minutes of March 3, 1992 PB meeting.  
**MOTION** Peter made a motion to accept the minutes as written. Rich seconded the motion. Vote 5-0 yes to accept the minutes.
- 7:45 PM** Thomas F. & Ruth M. Moran, Case #1992-2:K-66-20. Randy Haight of Meridian Land Services presented the plan for the applicants. He said they were subdividing the ball field (new lot K-66-43) from the remainder of lot K-66-20. The Morans had decided to retain ownership of the ball field as a separate lot labeled non-building. Tom will be deeding the remainder of the acreage of lot K-66-20 to the town.
- Peter questioned the ~~1735~~ frame for deeding K-66-20 to the

\* "that any transfer of conservation land be accompanied by a transfer of the ball field into an arrangement such as a deed....."

\* Amended  
4/7/92  
SUF

town. Randy didn't know and said he would check with Tom. Peter recommended ~~\* some sort of mechanism be put in place for the ball field~~ such as a deed with life tenancy, or a form of trust, which would become a condition of the subdivision approval because of the divergence from the original purpose of giving the entire lot K-66-20 to the town. He would like something to ensure the town will eventually acquire the entire property.

Rich wanted to know what the public right of access to the ball field would be. He asked if something could be worded in the deed as to how to handle the access issue—such as an access easement. He also questioned how the land would be disposed of in the event of Tom's death before the property had been deeded over to the town.

Randy will check with Tom regarding this issue.

**MOTION**

Peter made a motion to accept the plan as submitted. Rich seconded the motion. Vote 5-0 to accept the plan.

**Abutter's Comments:** Mr. & Mrs. Thomas Messore, owners of lot K-66-23, stated they had been told when they bought their property that lot K-66-20 was conservation land belonging to the town, and that nothing would be done with it. They asked to whom the land now belonged.

Judy answered that it belonged to Tom Moran. She explained that the current town ball field on Milford St. was shared by the adult, the little league, and the Babe Ruth ball teams. Scheduling problems resulted in a situation with alcohol involved a few years back when an adult team was playing on one field and a little league team was using the other field. Town counsel then advised the town to place an ordinance regarding no alcohol was to be allowed on town property because of the liability involved.

Peter said that as part of the Oak Hill subdivision approval Tom had agreed to build a ball park at his expense for the town's use. This land would then be given over to the town. He said Tom objects to the alcohol ordinance now in effect on town property, and wishes to have a ball field where adults can play softball and drink an alcoholic beverage.

Mrs. Messore was concerned with alcohol being consumed on the Oak Hill ball field and alcohol-related accidents.

Abutter Mitchell McConnell was concerned with children using the field and adults also using it and drinking alcohol.

Abutter Dennis Kajawski had concerns with who is using the ball field and who will be drinking and playing softball. Who will be policing the area, and who will be applying the rules for use of the field.

Peter said the PB's objective will be to have a deadline for the definite transfer of the conservation property, Lot K-66-20, to the town. He also said he recalled that it had been Tom's intention to deed over the ball field to the town after it had been completed as part of Lot K-66-20.

Judy said the PB should do whatever is necessary tonight and to have the abutters and Tom present to answer any questions at the next PB meeting on April 21, 1992.

Abutter Fred Burgher asked if there was any written evidence available in the PB minutes or tapes as to the disposition of the land. (Secretary will research this for the 4/21/92 meeting).

Rich said he understood that Tom originally wanted to have the ball field completed and the grass established before turning it over to the town. Rich noted that Tom had researched a new state statute regarding property liability for land used for recreational purposes with no fee involved. He found there would be no liability problems for the town if the property were retained under his ownership.

8:35 PM Rich made a motion to accept the plan as submitted. Judy  
MOTION seconded the motion. Yes vote to accept plan 5-0.

Case continued till April 21, 1992

8:38 PM Talbot-Taylor Estates Partnership, Case #1992-3:G-61-15, G-61-26. Bob Bourassa and Randy Haight were present. Randy said 2 existing lots were being divided into 4 lots. Jeremy said the plan is missing street numbers for the new lots, and one of the lots (G-61-15) is involved in the bond agreement restricting its sale until the road is bonded. Rich said this subdivision does not seem to impact the road system. He recommends the PB do a site visit.

8:40 PM Judy made a motion to accept the plan as presented. Rich  
MOTION seconded the motion. Yes vote to accept plan 5-0.

Site walk scheduled for Saturday, March 21st. at 9:00 AM.  
Case continued till April 21, 1992.

8:45 PM Bonding Issues  
1) Tom Enright, "Wallace Brook, II". Tom Enright was present and said that he and Dennis LaBombard and Clarence Farwell had visited the site on Saturday, March 14th. They went over the items on the bond estimate prepared by Joseph Cretella as well as items Clarence had concerns about. Dennis had prepared a new estimate for bonding the outstanding items (see attached). New estimate is for \$30,000.00. Tom said he is willing to put up a cash bond, and asked for the method by which he may reduce the bond to

pay the bills. He was told that with an inspection report of work completed, Selectman Russ Heinselman will authorize the bank to release the appropriate amount of funds. Tom plans to place the guard rails first; then do the 2nd coat of paving; and finally the seeding and finish work. He anticipates that all work will be done by July 1, 1992. He asked the amount of maintenance bond he will be required to post. PB will check original bond estimate. Maintenance bond is set at 10% of the original bond amount. Rich asked if there were outstanding issues other than Wallace Brook, II. He asked about the lot J-33-34, which had been used as a stump dump and had been excavated for the roads in W.B., II. Tom said Martin Construction owned the lot and had brought in stumps from W.B., II. He said the lot has been reclaimed and all that remains to be done is the seeding. Tom said it will be seeded by July 1, 1992.

**MOTION**

Rich made a motion to accept Dennis LaBombard's estimate of \$30,000.00. Margaret seconded the motion. Yes vote 5-0.

Tom will have a letter of credit drafted. PB will have it reviewed by town counsel. Road completion date will be July 1, 1992. Peter told Tom that once the bond is in place, the building permit moratorium will be lifted.

**9:10 PM**

**2) Fresh Pond Realty, "Mountain Road, II" and "Birch Hill, II"--revised road bond estimates.** Bob Bramley and PB members reviewed the estimate prepared by Meridian Land Services, Inc. (see attached). Rich asked if there was a contingency fee factored into the bond estimate. The answer was no. Bob said that the estimate from Tam-Char was without a contingency amount, and it was \$196,333.65 lower in amount. He felt that the difference in the estimates was an adequate cushion for possible price inflation. PB members discussed the fact that this was a phased project over a 5 year period. They were uncertain that the prices estimated today would reflect reality in 5 years time. They wished to require an added amount for contingency purposes, as well as a review of the bond amount at least once per year.

**MOTION**

Margaret made a motion to set the amount of bond for "Mountain Road, II" and "Birch Hill, II" at \$900,000.00 with a review of the bond at a minimum of once a year. Rich seconded the motion. Vote taken was 5-0 in favor.

**9:35 PM**

**3) Lorden Realty, "Elevations"--Road Bond.** Alan and Louise Lorden were present to ask the PB to consider a phasing of their construction bond for "Elevations" subdivision. Alan pointed out that Phase I, ending in a hammerhead does not exceed the maximum allowed cul-de-sac length. Without a bond, he is unable to complete the road in Phase I and get any building permits. It is his intention to finish the

first phase of road and build on the six lots. The generated revenue from sales of these houses will allow him to get a road bond for phases II and III. Without phasing the road bond, he will have to leave everything as is since the FDIC nullified his. Alan also had his engineers look at the drainage system. They recommend he retain the closed drain system and the cape cod berms with a swale off on the side to direct water into the closed drainage in the first section of road up to the intersection with the loop road. He will eliminate the island divider at the entrance. The width of paved area leading in from Route 13 is 30 feet wide.

Peter said he is inclined to accept the idea of a phased road bond in Phase I so that this portion of the subdivision road can be finished and not left incompleated.

10:10 PM  
MOTION

Judy made a motion to allow "Elevations" to bond Phase I by itself with the stipulation that the conveyance of all lots in Phases II and III will be restricted until an adequate road bond is posted with the Town of Brookline. A letter to that effect will be recorded in the Hillsborough County Registry of Deeds. The completion date of the road in Phase I will be a maximum of one (1) year from today's date which is March 17, 1992.

Margaret seconded the motion. Yes vote-4. No vote-1 (Rich).

10:20 PM

Margaret made a motion to adjourn the meeting. Rich seconded the motion. Meeting stood adjourned by a 5-0 vote.

	Summit Lane	0+25 - 9+24.36	\$50,307.95	
	Subtotal		\$244,617.05	\$154,155.00
<b>Totals</b>			<b>\$882,936.60</b>	<b>\$532,447.95</b>

\* Note that this amount includes clearing and culverts for the entire site.

*Selectmen*

TOWN OF  
**BROOKLINE, NEW HAMPSHIRE**

P.O. Box 360  
Brookline, NH 03033

(603) 673-8855

**PLANNING BOARD MEETING**

April 7, 1992

**PRESENT:** Peter Webb, Chairman, Voting  
Rich Napolitano, Voting (left meeting at 9:00 PM)  
Judy Cook, Selectmen's Rep., Voting  
Joe Kaganski, Voting (joined meeting 8:15 PM)  
Bob Sykes, Alternate, voting for Chris  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

**7:35 PM Planning Board Business Meeting**  
Peter called the meeting to order. Roger and Lois Sylvia were present to discuss a conceptual idea for a breakfast and luncheon business at the present site of the Children's Creative Cottage at 22 Main Street, lot H-61. Mr. Sylvia said their plans were to serve lite-fare meals and provide cafe-style seating both inside and outside. Peter suggested they contact George Foley, chairman of the Z.B.A. to see if zoning would require a variance to open a restaurant at this location. Portions of this building have been used commercially but it also contains a private residence.

**7:45 PM Review minutes of March 17, 1992 PB meeting.** Page 2, Para. 1, Line 2, change to read: "Peter recommended that any transfer of conservation land be accompanied by a transfer of the ball field into an arrangement such as a deed with life tenancy, or a form of trust, which would become a condition of the subdivision approval because of the divergence from the original purpose of giving the entire lot K-66-20 to the town. He would like something to guarantee the town will eventually acquire the entire property." Peter made a motion to accept the minutes as amended. Rich seconded the motion. Vote yes 4-0.

**MOTION**

**7:53 PM Bonding/Phasing Issues**  
Bob Bramley was present to ask PB members to consider a phasing of the road construction bond for Mountain Road Estates, II and Birch Hill Estates II because they are not able to secure a bond for \$900,000.00 for the entire project. He suggested a road phasing plan similar to the Talbot-Taylor Estates or Elevations subdivisions. It would also be accompanied by a letter recorded at the Registry of Deeds restricting the sale of lots in any phase without a bond on the road. He said that they were having more difficulty securing a bond because the plans have not yet been recorded pending the posting of the bond.

Peter said the scope of this project is somewhat different than Talbot-Taylor due to the size of the project and the larger road system. After some discussion, Judy suggested that if the road construction could be phased so that either connector road (Birch Hl. Rd. extension to Westview Road [Side A]; or Birch Hl. Rd. extension to Mountain Road extension [Side B]) could join up with the existing sections of Birch Hill and Mountain Roads, it would be a better solution to the problem. After looking at the original 5-Phase plan as presented, PB members suggested this would be a more agreeable solution--each side having approximately the same amount of lots (23). The 3 cul-de-sacs could be built in a later phase. The Planning Board would record only the portion of the subdivision that was to be constructed. Bob said he would look into the possibility of doing this. He will come back to the PB for the May 5, 1992 meeting with a proposal.

**a) Review bond status of various subdivisions**

Tom Enright (Wallace Brook, II) and Eddy Whitcomb (Scabbard Mill Brook Road) have submitted letters of credit from the Milford Co/Op bank which have been sent to town counsel for review. Pending his favorable review, the moratorium on building permits in both subdivisions will be lifted and the Building Inspector notified that he may issue permits. PB will review the bond status of other subdivisions and the draft of a new Letter of Credit at the work session May 5th.

**8:20 PM  
MOTION**

On a motion by Chairman Webb, seconded by Bob Sykes, and duly recorded in the PB minutes, it was voted that two of Brookline's newest citizens be acknowledged-- Joseph Gerald Napolitano and Megan Elizabeth Kaganski. Congratulations were extended to PB members Rich Napolitano and Joe Kaganski and their wives on their new arrivals.

**8:25 PM**

**Election of Officers**

Rich put forth Peter Webb's name in nomination for Planning Board Chairman. Judy seconded the nomination. Vote was 4-0-1 Abstention (Peter) to elect Peter as Chairman.

Peter placed Rich Napolitano's name in nomination for Planning Board Vice-Chairman. Judy seconded the nomination. A 4-0-1 Abstention(Rich) vote elected Rich as Vice-Chairman.

**8:30 PM**

**Discuss upcoming Planning Board Cases**

Peter turned over the meeting to Jeremy who reviewed the agenda of upcoming cases for the April 21st meeting.

**Potential zoning projects for 1992**

a) Jeremy gave a brief talk on the feasibility of the PB studying an open-space zoning concept this year. He noted that such a change in the zoning results in less roads being built; provides for more open space areas in subdivisions; and allows for better use of unique parcels of land that might otherwise not be capable of being developed.

Rich reported on a commissioners' meeting at the Nashua Regional Planning Commission where Jeff Taylor from the Office of State Planning had explained the State's directive to require that better use be made of the state's remaining undeveloped land by better open-space zoning regulations.

Jeremy also addressed the issue of back-lot subdivision. A back lot accesses a town road via a shared driveway with the front lot. This means less road frontage is necessary.

Judy felt that the PB should address a plan joining as many short roads with the longer connector roads to make it easier to locate homes for emergency services.

#### Planning Board General Business

a) **Project Status**—PB members reviewed the March 25, 1992 letters from the selectmen requesting the PB conduct site plan reviews for the Don Ross property, 100 Old Milford Rd. -lot D-67; and the Field and Stream Trailer Park, 5 Dupaw-Gould Road, lot E-29. PB members discussed the selectmen's items of concern, and determined the Selectmen need to decide if these properties are in violation of the zoning ordinance. Joe said the PB is not responsible for ascertaining whether there are zoning violations; and a site plan does not cover nor correct a zoning problem. PB will inform the selectmen of their decision.

**Eddy Whitcomb, Scabbard Mill Brook Road** PB members reviewed a letter from Road Inspector Bill Duncklee estimating \$29,500 as the amount to complete the road. The Board of Fire Engineers wrote a letter approving the change of location of the fire pond. PB determined a corrected mylar showing the location of the fire pond and its easements with the signatures of the owners of the lots involved in the change, along with a signature block for the PB should be presented by Mr. Whitcomb for recording at the Registry of Deeds.

b) PB members will be assigned to new cases at the May 5th meeting.

9:45 PM Peter made a motion to adjourn the meeting, seconded by Joe. Meeting was adjourned by a 4-0 vote ( Rich had left at 9:00).

Next Planning Board Meeting Tuesday, April 21, 1992

Submitted by:

Sandra L. Fessenden, Secretary  
Brookline Planning Board

(603) 673-8855

*Selectmen*

**TOWN OF  
BROOKLINE, NEW HAMPSHIRE**

Brookline, NH 03033

PLANNING BOARD MEETING

April 21, 1992

**PRESENT:** Peter Webb, Chairman, Voting  
Richard Napolitano, Voting  
Joseph Kagenski, Voting  
Judy Cook, Selectmen's Alternate, Voting  
Christopher Hegarty, Voting  
Margaret Olson, Alternate, \*Voted for Rich on 2 cases  
Dennis LaBombard, Alternate  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

**7:30 PM** Planning Board Business Meeting  
**MOTION** Peter called the meeting to order. Minutes of the March 17, 1992 were reviewed. Rich made a motion to accept the minutes as written. Peter seconded the motion. Vote was 5-0 to accept the minutes.

**7:35 PM** David Farwell, 15 Lake Road-Case #1992-4:E-88 & E-90. David Farwell and Randy Haight of Meridian Land Svcs were present. Randy explained the plan would revise the common boundary line between the two lots- reducing lot E-88 from 81.0 to 15.929 A.; and increasing lot E-90 from 6.0 to 77.867 A. Jeremy said the plan meets all subdivision criteria for acceptance.  
**Abutters:** The only abutter present was Margaret Olson who voiced no objection.

**7:40 PM** Rich made a motion seconded by Joe to accept the plan as presented. Vote was 5-0 yes.  
**MOTION**

Jeremy questioned the property line between lot E-90 and the Janik's lot E-54. Randy explained that there was a line discrepancy in a previously recorded survey, but the line shown on Janik's deed reference was correct and had no bearing on this lot line adjustment plan as presented.  
**MOTION** Judy made a motion to approve the plan as presented subject to all fees being paid and a mylar presented for recording. Rich seconded the motion, which passed by a 5-0 yes vote.

\* (Rich stepped down from the Board for the following case and Margaret voted in his place)

7:48 PM Thomas F. & Ruth M. Moran, Case #1992-2:K-66-20.  
Tom Moran was present to address issues raised at the PB meeting of 3/17/92 as regards the ball field. He stated his immediate plans were to structure an entity to manage the ball field area (lot K-66-43); and to convey the remainder of the land in lot K-66-20 to the Town of Brookline for conservation and recreation use. Tom declared the land he was donating to the Town had never been made a condition for the approval of the Oak Hill Estates subdivision. He said he had voluntarily built the ball field which is now a public use park and will remain as such.

**Recollection Comments:**

Former Selectmen Peter Webb said it was his recollection that the idea of donating the land to the Town had been strictly Tom's own idea.

Former Selectman's Alt. to the Planning Board Nancy Brodeur said that the PB at the time was looking to protect some sensitive areas of land in town, this being one of them. During discussions regarding the conservation land, her concerns were answered by the label "Non-building Lot" being shown on the subdivision plan. She recalled during informal sessions Tom had said he would like to build a ball field on a portion of the land he was giving to the Town.

Former Conservation Commission Chairman John Osowski said that Tom had volunteered the land as a conservation area; and that he doesn't recall Tom being required to deed over the land at any specific time. He said it was always Tom's intent to give the land for conservation/recreation purposes and it was never a subdivision condition. The Conservation Commission was looking to acquire property to build trails. The two larger sections of K-66-20 were linked together by a narrow walkway.

Peter asked if this was ever included as a formal condition. Tom said nothing has been formalized. He had the lot line adjustment for Bill Ingraham's lot taken care of so that lot K-66-18 could be give to the Town along with the remainder of lot K-66-20. Peter said in researching the PB minutes of the subdivision for Oak Hill Estates, it appears that Tom volunteered to give the land to the Town although those intentions to do so were never formalized. Peter said the concern of the people at the last PB meeting was that the property might not ever be deeded to the Town. They were also concerned that drinking alcoholic beverages would become a part of the use of the ball field.

Tom said that the issue was not one of drinking, but rather one of liability. Part of the reason he does not want to turn over the ball field to the Town at this time is because the one incident that prompted the no drinking ordinance on all town property came in the interim between his planning the ball field project and the finishing of it. He noted that the ball field on Milford Street is primarily used by the children. He does not wish to have the ordinance applicable to the Oak Hill Road ball field which the adults will primarily be using.

Selectman Barbara Burckes said the Town had more than one issue at one location when deciding to impose the no drinking ordinance. Of concern were sanitation problems without bathrooms being available at the ball field and the boat launch area at Lake Potanipo.

Peter said the original approved plan calling for the entire lot to be given to the Town was not voided by segmented transfers. He felt that the conservation land could be deeded, and at the same time the remainder could be put into an irrevocable deed so that it will ultimately be deeded to the Town. He noted that nothing on the plan states the ultimate disposition of lots K-66-20 and K-66-43.

Rich asked if there couldn't be a trust created with people in Town to manage the use and maintenance of the field with the Town named as the beneficiary if the trust is unable to administer the care and operation of the field.

Tom said the Town is the ultimate beneficiary of the ball field. He is now merely looking for a vehicle to set up a group to manage it. He also said he would like the adult teams to have first priority of use on this field.

8:15 PM  
MOTION

Margaret made a motion to approve the subdivision subject to fees being paid and a mylar being presented.

Peter asked if there were any other concerns from anyone present tonight at the hearing.

Bill Duncklee asked if the subdivision would affect the access to the Conservation land from Oak Hill and Parker Roads. Tom said no, he had left 25 feet of access over dry land behind the ball park on which to walk.

Nancy Brodeur asked if the subdivision indicates the 2 lots are still labeled non-building. Answer is yes they are.

Joe Kagenski asked if there could be a time frame specified by Tom for turning the property over to the Town.

Tom said he is willing to stipulate the following: 1) within 30 days from approval (time required to prepare the deed) lot K-66-20 will be deeded over to the Town for conservation land. 2) If an entity to manage the ball field can't be established before 12/31/92, he will convey the ball field to the Town of Brookline at that time. If an entity (trust) is formed he will stipulate that if the conditions of the trust can't be upheld by the entity, the ball field will be given over to the Town to manage.

Judy suggested there be a note added to the mylar stating that lot K-66-20 is to be deeded to the Town. Margaret then amended her motion to add **Note #6** to read: **Lot K-66-20 is to be deeded to the Town of Brookline.** Judy seconded the amended motion. Vote to approve subdivision plan 5-0 yes.

8:35 PM Talbot-Taylor Estates Partnership, Case #1992-3:G-61-15 and G-61-26. Bob Bourassa and Randy Haight were present with the plans to divide two lots into 4. Randy said he had added the street numbers to the lots and revised note #6. Jeremy read Milner Wallace's evaluation of his site walk done today which states the Conservation Commission has no real areas of concern. Jeremy said there was no need to amend the road bond agreement regarding restricted lots since none of these lots would be involved.

8:40 PM Peter made a motion to approve the plan subject to fees MOTION being paid and a mylar presented for recording. Joe seconded the motion. Yes vote 5-0.

8:45 PM Murray Clayman, Case #1992-B:G-53-Non-residential Site Plan Preliminary Conceptual consultation. Mr. Clayman presented a site plan model scaled 1"-100" of Muscatanipus Hill. In phase 1 he plans to construct an indoor-underground 60'X120' building for a 25-yd. shooting range, employing 7 to 10 employees. In phase 2 he plans to have an outdoor facility with 1-25-yard and 1-50 yard range for silhouette, trap and skeet shooting, using earth berms to capture the bullets. He suggested the PB members visit the site so that they will be more familiar with the actual site elevations.

Peter asked how much sound was going to be heard at various locations in Town. Answer: it depends on the type of gun used and also the weather conditions. Mr. Clayman said the hill mass will absorb much of the sound.

Rich said this was a preliminary plan only. His concerns would be the use of abutting property. He noted that the outdoor range will be 700 feet from a proposed day care center on lot G-53-1. Mr. Clayman said he has a slope easement with exclusive use of the slope between his property and Eddy Whitcomb's (G-53-1). The indoor shooting range and stand for outdoor shooting is in the Industrial/Commercial zone. The house and back-stop area for the skeet and pigeon shoot is in the Residential/ Agricultural zone.

Judy asked about safety guidelines, and asked who monitors the facility.

Mr. Clayman said he and 4 other employees are N.R.A. certified instructors and there are N.R.A. inspectors who periodically check on the facility.

Peter said his concerns are the following:

- 1) volume of traffic
- 2) Quality of supervision
- 3) A commercial activity in a portion of the residential zone. may need to be addressed.

Peter suggested Mr. Clayman meet with the Board of Selectmen regarding the zoning issue.

Peter said he would like to see a commercial venture that will not negatively affect the neighboring properties. It was agreed that the PB members and Mr. Clayman will meet at the site at 9:00 AM on Saturday, April 25, 1992 to view area and listen to various types of guns being fired for sound levels in different areas in town.

9:55 PM **Jane Dwyer, "Children's Creative Cottage", Case #1992-C:6-53-1**  
Non-residential Site Plan Preliminary Conceptual consultation. Jane and Tom Dwyer were present with a preliminary sketch of modifications to the "Barnside" building to house her day care/kindergarten. Mr. Dwyer expressed some concerns as to the outdoor shooting range being proposed next door, and stated it might ultimately affect their plans to go forward with moving the day care to this site. Jane said the new location will double the present allowable number of children from 23 to 46. They plan to use the entire second story of the building—blocking off the third story which is used for storage. No one will be using the lower level. There will be a sprinkler system throughout the building; and an alarm system tied into MACC base. Handicap access will be provided to the building and rest rooms. The State Fire Marshall has visited the site and given them a list of health and safety requirements.

Peter asked if the structure is right for the use they are proposing. Applicants felt with modifications to the building it would be suitable for a day care.

Dennis asked to have better site plans presented, with the entire site shown; well and septic information included; and the fenced-in play area, parking, and access lanes shown.

Jeremy said the Dwyers should present full plans and make a formal application for site plan review. PB members agreed they could check the site on Saturday before the shooting demonstration.

10:15 PM **Beaver Wood Associates—Preliminary consultation for subdivision.** (Rich, a partner in Beaver Wood Assoc. stepped down for this case. Margaret sat as member in his place).

Joe Bourassa presented a conceptual plan for a 2 lot subdivision of the former William and Annie Quigley property on South Main Street. His plan showed a 2 acre parcel being subdivided as a house lot from the 31 acres, squaring off the lot lines as much as possible.

Judy asked what usage was planned for the "5-B's" seasonal campground area. Joe answered that they will continue to operate as a campground this year. He said there were 50-60 campsites equipped with electricity presently there.

Dennis questioned the existing use of the house lot; and whether the subdivision would create a problem for septic usage of the campground area by removing the 2 acres. He feels the soils of the entire property should be shown. It was noted there was also a permanent trailer on the site by variance, and this should be taken into consideration.

Rich Napolitano said he would like Beaver Woods to come to the Town with a site plan after the subdivision is done.

**Planning Board General Business**

Randy Haight presented corrected plans and a mylar for the Scabbard Mill Brook Rd. subdivision showing the fire pond location and associated easements for PB's signatures.

Tom Moran presented a letter to the PB requesting a building inspector be named for "Rock Ramond Estates" project; and a request to meet with the PB to discuss a newly prepared road bond estimate and Tom's plan to begin road construction. PB named Bill Duncklee as road inspector, and agreed to discuss road bond estimate at the May 5, 1992 PB meeting.

10:45 PM Peter made a motion to adjourn the meeting, seconded by Joe.  
MOTION Motion to adjourn carried by a 5-0 yes vote.

Next Planning Board Meeting Tuesday, May 19, 1992

Submitted by:

Sandra L. Fessenden, Secretary  
Brookline Planning Board

(603) 673-8855

*Selectman*

**TOWN OF  
BROOKLINE, NEW HAMPSHIRE**

P.O. Box 360  
Brookline, NH 03033

**PLANNING BOARD MEETING**

May 5, 1992

**PRESENT:** Peter Webb, Chairman, Voting  
Richard Napolitano, Voting  
Joseph Kagenski, Voting  
Christopher Hegarty, Voting  
Judy Cook, Selectmen's Representative, Voting  
Dennis LaBombard, Alternate  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

**7:30 PM Planning Board Business Meeting**

**MOTION** Peter called the meeting to order. Minutes of the April 21, 1992 PB meeting were reviewed. Peter made a motion to accept the minutes as written. Judy seconded the motion. Vote 5-0 yes to accept the minutes.

**7:35 PM Discuss Upcoming Cases**

Jeremy apprised PB members of a preliminary subdivision consultation with P. & C. Realty, N.R.P.C., and the Hollis Planning Board regarding a subdivision involving land in Hollis, and lots F-18, F-60, & F-118 in Brookline on the town line in the Rocky Pond Road area. P. & C. Realty has proposed a clustered development to the Hollis PB and the regional developers. Jeremy said since this is a large subdivision involving both towns, it becomes a regional impact issue coming under new state law R.S.A. 36:54-58. Proposed road access will be to Rocky Pond Road. Total acreage involved in Brookline is approximately 194 acres.

**7:47 PM Thomas F. Moran, "Rock Ramond Estates", Bond Estimate**

Tom Moran was present to discuss bonding for Rock Ramond Road. He asked to have the bond reduced to \$123,000, the amount of his contract with Tamchar. He plans to continue road construction work until the end of May without posting a bond. At this time he will place a cash bond for the amount of outstanding road work in order to obtain a building permit. Tom asked to have Bill Duncklee review the estimate from Meridian Land Services and the contract with Tamchar in order to correctly estimate the dollar amount of remaining work at the time of bond posting. Tom said he will ask to have monies released from the cash bond as work is completed. He noted there is gravel on-site which has lowered the cost of construction, although there may not be enough to do the whole project.

**8:10 PM Potential zoning projects for 1992**  
Projects considered for 1992 were "Open Space Zoning" and "Back Lot Zoning". Rich Napolitano had been to a seminar at U.N.H. regarding open space zoning, and had some material which will be copied for other PB members. Back lot zoning which requires less road building and maintenance for the Town while keeping density down, was discussed. It was decided to examine both of these concepts this year. Jeremy brought some reference material for this meeting, and will put together rough drafts for the June 2nd work session.

**8:30 PM Planning Board General Business**  
PB members discussed project status. Dennis and Chris mentioned items in the Bear Hill Assoc. and Serenity Homes subdivisions. Chris said there was damage done to the road surface by heavy construction equipment on Wadsworth Drive and Captain Seaver Road. There was also debris still along the sides of Captain Seaver, and the shoulders needed to be built up in some locations. Dennis said the water situation at the intersection of Senter Drive and Kodiak Road being caused by a natural spring still exists, and his concern was that permanent damage to the road is possible, and icing in the winter is still a problem. Pb will send a letter to the selectmen regarding these issues.

Joe apprised other PB members that Murray Clayman had applied to the Z.B.A. for a variance for the outdoor shooting range to be located in the Residential/Agricultural portion of lot G-53-1 upon the recommendation of the Board of Selectmen after his meeting with them. There was a brief discussion of the firing session held 4/25/92 to ascertain sound levels at different locations in town. It was noted that the sound carried as far as the Oak Hill Road section of town; while on Main Street it was less noticeable. There were no reports called in to the Police Dept. that morning regarding the demonstration.

PB will review assignments of members to new cases at the next work session.

**9:00 PM Bonding/Phasing Issues**

a) PB members reviewed updates of bond status in several subdivisions. Based on road inspector Bill Duncklee's estimate of the value of the work remaining to be completed, Eddy Whitcomb wrote a letter on 4/22/92 requesting a bond reduction to \$29,500.00 on Scabbard Mill Brook Road.

**MOTION** Rich made a motion, seconded by Joe, to recommend to the selectmen that the bond on Scabbard Mill Brook Road be reduced to \$29,500.00. Vote was 5-0 yes.

b) PB members evaluated the draft of the letter of credit. It was decided to change the wording in paragraph 2, line 2 to read: ".....by draft executed by the Chairman of the Town of Brookline Board of Selectmen which shall refer....."

9:10 PM  
MOTION

Peter made a motion to proceed to remove the existing letter of credit from the Subdivision Regulations and replace it with the new one. Rich seconded the motion. Yes 5-0 vote.

c) Joe asked to check with the Building Inspector to see if Certificates of Occupancy are part of the BOCA Building Code. If not, the PB should include a change for 1993 to add it into the Building Code section of the zoning ordinance to properly implement R.S.A. 676:13, Building Permits Restricted.

9:45 PM  
MOTION

Peter made a motion to adjourn the meeting, seconded by Joe. Motion to adjourn carried by a 5-0 yes vote.

Next Planning Board Meeting Tuesday, May 19, 1992

Brookline, NH 03033

PLANNING BOARD MEETING

May 19, 1992

PRESENT: Peter Webb, Chairman, Voting  
Judy Cook, Selectmen's Representative, Voting  
Christopher Hegarty, Voting (joined meeting at 8:00 PM)  
Margaret Olson, Alternate, voting for Rich  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

- 7:35 PM Planning Board Business Meeting  
Peter called the meeting to order. Minutes of the May 5, 1992 were reviewed. Judy made a motion with Peter seconding to accept the minutes as written. Vote was 2-0-1 Abstention (Margaret not at meeting) to accept the minutes.
- MOTION
- 7:40 PM Donovan Engineering, Case #1992-D:K-76. Non-residential Site Plan preliminary consultation. Mr. Bill Hession representing Donovan Engineering was present. He said plans are to add a 26' X 30' addition to the office building with no increase in the manufacturing facility at all. Jeremy had reviewed the plan with Mr. Hession and said he found no problems with the conceptual plan. Depending on the size of the addition, one more parking place might have to be added, but there was ample room available. Site plans are being drawn up and include a new well and septic system. When plans are ready they will make a formal application.
- 7:50 PM P. & C. Realty, Case #1992-6:F-18, F-60, & F-118.  
Mr. Francis Gavin of P. & C. Realty showed PB members a copy of their land survey of approximately 194 acres in Brookline and 56 acres in Hollis. He has met once with the Hollis PB and N.R.P.C. representatives and will meet again with the PB in Hollis on June 2, 1992. Mr. Gavin said his plans are to subdivide the land in Brookline into 50 to 75 lots and build starter homes. He is here tonight asking for some input from the Brookline PB.

Judy asked what kind of road system he was proposing, and where it would tie in with existing town roads. She said she was concerned with another large subdivision which would use Old Milford Road as the main connector road. She told Mr. Gavin of the recent traffic study on Old Milford Rd. and said the count was much higher than expected. Heavy usage was not confined strictly to the commuting hours. She also spoke of speeding problems and the group of citizens who have petitioned the selectmen regarding the situation.

Jeremy pointed out that a new road might possibly tie in with Birch Hill, II (between D-55-6 & D-55-7); or with Perkins Road, a private road, if the owner was agreeable. The PB could request P & C to provide future access to town owned Lot F-17 as well as other land-locked properties.

Mr. Gavin indicated that he did not have the road system entirely worked out at this time, and was looking for suggestions as to how best to proceed.

Peter said the plans as presented tonight are too unformed for the PB to make a good judgement. He told Mr. Gavin that a subdivision of this size will impact existing town roads and services; and recommended that he meet with the board of selectmen to discuss off-site improvements. Peter said that although Hollis has open-spaced zoning which Mr. Gavin is discussing with them, Brookline is just beginning to draft such a zoning change proposal. He suggested that it might be advisable for Mr. Gavin to wait until next year to subdivide if he wanted to be able to utilize the land in this manner. Mr. Gavin indicated that he was looking to subdivide this calendar year. Peter said that we should correspond with the Hollis PB regarding this subdivision; and the suggestion was made that since the Brookline and Hollis PBs meet on the same nights, it might be a good idea to hold a joint meeting with them and Mr. Gavin during the formative stages of this subdivision. Secretary to contact the Hollis PB.

8:10 PM

**Lorden Realty, Inc., "Elevations"-Phase I, Case #192**

**1) Review Revised Drainage Plans-Lorden Lane**

Alan Lorden and Bruce Archambault were present along with road inspector Bill Duncklee and road agent Clarence Farwell to discuss the road drainage. Mr. Lorden's engineer had recommended placement of an aboveground drainage swale along the right side going up from Rte 13 to divert water into the underground catch basins. Cape cod berm was still shown on the plan. Clarence voiced his opinion that closed drainage was a maintenance problem for the town and pointed to the 3 catch basins within 40 feet of one another at the junction of Lorden Lane and Rockwood Rd. He said the cape cod berms were unnecessary and he would prefer they not be installed.

Bill Duncklee had requested new drainage plans from Maynard & Paquette to correct the high groundwater problem. He had received a revised plan from Maynard & Paquette on 12/26/91. (This plan still shows placement of the center island.) Bill said any other changes are not on his set of plans, and he should have corrected ones. He said he must follow the plans as designed unless he is authorized differently by the PB.

Road contractor Bruce Archambault said he recommends putting drainage swales on both sides and also installing rip rap to control the water flow for the first 350' of road. He advocates installing the cape cod berms; and said they protect the edges of the road pavement from being broken as well as keeping water off the road surface. He feels they are useful and not a maintenance problem. He also noted that the diameter of drainage pipe has been changed from 12" to 15" where necessary.

PB member Margaret Olson said she would like to have the plans reflect the actual drainage system installed.

Peter agreed that the originally engineered plans differed because of on-site problems and the changes made to correct those problems. An excessive amount of groundwater has been encountered while building this road, necessitating changes.

Chris said he feels the plans should be re-drawn showing the drainage ditches on both sides and he would like to know what impact the swales will have on the berms. It is not clear what effect the changes made in Phase I will have on the drainage as originally designed for Phases II and III.

Clarence said he was concerned that the letter dated from Maynard and Paquette (see attached) indicated that they want to have the closed drainage system used in Phases II and III. He also feels that the road at the junction of the "t" should have adequate under drainage.

Peter reiterated that the PB was concerned that the road be built correctly so that it does not become a future problem for the town to maintain. The type of drainage system installed must be adequate to meet the conditions present at the site- rather than one formulated from engineering calculations. He said the PB may ask for an independent engineering review to be made if they feel it is warranted. Peter made the following recommendations to Mr. Lorden:

- 1) Have Maynard & Paquette contact Clarence Farwell to discuss the closed drainage and cape cod berms.
- 2) Have M. & P. draw up new plans reflecting all the field changes that have been made to the road profile plans.
- 3) Have everyone come back to the PB on June 2, 1992 for a discussion and PB authorization/and or review request for any and all changes. PB will want to know how changes in the drainage plans for Phase I will affect the drainage in Phases II and III.

9:00 PM 2) Road Bond-Phase I, Lorden Lane  
Bill Duncklee had prepared an estimate of \$108,447. as the amount of bond the town should require to finish the road in Phase I. He noted that there was no itemized breakdown on Mr. Archambault's estimate of \$40,000. Bill was happy to discuss the figures he used to compute his estimate, adding also 10% engineering & contingency fees.

Peter explained that the town must have a figure adequate enough to finish the road to road specifications in the event Mr. Lorden or Mr. Archambault were not doing the work. Mr. Archambault said that \$40,000. was his quote to Mr. Lorden, and agreed that the amount would be different if someone else were contracted to do the same work.

Peter said he feels comfortable with Bill's estimate, until more itemized figures can be substantiated from Mr. Lorden.

Alan Lorden questioned if he posted a bond for \$50,000. could he have a building permit for one lot, and not ask to have an occupancy permit granted. Peter explained that he could not get any building permits, even with a bond posted, until the road inspector had written a report saying the road was at sub grade. He advised Mr. Lorden to continue road construction to bring it up to the sub grade level. Bill Duncklee then gave Mr. Lorden an approximate figure of \$54,000 to \$60,000. (depending on whether the berms for \$6,000 were required) as the amount to post for the road bond to finish Lorden Lane in Phase I.

9:15 PM Tom Moran, "Rock Ramond Estates"-Bond Estimate-  
Tom Moran said Bill Duncklee had checked the road today and approved it for sub grade level. Bill will compute the value of the remainder of work and write up an estimate for the road bond. Tom will come back to the PB on 6/2/92.

Fresh Pond Realty, "Mountain Road Estates, II" & "Birch Hill Estates, II"-Discussion of Phasing plan for recording and road bonding.

Tom Moran and Bob Bramley were present to ask if they could amend the sequence of the phasing plan the PB had approved on 8/6/91 (see attached) to the following:

- 1) Yellow-Phase 1 [formerly Phase 2] (2,000 feet of road; 10 lots) all clearing of trees and stumps will be done for entire road system in this phase.
- 2) Green-Phase 2 [formerly Phase 1] (2,900 feet of road; 12 lots)
- 3) Blue-Phase 3 [formerly Phase 3] [Phases 4 & 5 remain the same]

MOTION Margaret made a motion to amend the sequence of phasing approved on 8/6/91 to reflect the above phases. Judy seconded the motion. Vote 4-0 yes.

Tom asked if they could phase the bond in order to record the plan. Jeremy noted the road bond for Phases 1,2 & 3 was \$550,000. They would be adding 2,000 feet to Mountain Road.

Peter referenced the 8/6/91 PB minutes that specified the entire road system would have to be bonded before recording the plan. He said he was concerned with the length of Mountain Road if the next phase weren't completed. Judy said she agreed with Peter, and suggested they build Mountain Road and reduce the amount of bond in the other 4 phases. She said she favored a plan for completing the long connector roads in each phase rather than only a section of each one. Tom will consider this, but says he needs the plan recorded in order to get the approval from the Attorney General's office.

Carnell Baker did not show up for the meeting.

9:45 PM

**Planning Board General Business**

Clarence reported on the items in the May 11, 1992 PB letter to the selectmen. He said Continental Paving had damaged Wadsworth Dr. and ~~Captain Seaver Rd.~~ He had contacted them and they will repair the roads. He said the road debris and the shoulder work needed on ~~Center and Rediak Roads~~ was <sup>CAPTAIN SEEVER, WADSWORTH, and Bear Hill R</sup> Michael Tamposi's responsibility. Clarence will work up a dollar amount to complete the work and will tell Rena to notify Mr. Tamposi.

Peter said the situation has existed long enough. He would like the selectmen to call the bond and get the project finished as soon as possible.

10:00 PM  
MOTION

Chris made a motion to adjourn the meeting, seconded by Peter. Motion to adjourn carried by a 4-0 yes vote.

Next Planning Board Meeting Tuesday, June 2, 1992

**PLANNING BOARD MEETING**

June 2, 1992

**PRESENT:** Peter Webb, Chairman, Voting (on review of minutes only)  
Richard Napolitano, Voting  
Joseph Kagenski, Voting  
Judy Cook, Selectmen's Representative, Voting  
Dennis LaBombard, Alternate, Voting for Peter  
Margaret Olson, Alternate, Voting for Chris  
Bob Sykes, Alternate  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

**7:30 PM** Planning Board Business Meeting  
Peter called the meeting to order. Minutes of the May 19, 1992 PB meeting were reviewed. Amend Page 5, 9:45 PM, Paragraph 1, beginning with sentence 2 to read as follows: "He said Continental Paving had damaged Wadsworth Drive. He had contacted them and they will repair the road. He said the road debris and the shoulder work needed on Captain Seaver, Wadsworth, and Bear Hill Roads and Mc Daniels Dr. was Michael Tamposi's responsibility. Clarence will....."  
**MOTION** Judy made a motion to accept the minutes as amended above. Peter seconded the motion. Vote 5-0 yes to accept the amended minutes.  
Peter announced he had to leave the meeting at this time. Vice-chairman Rich Napolitano chaired the rest of the meeting from this time.

**7:45 PM** Lorden Realty, Inc., "Elevations"—Alan Lorden was present with Richard Maynard, P.E. of Maynard & Pacquette and Bruce Archambault, road contractor for Lorden Lane. Road inspector William Duncklee and town road agent Clarence Farwell were also present. Mr. Maynard presented new plans for the open drainage system on Lorden Lane up to the intersection of Rockwood Road. He has designed open swales on both sides of the road. Driveways will have 12" r.c.p. culverts. The swale will be 2 1/2" below the pavement grade. He has adjusted some of the grades, raising them to lessen the amount of gravel having to be removed. There is no curbing (cape cod berms) now in the entire project. The pavement at the entrance to Route 13 is 29' wide. He said with the PB's permission he will design a hammerhead turnaround at the end of Rockwood Road. PB agreed to this change. He also asked if the second fire pond is needed. PB members referred Mr. Lorden to fire chief Ray Keyce to see if the fire engineers

*Amended 6/16/92  
\* 2 1/2' (Feet)  
SLF*

would be willing to delete it. Dennis then asked if this second pond was a detention area as well as a fire pond. Mr. Maynard will check his figures. He thinks a detention pond will be needed. However, no hydrant will be placed.

Rich asked if an open drainage system will work as well as the closed system originally designed for this project. He related that the PB was told during the review process that a closed system had been designed for this project because of the steep slope and the velocity of water on that slope. He asked Richard Maynard what had changed his mind; and questioned whether the open drainage system is more apt to fail than the closed system.

Mr. Maynard said his preference would be the closed drainage system, but the town seems to want to have open drainage for maintenance reasons. He said this new design will work equally as well as the closed system. He said the only area of concern is the entrance road, and he has designed steep stone-lined swales which he feels will adequately control the velocity of water. He said it will however take more work to stabilize the slopes; and it will take a couple of years for the vegetation to become established.

**MOTION**

Rich made a motion to refer the changed drainage plans and related items to an independent engineering firm for review due to the complexity of the original drainage design and the long review process. Margaret seconded the motion.

Discussion: Rich said he was on the PB during the review and approval process. The drainage calculations had been a problem during the review period. He said he is not a civil engineer, and it is his feeling that it is beyond the scope of the PB members to evaluate drainage calculations. He is asking for an independent review of the changes in the drainage to substantiate what is being presented tonight.

Judy said she felt the new system will be adequate, and stated she had been to the project this past week after heavy rains, and found there was no overflow problem.

Margaret said she felt uncomfortable making a decision tonight on the new drainage since the drainage plan has been radically changed.

Dennis said the total water in the retention pond would not be affected by either a closed or an open drainage system. He said he had concerns with the 2 to 1 side slopes and the stability of the slopes because of a 24 foot drop in the swale. He stated the methods of designing the rip rap were very important; and he felt a change in design of this magnitude might well trigger the PB to ask for an outside engineering review. There were a number of items that he felt should be looked at.

Richard Maynard said they were trying to satisfy the town with this design. He has a preference to pipe drainage, and said if there is a controversy, he would withdraw this plan and go back to the original closed drainage system for which the project has been granted PB approval.

Clarence said he prefers open drainage because of the economy of maintenance for the town. We use sand and not salt on our roads; and maintenance of a closed system is costly. He mentioned several projects built in the last few years having no difficulty with open drainage systems on roads with grades of 8 to 10%. Potanipo Hill Road was mentioned as having problems in the beginning; but road inspector Bill Duncklee said that now that the drainage swales were stabilized the open drainage was working satisfactorily on that steep of a road grade. If the road is built correctly, open drainage will work as well if not better with steep grades and high volumes of water.

Tom Moran, a P.E. present in the audience, said that open drainage provides better hydraulics; water velocities are reduced; and problems are not magnified downstream when the system is correctly designed with appropriate rip rap and stone-lining used in the ditches.

Rich said it is not his intention to drive up the costs for the project, but he wants to be sure that the PB is doing the right thing for the town's long-range benefit. He said if it weren't for the steep slope, he would not have a problem with the open drainage.

Alan Lorden spoke to the fact that the town has roads of the same grade with open drainage which is working. He said that he would be better off going with the approved plans if it means a time delay and the expense of another review.

Joe said that roads with identical grades can have water flows which may not be the same. He favored a review of the new drainage plan.

Bruce Archambault said he had visited sites with Clarence to see roads with steeper grades built with the open drainage. He and Mr. Lorden had then asked Maynard & Paquette to draw up new plans for an open drainage system in Phase I.

**MOTION**

Rich at this point withdrew his original motion, and made a new motion to refer this plan to Meridian Land Services, Inc. for a review of the proposed open drainage system on the balance of Lorden Lane in Phase I, specifically checking the size of stone and rip rap used in the drainage swale from Sta. 3+00 to approximately Sta. 7.62. Margaret seconded the motion. Motion carried by a vote of 4-Yes [Rich, Dennis, Joe, Margaret] 1-No [Judy].

Mr. Lorden was told to continue work on the road up to the area of changed drainage; and return to the June 16th PB meeting.

**8:35 PM Tom Moran, "Rock Ramond Estates"--Road bond review.**  
Tom Moran was present to discuss Bill Duncklee's letter of May 21, 1992 estimating the cost to complete Rock Ramond Road to be \$114,500.

**MOTION** Rich made a motion to set the bond amount for Rock Ramond Road at \$114,500. Dennis seconded the amount. Vote 5-0 yes.

Tom asked if the Chairman of the Board of Selectmen Russ Heinselman could be authorized to release monies from the cash bond on a letter of recommendation from Bill Duncklee without having to come back to the PB. It would be a more expedient method of releasing funds, and had been previously done for another subdivision road project for Tom Enright.

Rich answered that Enright's had been a special case. The PB's procedure was to continue to have involvement in the incremental release of bond funds.

**MOTION** Judy said Mr. Enright's case was a little different in that his road had the first coat of pavement in place and all that remained was the second coat of asphalt and minimal finishing touches. She made a motion to appoint chairman of the PB Peter Webb to sign off on the reduction of bond with a positive recommendation of road inspector Bill Duncklee, effective only on the "dirt" phase of the road and not the "tar" phase. Rich seconded her motion.

Dennis said he felt the PB is going to set a precedent with this procedure which in the future will not be limited to the "dirt" phase.

Margaret said that a change of policy should apply to everyone. She said policies should provide checks and balances to the system; and was not in favor of changing the established policy without discussing its pros and cons.

Motion was defeated by a vote of 3-No [Rich, Joe, and Margaret]; 2-Yes [Judy and Dennis].

Tom restated his position that his plan was to have the road finished by the end of June; and he did not want to have a delay of payment of 2 to 3 weeks to the contractor building the road. He said he was not asking for special favors since the PB had made a similar previous arrangement.

Rich said he feels that the procedure the PB has in place serves a function as a check and balance system during the road construction phase. He recommended the PB review the bonding procedure in a conceptual way at the next business meeting.

Bob Sykes said he feels that the PB may want to address the present bond release procedure. They could rely on their appointed engineer's written opinion and devise a more timely method of releasing funds.

**9:10 PM Potential zoning projects for 1992**

PB members and Jeremy reviewed the letter from Building Inspector Wes Whittier regarding his suggested changes to the Building Code (see attached). Jeremy said he had discussed them with Wes and they were minor clarifications except for the addition of a section to address Certificates of Occupancy. PB members questioned the criteria needed for a "temporary" C.O. Jeremy will check with Wes.

Jeremy discussed his memo on open space zoning. Issues mainly focused on frontage, setbacks between houses, and wells and septic systems-individual and combined. Jeremy will research open space ordinances in other towns comparable to Brookline for the next business meeting.

**10:00 PM** PB members discussed at length the May 18, 1992 letter from the Board of Selectmen regarding some suggested changes to the zoning ordinance. They felt the "in-law" apartment needed to be examined. Rich made a motion, seconded by Judy to instruct Jeremy to research "In-law" apartments for a possible zoning change. Yes vote 5-0.

**MOTION**

Judy said two other items, definitions of "housekeeping unit" and "Home Business" would help the selectmen in the enforcement of the zoning ordinance.

**10:55 PM** Bob Sykes, a Brookline representative to the Nashua Regional Planning Commission, reported on recent meetings dealing with the possible location of a new commercial airport. Suggested locations have been either at Fort Devens or Gardener, Mass. Bob said that at a May 20, 1992 meeting of the N.R.P.C. & South West Regional Planning Comm. it was reported that there would be an 18 month review conducted before a report recommending a site would be forthcoming. He will keep the PB informed on this and other issues at regular PB work sessions.

**11:10 PM** Rich made a motion to adjourn the meeting. Joe seconded the motion. Affirmative 5-0 vote to adjourn.

COPY

TO: Planning Board  
FROM: Wesley N. Whittier *WNU*  
DATE: June 2, 1992  
SUBJECT: ZONING BYLAW REVISIONS

I. ARTICLE XX: Brookline Building Code

2. Add "which is deemed to be installation of footing and foundation" to read "Such permits shall expire and become invalid if construction, which is deemed to be installation of footing and foundation, has not started within six (6) months from the date of issuance."
  
4. C. Add "as amended" to read "In determining good building practices, the BOCA and CABO Building Codes, as amended, shall be used as a standard."
  
4. D. Add new section to read " No building or structure erected or altered as specified in a Building Permit issued under the terms of this Ordinance shall be occupied or used, as a whole or in part, until a Certificate of Occupancy has been issued by the Building Inspector. A temporary Certificate of Occupancy may be issued for a building or structure or any part thereof before the entire work covered by the permit shall have been completed provided the Building Inspector deems life or public welfare shall not be endangered by the occupancy."

TOWN OF  
**BROOKLINE, NEW HAMPSHIRE**

P.O. Box 360  
Brookline, NH 03033

PLANNING BOARD MEETING

June 16, 1992

**PRESENT:** Peter Webb, Chairman, Voting  
Rich Napolitano, Vice-chairman, Voting  
Joe Kagenski, Voting  
Christopher Hegarty, Voting  
Judy Cook, Selectmen's Representative, Voting  
Dennis LaBombard, Alternate (voting for Peter on the  
6/2/92 minutes)  
Margaret Olson, Alternate,  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

**7:30 PM** Planning Board Business Meeting  
**MOTION** Peter called the meeting to order. Minutes of the June 2, 1992 PB meeting were reviewed. Dennis noted a change to be made on Page 1, 9th line from bottom to read as follows:  
"swale will be 2 1/2' (feet) below the pavement grade."  
Peter made a motion with Judy seconding it to accept the minutes as amended. Vote 5-0 Yes.

**7:42 PM** **Bob Bramley, "Rock Ramond Estates", Bond Reduction-**  
Peter told PB members present that he and Rich had met with the selectmen and Bob Bramley on June 8, 1992 regarding the procedure for reducing the road bond. Peter said he would recommend a review of the PB's procedure in light of this meeting. He said he believes the PB can address the road bond reduction issue on a case by case basis without jeopardizing the procedure the PB now has in place.  
**Margaret** was not adverse to a change, but she felt any change of the present procedure should apply to everyone.  
**Rich** said he felt it was important for the PB to still be involved in the final phase of the road's construction.  
**Judy** agreed the PB should be involved in the final phase; but that in the stages up to the subgrade stage, the amount of bond reduction could be left up to the road inspector's determination after his on-site inspection and report.  
**Joe** agreed that early on in the road's construction process the PB may not need to be involved; but he felt all items should be checked by the PB members assigned to the case.

Bob Bramley questioned why a once a week bond reduction is an unreasonable request. He stated he did not understand the PB's reluctance to change the procedure to expedite the release of funds. He said the developer was paying for the road inspection and report necessary to estimate the dollar

amount before bond money is released. Bob stated he felt that waiting two to three weeks after an inspection for release of funds was unnecessary. Peter said the frequency of bond reduction requests will also mean more frequency of inspections and therefore less chance for items to be missed.

Discussion followed as how best to determine the percentage amount of the total bond in each stage of road construction. Bill Duncklee told PB members that an itemized list could be drawn up prior to the beginning of construction. He could estimate the percentage of cost for each segment as he reviews the estimate for the total amount of bond required. He also said that there was a standardized engineer's inspection checklist which he could have available for the PB to review in approximately 1 week. He now maintains a spreadsheet on each of his projects to keep track of the project's progress. He is willing to provide the PB with a copy of these spreadsheets for their review; and feels that a workable system can be developed as we go along. PB members were agreeable to allowing a change in the road bond reduction procedure for the beginning construction phases up to the "subgrade" level based on a recommendation from the road inspector to the selectmen.

Clarence Farwell mentioned to PB members that the town has a road bond estimate prepared before each project is started. This estimate is reviewed by the town's road inspector and then approved by the PB. The town holds 10% of that amount as a maintenance bond at the end of construction. The bond cannot be dropped below that 10% level. He added that not all projects have high expense prior to the subgrade level. Each road is different depending on the terrain being built upon. He suggested we contact other towns to see how they handle reducing bonds.

8:30 PM  
MOTION

Peter offered the following as a motion:

- 1) Have Bill Duncklee develop and maintain a spreadsheet program and an inspection checklist for keeping track of work for each road project.
- 2) The road inspector will work as the PB's designee for reduction of bond for road construction up to the subgrade level.
- 3) The Planning Board will authorize the Selectmen's representative to the PB to act as their designee for the reduction of road bonds upon recommendation and approval of the project's road engineer. This authorization extends up to the "subgrade" level of road construction only.

Vote was 3-Yes (Peter, Rich, and Judy); and 2-No (Chris and Joe). Motion passed.

Bill then presented PB members with a letter recommending a reduction of bond to \$67,851.00 on Rock Ramond Road.

**MOTION** Rich made a motion to accept Bill Duncklee's bond reduction amount. Judy seconded the motion. Vote was 5-0 yes to reduce the bond to \$67,851.00

**8:45 PM** Lorden Realty, Inc., "Elevations"-Phase I, Case #192

**1) Review Revised Drainage Plans-Lorden Lane**

Alan Lorden and Richard Maynard were present to discuss with PB members the review of the open drainage system in Phase I of Lorden Lane prepared by Gerard Gagne of Meridian Land Services, Inc. Rich said he had spoken with Gerry who was satisfied that the open drainage as designed would be adequate to control the amount of water flow. Bill Duncklee mentioned Gerry's recommendation of a silt screen to be placed under the rocks within the drainage swales, and asked that the engineer provide him a sketch of its location and the placement method to be used.

**MOTION** Judy made a motion to approve a revised plan for the open swale drainage; including the establishment of a hammerhead turn around at the end of Rockwood Road instead of a cul-de-sac. Plan will also eliminate the island at the junction of Lorden Lane and Route 13, retaining the balance of road width shown in the road specifications. PB will require a sketch for erosion control fabric and installation details for rip-rap. All previous conditions of subdivision not inconsistent with the above shall remain.

Margaret seconded the motion. Affirmative 5-0 yes.

**2) Lorden Realty, Inc.-Lot Line Revision, Case #1992-7:J-17-16, J-17-17, J-17-19, J-17-23.**

Mr. Lorden and Richard Maynard presented PB members with a plan for lot line adjustments to common lines between lots J-17-16 and J-17-17 (done at the request of new owner); and lots J-17-19 and J-17-23 (done to rotate the frontage of these two lots to Rockwood Road). New test pit (TP #100) for lot J-17-19's septic system has been sent to the state. Jeremy said the plan meets the subdivision regulations. It was noted that new street numbers will be required.

**MOTION** Peter made a motion to accept the plan as presented, seconded by Rich. Vote to accept plan 5-0 yes.

**MOTION** Peter made a motion to approve the plan with the following conditions to be met:

- 1) State septic approval for lot J-17-19
- 2) Fees Paid
- 3) Mylars presented for recording
- 4) New street numbers

Chris seconded the motion. Vote was 5-0 yes to grant approval with above conditions to be met.

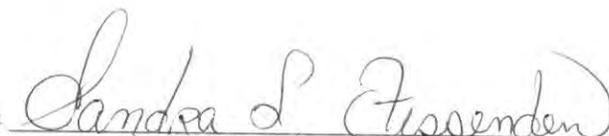

9:05 PM Discussion of 1992 Proposed Zoning changes  
Jeremy presented PB members with a packet of information he has put together on the 1992 proposed zoning changes. He suggested members read it over and be ready for discussion at the work session July 7, 1992. Tonight's conversation centered on Open Space zoning. It was agreed that more research is needed regarding the density formula to be used. Also to be determined: 1) How to tax the common-owned open space ( will current use taxation rates be allowable ? ); 2) How taxation of smaller sized building lots will be handled; 3) How ownership of the open space land will be set up.

Margaret agreed to research the definitions of "Family" and "Housekeeping Unit" for the work session on July 7th.

10:20 PM Peter made a motion to adjourn the meeting. Rich seconded the motion which passed by a 5-0 yes vote.

Next Planning Board Meeting Tuesday, July 7, 1992

Submitted by:

  
Sandra L. Fessenden, Secretary  
Brookline Planning Board

(603) 673-8855

*Selectmen*

TOWN OF  
**BROOKLINE. NEW HAMPSHIRE**

P.O. Box 360  
Brookline, NH 03033

PLANNING BOARD MEETING

July 7, 1992

PRESENT: Peter Webb, Chairman, Voting  
Richard Napolitano, Voting  
Joseph Kagenski, Voting  
Barbara Burckes, Selectmen's Alternate, Voting  
Chris Hegarty, Voting  
Margaret Olson, Alternate  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

- 7:30 PM Planning Board Business Meeting  
Peter called the meeting to order. Minutes of the June 16, 1992 PB meeting were reviewed.
- MOTION Rich made a motion to accept the minutes as written. Joe seconded the motion. Vote was 4-0-1 Abstention (Barbara not at the 6/16/92 meeting) to accept the minutes.
- 7:40 PM "Rock Ramond Estates"-bond reduction request. Road inspector Bill Duncklee was present with a report dated 7/7/92 which would reduce the road bond by \$10,200. He had also prepared a report on 6/22/92 for bond reduction of \$20,241.00 which the PB would be reviewing at tonight's meeting. Discussion established that the beginning road bond figure was estimated at \$174,190, from which a 10 % maintenance bond will be held.
- MOTION Peter made a motion to reduce the bond by \$20,241.00 as recommended in Bill's 6/22/92 report. Chris seconded the motion. Vote 5-0 yes.
- MOTION Barbara made a motion to reduce the road bond by \$10,200. as recommended in Bill's report of 7/7/92. Chris seconded the motion. Affirmative 5-0 vote.  
A letter will be written to the selectmen recommending they reduce the bond by a total of \$30,441.00.
- 7:50 PM Plans for the drainage changes on "Elevations" subdivision were reviewed and signed. Bill Duncklee received a revised signed copy as road inspector.
- 7:55 PM William & Kathleen Murphy and Thomas F. Moran/Rock Ramond Estates Trust, "Rock Ramond Estates", Lot line adjustment, Case #1992-5:E-22-8 and E-22-9.  
Mr. & Mrs. Murphy were present with a plan to adjust the common boundary line between their lot E-22-8, and Thomas F.

MOTION Moran's lot E-22-9 to make lot E-22-8's size 160,000 square feet which will allow a two-family home to be built. PB members reviewed the septic test pit data to make sure that there wouldn't be a problem on either lot. Peter made a motion to accept the plan as presented with Rich seconding the motion. Yes vote 5-0 to accept the plan.

MOTION Barbara noted that the plan showed the boundaries were not as yet set; and the location change in the back boundary pin was to be set. She asked that the PB check to see that the bounds are all correctly set within one month from today.

MOTION Chris made a motion to accept the plan as presented subject to all fees being paid and a recording mylar being presented. Barbara seconded the motion. Yes vote 5-0.

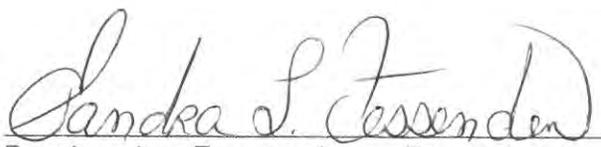

8:05 PM **Review of proposed zoning changes.**  
PB members discussed Jeremy's memo of 6/16/92 relative to the "open space" zoning and what the purpose such zoning would serve and what problems might be encountered. The following was a list of potential difficulties to be addressed:

- 1) Septic-Individual and community systems.
- 2) Water- State requirements for water and well placement for community systems.
- 3) Affordable housing-does this zoning address the issue?
- 4) How to properly assess and tax property with open space zoning.

A discussion followed as how best to incorporate this type of zoning into the present zoning ordinance. Jeremy will check similar open space ordinances in other towns. He will also check with attorney Peter Bennett, who is both familiar with setting up home owner associations as well as dealing with the associated property tax issues, to see if he can come to the PB work session in August.

10:05 PM Rich made a motion to adjourn the meeting. Joe seconded the motion. Affirmative 5-0 vote to adjourn.

**Next Planning Board Meeting Tuesday, July 21, 1992**

Submitted by:

PLANNING BOARD MEETING

July 21, 1992

**PRESENT:** Peter Webb, Chairman, Voting (joined meeting at 8:05 PM)  
Richard Napolitano, Vice Chairman, Voting  
Joseph Kagenski, Voting (joined meeting at 8:00 PM)  
Judy Cook, Selectmen's Representative, Voting  
Chris Hegarty, Voting  
Margaret Olson, Alternate, Voted for Joe till 8:00 PM and  
voted for Rich on Beaver Woods Associates)  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

**7:30 PM** Planning Board Business Meeting  
Rich called the meeting to order. Minutes of the July 7, 1992 PB meeting were reviewed. Page 2, paragraph 3, was amended to read: "Chris made a motion to approve the plan as presented.....".

**MOTION** Chris made a motion to accept the minutes as amended. Margaret seconded the motion. Vote was 3-0-1 Abstention (Judy not at the 7/7/92 meeting) to accept the minutes.

**7:35 PM** Alan Lorden, "Elevations"—Alan Lorden was present with a letter from road inspector Bill Duncklee (see attached) estimating the value of the remaining work to be \$65,279.00 for Phase I of Lorden Lane. Bill also stated that the road was at sub grade up to station 6+00.

**MOTION** Margaret made a motion, seconded by Judy to accept Bill's estimate of \$65,279.00 as the amount needed for the road bond; and to accept the road to station 6+00 as being at sub grade. Vote was 4-0 yes. Mr. Lorden will post a bond in the amount of \$65,279.00 with the Town of Brookline.

**7:40 PM** Bob Bramley, "Rock Ramond Estates" —Bob was present with a letter from Bill Duncklee stating the work completed; and recommending that the bond be reduced to \$17,419, the 10% amount required to be held for the maintenance bond.

**MOTION** Judy made a motion seconded by Margaret to recommend to the selectmen that the bond be reduced to \$17,419.00. Vote was 4-0 in the affirmative.

Bob asked if the PB would be willing to reduce the maintenance bond to 10% of the actual construction cost. PB members would like to confer with Bill before changing the maintenance bond amount. PB will ask Bill to come to the work session on August 4th to discuss this proposal.

7:40 PM Roy F. Greenwald, Donovan Engineering & Construction Co., Inc. N.R.S.P. Case #1992-D:K-76. Roy Greenwald was present with Jim Edwards of Meridian Land Services with plans for the construction of a 1,103 sq. ft. addition to the office building. Jim said they have state approval for a new septic system. Access off from Route 13 and the parking lot area will remain the same. Jeremy said it meets all checklist criteria. Rich asked if heavy trucks going over the new septic system to the loading dock area would damage it. Jim said the system is designed to have heavy trucks travel over it. It will handle 975 gallons per day, sufficient for use by 30 people. There will be 14 people in the office and 2 to 3 in the shop. Rich asked if there would be a gravel drive over the septic system for the parking area. Answer was yes. There were no abutters present.

MOTION Margaret made a motion to accept the plan as presented. Judy seconded the motion. Yes vote 4-0.

Chris made a motion to approve the plan as presented subject to all fees being paid. Judy seconded the motion. Vote was 4-0 yes to approve the plan.

7:55 PM Murray L. Clayman, "Great Bear Range", N.R.S.P. Case #1992-B:G-53 Owner Murray Clayman and Sue Robinson were present with Jim Edwards of Meridian Land Services with plans for an indoor firing range and future outdoor firing and trap and skeet ranges. Rich explained the site plan review procedure for those in attendance, and said the certified notice of hearing is sent to direct abutters for the first PB meeting only—they must read the agenda or paper for continuations. Citizen Bill Chapman asked how the proposal could be removed from the PB's review consideration. Chairman Peter Webb, who had joined the meeting at this point, said Mr. Clayman could request removal of the plan from PB site plan review consideration; but if the plan meets all the PB's submission requirements, the PB must hear it for review. Jeremy explained his part in helping to assure that plans are in the proper format with all required information for the PB's public hearing review meeting. It is then up to the PB members to consider the substance of the proposal after they vote to accept the plan for review. Jeremy said this plan meets the checklist requirements, and ran through the checklist for those in attendance. He said state septic approval is still pending. He did suggest that a notation be added to the present plan indicating the location of the aquifer at the beginning of the access road along Route 13. Joe suggested that lot number G-53 be added onto the plans. Jim Edwards then presented the 2-phase plan. Phase 1 calls for an indoor firing range housed in a 60 foot by 150 foot commercial building to be built into the hill. The rear of the building will be 2 feet above the grade of the hill. The septic system servicing it will be located behind the

present Barnside building. (This will also be the proposed location of the trap skeet range.) A visual barrier of trees will be planted in this vicinity along the property line of G-53-1. Jim explained the drainage system designed to divert the ground water runoff to an existing box culvert under Route 13. The lower portion of the driveway off Route 13 will be 24 feet wide and built to town specifications (a note will be added to the plan to this effect), and serve as the access to the commercial building. It will narrow down to 20 feet in width in the parking area located to the left of the building; and narrow down further as it becomes the driveway to Mr. Clayman's house. Utilities will be placed underground (a note will be added to the plans to this effect). A sign will be placed at the entrance on Route 13 will which comply with Brookline's sign ordinance. Phase 2 will include a trap skeet range and 2 outdoor firing ranges.

8:30 PM Peter asked if the plan has sufficient data to warrant PB acceptance. Jeremy said he felt it has.  
MOTION Peter made a motion to accept the plan as presented. Rich seconded the motion. Vote to accept 5-0 yes.

Rich asked how many rounds could be fired at a time during peak usage. Mr. Clayman answered there was a maximum of 5 shooters at 1 time on the trap range, and it took between 15 and 30 minutes to fire a complete round. He estimated 125 rounds per 15-30 minute period of time.

On the outdoor firing range there was no way to gauge how many rounds would be fired. It depended on the shooter and the type of gun being used. He could not determine the total number of stations until the range is built. He estimates the range will be 50 meters wide; and there is usually 4 to 5 feet between each shooter. Rich asked about noise from operating equipment or loud speakers. Murray said that individual speakers would be located behind the shooters. This would produce less noise than 1 loud speaker system. Only a conversational tone would be necessary to tell the trap skeet attendant to release the skeet. Even someone wearing hearing protectors would have the ability to hear normal conversation tones Sue Robinson explained. She said sound is muffled but not deadened. Murray said there is no operational equipment that would produce loud noise. Rich asked about the design of the backstop at the outdoor firing range. Murray said that there would be a backstop made of sand 12-15 feet thick placed in front of a ledge wall. Rich asked what happened to the lead shot. Murray said the bullet imbeds itself in the sand bank, and people sift the sand periodically to remove the lead and recycle it. He said this provides a cost effective removal system. Rich asked what happened to the shot on the trap skeet range. Murray answered that shot gun shells with small pellets of lead are used. They dissipate in about 50 yards, will impact into the hillside, and won't be collected. Rich

questioned an impact on water supplies. Murray said there shouldn't be any. None of this area is in the aquifer. Judy inquired if the acid rain that N.H. experiences wouldn't cause this lead to leach out into the ground. She would like the skeet range to have a plan for retrieving the lead. Sue and Murray said they will check into this. Rich asked what they planned as hours of operation. Murray said he proposes to operate Monday through Friday from noon to 9:00 PM; Saturday 9:00 AM to 6:00 PM; and Sunday 10 or 11:00 AM to 3:00 PM. The outdoor ranges would not be lighted so they are operational only during daylight hours and warm weather times of the year. Murray felt they would be busiest during the week-ends. The indoor range will be open during the week, employing 4 people; and 18 people will be able to shoot at any one time. He said in the future he plans to open a retail store for the sale of guns, ammunition and related shooting items. Peter asked Murray if he would like to have the PB take this plan under consideration as a phased plan with the indoor range being considered first. Murray said he anticipates this could be a 10 year project. He said he realizes the sound of the outdoor range could present a problem for abutting properties. He said he would like to have local approval to construct the outdoor range and operate it on a trial basis before making a sizeable investment in the whole project. Sue said they would like to install one outdoor range with the berms on the side and the backstop and operate it for a 30 day trial period. Murray suggested conducting another sound test during warm weather with advance notice given to the townspeople to show that there will not be an incremental increase in the sound level determined by the number of people shooting at any one time. Rather, the type of gun being used produces different levels of sound. Judy stated that she felt the PB should have a sound engineer at the next test firing to independently evaluate the sound levels. Peter said he felt uncomfortable with the location of the outdoor firing range. Sue said the driveway to the house has cut across the left firing range, and there was some uncertainty that they would be able to use it at all. They did not know how much ledge and possible blasting would be needed to construct the outdoor ranges. She said if extensive blasting were necessary, it would become too costly to build two ranges. Rich said he thought the PB's perception could be helped by a visual rendering of the outdoor range with the bunkers and backstops. He also wanted to know if plans for the indoor shooting range were available because it would be helpful for the PB to have the architectural plans for their review. Murray said they were not as yet complete. Sue said the design for the reinforced concrete building had to meet strict standards. State and local authorities would be monitoring the range to assure structural integrity; and she

said OSHA may inspect the facility also. Peter said that copies of the building plans will be required for final PB consideration.

**Abutters comments:** Riverside Restaurant owners John and Judy Griffing were present with their attorney John Emery who asked if the plan as presented was for an indoor range; 1 trap and skeet range; and 1 or 2 outdoor firing ranges. Answer yes. He wanted to know if the maximum number of shooters on the outdoor range(s) would be 18 or 36. Murray answered there will only be 1 outdoor range now planned because of the driveway location. The range on the left will be eliminated. Mr. Emery asked about the groundwater treatment swale, and if the discharge area will be in the aquifer. Answer was yes. He asked about exterior lighting. Murray said there were lights to illuminate the building and parking area. The outdoor range was unlighted and would not be used at night. Mr. Emery stated the Griffings, while not opposed to the entire project, had concerns with the noise from the outdoor ranges affecting their business.

**Residents comments:** Jim Wilson, Old Milford Rd. asked if fully automatic weapons will be used on the range. Answer: No, fully automatic weapons require federal licensing. Semi-automatic weapons are allowable. John Tomaso, co-owner of Connie T's. Floral Tree expressed concern with the sound level possibly produced by 18 shooters using semi-automatic weapons if they were all firing at the same time. Sue answered that the level of noise will not increase in volume with added shooters. Five guns firing at the same time do not produce five times more sound volume than 1, she said. Dave Gagnon from Potanipo Hill Road asked how enforceable are the conditions of operation. Peter answered that operational conditions will be stated in the final PB approval and must be kept within the prescribed guidelines. Roger Ogden, Potanipo Hill Road asked if the area of the skeet shoot would be fenced in. He estimated there were 50 children ages 10 and under from the Potanipo Hill Road area that might wander into the area. Murray said the land would be posted every 50 feet, but not fenced. He pointed out that the skeet range is a wide open area. Guy Pultz of Potanipo Hill Road was concerned with the trajectory and the given estimated distance that the shot pellets might travel on the proposed skeet shooting range location. Jack Flanagan has an office in Gazebo Square, and spoke of his concern with gun noise during normal business hours. He said he felt noise is a community concern for both residents and people visiting our town. Bill Chapman said he owns land in Maine across a lake from a National Guard firing range. He said noise from that range is annoying to those hearing it; and he feels that this is a bad location for a firing range in the center of Brookline. Most ranges are located on the outskirts of a town. Wayne Coleman of Milford Street said he is a member of the

Army National Guard and they have been asked to leave the range in New Boston because the noise bothered nearby residential areas.

Jim McBride, Meetinghouse Hill Road asked if there was an equivalent-sized facility located in the middle of a town the same size as Brookline. He is concerned with the amount of sound being generated in the center of town.

Bill Quigley, a member of the N.H. State Police spoke in favor of a controlled area to go and practice shoot rather than an outdoor location that target shooters use and leave with broken glass and cans that are not only unsightly but dangerous to domestic animals and children.

Greg Marszewski of Wallace Brook Road suggested that the sound concerns people are expressing may not be as severe as many are assuming. He said the indoor facility if properly constructed can absorb shot fired repeatedly in the same location without damaging the integrity of the building.

Jerry Farwell pointed out that this facility cannot be built in a residential location, and thus is limited to a location within our small commercial zone.

Peter White, Route 13 North expressed his opinion that new businesses coming into town should not disturb the existing abutting businesses. He suggested that the Zoning Board of Adjustment could grant a variance to allow the facility to be placed in a remote area of the residential zone.

A resident of 4 Beaver Pond Drive asked if guns could be purchased at the facility. Murray answered yes, if the buyer had proper identification and proper licensing.

9:50 PM Peter announced that the PB had another case to be heard this evening, and continued the discussion on this case till Tuesday, August 18, 1992.

9:55 PM **Beaver Woods Associates, Case #1992-8:K-28.** (Rich, a partner in Beaver Woods stepped down from the board at this time. Margaret voted for Rich on this case). Rich and Joe Bourassa presented plans for a two lot subdivision of K-28. Their proposal will create lot K-28-4 containing an existing house on a 2.116 acre lot. The remaining 27.5 acres will remain as a campground area with an existing mobile home trailer at the rear of lot K-28-4. The access road to the campground from Route 130 will be moved to better serve the campground; and the driveway to the house will remain as is. A state driveway permit is pending. The septic system for lot K-28-4 is shown on the plan. He said most of K-28 is in the floodplain, but will not affect lot K-28-4 which is not. Rich said the existing sign may be relocated or replaced. Judy asked if some of the campsites are in the wetlands, and questioned the pumping station. Joe explained that none of the camp sights have drinking water or septic holding tank facilities. The campground has a pump which pumps brook water up to the 4 rest rooms.

MOTION Joe made a motion seconded by Chris to accept the plan as presented. Yes vote of 5-0 to accept the plan.

Abutter Bill Quigley expressed no concern with the plan, and said he was interested in how the new interior camp road would affect the back of his lot, K-28-3.

Rich said this was a plan for the subdivision of the house lot. They have had an entire land survey done. He presented a letter from Meridian Land Services indicating sufficient septic loading capacity for the existing campground. He said they have provided a mapped location of the existing campsites.

Peter stressed that new access for the campground must not be diminished from the present access. Emergency vehicles must have access to the campground area. He said he had concerns regarding the volume of use and the extent and number of sites in the existing campground.

Rich stated that he is willing to come before the PB at a later time for a site plan review for the campground. They are now just looking for PB approval so that the house can be subdivided from the campground and sold.

10:20 PM Chris made a motion to approve the plan pending state driveway permit approval, all fees being paid, and a mylar presented for recording. Joe seconded the motion. Vote was 5-0 yes for approval.

10:40 PM Peter made a motion to adjourn the meeting. Judy seconded the adjournment motion. Vote was 5-0 yes to adjourn.

Next Planning Board Meeting Tuesday, August 4, 1992

Case File

1 Parker Road  
Brookline NH 03033

11 July 1992

Mr. Peter Webb, Chairman  
Brookline Planning Board  
Brookline NH 03033

Re: Elevations, Phase I -

Case # 192

Dear Peter:

Taking into account the changes in the plans dated 7/7/92 and the work completed since my last estimate of 18 May 92, my estimate of the remaining value of work on this project is \$65,279. This is a reduction of \$43,168 from the estimate of 18 May 92.

I also recommend acceptance of the sub grade up to sta 6+00. This provides at least 250 ft of approved sub grade in front of lot 17-17 and all of lot 17-2.

Very truly yours,

William W. Duncklee  
Road Inspector

PLANNING BOARD MEETING

August 4, 1992

PRESENT: Peter Webb, Chairman, Voting  
Richard Napolitano, Vice Chairman, Voting  
Joseph Kaganski, Voting  
Judy Cook, Selectmen's Representative, Voting  
Margaret Olson, Alternate, Voting for Chris  
Dennis LaBombard, Alternate  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

7:30 PM Planning Board Business Meeting  
Peter called the meeting to order. Minutes of the July 21, 1992 PB meeting were reviewed.  
MOTION Judy made a motion to accept the minutes as written. Peter seconded the motion. Vote was 4-0-1 Abstention (Joe) to accept the minutes.

7:35 PM Jane & Thomas Dwyer, "Children's Creative Cottage"- Mr. and Mrs. Dwyer were present to discuss whether they needed to have a site plan review done prior to obtaining a building permit to renovate the second floor of the portion of the building at 22 Main Street that was previously used as the school district's offices. They are have a sprinkler system installed for both floors, and repairing and modifying the two existing stairways to the second floor in preparation for using the second floor to add 15 more children to the 23 they are presently licensed for; and have 2 more part-time employees, bringing the total to 4 part-time employees. Jane said that the kindergarten children will be in the upstairs room, and the pre-school will be downstairs. There will also be room for her office as well as storage space on the second floor. PB members discussed whether this is an expansion of use requiring a site plan review. The consensus of opinion of PB members present was that the addition of 15 more children would require a site plan review. The renovations requiring a building permit would not in and of themselves require a site plan review.

8:05 PM Peter made a motion to instruct Wes to issue a building MOTION permit for the renovations to add a sprinkler system, and modify and repair the two stairways. Rich seconded the motion. Vote was 4-yes, 1-no (Joe).  
Peter told Mr. & Mrs. Dwyer that a letter would be sent to the building inspector to instruct him to issue the building

permit. He cautioned them that it's issuance in no way guaranteed Planning Board approval of the site plan. Mr. and Mrs. Dwyer said they understood. They needed the building permit as soon as possible in order to complete the renovations by the beginning of the school year. They were amenable to having a site plan review for the additional children and staff. They are scheduled for the August 18, 1992 PB public hearing.

**8:15 PM** **Open Space Zoning**—Attorney Peter Bennett was present to discuss homeowner's associations as a requirement to the proposed open space zoning concept. He brought with him some samples of open space zoning ordinances from other towns and how the common land requirements are written in. The association would become the entity to be taxed; and it may or may not be incorporated. He explained that each unit within the development is assessed a percentage of the common land area. Mr. Bennett said if taxation is not a consideration, the homeowner's association is the way to go. Some communities, however, have the common land deeded over to the town. This however decreases the amount of revenue collected from taxable properties. He said a means of preventing problems with the common land area is to have covenants and restrictions made a part of the subdivision approval requirements. Discussion then centered around the question of whether the common land area, if in excess of 10 acres, could be put into current use tax status, thereby reducing the assessed value of each building lot which then would be 1 acre in size. It was decided to ask the local board of assessors to come to the September 1, 1992 work session to discuss their views on how open space lots would be assessed. Jeremy said he will try to have someone from the Nashua Regional Planning Commission also come to talk to the board in September about open space zoning concepts.

**8:40 PM** **"Rock Ramond Estates", Road Bond**—Road inspector Bill Duncklee was present at the board's request to discuss whether the maintenance bond amount could be reduced to reflect the actual construction cost of building Rock Ramond Road. Bill said the road is essentially complete and he doesn't foresee any maintenance problems. There were a few items from the original estimate that were not included in the road's construction. Bill said he would calculate the cost of these items and submit a report to the PB.

**8:45 PM**  
**MOTION** Peter made a motion to adhere to the 10% maintenance bond procedure. Our Road Inspector shall adjust the original construction value of Rock Ramond Road to comport with adjustments to the road's construction. Rich seconded the motion. Yes vote 5-0.

**8:55 PM** Rich had visited the "Elevations" subdivision and asked Bill whether there had been some changes made to the drainage system at the top of the hill. Bill said that some under drainage had been needed at the top of Lorden Lane, and the developer was having it installed.

- 9:00 PM Potential Zoning Changes--  
1) Libby Wehrle-Anderson, Brookline Conservation Commission-  
Libby was present to explain a change the Conservation  
Commission would like to have made to the Wetlands Ordinance  
to add a construction buffer to minimize any disturbance to  
wetlands during the construction of either buildings or  
driveways. She would also like to require a setback buffer  
for the placement of the foundation. She had a list from  
the Association of Conservation Commissions which gave the  
setback buffers other N.H. towns have adopted which range  
from a 25 foot to a 200 foot setback. She said the  
Conservation Commission will be preparing the necessary  
information for the PB to present at the required public  
hearings on zoning changes.
- 9:20 PM 2) Discussion of Jeremy's 6/16/92 memo- Margaret said she  
has been researching a definition for "Family" and  
"Housekeeping Unit" and had discovered differing opinions  
from conservative to quite liberal. PB members discussed  
how best to define housekeeping unit in terms of disallowing  
rooming houses in Brookline. Jeremy was asked to further  
research "In-law" apartments; and PB members will read the  
Hollis, N.H. In-law Apartment Ordinance for discussion at  
the next work session.
- 10:30 PM Peter made a motion to adjourn the meeting. Judy seconded  
the adjournment motion. Vote was 5-0 yes to adjourn.

Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

7:30 PM

**Planning Board Business Meeting**

Peter called the meeting to order. Minutes of the August 18, 1992 PB meeting were reviewed. It was voted to amend the following: Page 2, delete last sentence of paragraph beginning "Rich agreed to waive".

Page 7, 9:45 PM, replace section to read: Peter reviewed the NRA guidelines on the construction of a firing range. The guidelines recommended, among other things, the following: a noise profile by an acoustical engineer, a sound study, a sound mitigation program. He would recommend a publicized "shooting demonstrations day," and that the noise be quantified by the above sound work. The guidelines indicate that noise complaints occur if residences are within one half mile of a range; that one mile is appropriate for a skeet range. Peter noted that the NRA recommends a "safety fan" of adequate distance (see attached). He referenced NRA ballistic tables indicating common ammunition ranges of one to three miles (see attached). His major concerns were:

- 1) Noise
- 2) Loose fire exceeding the limits of the range,
- 3) Impact on existing commercial uses."

Page 8, Line 3, change to read as follows: "the PB must have a consultant who has the expertise....."

Paragraph 4, (Rich said) Line 2, change to read: "indoor range could be built on this site. He said studies may also be required by the PB for the indoor range. He was unsure that this is the case for the outdoor range."

**MOTION**

Peter made a motion to accept the minutes as amended. Rich seconded the motion. Vote was 5-0 accept the minutes.

7:35 PM

**Board of Assessors**

Assessors Phil Winter and Allan Fessenden were present to discuss the assessment of common land associated with open

space zoning. Phil said this land could be put into current use if it meets the current use criteria. He said the homesite evaluation would not be significantly less than other building lots in town. Allan asked what value this type of zoning would be to Brookline; and expressed a concern that the town's tax base not be diminished. Chris said this type of zoning lends itself to better utilization of land. Less roads have to be built, and otherwise undevelopable land could be developed. Rich asked how much of the total assessment was placed on land and how much on building; and the percentage difference between a 1 acre site versus a 2 acre site. Phil said to check the assessment of properties in the center of town which generally have a 1/4 acre piece of land to get an idea of the land assessment values. Allan asked if there was any state case law addressing the tax base; and he recommended that the Nashua Regional Planning Commission check with the state to see what guidelines they may have.

7:50 PM

**Road Issues**

**a) Tom Moran, "Rock Ramond Estates"**

Tom had prepared a letter for the PB to read regarding the issue of maintenance bonds. He asked PB members to consider what surety amount is safe for the town to hold but not excessive for the developer. He questioned the 10% of the estimated cost of construction amount as a valid ratio to use in these economic times where the bond is often a cash bond. He also wanted to verify whether the maintenance bond came under the jurisdiction of the PB or the board of selectmen, since he found no reference in state law regarding maintenance bonds.

Chris questioned whether the maintenance bond reflects the actual needs of the town in terms of an amount necessary to correct any road defects. If the road is built properly, he felt the 10% maintenance bond amount may be too excessive. Rich said we need to place a value on the road construction costs plus some percentage thereof to use as a maintenance bond. If ten percent is too much, a different metric needs to be considered.

Jeremy said other towns have varying requirements. He will assemble information, and the PB will discuss this at the next work session October 6th.

**MOTION**

Peter made a motion to reduce the maintenance bond on Rock Ramond Road to \$16,985.00 per the 8/5/92 adjustment letter from road inspector Bill Duncklee. Rich seconded the motion. Affirmative 5-0 vote.

A letter will be sent to the selectmen recommending the bond reduction.

**8:10 PM  
MOTION**

b) Peter made a motion to appoint Bill Duncklee as road inspector for Mountain Road Estates, II and Birch Hill Estates, II. Rich seconded the motion. 5-0 vote yes.

- 8:15 PM** c) **Robert Petersen, Petersen Road**— Robert Petersen and road inspector Clarence Farwell were present to discuss the road construction timetable for Petersen Road. Clarence said he had met with Bob Petersen and recommended that the base coat be placed this year. He said the road cleanup, establishment of the shoulders, and the loam and seeding should also be completed this fall. Next year, the final pavement could be placed. Clarence said he would also recommend leaving the \$30,000 construction bond in place for 1 more year (expiration date is 2/4/93) till February of 1994. Mr. Petersen said it was his understanding that the bond could be reduced as work was completed and inspected. Clarence suggested that Bob get estimates of the remaining work to be done. With only the base coat of pavement placed this fall vehicles associated with home construction won't damage the final pavement. Judy mentioned that if the base coat is put down this year before winter, the board of selectmen wont have an issue with respect to emergency vehicles being able to get up and down the road. Chris said if all issues but the top coat of paving are taken care of this year, he would be willing to recommend adjusting the bond to reflect the completed work. Mr. Petersen said he will post a cash bond if this bond expires in February. Peter said the PB will extend the bond if necessary, and adjust the amount if necessary. However, the bond will be called to finish the work if Mr. Petersen fails to do all but the final paving before the February 4, 1993 date.
- 8:25 PM** Beverly Petersen Lynch was present to request a signature on a State of N.H. family day care form. She is in the process of applying for her state license, and she is also preparing an application for PB non-residential site plan review. Jeremy will contact her to help with the application form.
- 8:30 PM** d) **Bear Hill Road Subdivision**—Chris reported that the roads were paved last December. Since then 4 or 5 houses have been built and construction vehicles have damaged the road. He, Dennis and Clarence visited the site, and all felt that the people responsible for the road damage should be held responsible for payment. Dennis said the enforcement of correction items should be expediently handled with those responsible, since they are often not available once the house is finished and sold. Clarence said with vandalism of any town property, the party responsible for it should pay restitution. PB members briefly discussed the best method of enforcing payment, and will check the state statutes regarding destruction of town property.
- 8:40 PM** e) **Road grade changes to Taylor Road**—Bill Duncklee presented a letter from Meridian Land Services for some road grade changes from Sta. 5 to Sta. 12. Bill said this was a minor grade change to get over some ledge, and did not affect the drainage system.

MOTION Peter moved to approve the road modification to Taylor Road as presented. Rich seconded the motion. Vote 5-0 yes.

8:50 PM Jane & Thomas Dwyer, "Children's Creative Cottage"- Mr. and Mrs. Dwyer were present. Mr. Dwyer presented a letter dated 8/23/92 from septic designer David Hirko (see attached) regarding the septic system. Jane said there will be a total of 4 toilets in the school- 2 on each floor. She said the total number of 35 children would be present only for 2 hours each day. It was noted that the State requires a standard ratio of 15/gpd/student as a guideline for septic requirements. Mr. Hirko's letter indicated a 1,500 gallon tank with a leach field. Clarence said he had previously installed a 1,000 gallon tank and dry well at this location. Dennis said that his concern still was whether the lot will sustain the load that is being placed on it with the expansion of the school. He stated that the Hinckley soil was a good draining soil, but he had concerns with the method of calculating how much leachate that lot will hold. He said that type of soil would handle 2,000/gpd/per acre; but noted the lot was .40 acres, and the house and its septic system was not reflected in the numbers presented in this letter. He said there was not enough information in this letter to make an informed determination. The system, he felt, was borderline in its ability to handle the increased usage. The abutting properties both have artisan wells, as the Dwyer's have shown on the presented plan. Rich noted the items asked for by the PB were the septic tank evaluation and site loading calculations; the type of soils; and the type and location of abutters' wells.

MOTION Rich made a motion to add into the minutes that: **It is the opinion of the Planning Board that the septic site loading is marginal, and that further expansion of use at this site might represent a health safety factor.**

Judy seconded the motion. Motion supported 5-0 yes.

MOTION Rich made a motion to approve the plan subject to fees being paid. Peter seconded the motion. Vote 5-0 yes.

9:20 PM Potential zoning projects for 1992.

PB members reviewed Jeremy's 8/18/92 memo. Discussion focused on Accessory Dwelling Units, definition of "Housekeeping Unit", and briefly on Open Space Zoning. Jeremy reminded PB members that the N.R.P.C. will be hosting a presentation on this subject on Tuesday, September 22nd at the Elementary School on Milford Street. Many questions may be answered at that time.

Rich reported that Terry and Margie Sherlock have agreed to again put together some informational articles on proposed zoning changes to be put in the local papers.

Judy asked whether it might be possible to look into a noise ordinance for inclusion in the zoning. After discussion, it was decided that it might be within the selectmen's jurisdiction to establish such an ordinance.

10:25 PM Peter made a motion to adjourn the meeting. Rich seconded the motion. Motion to adjourn was passed by a 5-0 vote.

Next Planning Board Meeting Tuesday, September 22, 1992

TO BE HELD AT THE BROOKLINE ELEMENTARY SCHOOL

Submitted by:

Sandra L. Fessenden, Secretary  
Brookline Planning Board

Made part of the 9/1/92 P.Bd. minutes (LIF)

August 23, 1992

Children's Creative Cottage  
c/o Jane Dwyer  
22 Main Street  
Brookline, NH 03033

SEP - 1 1992

Dear Mrs. Dwyer:

This letter is to certify that on August 21, 1992, I performed a field site assessment of the sewage disposal system at 22 Main Street, Brookline, NH.

The existing system was installed circa 1964. A leach field is present as well. Mr. Clarence Farwell installed the system and I was told by you that he will be submitting a letter on what was done.

As a result of this inspection I found the following:

1. Septic tank is approximately 1500 gallons. I estimate it to be in very good condition. No cracks or leaks were found.
2. Well is approximately 80' from the septic tank.

Conclusion: The present septic tank will sustain the proposed loading of 6 daytime teachers, and 35 daytime students as follows:

6 teachers @ 20 gpd each	120 gpd
35 students @ 15 gpd each	<u>525 gpd</u>
	645 gpd
<u>Total @ 200%</u>	1290 gpd
<u>Existing tank</u>	1500 gal

The existing tank is greater than today's tank requirements. 1250 septic gallons are required today and this existing tank is 1500 septic gallons. This tank is adequate and in satisfactory operating condition.

Very Truly Yours,

David Hirko

David Hirko  
Licensed Septic Designer

(603) 673-8855

TOWN OF  
**BROOKLINE, NEW HAMPSHIRE**

P.O. Box 360  
Brookline, NH 03033

PLANNING BOARD MEETING

September 15, 1992

**PRESENT:** Peter Webb, Chairman, Voting  
Richard Napolitano, Vice Chairman, Voting  
Joseph Kagenski, Voting  
Judy Cook, Selectmen's Representative, Voting  
Margaret Olson, Alternate, Voting for Chris (joined meeting  
at 7:50 PM)  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

**7:30 PM** Planning Board Business Meeting  
Peter called the meeting to order. Minutes of the September 1, 1992 PB meeting were reviewed. It was voted to amend the minutes as follows: Page 3, Line 26, change to read: "Peter said the PB may extend the bond, and adjust the amount if deemed appropriate." Page 4, Line 33, change to read: "might represent a threat to health and safety."  
**MOTION** Rich made a motion to accept the minutes as amended. Judy seconded the motion. Vote was 3 Yes-0-1 Abstention (Joe was not at the 9/1/92 meeting) to accept the minutes.

**7:40 PM** P & C Realty, Francis Gavin, Case #1992-6:F-1B & F-60  
(Peter stepped down as chairman for this case. Rich chaired the meeting.) Francis and Paul Gavin were present for a preliminary conceptual consultation. Francis Gavin said they were preparing to subdivide the entire parcel of land along the Brookline/Hollis town line; and plan to further subdivide the portion in Brookline independently of the portion in Hollis. They will submit subdivision applications and the deed descriptions will be prepared accordingly for each town.

**8:00 PM** Scenic Road Hearing  
1) North Mason Road-Charlie Corey was not present at this hearing. Road agent Clarence Farwell indicated that the increase in the road grade on North Mason Road will cause the base of several trees to be covered and will eventually kill them. The utility pole is being moved from the center of the triangle. New England Telephone Co. would like to have some other trees removed for the new utility line for Ben Farnsworth Road. 1788 the trees are located on Lorden land,

and the town has been given permission to cut them. PB members wished to visit the site before acting on a motion to cut the trees.

2) **Averill Road**—Clarence said there are 2-12" to 15" (inch) maples, and 1-30" (inch) pine tree needing to be cut where they are correcting the curve and changing the grade of Averill Road at the corner heading toward Cleveland Hill Road. These trees are located right on the edge of the pavement, and eventually will have to be taken down.

Earl Bergh was present and expressed his opposition to the removal of any of these trees.

8:04 PM  
MOTION 1) **North Mason Road**—Peter made a motion to continue the hearing till October 6, 1992. Rich seconded the motion for continuation. Yes vote 5-0.  
MOTION 2) **Averill Road**—Rich made a motion to vote to authorize the cutting of trees on Averill Road. Judy seconded the motion. Yes vote 5-0.

8:07 PM **Kinney Danforth Real Estate Associates, "Granite State Convenience", 75 Route 13 South, N.R.S.P. Case #1992-F:H-103.** Bill Kinney was present with a plan for a 45' X 48' steel building to be used as a repair shop. There will be no toilets or sinks in the building. There will be water only for washing vehicles. No drains in the cement floor.

Peter said he was concerned with the disposal of hazardous waste materials given the proximity to the Nissitissit River. He noted the fact that the property is located in the aquifer and this was an expansion of use. He asked if the site were going to be landscaped.

Bill said he is planning to landscape along the sides. Jeremy said topographic, soils, and drainage information as well as the surveyor's stamp which was not on the plan can be waived as this is an existing site.

Judy also was concerned with the water and its drainage with the Nisitissit River in back. She pointed out this would not be allowable as a new commercial venture at this site.

8:20 PM  
MOTION Rich made a motion to accept the plan as presented. Judy seconded the motion. Vote was 4-Yes, 1-No (Joe).

Bill said that water will contain dirt washed from the cars. Waste oil is burned and other hazardous materials are removed from the site. When he was asked if there was still a junk yard on site, Bill said yes.

PB members were concerned with the waste water from this building and the disposal of any hazardous wastes. They want the plan to include the following:

- 1) Distance to the Nissitissit River;
- 2) Soil types;
- 3) Note this lot is in the aquifer and show the aquifer boundary in relation to the property;
- 4) Show location of paving and landscaping;
- 5) Show elevations with respect to the river.

Rich mentioned that the U-Haul trailers are in the State right-of way and not where the site plan shows they should be located. Bill said they are there temporarily.

Case continued till October 20, 1992.

8:25 PM **Bingham Lumber Co., Inc. 89 Route 13, N.R.S.P. Case #1992-G:H-90.** Don Bingham was present with a site plan to build a new garage, add a roof to an existing overhang; and to build an addition to the planer building. He said his primary concern was getting a permit for the garage as soon as possible. Secondly, he wanted to enclose the overhang on the planer building with a new roof and sides. He plans to put the addition on the planer building in 3 stages, the first of which he will do this fall or next spring. He plans to put a bathroom into one of the 3 additions and will have a new septic system designed when necessary. Jeremy said he had visited the site, and all the work is done within the commercial zone. There are no added employees at this time; no changes in the well and septic; and nothing is visible from Route 13. Peter asked if the garage was being built to house new or different vehicles than were presently there. He asked if there would be a drainage system for any oils or solvents. Don said at present there would be no new equipment added. He has 4 fork lifts and 3 front end loaders which will be garaged and repaired inside. The garage will have a concrete floor with no drainage. On site there are now 2-275 gallon containment drums for the hydraulic fluid and waste oil, some of which he uses for lubrication of the saw mill equipment. He has no plans to relocate these. He said the addition to the planer building is to house a rip saw he already has to make the operation more efficient. He employs 6-8 people and foresees possibly 4 more in the future. Judy said her only concern is how the containment of hazardous materials will be handled. Rich said the vehicles are the same ones already on site. They are improving the method of housing these vehicles.

Abutters comments and/or concerns: Abutters John Griffing and Murray Clayman voiced no concerns.

8:45 PM Peter made a motion to add the following finding, noting  
MOTION that the garage is a non-conforming use on top of the  
aquifer: The Planning Board specifically finds that the uses  
proposed in this application, to the extent that any of them  
being proposed be deemed non-conforming, the nature of the  
proposed use and the fact that the use is effectively an  
existing use, the proposed use is a continuation and not  
more detrimental to the protected areas. Specifically,  
1) the vehicles are already on site;  
2) the vehicles to be serviced belong to Bingham Lumber  
Co.

Margaret seconded this motion. Yes vote 5-0.

MOTION Margaret made a motion to approve the plan subject to all  
fees being paid. Joe seconded the motion. Plan approved by  
a 5-0 affirmative vote.

9:15 PM Murray L. Clayman, "Great Bear Range", N.R.S.P. Case #1992-  
B:6-53. Murray told PB members he plans to withdraw his  
application for the outdoor ranges and will proceed with  
plans for a 60' X 150' indoor range building, the interior  
of which will be divided into 3-20' sections.  
Peter asked if there would be any interior noise from the  
range discernible outside the building.  
Murray said the building will have 8'(foot) high X 1'(foot)  
thick concrete walls. The majority of the building will be  
underground, with only 2 feet of the roof with the A/C  
equipment on it visible above ground. He will have a buffer  
of hemlock and pine trees surrounding the building. The  
planned hours of operation will be noon to 9:00 or 10:00 PM  
6 days a week; and on Sundays beginning later in the  
morning. There will be space for 18 (eighteen) people, (6  
[six] per section) to shoot at one time. Approximate time  
spent per person is one hour. There will be no food other  
than drinks and coffee in vending machines. There will be a  
retail store for the sale of guns and ammunition; and Murray  
estimates there will be 10,000 rounds of ammo stored at one  
time. All guns and ammunition will be locked in a vault  
area when the range is not in operation. There will be a  
20' X 18' classroom for qualified instructors to teach  
firearms safety in the use of rifles, pistols and handguns  
for personal protection and sporting purposes. He said he  
will make this classroom available to town organizations.  
There are 28 parking places shown on the site plan. There  
are no exterior windows and doors in the range area. The  
walls and roof are made of concrete. There is a double door  
system between the lobby and the range with a buffer/  
observation area. There will be a sign near the entrance of  
the driveway, as well as one at the entrance off Route 13.  
David Sheldon asked if the ventilation system would expel  
the odor of gunsmoke outside. Murray explained the air  
filtration system, and stated this would not be a problem.

PB asked for the following to be shown on the new plan:  
1) Specifics of visual landscape barrier (tree size).  
2) Note the D.E.S. Septic approval #  
3) Include an isometric profile view of the building.

Murray was asked to have stakes set for the location of building prior to the 9/26/92 site walk.

Site walks were scheduled for **Saturday, September 26, 1992**

- a) "Great Bear Range" at 9:00 AM.
- b) Ben Farnsworth/North Mason Roads immediately following Great Bear.

Case continued till **October 20, 1992**

**Planning Board General Business**

- a) 1993 Planning Board Budget

PB members discussed the budget figures for 1993. It was decided to have the following amounts in the budget:

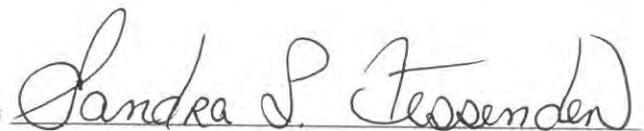

- 1) \$16,800.00-Consulting Services  
( 14,400-Nashua Regional Planning Commission  
2,400.00-Road Inspections)
- 2) \$500.00-Training & Education
- 3) \$200.00-Recording Fees
- 4) \$100.00-Office Equipment
- 5) \$200.00-Notices

---

**\$17,800.00 Total**

10:50 PM Rich made a motion to adjourn the meeting. Joe seconded  
MOTION the motion. Vote to adjourn 5-0 yes.

Submitted by:

Sandra L. Fessenden, Secretary

Richard Napolitano, Vice Chairman  
Joseph Kagenski  
Judy Cook, Selectmen's Representative  
Margaret Olson, Alternate  
Sandra Fessenden, PB Secretary

7:30 PM Planning Board Business Meeting

1) Open Space Development zoning concept

Don Zizzi, Mark Archambault, and Jeremy Ginsberg of the Nashua Regional Planning Commission met with PB members and Milner and Ruth Wallace of the Conservation Commission to discuss the open space zoning concept. A video tape was shown, followed by a question and answer session. Mark is the N.R.P.C. circuit rider for Hollis, and said Hollis is in the process of modifying their P.U.D. zoning. He said some of the bonuses to OSD zoning are:

- 1) Design Flexibility;
- 2) Preservation of valuable natural resources;
- 3) High real estate appreciation rates;
- 4) Maintenance of the town's rural character;
- 5) Less road systems and road maintenance costs;
- 6) Prevention of growth sprawl.

Mark said this type of zoning requires extra effort by the PB and the developer. He suggests that during the design review stage, the PB require the developer to provide both an Open Space Development (OSD) design as well as the standard subdivision design.

Don Zizzi said this type of zoning is not for every subdivision. It offers itself to better designed housing developments on unique pieces of property. He said the N.R.P.C. would make this video tape available for broadcast on the public access cable TV channel to help publicize the open space concept zoning idea to Brookline residents if the PB wanted to do this.

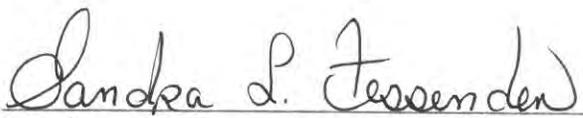

Margie and Terry Sherlock, who are writing some articles for publication on proposed zoning changes were at this meeting.

2) Joint meeting with Hollis PB and Selectmen

PB members discussed a possible date for a joint meeting with the Brookline Selectmen and the Hollis PB members and Selectmen to discuss issues common to both communities. Since both PBs meet on the same nights each month, it was tentatively scheduled for Tuesday, October 27th.

Next Planning Board Meeting Tuesday, October 6, 1992

Sandra Fessenden, PB Secretary

**7:30 PM** Planning Board Business Meeting  
**MOTION** Peter called the meeting to order. Minutes of the September 15, 1992 PB meeting were reviewed. Peter made a motion, with Rich seconding, to accept the minutes as written. Vote was Yes-4, No-0, 1-Abstention (Chris absent from this meeting)

**7:40 PM** Road Issues  
1) Talbot-Taylor Estates, Taylor Road  
Road agent Clarence Farwell was present to discuss the approved plan which calls for 22 foot paved roads in this subdivision. He said the current subdivision regulations call for 20 feet for a local street; and 24' for a principal street. The 22 foot wide base coat in phase 1 of Taylor Road has been placed; but he suggested that developer Bob Bourassa could ask that the second phase of Taylor Road be 20 feet wide. He said that the PB should be checking the road profiles during the subdivision review stage for conformity to the road construction regulations.

2) Petersen Road Bond Reduction and road paving width.  
Clarence Farwell, road engineer for this subdivision was present to request that the 24 foot paving on the Petersen Road subdivision be changed to 20 feet. He said this was a plan approved in 1983, but it was a cul-de-sac road with no ability to further add on a road system to adjoining land. Rich asked if this change would require a public hearing to change the road width, since the scope of the change affects the entire road's width. After some discussion, it was decided that the PB could change the road width, and require as-built plans to reflect this change.  
**MOTION** Peter moved that the Petersen Road pavement width be changed to 20 feet from the previously approved 24 foot width. Margaret seconded the motion. Yes vote 5-0.

Clarence also asked that the \$30,000.00 road construction bond be reduced by approximately \$10,000.00; and that the expiration date of the letter of credit be extended till July 4, 1993 from February 4, 1993. PB secretary was asked to check with the Centerpoint Bank to see if they were agreeable to replacing the existing letter of credit with a \$20,000. bond and with a change in the expiration date. Clarence will write a road inspector's report with a bond reduction recommendation.

**8:00 PM**     **b) Alan Lorden, Road Bond Reduction for Lorden Lane**  
Road inspector Bill Duncklee was present. He had made a road inspection and was recommending the bond be reduced. His letter to the PB was being processed, and he said the amount to be reduced was approximately \$20,000., bringing the bond to about \$46,000.

**MOTION**     Margaret made a motion to reduce the bond to the amount in Bill's forthcoming letter of 10/6/92, provided that the amount left in the bond is not less than the 10% amount required for the maintenance bond. Peter seconded the motion.     Yes vote 5-0.

**8:05 PM**     **Scenic Road Hearing Continuation**  
              **1) North Mason Road-The purpose being a utility line installation.**  
Eddy Whitcomb was present for the hearing. He is developing 4 lots on the Ben Farnsworth Road which requires a new utility line installation. PB members had visited the site on September 26, 1992. Clarence was asked how much the road grade on North Mason Road was been raised, and he replied 4 feet. Peter said that the base of the trees would be covered and would die in a short period of time. He made a

**MOTION**     a motion to authorize the cutting of the trees as shown on the plan dated August 25, 1992. Margaret seconded the motion. Yes 4, no-0, 1-Abstention (Rich).

**8:07 PM**     **Charles Kowalski, Muscatanipus Road.** Mr. Kowalski said he would like to have Muscatanipus Road accepted by the town this year. He referred to a road inspector's report by Joe Cretella dated 4/10/91 which listed 14 items, and an estimate of cost for these items. Mr. Kowalski said the cable company had destroyed approximately 700 feet of hydro-seeded bank, which they re-filled with sand. They then cut a trench across the pavement. Repairs have not been taken care of satisfactorily by the cable company, and he would like some guidance from the PB as to how to remedy the issues necessary in order to have the road accepted in light of this problem. Chuck said Joe Cretella was difficult to schedule inspections with. Peter said he would be willing to replace Joe with Bill Duncklee, and ask bill to visit the site and make a recommendation to the PB on the status of this subdivision.

**MOTION** Peter made a motion seconded by Margaret to replace Joe Cretella as road inspector for Muscatanipus Road with Bill Duncklee replacing him. Vote was 5-0 yes. Mr. Kowalski, Bill Duncklee, PB member Rich Napolitano and road agent Clarence Farwell will visit the site and come back to the October 20, 1992 PB meeting.

**8:20 PM** **Thomas Enright, "Wallace Brook Road"**- Tom said the only two items left to complete from the March 14, 1992 road inspection report of Hillside Road extension were:

- 1) Set bounds, and re-set any disturbed bounds;
- 2) Shape and grade some of the shoulders.

He is looking to have the road bond reduced from \$30,000. to \$15,000; and change to a maintenance bond. Peter said he would like to have a report from Dennis LaBombard to quantify the present road situation and the dollar amount of work remaining.

Judy, referencing Rich Napolitano's letter of 9/21/92 (see attached) asked about the seeding of lot J-33-34, the gravel pit area on Wallace Brook, I. Tom said vegetation is growing in the area and asked what needs to be done. He has no objections to Dennis checking the area and making a recommendation to the PB when he does the road inspection. Tom asked about a maintenance bond and the time frame it's held for. Peter said the maintenance bond is 10% of the construction bond for a 1 or 2 year period depending on the date of subdivision approval. Tom is to come back to the October 20, 1992 PB meeting.

**8:35 PM** **Discussion of Tom Moran's letter on maintenance bonds.** Tom Moran was present to discuss his August 26, 1992 letter on bonding and the requirement for maintenance bonds. A lengthy discussion followed as to how to best make an adjustment to the present system of holding 10% of the construction cost estimate for a 1 or 2 year period. Tom said he felt that the actual cost of road construction rather than an estimated cost should factor into the amount of money held for a maintenance bond. He recommended that the PB study the actual annual maintenance cost to the Town for its roads. He also asked that the jurisdiction of setting the bond, Planning Board or Board of Selectmen, be clarified. Tom also had suggested that the cash bond money held by the town be earning as much interest as possible.

**MOTION** Margaret made a motion that all cash bonds be invested so that:

- 1) The principal is 100% protected; and the
- 2) Principal is immediately liquid; and the
- 3) Investment conforms to the guidelines set by the State of N.H. and local regulations.

Peter seconded the motion. 5-0 yes vote.

Jeremy had prepared a memo of how the maintenance bonds are set up in various other towns. He was asked to come back to the November 10, 1992 work session with some suggestions for possible changes to the current subdivision regulations; and compile some information to be considered for factoring an amount for the town to require for road maintenance bonds relative to real costs of construction and maintenance.

**9:45 PM Potential zoning projects for 1992.**

PB members discussed possible public hearing dates for proposed zoning changes. Tentative dates are December 1, 1992, January 5, 1993, and January 26, 1993. At the November 10, 1992 work session, PB members will work on finalizing the potential zoning changes.

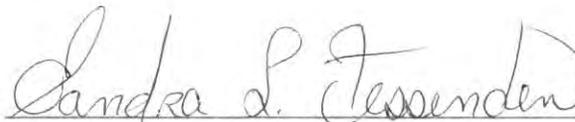

**9:50 PM Planning Board General Business**

PB members discussed meeting in Hollis on Tuesday, October 27, 1992 to discuss issues of concern to both communities. The Board of Selectmen will be invited to attend. Time will be finalized with the Hollis PB.

**10:00 PM MOTION** Rich made a motion to adjourn the meeting. Joe seconded the motion. Vote to adjourn 5-0 yes.

**Next Planning Board Meeting Tuesday, October 20, 1992**

September 21, 1992

TO: Brookline Planning Board  
FROM: Richard Napolitano  
SUBJECT: Wallace Brook Estates, II, Case #199

Dear Members,

On September 12, 1992 I visited the Wallace Brook Estates, II project. The following items must be corrected before the road is considered complete:

- 1) Bounds on lots J-33-49, J-33-50, and J-33-51 on Hillside Drive are in the drainage swale and appear to have been disturbed. These bound must be reset.
- 2) The grading of the shoulders appears incomplete, especially along lots J-33-48 and J-33-43.
- 3) The gravel pit area in Wallace Brook, I which was used for material on this project does not appear to have been seeded.

Richard Napolitano

**TOWN OF  
BROOKLINE, NEW HAMPSHIRE**

P.O. Box 360  
Brookline, NH 03033

MINUTES  
PLANNING BOARD MEETING  
OCTOBER 20, 1992

**PRESENT:** Peter Webb, Chairman  
Richard Napolitano, Vice Chairman  
Judy Cook, Selectmen's Representative  
Margaret Olson, Alternate  
Rena Duncklee, Acting PB Secretary  
Jeremy Ginsberg, Nashua Regional Planning Commission

7:30 p.m. **Planning Board Business Meeting**  
Peter called the meeting to order. Minutes of the September 22nd and October 6, 1992 meetings were reviewed.

**MOTION** Peter moved, seconded by Judy to approve both sets of minutes. Vote was Yes-4-0.

Rena said the deed received for the **Bear Hill Associates** subdivision is titled Road Easement Deed. Jeff Knights of Mike Tamposi's said they could probably get a Quitclaim Deed but didn't think they could get a Warranty Deed. Peter said the regulations say a Warranty Deed and that's what is needed.

1) **Murray L. Clayman, "Great Bear Range" N.R.S.P. Case #1992-B:G-53, (con't).** Jeremy reported he spoke to Jim Edwards of Meridian Land Services who said it was up in the air on what will happen with the site plan since Mr. Clayman's death. Jeremy said they will be sending a letter of intent. Abutter John Griffing asked if he would be notified if the case comes up again.

**MOTION** Peter moved, seconded by Judy that this case be tabled for ninety (90) days. The Board will notify abutters if the case is brought forward within the ninety (90) days. Vote was Yes-4-0.

2) **PAX Builders, Muscatanipus Road.** Chuck Kowalski asked the town to accept Muscatanipus Road contingent on loaming and hydroseeding in the spring due to the damage done by the cable company. Road Inspector Bill Duncklee submitted a letter dated October 20th for items to be completed and recommended not requiring guard rails. The planning board agreed to eliminate the guard rails. Chuck said the base course has been down about two (2) years. Peter said if Chuck feels the maintenance bond is excessive he can come back to the planning board to discuss reducing the amount.

MINUTES  
BROOKLINE PLANNING BOARD  
OCTOBER 20, 1992, Pg. 2

3) Beverly Lynch "Purple Pony Day Care" N.R.S.P. Case #1992-H:K-57-7. Beverly Lynch and Robert Petersen were present to request a licensed day care center for up to nine (9) children. Septic plans have been submitted, there are no plans to put up signs, no wetlands on the property, they have temporary approval from the state and the road has been upgraded. Peter asked the proximity of the nearest residence; Bob Petersen said at least 400'. Rich asked about the fence on note 3 of the plan and if four (4) parking spaces are enough; Bev said the state does not require a fence due to the location and the children get dropped off and picked up at different times so parking spaces are not a problem.

MOTION Peter moved, seconded by Rich to accept the application. Vote was Yes-4-0. Libby stated the conservation commission has no issues on this site plan.

MOTION Peter moved, seconded by Rich to approve the site plan subject to the planning board receiving a copy of the state licence. Vote was Yes-4-0.

4) Kinney-Danforth Real Estate Associates, "Granite State Convenience", N.R.S.P. Case #1992-F:H-103, con't. Bill Kinney explained the proposed 45' x 48' building is for car and truck repair, will probably hold four (4) cars, there will be drains in the cement floor\* going into holding tanks which will be pumped out and recycled regularly, visually damaged vehicles will be kept behind the fence. He submitted an addendum regarding disposal of hazardous waste. Jeremy also submitted an agreement on the waste. Minor changes were made to both addendums with Bill Kinney's approval. Rich asked about additional landscaping in front of the building. Bill said shrubs and bark mulch will be placed at the front right hand section of the fence and a raised bed of grass will be put by the Texaco signs not presently paved.

Libby questioned the expanded use of the property and asked whether this was a non conforming use. Margaret said if oil and antifreeze is considered hazardous waste and not allowed in the ordinance it's probably illegal. Peter checked the zoning ordinance.

MOTION Peter moved, seconded by Rich that the Boards finds the proposed use is neither storage, processing, or disposal of hazardous waste. Also, the proposed use is a continuation of a non conforming use which is not more detrimental. Vote was Yes-4-0.

MOTION Judy moved, seconded by Rich to approve the site plan subject to both addendums being retyped, fees paid and the penciled lines being inked on the plan. Vote was Yes-4-0.

*\* in EACH BAY  
AREA .....  
Amended  
11/10/92 (SR)*

MINUTES  
BROOKLINE PLANNING BOARD  
OCTOBER 20, 1992, Pg. 3

5) **Bob Petersen, Petersen Road.** Bob Petersen said he's ready for the base course on Petersen Road. It will cost about \$11,000 and would like the bond reduced in order to pay the bill. Peter said the bond is reduced after the work is done, we accept either a letter of credit or a passbook, if the road inspector says the bond can be reduced by \$11,000 the Board will consider the request.

6) **Brookline School Board.** Ernie Hudziec, Nancy Heline and Marcia Farwell were present. Ernie said they are receiving numerous complaints about bus stops, either they are in deserted areas or on busy Route 13. They have no specific recommendations but questioned bus stop signs or places on Route 13 where the bus could pull off the road. Rich asked why the school board couldn't review proposed subdivisions and make a recommendation to the planning board. He also suggested the Board change the regulations that bus stops be considered.

7) **Ben Farnsworth Road.** The Fire Engineers will be asked to come in to the next planning board meeting regarding the fire pond on the approved plan.

The meeting adjourned at 9:45 p.m.

Next Planning Board Meeting is Tuesday, November 10, 1992

Richard Napolitano, Vice Chairman, Voting  
Joseph Kagenski, Voting  
Judy Cook, Selectmen's Representative  
Dennis La Bombard, Alternate, Voting for Chris  
Margaret Olson, Alternate  
Robert Sykes, Alternate  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

7:30 PM Zoning-Proposed Changes for 1992  
Sid Hall, Jr. of the Conservation Commission was present to discuss the wording for a zoning change to add a 25 foot construction buffer to the Wetlands Conservation District. Rich had spoken to Libby Wehrle as to whether placement of driveways would need to observe the construction buffer. Rich suggested to Sid that the Cons. Comm. might want to add language that would put a mechanism into Section 5, Special Exceptions, of the Wetlands Ordinance to cover driveways.

8:05 PM Planning Board Business Meeting  
Peter called the meeting to order. Minutes of the October 20, 1992 PB meeting were reviewed. It was voted to amend page 2, #4, Kinney-Danforth, line 4 to read: " there will be drains in the cement floor in each bay work area going into holding tanks .....". Peter made a motion, with Rich seconding, to accept the minutes as amended. Vote was Yes-4, No-0, 1-Abstention (Dennis absent from this meeting)

8:10 PM Road Issues  
1) Talbot-Taylor Estates, Taylor Road, Phase II  
Bob Bourassa was present to ask the PB to allow a change of pavement width in phase II of Taylor Road from the 22 feet to 20 feet as shown on the approved subdivision plans.\* Rich made a motion to reduce the width of payment from 22 feet to 20 feet for the second phase of Taylor Road at Mr. Bourassa's request, with the provision that red-lined or as-built plans will be provided to the Planning Board by Mr. Bourassa. Joe seconded the motion, which passed by a 5-0 yes vote.

MOTION  
\*IT WAS NOTED  
THAT THIS IS A  
SECONDARY ROAD AND  
NOT A COLLECTOR ROAD.  
Amended 11/17/92  
(Signature)

2) **Petersen Road, Bond Reduction**—Road Inspector Clarence Farwell had written a report dated 11/10/92 recommending reduction of the road construction bond, and outlining the outstanding work still to be completed.

MOTION Peter made a motion to recommend to the selectmen that the road bond be reduced to \$20,000.00. Rich seconded the motion. Vote was in the affirmative 5-0.

3) **As-Built plans, Rideout Lane and Bear Hill Estates**  
As-built plans which road agent Clarence Farwell found to be accurate of the field changes made during construction were reviewed by PB members.

8:30 PM **Zoning-Proposed Changes for 1992**  
PB members and those present in the audience were shown 2 video tapes on open space zoning development. At the conclusion of the videos, Tom Moran said that one of the problems with this type of development is that the approval process is too subjective and time consuming as opposed to conventional subdivision approval. Allan Fessenden, while favoring the overall concept, said it would require the expertise of a land planner to creatively design such subdivision projects.

9:05 PM **Margie & Terry Sherlock—Outline of Articles**  
PB members discussed with the Sherlocks their outline of articles for publication on zoning changes. It was decided that there would be an introductory article listing all the proposed items; then a separate article explaining the Open Space Development; to then be followed by an article outlining all other changes.

9:15 PM **Subdivision Regulations Changes—Bonding Issues**  
PB members discussed Jeremy's 11/04/92 memo regarding changes to the subdivision regulations regarding bonding. Suggestions to this memo were as follows:  
On page 1,, Section 4.8.02: "Completion Bond is completed and the road is accepted by the Planning Board." Page 2, Section 4.9.05, reword to reflect a 1 year bond "following the date of road acceptance by the Planning Board." Change the wording in 4.9.05 to read: "This amount shall not exceed 10 % of the total accepted road bond estimate, or be less than 10% of the actual cost needed to .....". It was also discussed whether to include a recommendation by the road inspector on the length of time and the amount to be required for a maintenance bond. Jeremy will make the changes and bring them to the 11/17/92 PB meeting.

PLANNING BOARD MEETING  
November 10, 1992 Page 3

9:45 PM C.I.P. 1992 Update- Jeremy had drafts of the updated C.I.P. for PB members to review and discuss at the PB meeting of 11/17/92.

10:30 PM Rich made a motion to adjourn the meeting. Joe seconded  
MOTION the motion. Vote to adjourn 5-0 yes.

Next Planning Board Meeting Tuesday, November 17, 1992

Submitted by: Sandra L. Fessenden  
Sandra L. Fessenden, Secretary  
Brookline Planning Board

**November 17, 1992**

**PRESENT:** Peter Webb, Chairman, Voting  
Richard Napolitano, Vice Chairman, Voting  
Judy Cook, Selectmen's Representative, Voting  
Margaret Olson, Alternate, Voting  
Jeremy Ginsberg, N.R.P.C. Representative  
Sandra Fessenden, PB Secretary

**7:30 PM Planning Board Business Meeting**  
PB members reviewed the minutes of the 11/10/92 PB meeting. It was voted to amend Page 1, Road Issues, Talbot-Taylor Est., Line 4 to read: **"..plans. It was noted that this is a secondary road and not a collector road. Rich made a...."**

**MOTION** Peter made a motion to approve the minutes as amended. Rich seconded the motion. Vote was 4-0 yes.

**7:40 PM Ray Kecz, Fire Chief-** Ray was present to discuss his 9/17/92 letter to the Planning Board (see attached) regarding the fire pond on N. Mason Road. The fire engineers would like to have the existing fire pond dredged only to the extent that it will make the water deeper and allow for use of a floating strainer, rather than requiring the installation of a dry hydrant. They would like a set-up area for two fire trucks on the Ben Farnsworth side of North Mason Road. Peter said the PB should do whatever is necessary to make the fire pond co-extensive with the existing body of water. Therefore, following the recommendation of the Brookline Fire Engineers, Peter made a motion that the Planning Board will require the developer to submit updated plans of the fire pond in compliance with the fire engineer's directive. Rich seconded the motion, which passed by a 4-0 yes vote.

**MOTION**

**7:50 PM Charles Kowalski, PAX Builders, Muscatanipus Road**  
Mr. Kowalski is asking for acceptance of the road at March 1993 town meeting. Road inspector Bill Duncklee's 10/20/92 report estimated the value of outstanding work to be \$2,152.00. The PB agreed to change the construction bond to a one year maintenance bond in the amount of \$5,000.00 and recommend acceptance of Muscatanipus Road.

**MOTION** Margaret made a motion to reduce the amount of bond held to \$5,000.00; and change it to a one year maintenance bond expiring 11/17/93. Judy seconded the motion. Yes vote 4-0.

7:55 PM Fine Lines Auto Body, 194 Route 13 North- Donald Manter of Manter Corp. showed PB members a preliminary conceptual drawing for a 50' X 80' addition to the existing building. There would be bathroom facilities in the new building and the addition of a new septic system. Jeremy explained this would be an expansion of use on a non-conforming lot. After discussion, Peter told Mr. Manter that he would like to have an interpretation of zoning Article VII-Non-conforming Uses and Buildings, Section 3. PB members were in agreement that Mr. Manter should contact the Z.B.A. regarding whether a variance was necessary prior to making a formal application to the Planning Board for a site plan review. Rich said he would be concerned with the following items when they came back for site plan review:

- 1) Signage;
- 2) Cars for sale on the premise;
- 3) Visibility of damaged vehicles

Jeremy said they might also want to consider the following items:

- 1) A visual barrier along Route 13;
- 2) Traffic flow;
- 3) Listing all specific uses on site.

He asked Mr. Manter if he had building plans for the new addition, and if the architecture of the new building would match the existing building. Mr. Manter did not have new plans with him, but said the buildings would match. Libby Wehrle of the Conservation Commission said they would be concerned regarding the septic systems; and asked if the property was over the aquifer. Jeremy answered that he had checked the aquifer map and it wasn't.

8:30 PM Zoning Issues-Informational discussion of proposed zoning changes. PB members and Conservation Commission Co-chairman Libby Wehrle discussed Jeremy's 11/11/92 memo outlining zoning changes. Jeremy had made some minor wording changes to Items #1 and #2. Suggested changes were as follows: Item #5- reposition first paragraph to section "G-PROCEDURES". Item #9- clarify sections involving the addition of a construction buffer to the Wetlands Conservation District. Jeremy will make these suggested changes.

*\* Amended  
12/1/92  
SRF*

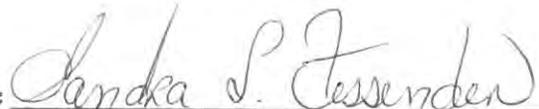

Terry and Margie Sherlock had left a draft of the first article on proposed zoning changes for PB members to review. They will make any new changes and have the article ready to publish in next week's Milford Cabinet and Brookliner.

PLANNING BOARD MEETING  
November 17, 1992 Page 3

- 10:15 PM **C.I.P. Update**- Members decided to wait till the December 15th meeting to discuss the C.I.P. due to the lateness of the hour at this meeting.
- 10:18 PM **Planning Board General Business**-Secretary informed PB members that road inspection fees had exceeded the amount budgeted for 1992. Although the Town is re-imbursed this amount by the developers, Peter said the PB will need to better judge next year's level of road construction in order to be able to estimate more accurately a budgeting figure for this item.
- 10:20 PM **MOTION** Rich made a motion to adjourn the meeting. Judy seconded the motion. Vote to adjourn 4-0 yes.

RE: Fire pond at Ben Farnsworth development

- Case # 1991-4:c-5

Dear Sandy,

The Board of fire Engineers has learned that their proposed fire hole at the above development has been recommended by the board to be changed to a completely separate water hole next to the existing one. The Board of Engineers would recommend against this as we feel it would be an unnecessary expense to the developer and also to the town at a later date. In the past we have done away with water holes of this type because of the silting and algae problems which make it costly for the town to keep cleaned out each year. If this is true, the board of engineers would like to suggest just making a pull out at the existing water supply so that the trucks pumping water could get off the road and leave it open for mutual aid if needed.

**7:30 PM Planning Board Business Meeting**  
Peter called the meeting to order. Minutes of the November 17, 1992 PB meeting were reviewed. It was voted to amend page 2, 8:30 PM Zoning Issues, line 6, to read: "reposition first paragraph from section G-PROCEDURES.".....  
Peter made a motion to accept the minutes as amended. Rich seconded the motion. Vote 5-0 yes to accept the minutes.

**7:40 PM Public hearing on Proposed Zoning Changes for 1992**  
Peter gave a brief introduction to those present at the hearing of the nine items proposed for zoning change.  
**Item #1-** Margaret explained this as a housekeeping change to correct a previous error.  
**Item #2-** Peter explained this change would permit family members to live within a single family residence in a separate accessory dwelling unit (ADU) with a special exception granted by the Z.B.A. Clarence Farwell asked if this could be done on a lot size of 80,000 square feet. Answer was yes. Rich said he was concerned there was no basis for discontinuing the special exception as item 2 was currently written. He felt the PB has not addressed the specifics, and that the article is too open-ended. It could generate other problems. Two of his concerns were:  
1) No guidance as a basis for special exception.  
2) No definition for when the special exception is in effect.

Discussion followed regarding allowing cooking facilities in the ACU in relation to the proposed definition change in Item #3, Family. Russ Heinselman and Clarence Farwell expressed their opinion that Item #2 is being drafted only to allow a second cooking unit.

Article XVII, Section C.-Requirements- After discussion it was decided to change sentence 2 of the first paragraph to read: "In granting a temporary special exception the Zoning Board of Adjustment....." Peter also asked Jeremy to add wording addressing "cooking facility" to this section. #5- change second sentence to read: "Internal access to the principal dwelling unit shall be maintained."

Item #3- Russ asked to have a clearer definition of cooking facility. He said the Selectmen, as the enforcing agents, need to know the intent of the ordinance as written.

8:20 PM Rich said items 2 and 3 do not address the use of a residence as a boarding or rooming house. He made a motion for a redefinition of family, Item #3. Motion died for a lack of a second. Rich made a motion to strike Item #2, to allow Accessory Dwelling Units. Motion died for a lack of a second.

MOTION

MOTION

MOTION

Margaret made a motion to change Item #3 to read: "Family- Cohabitants of a single household who jointly share in the use of an entire dwelling unit." Judy seconded the motion which passed by a 5-0 yes vote.

Item #4- Jeremy gave a brief explanation of the proposed Back Lot zoning article which would create lots with less than 200 feet of road frontage, and have a minimum lot size of 5 acres. Clarence asked if a back lot could be created in a new subdivision. PB members answered yes. Questions arose as to how driveways serving back lots could be placed. Jeremy checked the current subdivision regulations, and found that individual driveways can't be any closer than 50 feet.

8:35 PM Rich made a motion to delete Item #4-Back Lots from the proposed zoning changes. Motion died for lack of second.

MOTION

PB members decided to change the wording of Item #4- BACK LOTS to read: "Minimum lot area 5 acres. Minimum land area is 5 acres per dwelling unit."

Item #5-Open Space Development Rich explained the salient points of this type of zoning as follows: 1) The density of housing remains the same (1 dwelling unit per every 80,000 square feet); and 2) All land not used for house lots, roads, and driveways will become permanently dedicated as open space. He felt a buffer between any structures in an O.S.D. and existing buildings might be desirable. PB members and audience members did not agree.

MOTION

Margaret made a motion to add language within the Open Space Development article which would allow common wells and septic systems. Rich seconded this motion. Yes vote 5-0.

9:15 PM **Item #6**-Building Inspector Wes Whittier was present to explain the three proposed amendments to the Building Code. He said #2 is reworded to clearly define the beginning of construction as the installation of footing and foundation. The CABO code indicates a building permit expires 6 months from it's issuance if construction hasn't started. The next-4.C.-Jeremy said he had spoken to town counsel Bill Drescher regarding this item. Mr. Drescher indicated it may not be possible to use "as amended" as it applies to updated versions of BOCA and CABO Building Codes. Jeremy will check this for the next meeting. The third item, 4.D.- Wes said this adds Certificates of Occupancy- both temporary and permanent to the Building Code.

**Item #7**-Margaret explained that this change clarifies what can be done within the dwelling unit rather than a listing of permitted businesses. Russ said this change will make it enforcement easier for the Selectmen.

**Item #8**-After discussion, Russ suggested that the PB check the definition of "sign" as it pertains to the maximum size.

**Item #9**-Libby Wehrle-Anderson and Judy Fasulo of the Conservation Commission were present. Libby explained the proposed change was to add a 25 foot buffer to the Wetlands Conservation District. Clarence asked for a clarification of "ground disturbance". What could and could not be done within the buffer (ex. digging a waterline from a well in the wetlands district to the house in the buffer. Loaming and seeding a lawn within the buffer). Russ Heinselman also was concerned with the wording in paragraph #3 being unclear and possibly imposing restrictions in the wetlands buffer that were inconsistent with those in the wetlands district. Wes was concerned with the Commission wanting him to be the person verifying the location of the buffer as he does not have the qualifications necessary to determine wetlands soils. Libby said the Selectmen do not support this article because of the enforcement issue. Tom Moran asked what had precipitated this change in the ordinance. Libby said that other communities have wetlands buffers over which local jurisdiction prevails instead of the State of N.H. Wetlands Board. She said that the buffer's purpose is to stop minor violations to the wetlands during construction. She said the Conservation Commission is working on revising item 9.

10:00 PM **Lorden Realty, "Elevations" subdivision-Bond Reduction.**  
Louise Lorden and Road Inspector Bill Duncklee were present  
MOTION to discuss lowering the bond on Lorden Lane. Margaret made a motion seconded by Rich to lower the road construction bond to \$17,800.00 as per Bill Duncklee's 12/1/92 inspection report. Rich seconded the motion which passed by a 5-0 vote.

Rich seconded the motion. Vote was 5-0 yes to recommend to the Selectmen that the bond be reduced to \$17,800.00.

**MOTION** **Rock Ramond Estates-Tom Moran-** Based on Bill Duncklee's final inspection letter dated 11/25/92, Peter made motion to recommend acceptance of Rock Ramond Road. Margaret seconded the motion. Vote 5-0 yes.

**10:15 PM** Margaret made a motion to adjourn the meeting. Rich seconded  
**MOTION** the motion. Vote to adjourn 5-0 yes.

- MOTION**
- 8:00 PM** Open Space Development Article—PB members discussed with Terry and Margie Sherlock their draft article on Open Space Development. Members will review the article tonight and PB secretary will get any suggested changes to Terry tomorrow so that the deadline for "Our Place" and the "Brookliner" and the Milford Cabinet can be met.
- 8:20 PM** Rich expressed his opinion that because this Open Space Development is creating a different situation than currently exists in our zoning, it might be helpful to have a buffer area between an already developed area and an O.S.D. It was decided to add a "perimeter setback" from any houses along the perimeter of the building land area.
- 8:40 PM** Review Capital Improvements Plan 1992 Update  
A brief discussion was held regarding the changes made to the C.I.P. draft in Jeremy's 12/14/92 memo. Peter decided to reschedule this item till to the PB meeting January 19, 1993 when more PB members would have a chance to add their input to the document before the PB formally approves it.
- 9:10 PM** Roads for town acceptance at March Town Meeting.  
PB members discussed two roads which have meet all criteria for town acceptance. They are the following:  
1) Muscatanipus Road  
2) Rock Ramond Road  
PB will notify the selectmen that they are recommending these two roads for acceptance.

PLANNING BOARD MEETING  
December 15, 1992 Page 2

Review Subdivision Regulation Changes-PB members postponed discussion of these changes till a later date.

- 9:20 PM Planning Board General Business  
1) Road Bond Reduction-"Talbot Taylor Estates"- PB members acted on a letter dated 12/4/92 from road inspector William Duncklee to reduce the road construction bond on Talbot and Taylor Roads, Phase I. Peter made a motion to recommend to the Selectmen that they reduce the road bond to \$34,290.00 Rich seconded the motion. Yes vote 3-0.
- MOTION
- 9:30 PM Judy made a motion, seconded by Peter to adjourn the meeting. Yes vote to adjourn 3-0.

Next Planning Board Meeting Tuesday, January 5, 1993

Submitted by: Sandra L. Fessenden  
Sandra L. Fessenden, Secretary

- 7:30 PM Planning Board Business Meeting
  - 1) Review Minutes of the July 16, 1991 meeting  
PB members reviewed the minutes.
- MOTION Chris made a motion to accept the minutes as written. Peter seconded the motion. Vote in the affirmative to accept 5-0.
- 7:40 PM Planning Board General Business
  - 1) Town Road Construction Specifications  
Bill Duncklee was absent from this meeting. PB will reschedule he and Clarence for the August 20th meeting.
- 7:55 PM 2) Fresh Pond Realty/ Millrock Realty  
Tom Moran was present with a plan for phasing "Mountain Road Estates, II" and "Birch Hill Estates, II". Tom proposed a 5-phase plan. He intends to complete the connector roads first, beginning with Section 1-Birch Hill Road-north to Hollis Lane. Connector roads will terminate in temporary hammerhead turns till Section 3 (connecting 1 & 2), and Sections 4 & 5 are built. Cul-de-sacs will be completed after the connector roads are built and are not scheduled in any particular phase. Peter asked if there was a time frame for completion of the two projects. Tom said he plans to begin Phase 1 in 1992, but declined to place a time limit on completion citing economic conditions as a determining factor. Planning Board was agreeable to the phasing plan with the following stipulations:

1) PB approves the 5-Phase construction concept configuration as presented on plan submitted on August 6, 1991 with temporary hammerhead turns.

2) Phasing is to be in the sequence as presented at this meeting.

Phase 1- 12 Building lots, 2,900 +/- ft. of road

Phase 2- 10 Building lots, 2,000 +/- ft. of road

Phase 3- 15 Building lots, 2,200 +/- ft. of road

Phase 4- 10 Building lots, 1,700 +/- ft. of road

Phase 5- 6 Building lots, 1,700 +/- ft. of road

3) All roads within each phase will be completed before the next phase is opened and road construction is begun.

4) Bonding for the entire road system will be in place before the plans are recorded.

**MOTION**

Chris made a motion to approve the phasing plan as presented tonight with the above four conditions. John seconded the motion. Phasing plan approved by a 5-0 yes vote.

**8:15 PM**

**Erwin Corey, 103 Route 13 South, Lot H-25**

Mr. Corey was present with his attorney Carl Lanza. Mr. Lanza requested the PB to give its reasoning for requesting a site plan review of the log cabin building housing "Connie T's Flower Shop". Peter said the Town has a site plan review mechanism allowing site review when a change of use occurs. He said it was the PB's viewpoint that the change of use occurred when the flower shop opened up. Mr. Lanza voiced his opinion that there has been no change of use and therefore a site plan review was not necessary. He stated the log cabin building has been used continuously for various mercantile commercial businesses for the past 40 years. Mr. Corey presented old photographs and postcards of "Corey's Trading Post" showing various retail sales merchandise being sold. PB members had visited the site this evening. Rich asked Mr. Corey if he would repaint the white line delineating the parking lot area at the corner of Bond St. and Route 13 which had been covered over when the parking lot was re-paved. Mr. Corey said he felt the corner was not a problem; and that if it were delineated correctly, trucks would have a difficult time rounding it. The Town also would not be able to plow back the corner as widely as it now does in the winter. After discussion, Clarence said he would take care of re-painting the white line. Mr. Lanza said Mr. Corey was willing to submit a plan of the log cabin building for filing at Town Hall only to show what business is currently there-but not for PB approval.

Lorden - Elevations Subdivision  
Route 13 and Lorden Land (J-2135)

Case #192

Dear Board Members:

It has come to our attention through Alan Lorden that there has been some discussion and concern regarding the approved road and drainage design for the entrance road (Lorden Land) to the Elevations Subdivision. The entrance road has a grade of 8% and is designed for a closed (pipel) drainage system with catch basins and cape cod berms (asphalt curbs) along the roadway pavement. This design was chosen, based on experience in other communities, as the best method to control storm water runoff on steep road grades.

Eliminating the asphalt curbs and substituting an open ditch drainage system is not recommended. Open ditches some 8 to 10 feet wide and 2 to 3 feet deep are unsightly. More importantly, it is very difficult to control drainage and erosion with 8% slopes and open drainage ditches.

Should the Board have any questions or concerns regarding the approved drainage design, we would be most happy to meet with the Board to discuss the matter.

Very Truly Yours,  
MAYNARD & PAQUETTE, INC.

Richard A. Maynard, PE

Brookline School District  
Narrative for school board meeting  
9-16-2021

EEI and Banwell Architects have been working with the Brookline School District to do a preliminary facility assessment at RMMS and SDA. The enrollment in the district has maintained steady while services have increased

Existing conditions

RMMS

1. There is in overall lack of space in the building for education needs
2. There are needed ADA and code upgrades
3. Building lacks sprinkler system
4. Building has 3 inefficient oil boiler plants
5. Ventilation systems are at end of life.
6. No elevator for ADA access for lower level
7. Main office is separated from main entrance creating security risk
8. School lacks a modern kitchen and a dedicated cafeteria

CSDA

1. School relies on modular classrooms as space inside the building is strained
2. HVAC controls and fire alarm system nearing end of useful life
3. HVAC system does not allow for dehumidification or recommended ASHRAE filtration
4. Building has inefficient fluorescent lighting
5. Cafeteria is undersized for student usage
6. Building lacks sprinkler system

Potential solutions will be discussed at board meeting

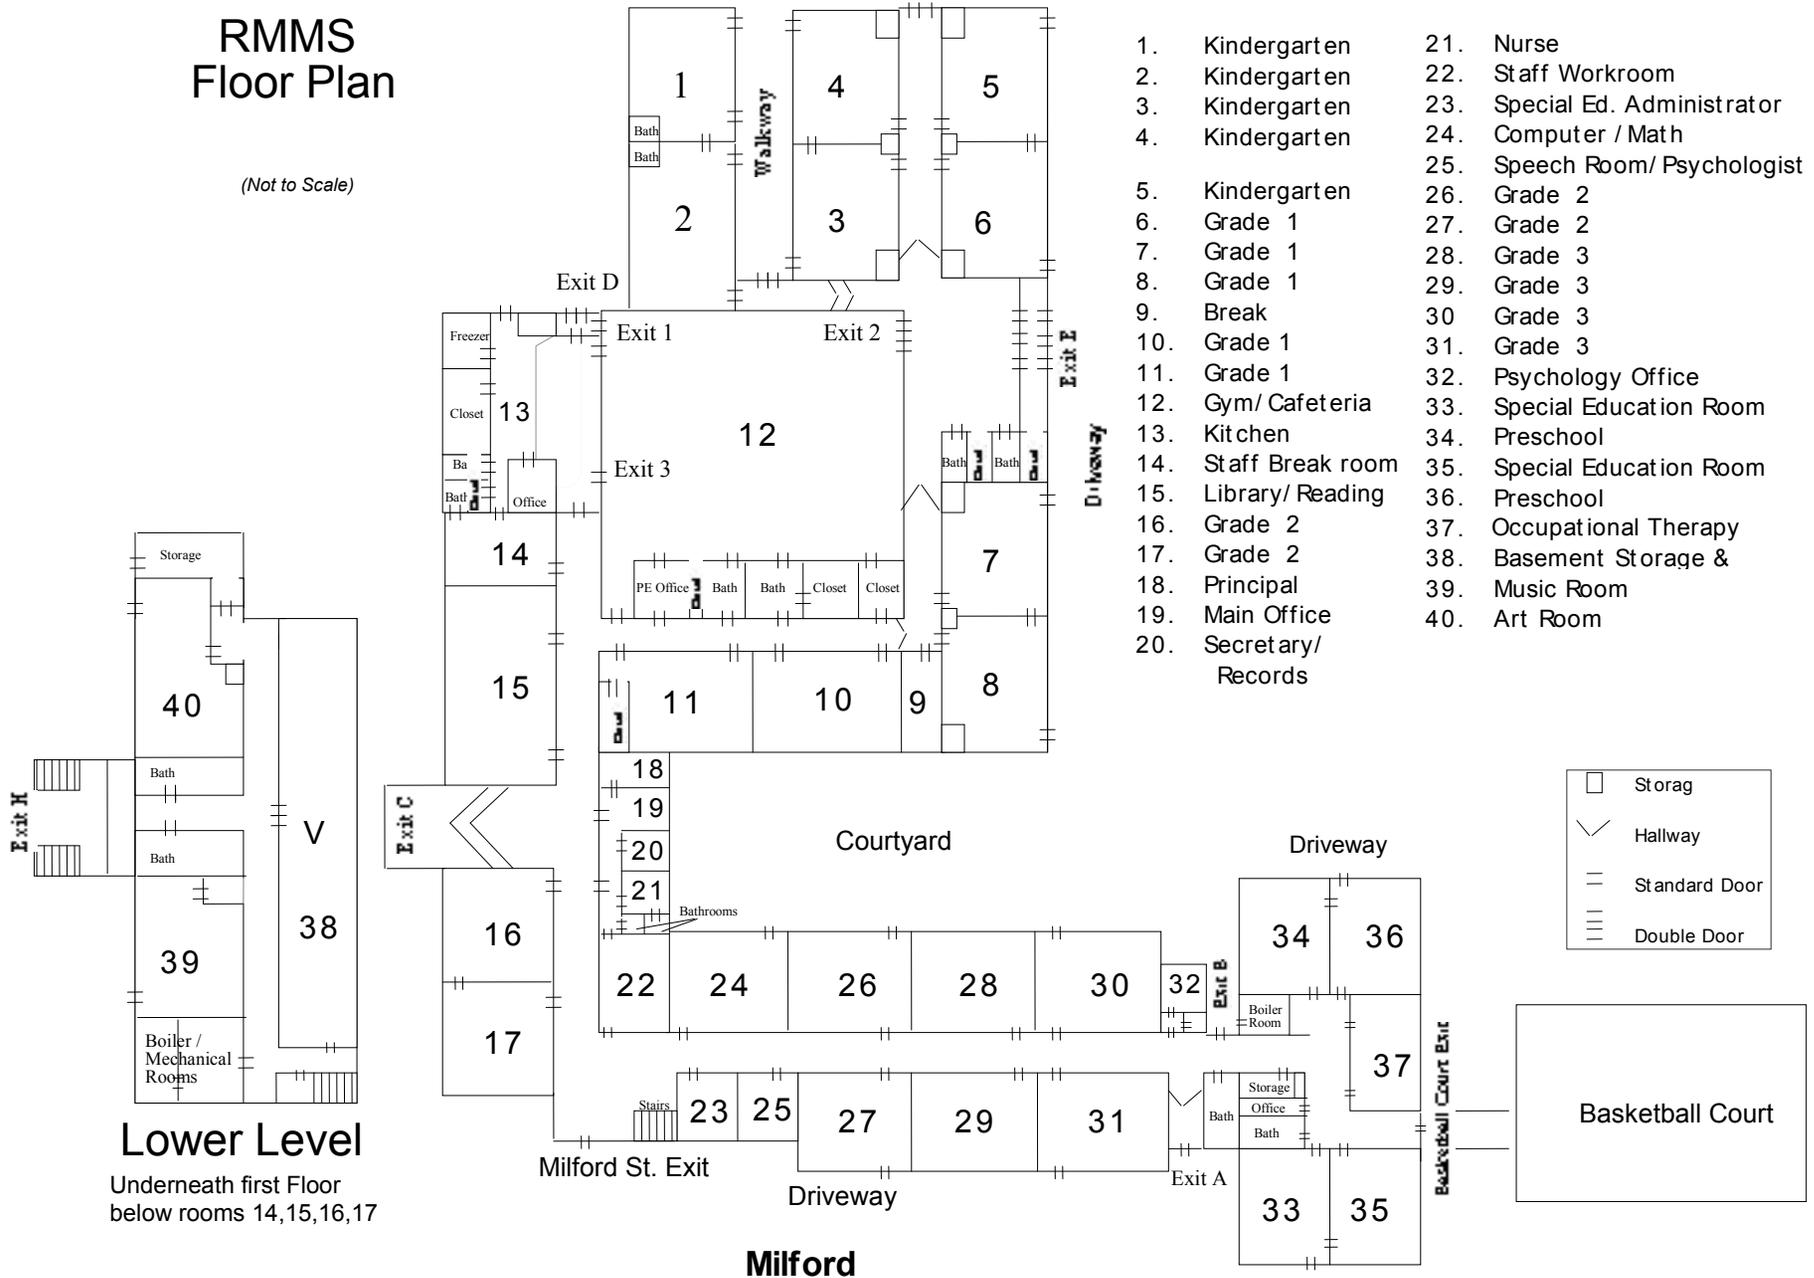

1. Performance contract: low budget impact solution for (Controls, boilers, solar, and lighting)
2. Additions to both schools to provide more educational space
3. ADA, safety, and fire protection upgrades
4. Ventilation and dehumidification options
5. Renovations to RMS to improve main office access

11	OT/PT	10	4
10	Reading Intervention	5	1

### **RMMS Room Utilization History:**

Below is a listing of how spaces have been used at both RMMS and CSDA to accommodate increased enrollment. Attached to this email are the current maps for both RMMS and CSDA.

RMMS uses all spaces, some of which serve multiple purposes.

Room #3: Grade K classroom. A fourth section was added in 2016-2017. This space was used as a reading lab prior to this.

RM#5: Grade K classroom. We added a 5th section of grade K during the 2021-2022 school year. This space was used as a 1st grade class prior to this.

Room #9: Special Education space. Prior to the 2020-2021 school year, this space was used as a guidance office and a psychologist office during the 2015-2016 school year.

RM #10: Grade 1 classroom. We added a 5th section during the 2021-2022 school year. This space became the Reading Room during the 2017-2018 and was the Music room prior to this.

RM #11: Grade 1 classroom. We added a 5th section during the 2021-2022 school year. This became the STEM /Math room during the 2016-2017 school year and was the art room prior to that.

RM #15 - Now the reading room and library learning commons. This was previously the library learning commons.

Room #16: Grade 2 classroom. This space was a grade 3 classroom from 2019-2021 and was a grade 2 classroom from 2017-2019. This space was the reading lab in 2016 - 2017 and was used as a speech room prior to that.

Room #17: Grade 2 classroom. Was used as a grade 3 classroom from 2017-2020 and was a special education classroom prior to this time.

Room #21: Guidance office. Prior to the 2020-2021 school year, this area was used as a nurse's office.

Room #22: Nurse's office. Prior to the 2020-2021 school year, this space was the teacher work room.

RM#24: Computer Lab and STEM/Math. This was previously the computer lab.

Room #25: Speech Office. From 2015 - 2017, this office was used as a Curriculum Administrator and Psychologist office.

RM#32: Psychologist office. Previously this space functioned as a technology office from 2018-2020 and was a guidance office prior to this.

RM#33: Special Education Classroom. During the 2016 - 2017 this space was used as the art room. Prior to that time this space was used as a science classroom.

RM #34: Currently used as a preschool 4 year old class. This potentially could be used as a classroom space, so long as it meets the standards for Educational Space - ED 321.10

RM #35: STEP special education room since 2017-2018. This space previously functioned as the speech room during the 2016-2017 school year and was the math lab prior to that. This space potentially could be used as a classroom space, so long as it meets the standards for Educational Space - ED 321.10

RM #36: Currently used as a preschool 3 year old class. This potentially could be used as a classroom space, so long as it meets the standards for Educational Space - ED 321.10

RM #39: Music room since the 2017-2018 school year. This space was used for BASP and was a classroom at one time.

RM #40: Art room since the 2017-2018 school year. This space was used for BASP and was a classroom at one time.

**Additional Interior and Exterior Building Information:**

Richard Maghakian Memorial School is located on 12 acres of land. The original building, Brookline Elementary School, was built in 1961 supporting the town's community with a four-room schoolhouse. Subsequent construction followed in 1967, which added 6 rooms to the existing building. In 1987, the office, library, kitchen and gymnasium were added. Four years later, the first

grade wing was added, and the latest addition for kindergarten was added in 1996. The 54,000 sq. ft building, composed of wood, cinder block and steel, was built according to code at the time of the construction. A new roof was applied above the kindergarten, first grade, 1/2 gymnasium, art and music classrooms; along with a pulastic floor was laid in the gymnasium in 2015. In 2016, the VCT hallway floors spanning from the Milford Street Door to the end of the first grade wing were replaced. At the start of the 2019-2020 school year students arrived at a brand new playground. In 2020, the grade  $\frac{2}{3}$  wing hallway floors were replaced. In 2021, 6 classroom floors were replaced.

### **CSDA Room Utilization History:**

Prior to grade four moving up here in approximately 2006-2007 (15 years ago), we had a science room (RM #15), a special education room (RM #16), two large office spaces for OT (RM #5, #6) and reading (RM #23, #24), two small office spaces (RM #22 and RM #7), and two empty classrooms (RM #14 and RM #17)

### **Once fourth grade moved up here in 2007-2008:**

RM #14 became a classroom

RM #15 became a science room

RM #16 became a classroom

RM #17 became a classroom

The two larger spaces occupied by OT (RM #5, #6) and reading (RM #23, #24) had a wall placed in them to make 4 spaces:

RM #5 became speech/OT/School Psychologist

RM #6 became guidance,

RM # 7 became the math specialist room for accelerated math and intervention

RM # 22 reading intervention

RM #23, 24 all became special education services

A bubble year required five (5) fifth grade classrooms for the two years of 2008- 2010. This resulted in the arrival of the portable moving two sixth grade

teachers out to the portable (RM# 10 and RM# 11) for a few years with an average of 27 students in a classroom for sixth graders.

Once the bubble moved on, we went down to 4 classrooms per grade and moved reading intervention (RM #22) to RM#10 and OT/PT (RM #5 and #6) to RM#11 in the portables. Their two small spaces became additional special education services (RM#22, RM# 23, and RM# 24) and the math specialist room (RM #7)for teaching accelerated math

### **2021-2022:**

Currently, we use all of the spaces. We eliminated the computer lab in RM #4 to become a grade 4 classroom this year.

### **RMMS Additional Information:**

If we were to use the state maximum using our current population this is what we would have:

K - 81 students (5 sections down to 4) state maximum 25

RM#1 - 21

RM#2 - 20

RM#3 - 20

RM#4 - 20

Grade 1 - 81 students (5 sections to 4) state maximum 25

RM#5 - 21 - currently a grade K space

RM#6 - 20

RM#7 - 20

RM#8 - 20

Grade 2 - 82 students (4 sections) state maximum 25

RM# 16 - 21

RM#17 - 21

RM#25 - 20

RM#27 -20

Grade 3 - 84 students (3 sections) state maximum 30

RM#28 - 28

RM#29 - 28

RM#30 - 28

By moving to maximum class size according to Ed 306.12, we would then have the following spaces available:

RM#10 -current grade 1 class (25 available spots)

RM#11 - current grade 1 class (25 available spots)

RM#15 - current library and reading (split into two classroom, for a total of 50 spots)

RM#24 - computer lab/math (25 available spots)

RM#31 - current grade 3 class (30 available spots)

RM#39 - current music class, go to a cart (25 available spots)

RM #40 - current art class, go to a cart (25 available spots)

By using all of these classroom spaces listed above according to the state class size maximum, our capacity would be 620 occupants.

RM#33,34,35,36 are under the minimum 900 square feet required for elementary school classrooms. These spaces would continue to be used for PreK and Sped.

Our gym maximum capacity is 590 occupants without tables and chairs and 277 occupants with tables and chairs

September 16, 2021

Maximum Enrollment numbers - CSDA

If we were to use the state maximum using our current population this is what we would have:

4 - 87 students (5 sections down to 3) state maximum 30

RM#14 - 29

RM#15 - 29

RM#16 - 29

Grade 5 - 83 students (4 sections to 3) state maximum 30

RM#18 - 28

RM#19 - 28

RM#20 - 27

Grade 6 - 84 students (4 sections to 3) state maximum 30

RM#8 - 28

RM#9 - 28

RM#12 - 28

Portable classrooms:

RM#10 current MTSS reading and math intervention services across grade levels and the Special Education Reading teacher

RM#11 current OT/PT - space required for therapy services

By moving to maximum class size according to Ed 306.12, we would then have the following spaces available:

RM#2 - current library, goes to a cart (30 available spots)

RM#4 - current grade 4 class (30 available spots)

RM#17 - current grade 4 class (30 available spots)

RM#21 - current grade 5 class (30 available spots)

RM#13 - current grade 6 class (30 available spots)

RM#25 - current music class goes to a cart (30 available spots)

RM#26 - current art class goes to a cart (30 available spots)

By using all of these classroom spaces listed above according to the state class size maximum, our capacity would be 620 occupants.

RM#22, 23, 24, 5, 6, 7 are under the minimum 900 square feet required for elementary school classrooms. These spaces would continue to be used for Special Education, Speech, Guidance, School Psychology, and Math Enrichment.

Our gym maximum capacity is 492 (542 including 50 employees) occupants.

---

March 17, 2021

Dear Members of the Planning Board,

I am writing to you on behalf of the Brookline School Board with regards to the potential workforce housing development proposed for route 13 in Brookline. The School Board held a special meeting on Tuesday, March 16, 2021 to deliberate on the impact this proposed housing would have on the School District. The Board unanimously supported the following two motions:

1. MOTION BY MEMBER SARRIS TO SUPPORT THE MORATORIUM ON THE 80-UNIT WORKFORCE HOUSING DEVELOPMENT (5-0).
2. MOTION BY MEMBER MARSANO TO SUPPORT A STUDY COMMITTEE TO REVIEW THE IMPACT OF THE 80-UNIT WORKFORCE HOUSING ON THE BROOKLINE SCHOOL SYSTEM (5-0).

The School Board utilizes the New England School Development Council (NESDEC) to complete the District's enrollment projections on an annual basis. The K-6 projected enrollment in Brookline is projected to go from 557 to 618. Depending on where those students fall (assuming the grade level projections are accurate), this could require potentially 3 additional classroom sections. Looking into next school year, some of our projected class sizes are greater than the specifications outlined in School Board Policy IIB and other projected class sizes are just below the specifications.

After discussing available spaces within our existing elementary buildings, we would have to re-evaluate how our specials (music, art, and computers) are taught. We would have to consider options such as taking back the computer labs, the STEM lab, the music classrooms, and/or the art classrooms to become traditional classrooms and move specials to a cart.

Trying to accommodate more than the NESDEC projections would require vastly different considerations. The School Board has been provided two presentations regarding facilities upgrades for RMMS during this school year. As a result of these two presentations the formation of a facilities study committee has been in process and will be officially formed at the School Board's next regular meeting on March 24, 2021. This committee is scheduled to provide regular feedback to the School Board during the upcoming school year as we prepare to make recommendations for potential warrant articles in March of 2022.

[Robert.thompson@sau41.org](mailto:Robert.thompson@sau41.org)

Our neighbors in Amherst recently completed a thorough study to analyze similar needs (<https://ifac.sau39.org/>). The end result includes two building projects: the construction of a new PreK-5 school with a price tag of \$66 million, and a complete overhaul of the middle school with a price tag of \$31 million.

This projected NESDEC enrollment increase will also impact transportation and at a minimum result in an additional bus being added to the fleet to meet the increase in ridership both in Brookline and for the Cooperative District.. The cost of adding an additional bus route calculates to somewhere between \$45,000 - \$55,000 (based on time and mileage) increase to our transportation budget. Any additional enrollment increase will most likely result in the need to further increase our bus fleet.

As Superintendent my goal is to provide information for your discussion and allow all factors to be considered regarding the potential impact further housing units could have on the School District(s). I appreciate your taking the time to review this letter submitted on behalf of the Brookline School Board and would be most happy to make myself available to answer any questions that the Planning Board may have.

Respectfully,

  
Andrew F. Corey

March 22, 2021

Dear Members of the Planning Board,

On Thursday, March 18, Town Administrator Tad Putney reached out to me seeking clarification on two items. The first item was regarding when I anticipate the enrollment increase happening? I believe the NESDEC projections indicate that the increase in student enrollment will occur over the next 18 months. As with all of our enrollment predictions much of what is projected is based on the economy and regional employers continuing to maintain or expand their work force. The second question was related to our historical enrollments being greater than the recent projections and why we cannot accommodate the projected increase? The two significant items that have reduced available classroom space are the Board's passing of policy IIB which dictates class sizes by grade. Prior to this policy we had class sections that in some cases approached the State maximum of thirty students per class. The second area that has reduced available classroom space has been the District's decision to create in-district special education programming which has reduced our need to place students out of district. These in-district programs allow us to provide an outstanding education to specific students while also avoiding substantial tuition and transportation costs associated with an out of district placement.

I hope you find this information helpful as you deliberate on the potential workforce housing development proposed for route 13 in Brookline.

Respectfully,

  
Andrew F. Corey  
Superintendent of Schools

---

October 21, 2021

Dear Members of the Planning Board,

On Tuesday, October 19, 2021, I met with Town Administrator Tad Putney regarding the school's enrollment and our facilities plans. I have provided Tad with updated enrollment projections from NESDEC. As with all of our enrollment predictions, much of what is projected is based on the economy and regional employers continuing to maintain or expand their work force.

As I shared with you last March, the Brookline Schools have reduced classroom space based on the District's decision to create in-district special education programming, which has reduced our needs to place students out of district.

This year we opened the school year at RMMS by shifting the STEM room to be a classroom, the reading room also became a classroom, and the library was divided in half to meet the needs of our reading students while continuing library services. The computer room at RMMS has been transitioned into a multi-purpose room to assist us with servicing students in math as well as students where English is not their primary language. At CSDA we converted their computer room to a classroom in order to intentionally reduce the teacher student ratio at grade fourth to provide further supports based on student assessment data.

During our most recent Board meetings we have been reviewing renovation plans which would add additional classrooms to both RMMS (4 classrooms) and CSDA (3 classrooms). The information regarding these proposals will be reviewed once again at the Brookline School Board's October 27, 2021 meeting.

I hope you find this information helpful as you continue your discussions around the Town's future growth.

Respectfully,

Andrew F. Corey

Superintendent of Schools

## Policy IIB - CLASS SIZE

### *Category R*

The purpose of this policy is to establish a process for the school board and administration to initiate discussions relative to class size.

Class size will be defined as the maximum number of students under the supervision of a teacher, at any one time, for the purpose of instruction and learning.

In determining the sections at each grade level, the Board and the administration will consider the needs of learners at each grade level, current best practices, the demands of the programs, standards at each grade level, and budgetary impact. If classroom enrollment exceeds the recommended guidelines as outlined in this policy, the Superintendent shall consult with the appropriate Principal and review the situation before deciding whether to take such steps as hiring additional personnel or using other resources.

The following guidelines should be utilized when initiating a discussion to determine if any further action should be taken relative to class size. This discussion will happen no later than the December School Board Meeting.

Grades K-1: 17 students

Grades 2-3: 20 students

Grades 4-6: 23 students

### **Legal References:**

## METHODOLOGY / RELIABILITY FOR ENROLLMENT PROJECTIONS

**Sources of Birth Data:** over the 40+ years NESDEC has been preparing 300+ sets of enrollment projections, we have found that official State DPH birth totals are the most complete. Thus, the birth numbers used in many projections, through 2018, are from the state's Department of Public Health. Any "provisional" numbers would be a preliminary total from the state DPH, a number that may increase (with the final "official" total) yet will not decrease. The "estimated" years, beginning with 2018 or 2019 would be a rolling five-year average, which NESDEC has found to be the most accurate span for purposes of estimation. Local City/Town Clerks have accurate and up-to-date information on local births, however, do not have access to the number of residents born at remote locations/out-of-state - information which will eventually become known to the state DPH. In communities near universities, military installations, or state borders (and near the Canadian border), the difference between the local clerk's tally and the state DPH, may be substantial. In southwestern CT, for example, a number of communities find that 10-15% (or more) of their births occur out-of-state.

**Methodology:** The cohort survival technique is the most frequently used method of preparing school enrollment forecasts. NESDEC uses this technique yet **modifies it in order to move away from forecasts that are wholly computer or formula driven**. Such modification permits the incorporation of important and current town/city-specific information into the generation of the enrollment forecasts. Basically, percentages are calculated from the historical enrollment data to determine a reliable percentage of increase or decrease in enrollment between any two grades. For example, if 200 students enrolled in Grade 1 in 2019-20 and the class increased to 210 students in Grade 2 in 2020-21, the percentage of survival would have been 105%, or a ratio of 1.05. Such ratios are calculated between each pair of grades or years in school, over a period of several recent years. The 13 ratios used (B-K plus 12 ratios between individual grades) are key factors in the reliability of the projections, given the validity of the data at the starting point. The strength of the ratios lies in the fact that each ratio encompasses **collectively** the variables that account for an increase/decrease in the size of a grade enrollment as it moves on to the next grade. If the B-K ratio, in recent years, is higher than 1.4, it can be helpful, in addition, to prepare a long-range "B-K Experience" table which includes the annual number of "net move-ins" at this level; the need for this table applies to only about 5-8% of districts. Each ratio, from Grades K to 12, represents the **cumulative effect** of the following factors:

- Migration, into or out of, of the schools (including movement to/from charter schools, private/parochial schools etc.)
- Changes in school program
- Dropouts, transfers, etc.
- Retention in the same grade
- Births and deaths (see above for sources of birth data)
- Housing growth as indicated by HUD reported building permits issued

Based upon a reasonable set of assumptions regarding each of these factors, ratios most indicative of present/future trends are determined for each pair of grades or years. To project for the future, the ratios thus selected by NESDEC are applied to the present enrollment statistics for a predetermined number of years. It is important to note that NESDEC annually updates projections for affiliated school districts at no cost. This provides an opportunity for the District to plan adequately for any changes that might occur. Enrollment projections are time sensitive. Factors affecting the projections are changing constantly – new births (or not), **new families moving in/out, schools competing for the district’s students (or not),** and on... Thus an outdated enrollment projection, like an outdated weather forecast, will need to be refreshed with new data. While it is difficult to project enrollments during this pandemic economy, NESDEC has added a “Second Semester refresher” enrollment projection at no cost.

**Reliability of Projections:** While the reliability of projections, in general, rests upon the soundness of the assumptions upon which they are based, there are degrees of reliability across the grades and over the ten-year period shown. The projections based on students who are already enrolled in the local Public Schools has the highest reliability. The projections based on children who have been born but are not yet in school are somewhat less reliable. The projections for students who are not yet born are the least reliable projections. It is worth stating, as well, that small schools/towns are the most difficult to project, as the in-/out-migration of only a few families makes a great difference. The research literature on enrollment projections indicates that a 1-2% variance per year is as close as projections are likely to occur-with the exceptions coming in the case of factors-that-were-not-known (examples, a parochial school closed, a charter school opened or expanded, the high school was placed on probation for its accreditation, the district had unusual difficulty in getting its annual budget approved – or other well-publicized difficulty which affected the number of families moving in, etc.)

**Long-Range Facilities Planning and Demographic Information:** Modified cohort survival (cohort component) forecasts are most often used in making decisions regarding annual budgets, 3–5-year plans, etc. However, if the district is engaged in long-range planning (for facilities or similar purposes), additional demographic features can be included in the preparation of the enrollment forecast in order to increase the long-range reliability of the result – including interviews with the Town/City Planner regarding anticipated residential construction, interviews with regional planners and with local realtors regarding recent home sales, and data regarding real estate sales and median sales prices - as well as U.S. Census/American Community Survey update information and other demographic factors, etc. Anticipated “student yield” of proposed multi-unit projects also can be calculated and included as a factor in the projection. Districts/schools with more than 1,000 students have more reliable projections than districts/schools with fewer than 1,000 students.

Karen Leacu LeDuc, Ph.D.  
New England School Development Council  
Revised June 10, 2021

### Historical Public Enrollments

1. After the "YEAR" column can be found the "BIRTHS" column. The number of births to residents for each of eleven years is displayed. Note any trends, e.g., have births been decreasing? increasing? leveling off? Kindergarten and Grade 1 enrollments normally are quite responsive to these fluctuations.
2. Look **down** the K and 1 columns, noting the direction of the trend. This affords a comparison of these classes over a ten-year period. Add the K and Grade 1 enrollments of the first school year recorded, and compare them with the sum of the current K and Grade 1 enrollments.
3. Take the first K class and follow it diagonally to trace its movement to Grade 1, 2, etc. up to its current 10th grade status. This comparison (which can be accomplished for other classes also) gives some measure of the effects of migration in your school district. If a sixth grade class today is larger than it was as a K class six years ago, then net in-migration probably has occurred; if it is smaller, then net out-migration probably has occurred.
4. Compare each K class with the previous year's graduating class. Note which is larger and by what amount one surpasses the other. Larger graduating classes generally reflect declining enrollments; larger K classes generally indicate increasing enrollments.
5. In the "Grade Combinations" section, note the trends of elementary, middle school and high school enrollments. A significant and consistent trend in these summaries usually results in the corresponding trend for projected enrollments. If enrollments are leveling off in the elementary grades after a period of decline, then the secondary enrollments might be expected to continue to decline for several years until the leveling off experience has had time to take hold at the secondary grades

### Enrollment Projections

1. Note the trends exhibited in the total K-12 (or 1-12) projection for the next five years as well as the projections for various grade combinations. The trends on this page should generally exhibit a continuation of the trends mentioned above for historical enrollments, although the **rate** of change may be quite different.
2. Look at the births in the most recent years and note whether the trend is up, down, or level.
3. Make similar comparisons as appropriate on this page as were suggested for the "Historical Public Enrollments" page

### PROJECTION METHODOLOGY

Cohort component (survival) technique is a frequently used method of preparing enrollment forecasts. NESDEC uses this method, but modifies it in order to move away from forecasts which are wholly computer or formula driven. Such modification permits the incorporation of important, current town-specific information into the generation of the enrollment forecasts (such as the volume of real estate sales, building permits, in/out-migration, etc.). Basically, percentages are calculated from the historical enrollment data to determine a reliable percentage of increase or decrease in enrollment between any two

grades. For example, if 100 students enrolled in Grade 1 in 2014-15, increased to 104 students in Grade 2 in 2015-16, the percentage of survival would have been 104% or a ratio of 1.04. Such ratios are calculated between each pair of grades or years in school over several recent years.

After study and analysis of the historical ratios, and based upon a reasonable set of assumptions regarding births, migration rates, retention rates, etc., ratios most indicative of future growth patterns are determined for each pair of grades. The ratios thus selected are applied to the present enrollment statistics for a pre-determined number of years. The ratios used are the key factors in the reliability of the projections, given the validity of the data at the starting point. The strength of the ratios lies in the fact that each ratio encompasses **collectively** the variables that account for increases or decreases in the size of a grade enrollment as it moves on to the next grade. Each ratio represents the cumulative effect of the following factors:

1. Real estate turnover and new residential construction;
2. Migration, in or out, of the schools;
3. Drop-outs, transfers, etc.;
4. Births to residents;
5. Retention in the same grade

### **RELIABILITY OF ENROLLMENT PROJECTIONS**

Projections can serve as useful guides to school administrators for educational planning. In this regard, the projections are generally most reliable when they are closest in time to the current year. Projections six to ten years out may serve as a guide to future enrollments, and are useful for facility planning purposes. However, they should be viewed as subject to change given the likelihood of changes in the underlying assumptions/trends.

Projections that are based upon **the children who already are in the district** (the current K-12 population only) will be the most reliable; the second level of reliability will be for those children already **born into the community but not yet old enough to be in school**. A less reliable category is the group for which an estimate must be made **to predict the number of births**, thereby adding an additional variable. See these three multi-colored groupings on the “Projected Enrollment” slide/page.

**How often do the actual enrollments closely match the NESDEC projections?** The research literature reports the closest that enrollment forecasters are likely to come to actual enrollments is about 1% variance per year-from-the-known-data. That is, a 1% variance from projection-to-actual “one-year-out” into the future (2% variance “two-years-out” ... 10% variance “ten-years-out”). NESDEC reaches this “highest possible” standard in about 90% of cases. When our NESDEC variance is greater, the reasons often are one of the following: a. imbedded/intervening “hidden” variables (examples: a parochial school closed or other students returned from non-public schools, a charter school opened, the Kindergarten program changed entrance age or to extended/full-day, the high school toughened its course credit/graduation requirements, the District set new attendance boundaries for elementary schools, or the District had well-publicized budget/referendum academic accreditation difficulties); b. the District size was below 500 students, thus subject to fluctuations in total numbers; or c. the District has not done enrollment projections on an annual basis.

Annual updates allow for early identification of recent changes in historical trends. When the actual enrollment in a grade is significantly different (high or low) from the projected number, it is important (yet difficult) to determine whether this is a one-year aberration or whether a new trend may have begun. **In light of this possibility, NESDEC urges all school districts to have updated enrollment forecasts developed by NESDEC each October.** This service is available at no cost to affiliated school districts.

## 2016-17 Enrollment Projections

TO: Andrew F. Corey, Superintendent of Schools, SAU #41  
FROM: Donald G. Kennedy, Ed.D., Demographic Specialist  
DATE: October 4, 2016  
RE: Enrollment Projections

We are pleased to send you the enclosed documents displaying the past, present, and projected enrollments for Hollis, Brookline and the SAU #41 School District. We have used the figures given to us by the District and we assume that the method of collecting the enrollment data has been consistent from year to year. It is worth noting that this time of transition is the most difficult of the past 25 years to reliably forecast future enrollments, due to the irregular/uneven pace of communities recovering from the effects of the economic cycle upon real estate markets and school enrollments. SAU #41's real estate/housing data remains steady, whereas the numbers of births in both towns continue to be fewer than the pace of the past 10-15 years.

**In a nutshell: for a decade, Brookline has been declining about 9 students per year in Grades K-6; Hollis in these same grades has been shrinking about 16 children each year; and Grades 7-12 combined have been decreasing about 10 pupils per year. Those trends appear to have flattened, ushering in a trend of more enrollment stability...with K-6 Brookline rising about 6 children per year; K-6 Hollis enrollments relatively flat; and the Grade 7-12 combined enrollment is forecast to shrink about 7 pupils per year.** NESDEC's enrollment projection totals from fall of 2015 data came within 13 students of the actual Hollis Grade K-6 enrollment total for fall, 2016 (623 projected v. 636 actual). In Brookline the Grade K-6 enrollment was 497 projected v. 528 actual. In Grades 7-12, NESDEC projected 615 from Brookline v. 612 actual. The Grade 7-12 cooperative enrollments were 1,233 forecast v. 1,257 actually enrolled.

The two factors now at work which will have the greatest effect upon future enrollments are: a. a decreased number of births to SAU #41 residents and, b. new in-migration (which had slowed, due to the 2008 real estate slowdown). The students currently in Grades 1-10 were born during a period when SAU #41 was averaging 52 Hollis births per year, and 53 Brookline births. More recently (and expected over the next 6-7 years) births are averaging about 10 fewer in Brookline and 12 fewer in Hollis each year. Hard-hit Connecticut experienced an 8.6% decline in births from 2007 to 2009, the largest decline among the six New England states – followed by an 8.1% decline in Rhode Island births, the two states with the highest rates of unemployment in the New England region – Massachusetts births declined by only 3.9% over these three years. Incidentally,

**New Hampshire experienced only about a 3% decline in births** from 2007 to 2009 (in large part caused by the economic Recession), the smallest decline among the six New England states. In the real estate decline which followed, however, fewer new families moved into the state, a factor which led to a rise in the median age, and hence contributing to the present smaller number of local births. Economists are forecasting a slow-yet-steady recovery from the current rates of unemployment which, in turn, may lead to additional in-migration and births. The unemployment rate as of August, 2016 in CT was 5.6%; RI 5.6%; US non-farm unemployment 4.9%; New England average 4.2%; ME 4.0%; MA 3.9%; VT 3.3%; and **NH only 3.0%** - other nearby states: PA 5.7%; NJ 5.3%; and NY 4.8%. The rate of unemployment influences the likelihood of improving real estate sales, residential construction and thus affects the number of new families moving into the community – the US unemployment rate was above 10% during the Great Recession of 2008.

The ever-changing relationship between SAU #41 births and Kindergarten enrollments is displayed on the B-K graphs. Hollis, over the past seven years, has registered about 130 Kindergarteners for every 100 births (five years previous), a relationship which has been relatively steady. This fall, the first year of full-day Kindergarten, there were 160 Kindergarteners for every 100 births. In Brookline, over the past seven years, there have been 137 K's for every 100 Brookline births five-years-prior. This fall, however, there were 78 Kindergarteners from 38 births, a ratio of 205 K's per 100 births. NESDEC Kindergarten projections for 2015-16 in Hollis anticipated 48 children v. 59 actually enrolled...as there were more “net move-in's” than expected. In Brookline, 49 Kindergarteners were projected v. 78 enrolled, due to the robust number of “net move-in's”. Ratios have been adjusted for 2017-18 and beyond. Next year's Grade 1 is expected to be about 13% larger than the previous year's Kindergarten class in Brookline and 45% larger in Hollis.

**“Hidden Trends” within the district:** Like many nearby communities, Hollis and Brookline continue to experience fluctuations in enrollment and in/out-migration in Grades 1-8. There are additional trends and counter-trends to consider. More so than other grade levels, **Grades 1-8 in most districts tend to be quite stable in their numbers.** Grades 9-12 are excluded from the calculation as there tends to be additional fluctuation for reasons having little to do with students moving in/out of the community (in the case Brookline the trend is to add an additional 2% to the class, in the Grade 8-to-9 transition whereas Hollis tends to decline by 1% at this point). Re the Grade 1-8 stability, if last year the Grade 1-7 total was 600 children, then (if no one moved in or out) this fall's Grades 2-8 would equal about 600 – the same cohort of children. Because Grades 1-8 tend to be the most stable in total K-12 enrollment, these Grades 1-8 are excellent places to discover “hidden trends” that otherwise might go unnoticed and provide a useful yardstick by which to measure a district's tendency toward in-/out-migration. **In the case of both Brookline and Hollis, we know that the school district is currently experiencing a “net in-migration” of new families with school age children. For example, in Hollis the 674 children in Grades 1-7 in 2015-16 increased by 25 children to 699 students in Grades 2-8 in 2016-17. Similarly in Brookline, the 579 children in Grades 1-7 during 2015-16 increased by 23 students to 602 children in Grades 2-8 in 2016-17. For the past five years both towns have increased in this statistic, the stability of Grades 1-8...a counter-trend to the fewer births.** The presence of a mixed in/out-migration trend is evidence of the complexity of enrollments in these unsettled economic times. Analysis of these hidden trends provides an additional benchmark by which to assess enrollment trends.

**Over the next three years, K-6 Brookline enrollments are forecast to increase by a total of 23 students (due primarily to fewer births); Grades 7-12 to decrease by 27 pupils...all within the next three years – as the classes move up the grades. Hollis, on the other hand, is**

forecast to decline by 29 children in Grades K-6, and to shrink by only 5 students in Grades 7-12. After that point these projections show increasing enrollment in Hollis at both levels...and Brookline the same. That said, it is possible that real estate turnover will have increased further, bringing in even more additional new families - see the “Projections” page. Although the Year #1-3 forecast likely will occur, the longer term future is better viewed as a possible direction which may be affected by improved real estate conditions. That longer-term future also will be affected by the number of babies-yet-to-be-born...it is quite likely that the birth numbers will increase as new families move in.

**Will these patterns of increasing enrollments really last for as long as ten years? That is difficult to answer.** All projections are more reliable for Years #1-5 in the future; and less reliable in Years #6-10 – as some many factors can change. As soon as the economy and real estate situation become more stable in the region, additional in-migration may occur in SAU #41. Many communities in the region sold during 2008-2014 only about 60-80% as many homes as in 2003-2007. Building permits had slowed as well; see the “Additional Data” table below. **As additional families move in, any forecasted declines may moderate.** See the description on Page 4 below regarding “reliability of projections”. The birth numbers used in the projections, through 2014, are from the NH Department of Public Health. The “estimated” years, beginning with 2015 are a rolling five-year average, which NESDEC has found to be the most accurate method of estimation. Local City/Town Clerks have up-to-date information on local births however do not have access to the number of SAU #41 residents born out-of-state (information which will eventually become known to the NH DPH).

The two most difficult grades to forecast in all districts are Kindergarten and Grade 9. The latter is difficult to anticipate, as there are so many options for Grade 9 (in vocational or agricultural schools, private or parochial non-public schools, etc.). Kindergarten can be difficult to project based upon births alone, as many districts have large numbers of “net move-ins/move-outs” who are ages 1-4. **Some districts take extra steps to track 3 and 4-year olds with a local census, or report to NESDEC the known number of 4-year olds in local preschools/nursery schools which typically enroll Kindergarteners in the district. Knowing this information helps NESDEC to project Kindergarteners more reliably...as does data from the Kindergarten Screening in districts which also track 3 and 4-year old siblings (or neighbors) at that time. The more data, in addition to births, which is sent to NESDEC regarding the incoming Kindergarten class, the greater is the chance that “enrollment surprises” will be minimized.**

**Will many new families be moving into our school district?** Everyday across America, 10,000 “Baby Boomers” celebrate their 65<sup>th</sup> birthday - a phenomenon which will continue for a decade. New England has a disproportionately large share of these senior citizens, many of whom had planned to “downsize” their living arrangements, yet postponed putting homes on the market due to the Great Recession. School enrollments are influenced strongly by the number of real estate sales, as these contribute new families moving into many districts. In over 80% of districts, the number of real estate sales is 4-5 times larger than the number of building permits for new residential construction – **thus the number of real estate sales often is a more important factor than building permits.**

**In New England, how rapidly will additional homes be placed on the market?** A mid-2014 study using data from the Federal Housing Finance Agency, Bureau of Economic Analysis and the U.S. Census Bureau directly links home prices to the “real Gross Domestic Product”

(GDP) in each of the nine regions in the country. However New England ranks only 7<sup>th</sup> among the 9 regions in the recovery of its regional economy (as measured in “the bubble” prior to the Recession, in “real GDP”). Comparing the regional economies from 2 Quarter of 2007 to 4 Quarter 2013: W. South Central = +18.6% (that is, many jobs are available); W. North Central +11.8%; Pacific +7.4%; E. South Central + 5.6%; Middle Atlantic + 5.1%; Mountain + 4.1%; **New England +3.4%**; South Atlantic + 2.1%; and E. North Central + 2.0%. Home sales prices are +14.6% in the W. South Central region (including Texas, Arkansas, Louisiana, and Oklahoma) with the strongest “real G.D.P.” v. -4.4% in New England. Thus, although real estate sales and rentals are very strong in some New England towns and cities, there are many senior citizens still refraining from placing their homes on the market – as house prices still may be rising. New England births, however, are likely to remain at low levels, due to the advanced age of the New England population.

# Analyzing Your Enrollment

## Historical Public Enrollments

1. After the "YEAR" column can be found the "BIRTHS" column. The number of births to residents for each of eleven years is displayed. Note any trends, e.g., have births been decreasing? increasing? leveling off? Kindergarten and Grade 1 enrollments normally are quite responsive to these fluctuations.
2. Look **down** the K and 1 columns, noting the direction of the trend. This affords a comparison of these classes over a ten-year period. Add the K and Grade 1 enrollments of the first school year recorded, and compare them with the sum of the current K and Grade 1 enrollments.
3. Take the first K class and follow it diagonally to trace its movement to Grade 1, 2, etc. up to its current 10th grade status. This comparison (which can be accomplished for other classes also) gives some measure of the effects of migration in your school district. If a sixth grade class today is larger than it was as a K class six years ago, then net in-migration probably has occurred; if it is smaller, then net out-migration probably has occurred.
4. Compare each K class with the previous year's graduating class. Note which is larger and by what amount one surpasses the other. Larger graduating classes generally reflect declining enrollments; larger K classes generally indicate increasing enrollments.
5. In the "Grade Combinations" section, note the trends of elementary, middle school and high school enrollments. A significant and consistent trend in these summaries usually results in the corresponding trend for projected enrollments. If enrollments are leveling off in the elementary grades after a period of decline, then the secondary enrollments might be expected to continue to decline for several years until the leveling off experience has had time to take hold at the secondary grades.

## Enrollment Projections

1. Note the trends exhibited in the total K-12 (or 1-12) projection for the next five years as well as the projections for various grade

combinations. The trends on this page should generally exhibit a continuation of the trends mentioned above for historical enrollments, although the **rate** of change may be quite different.

2. Look at the births in the most recent years and note whether the trend is up, down, or level.
3. Make similar comparisons as appropriate on this page as were suggested for the "Historical Public Enrollments" page.

### **PROJECTION METHODOLOGY**

Cohort component (survival) technique is a frequently used method of preparing enrollment forecasts. NESDEC uses this method, but modifies it in order to move away from forecasts which are wholly computer or formula driven. Such modification permits the incorporation of important, current town-specific information into the generation of the enrollment forecasts (such as the volume of real estate sales, building permits, in/out-migration, etc.). Basically, percentages are calculated from the historical enrollment data to determine a reliable percentage of increase or decrease in enrollment between any two grades. For example, if 100 students enrolled in Grade 1 in 2014-15, increased to 104 students in Grade 2 in 2015-16, the percentage of survival would have been 104% or a ratio of 1.04. Such ratios are calculated between each pair of grades or years in school over several recent years.

After study and analysis of the historical ratios, and based upon a reasonable set of assumptions regarding births, migration rates, retention rates, etc., ratios most indicative of future growth patterns are determined for each pair of grades. The ratios thus selected are applied to the present enrollment statistics for a pre-determined number of years. The ratios used are the key factors in the reliability of the projections, given the validity of the data at the starting point. The strength of the ratios lies in the fact that each ratio encompasses **collectively** the variables that account for increases or decreases in the size of a grade enrollment as it moves on to the next grade. Each ratio represents the cumulative effect of the following factors:

1. Real estate turnover and new residential construction;
2. Migration, in or out, of the schools;
3. Drop-outs, transfers, etc.;
4. Births to residents;
5. Retention in the same grade.

## RELIABILITY OF ENROLLMENT PROJECTIONS

Projections can serve as useful guides to school administrators for educational planning. In this regard, the projections are generally most reliable when they are closest in time to the current year. Projections six to ten years out may serve as a guide to future enrollments, and are useful for facility planning purposes. However, they should be viewed as subject to change given the likelihood of changes in the underlying assumptions/trends.

Projections that are based upon **the children who already are in the district** (the current K-12 population only) will be the most reliable; the second level of reliability will be for those children already **born into the community but not yet old enough to be in school**. A less reliable category is the group for which an estimate must be made **to predict the number of births**, thereby adding an additional variable. See these three multi-colored groupings on the “Projected Enrollment” slide/page.

**How often do the actual enrollments closely match the NESDEC projections?** The research literature reports the closest that enrollment forecasters are likely to come to actual enrollments is about 1% variance per year-from-the-known-data. That is, a 1% variance from projection-to-actual “one-year-out” into the future (2% variance “two-years-out” ... 10% variance “ten-years-out”). NESDEC reaches this “highest possible” standard in about 90% of cases. When our NESDEC variance is greater, the reasons often are one of the following: a. imbedded/intervening “hidden” variables (examples: a parochial school closed or other students returned from non-public schools, a charter school opened, the Kindergarten program changed entrance age or to extended/full-day, the high school toughened its course credit/graduation requirements, the District set new attendance boundaries for elementary schools, or the District had well-publicized budget/referendum academic accreditation difficulties); b. the District size was below 500 students, thus subject to fluctuations in total numbers; or c. the District has not done enrollment projections on an annual basis.

Annual updates allow for early identification of recent changes in historical trends. When the actual enrollment in a grade is significantly different (high or low) from the projected number, it is important (yet difficult) to determine whether this is a one-year aberration or whether a new trend may have begun. **In light of this possibility, NESDEC urges all school districts to have updated enrollment forecasts developed by NESDEC each October.** This service is available at no cost to affiliated school districts.

## Using This Information Electronically

If you would like to extract the information contained in this report for your own documents or presentations, you can use Adobe Acrobat reader to convert the desired information to a “snapshot,” which can be inserted into PowerPoint slides, Word documents, etc. Because the snapshot tool creates a graphic, the image is not editable.

### Steps for Using The Snapshot Tool in Adobe Acrobat Reader:

1. Click on Edit Menu (earlier versions of Adobe Reader might require you to click on the Tools menu and then choose “Select and Zoom;”);
2. Choose “Take a Snapshot” (or “Snapshot Tool” in earlier versions);
3. Click and drag around the text, chart, and/or graphics that you would like to capture: your selection will be copied to the clipboard automatically;
4. Click in the document where you would like the information to appear;\*
5. Give Paste command.

If you have an earlier version of Adobe Acrobat and these instructions don’t work for you, contact your tech support person, or NESDEC and we will try to assist you. Telephone (508)481-9444 or [ep@nesdec.org](mailto:ep@nesdec.org). Ask for Carol or Christina.

\*You may paste your snapshot onto a PowerPoint slide, onto an Excel sheet, or even into a graphics program to save as a separate graphic file (in .jpg or other format), so that it is available for inserting into future documents.

## New England's PK-12 Enrollments The "Big Picture"

From 2016 to 2028, the US Department of Education anticipates changes in PK-12 enrollment of +5.4% in the South; +2.1% in the West, -2.1% in the Midwest; and -3.7% in the Northeast.

State	Fall 2016 PK - 12	Fall 2028 Projected	PK-12 Decline	% Change, 2016-2028
CT	535,118	471,100	-64,018	-12.0%
ME	180,512	171,600	-8,912	-5.0%
MA	964,514	939,400	-25,114	-2.6%
NH	180,888	161,000	-19,888	-11.0%
RI	142,150	135,700	-6,450	-4.5%
VT	88,428	80,400	-8,028	-9.0%

**Source:** USDE, National Center for Education Statistics, *Projections of Education Statistics to 2028*, Table 3, Pages 35-36; Published May 28, 2020.

Although most New England Districts are seeing a decline in the number of births, NESDEC's experience indicates that the impact on enrollment varies from District to District. Almost half of New England Districts are growing in PK-12 enrollment, and a similar number are declining (often in rural areas) with the other Districts remaining stable.

# TITLE LXIV

## PLANNING AND ZONING

### CHAPTER 674

### LOCAL LAND USE PLANNING AND REGULATORY POWERS

#### Zoning

#### Section 674:21

##### **674:21 Innovative Land Use Controls. –**

I. Innovative land use controls may include, but are not limited to:

- (a) Timing incentives.
- (b) Phased development.
- (c) Intensity and use incentive.
- (d) Transfer of density and development rights.
- (e) Planned unit development.
- (f) Cluster development.
- (g) Impact zoning.
- (h) Performance standards.
- (i) Flexible and discretionary zoning.
- (j) Environmental characteristics zoning.
- (k) Inclusionary zoning.
- (l) Impact fees.
- (m) Village plan alternative subdivision.
- (n) Integrated land development permit option.

II. An innovative land use control adopted under RSA 674:16 may be required when supported by the master plan and shall contain within it the standards which shall guide the person or board which administers the ordinance. An innovative land use control ordinance may provide for administration, including the granting of conditional or special use permits, by the planning board, board of selectmen, zoning board of adjustment, or such other person or board as the ordinance may designate. If the administration of the innovative provisions of the ordinance is not vested in the planning board, any proposal submitted under this section shall be reviewed by the planning board prior to final consideration by the administrator. In such a case, the planning board shall set forth its comments on the proposal in writing and the administrator shall, to the extent that the planning board's comments are not directly incorporated into its decision, set forth its findings and decisions on the planning board's comments.

III. Innovative land use controls must be adopted in accordance with RSA 675:1, II.

IV. As used in this section:

- (a) "Inclusionary zoning" means land use control regulations which provide a voluntary incentive or benefit to a property owner in order to induce the property owner to produce housing units which are affordable to persons or families of low and moderate income. Inclusionary zoning includes, but is not limited to, density bonuses, growth control exemptions, and a streamlined application process.

(b) "Phased development" means a development, usually for large-scale projects, in which construction of public or private improvements proceeds in stages on a schedule over a period of years established in the subdivision or site plan approved by the planning board. In a phased development, the issuance of building permits in each phase is solely dependent on the completion of the prior phase and satisfaction of other conditions on the schedule approved by the planning board. Phased development does not include a general limit on the issuance of building permits or the granting of subdivision or site plan approval in the municipality, which may be accomplished only by a growth management ordinance under RSA 674:22 or a temporary moratorium or limitation under RSA 674:23.

V. As used in this section "impact fee" means a fee or assessment imposed upon development, including subdivision, building construction, or other land use change, in order to help meet the needs occasioned by that development for the construction or improvement of capital facilities owned or operated by the municipality, including and limited to water treatment and distribution facilities; wastewater treatment and disposal facilities; sanitary sewers; storm water, drainage and flood control facilities; municipal road systems and rights-of-way; municipal office facilities; public school facilities; the municipality's proportional share of capital facilities of a cooperative or regional school district of which the municipality is a member; public safety facilities; solid waste collection, transfer, recycling, processing, and disposal facilities; public library facilities; and public recreational facilities not including public open space. No later than July 1, 1993, all impact fee ordinances shall be subject to the following:

(a) The amount of any such fee shall be a proportional share of municipal capital improvement costs which is reasonably related to the capital needs created by the development, and to the benefits accruing to the development from the capital improvements financed by the fee. Upgrading of existing facilities and infrastructures, the need for which is not created by new development, shall not be paid for by impact fees.

(b) In order for a municipality to adopt an impact fee ordinance, it must have enacted a capital improvements program pursuant to RSA 674:5-7.

(c) Any impact fee shall be accounted for separately, shall be segregated from the municipality's general fund, may be spent upon order of the municipal governing body, shall be exempt from all provisions of RSA 32 relative to limitation and expenditure of town moneys, and shall be used solely for the capital improvements for which it was collected, or to recoup the cost of capital improvements made in anticipation of the needs which the fee was collected to meet.

(d) All impact fees imposed pursuant to this section shall be assessed at the time of planning board approval of a subdivision plat or site plan. When no planning board approval is required, or has been made prior to the adoption or amendment of the impact fee ordinance, impact fees shall be assessed prior to, or as a condition for, the issuance of a building permit or other appropriate permission to proceed with development. Impact fees shall be intended to reflect the effect of development upon municipal facilities at the time of the issuance of the building permit. Impact fees shall be collected at the time a certificate of occupancy is issued. If no certificate of occupancy is required, impact fees shall be collected when the development is ready for its intended use. Nothing in this subparagraph shall prevent the municipality and the assessed party from establishing an alternate, mutually acceptable schedule of payment of impact fees in effect at the time of subdivision plat or site plan approval by the planning board. If an alternate schedule of payment is established, municipalities may require developers to post bonds, issue letters of credit, accept liens, or otherwise provide suitable measures of security so as to guarantee future payment of the assessed impact fees.

(e) The ordinance shall establish reasonable times after which any portion of an impact fee which has not become encumbered or otherwise legally bound to be spent for the purpose for which it was collected shall be refunded, with any accrued interest. Whenever the calculation of an impact fee has been predicated upon some portion of capital improvement costs being borne by the municipality, a refund shall be made upon the failure of the legislative body to appropriate the municipality's share of the capital improvement costs within

a reasonable time. The maximum time which shall be considered reasonable hereunder shall be 6 years.

(f) Unless otherwise specified in the ordinance, any decision under an impact fee ordinance may be appealed in the same manner provided by statute for appeals from the officer or board making that decision, as set forth in RSA 676:5, RSA 677:2-14, or RSA 677:15, respectively.

(g) The ordinance may also provide for a waiver process, including the criteria for the granting of such a waiver.

(h) The adoption of a growth management limitation or moratorium by a municipality shall not affect any development with respect to which an impact fee has been paid or assessed as part of the approval for that development.

(i) Neither the adoption of an impact fee ordinance, nor the failure to adopt such an ordinance, shall be deemed to affect existing authority of a planning board over subdivision or site plan review, except to the extent expressly stated in such an ordinance.

(j) The failure to adopt an impact fee ordinance shall not preclude a municipality from requiring developers to pay an exaction for the cost of off-site improvement needs determined by the planning board to be necessary for the occupancy of any portion of a development. For the purposes of this subparagraph, "off-site improvements" means those improvements that are necessitated by a development but which are located outside the boundaries of the property that is subject to a subdivision plat or site plan approval by the planning board. Such off-site improvements shall be limited to any necessary highway, drainage, and sewer and water upgrades pertinent to that development. The amount of any such exaction shall be a proportional share of municipal improvement costs not previously assessed against other developments, which is necessitated by the development, and which is reasonably related to the benefits accruing to the development from the improvements financed by the exaction. As an alternative to paying an exaction, the developer may elect to construct the necessary improvements, subject to bonding and timing conditions as may be reasonably required by the planning board. Any exaction imposed pursuant to this section shall be assessed at the time of planning board approval of the development necessitating an off-site improvement. Whenever the calculation of an exaction for an off-site improvement has been predicated upon some portion of the cost of that improvement being borne by the municipality, a refund of any collected exaction shall be made to the payor or payor's successor in interest upon the failure of the local legislative body to appropriate the municipality's share of that cost within 6 years from the date of collection. For the purposes of this subparagraph, failure of local legislative body to appropriate such funding or to construct any necessary off-site improvement shall not operate to prohibit an otherwise approved development.

(k) Revenue from impact fees imposed upon development and collected by a municipality under RSA 674:21, V for construction of or improvement to municipal road systems may be expended upon state highways within the municipality only for improvement costs that are related to the capital needs created by the development. Such improvements may include items such as, but not limited to, traffic signals and signage, turning lanes, additional travel lanes, and guard rails. No such improvements shall be constructed or installed without approval of the state department of transportation. In no event shall impact fees be used for any improvements to roads, bridges, or interchanges that are part of the interstate highway system. Nothing in RSA 674:21, V shall be construed as allowing or authorizing additional impact fees merely by virtue of having approved the expenditure of collected fee revenue for construction of or improvement of state highways, nor shall it be construed as allowing the adoption of new impact fees devoted to assessing impacts to state highways.

(l) No later than 60 days following the end of the fiscal year, any municipality having adopted an impact fee ordinance shall prepare a report listing all expenditures of impact fee revenue for the prior fiscal year, identifying the capital improvement project for which the fees were assessed and stating the dates upon which the fees were assessed and collected. The annual report shall enable the public to track the payment, expenditure, and status of the individually collected fees to determine whether said fees were expended,

retained, or refunded.

VI. (a) In this section, "village plan alternative" means an optional land use control and subdivision regulation to provide a means of promoting a more efficient and cost effective method of land development. The village plan alternative's purpose is to encourage the preservation of open space wherever possible. The village plan alternative subdivision is meant to encourage beneficial consolidation of land development to permit the efficient layout of less costly to maintain roads, utilities, and other public and private infrastructures; to improve the ability of political subdivisions to provide more rapid and efficient delivery of public safety and school transportation services as community growth occurs; and finally, to provide owners of private property with a method for realizing the inherent development value of their real property in a manner conducive to the creation of substantial benefit to the environment and to the political subdivision's property tax base.

(b) An owner of record wishing to utilize the village plan alternative in the subdivision and development of a parcel of land, by locating the entire density permitted by the existing land use regulations of the political subdivision within which the property is located, on 20 percent or less of the entire parcel available for development, shall grant to the municipality within which the property is located, as a condition of approval, a recorded easement reserving the remaining land area of the entire, original lot, solely for agriculture, forestry, and conservation, or for public recreation. The recorded easement shall limit any new construction on the remainder lot to structures associated with farming operations, forest management operations, and conservation uses, and shall specify that the restrictions contained in the easement are enforceable by the municipality. Public recreational uses shall be subject to the written approval of those abutters whose property lies within the village plan alternative subdivision portion of the project at the time when such a public use is proposed.

(c) The submission and approval procedure for a village plan alternative subdivision shall be the same as that for a conventional subdivision. Existing zoning and subdivision regulations relating to emergency access, fire prevention, and public health and safety concerns including any setback requirement for wells, septic systems, or wetland requirement imposed by the department of environmental services shall apply to the developed portion of a village plan alternative subdivision, but lot size regulations and dimensional requirements having to do with frontage and setbacks measured from all new property lot lines, and lot size regulations, as well as density regulations, shall not apply.

(1) The total density of development within a village plan alternate subdivision shall not exceed the total potential development density permitted a conventional subdivision of the entire original lot unless provisions contained within the political subdivision's land use regulations provide a basis for increasing the permitted density of development within a village plan alternative subdivision.

(2) In no case shall a political subdivision impose lesser density requirements upon a village plan alternative subdivision than the density requirements imposed on a conventional subdivision.

(d) If the total area of a proposed village plan alternative subdivision including all roadways and improvements does not exceed 20 percent of the total land area of the undeveloped lot, and if the proposed subdivision incorporates the total sum of all proposed development as permitted by local regulation on the undeveloped lot, all existing and future dimensional requirements imposed by local regulation, including lot size, shall not apply to the proposed village plan alternative subdivision.

(e) The approving authority may increase, at existing property lines, the setback to new construction within a village plan alternative subdivision by up to 2 times the distance required by current zoning or subdivision regulations, subject to the provisions of subparagraph (c).

(f) Within a village plan alternative subdivision, the exterior wall construction of buildings shall meet or exceed the requirements for fire-rated construction described by the fire prevention and building codes being enforced by the state of New Hampshire at the date and time the property owner of record files a formal application for subdivision approval with the political subdivision having jurisdiction of the project. Exterior

walls and openings of new buildings shall also conform to fire protective provisions of all other building codes in force in the political subdivision. Wherever building code or fire prevention code requirements for exterior wall construction appear to be in conflict, the more stringent building or fire prevention code requirements shall apply.

VII. In this section, "integrated land development permit option" means an optional land use control to allow a project to proceed, in whole or in part, as permitted by the department of environmental services under RSA 489.

# TITLE LXIV PLANNING AND ZONING

## CHAPTER 674 LOCAL LAND USE PLANNING AND REGULATORY POWERS

### Zoning

#### Section 674:22

##### **674:22 Growth Management; Timing of Development. –**

I. The local legislative body may further exercise the powers granted under this subdivision to regulate and control the timing of development. Any ordinance imposing such a control may be adopted only after preparation and adoption by the planning board of a master plan and a capital improvement program and shall be based upon a growth management process intended to assess and balance community development needs and consider regional development needs.

II. The local legislative body may adopt a growth management ordinance under this section only if there is a demonstrated need to regulate the timing of development, based upon the municipality's lack of capacity to accommodate anticipated growth in the absence of such an ordinance. The need to regulate the timing of development shall be demonstrated by a study performed by or for the planning board or the governing body, or submitted with a petition of voters presented under RSA 675:4. The study shall be based on competent evidence and shall consider the municipality's projected growth rate and the municipality's need for additional services to accommodate such growth.

III. An ordinance adopted under this section shall include a termination date and shall restrict projected normal growth no more than is necessary to allow for orderly and good-faith development of municipal services. The planning board in a municipality that adopts such an ordinance shall promptly undertake development of a plan for the orderly and rational development of municipal services needed to accommodate anticipated normal growth; provided, however, that in a town that has established a capital improvement program committee under RSA 674:5, the plan shall be developed by that committee. The ordinance and the plan shall be evaluated by the planning board at least annually, to confirm that reasonable progress is being made to carry out the plan. The planning board shall report its findings to the legislative body in the municipality's annual report.

# TITLE LXIV

## PLANNING AND ZONING

### CHAPTER 674

### LOCAL LAND USE PLANNING AND REGULATORY POWERS

### Regulation of Subdivision of Land

#### Section 674:39

##### **674:39 Five-Year Exemption. –**

I. Every subdivision plat approved by the planning board and properly recorded in the registry of deeds and every site plan approved by the planning board and properly recorded in the registry of deeds, if recording of site plans is required by the planning board or by local regulation, shall be exempt from all subsequent changes in subdivision regulations, site plan review regulations, impact fee ordinances, and zoning ordinances adopted by any city, town, or county in which there are located unincorporated towns or unorganized places, except those regulations and ordinances which expressly protect public health standards, such as water quality and sewage treatment requirements, for a period of 5 years after the date of approval; provided that:

(a) Active and substantial development or building has begun on the site by the owner or the owner's successor in interest in accordance with the approved subdivision plat within 24 months after the date of approval, or in accordance with the terms of the approval, and, if a bond or other security to cover the costs of roads, drains, or sewers is required in connection with such approval, such bond or other security is posted with the city, town, or county in which there are located unincorporated towns or unorganized places, at the time of commencement of such development;

(b) Development remains in full compliance with the public health regulations and ordinances specified in this section; and

(c) At the time of approval and recording, the subdivision plat or site plan conforms to the subdivision regulations, site plan review regulations, and zoning ordinances then in effect at the location of such subdivision plat or site plan.

II. Once substantial completion of the improvements as shown on the subdivision plat or site plan has occurred in compliance with the approved subdivision plat or site plan or the terms of said approval or unless otherwise stipulated by the planning board, the rights of the owner or the owner's successor in interest shall vest and no subsequent changes in subdivision regulations, site plan regulations, or zoning ordinances, except impact fees adopted pursuant to RSA 674:21 and 675:2-4, shall operate to affect such improvements.

III. The planning board may, as part of its subdivision and site plan regulations or as a condition of subdivision plat or site plan approval, specify the threshold levels of work that shall constitute the following terms, with due regard to the scope and details of a particular project:

(a) "Substantial completion of the improvements as shown on the subdivision plat or site plan," for purposes of fulfilling paragraph II; and

(b) "Active and substantial development or building," for the purposes of fulfilling paragraph I.

IV. Failure of a planning board to specify by regulation or as a condition of subdivision plat or site plan

approval what shall constitute "active and substantial development or building" shall entitle the subdivision plat or site plan approved by the planning board to the 5-year exemption described in paragraph I. The planning board may, for good cause, extend the 24-month period set forth in subparagraph I(a).

# TITLE LXIV PLANNING AND ZONING

## CHAPTER 675 ENACTMENT AND ADOPTION PROCEDURES

### Zoning Ordinance, Historic District Ordinance and Building Code Enactment Procedures

#### Section 675:6

##### **675:6 Method of Adoption. –**

Every local master plan, subdivision regulation, site plan review regulation and historic district regulation referred to in this title shall be adopted or amended by the planning board or historic district commission, as appropriate, in the following manner:

- I. The board or commission, as appropriate, shall hold a public hearing prior to adoption or amendment. Notice for the time and place of the hearing shall be as provided in RSA 675:7.
- II. The board or commission, as appropriate, may adopt or amend the master plan or regulation upon completion of the public hearing by an affirmative vote of a majority of its members.
- III. No master plan, regulation, amendment or exception adopted under this section shall be legal or have any force and effect until copies of it are certified by a majority of the board or commission and filed with the city clerk, town clerk, or clerk for the county commissioners.
- IV. The historic district commission may adopt or amend regulations only after the commission has held a public hearing within the district. Notice for the time and place shall be as provided in RSA 675:7. The adopted regulations shall be certified by a majority of the historic district commission members and filed with the city clerk, town clerk, or clerk for the county commissioners.

**Source.** 1983, 447:1. 1985, 103:24. 1989, 266:26, eff. July 1, 1989.

# TITLE LXIV PLANNING AND ZONING

## CHAPTER 675 ENACTMENT AND ADOPTION PROCEDURES

### Zoning Ordinance, Historic District Ordinance and Building Code Enactment Procedures

#### Section 675:7

##### **675:7 Notice Requirements for Public Hearing. –**

I. (a) Notice shall be given for the time and place of each public hearing held under RSA 675:2-4 and RSA 675:6 at least 10 calendar days before the hearing. The notice required under this section shall not include the day notice is posted or the day of the public hearing. Notice of each public hearing shall be published in a paper of general circulation in the municipality and shall be posted in at least 2 public places. Any person owning property in the municipality may request notice of all public hearings on proposed amendments to the zoning ordinance, and the municipality shall provide notice, at no cost to the person, electronically or by first class mail.

(b) In lieu of publication in a paper of general circulation pursuant to subparagraph (a), notice may be posted on the municipality's Internet website, if such exists. If notice is posted on the municipality's website in lieu of publication in a paper of general circulation, the notice shall:

- (1) Appear prominently on the website's home page, or a link directly to the notice shall appear prominently on the home page;
- (2) Be posted at the time stated in subparagraph (a) and shall remain on the website until the conclusion of the hearing; and
- (3) Be posted in 2 other public places.

I-a. If a proposed amendment to a zoning ordinance would change a boundary of a zoning district and the change would affect 100 or fewer properties, notice of a public hearing on the amendment shall be sent by first class mail to the owners of each affected property. If a proposed amendment to a zoning ordinance would change the minimum lot sizes or the permitted uses in a zoning district that includes 100 or fewer properties, notice of a public hearing on the amendment shall be sent by first class mail to the owner of each property in the district. Notice by mail shall be sent to the address used for mailing local property tax bills, provided that a good faith effort and substantial compliance shall satisfy the notice by mail requirements of this paragraph.

I-b. In the case of a petitioned zoning amendment as authorized in RSA 675:4, the petitioners shall be responsible for the cost of notice by mail under paragraph I-a. If the full cost of notice is not paid at the time of submission, the municipality shall inform the voter whose name appears first on the petition of the cost of notice within 5 business days, and the balance shall be paid within another 5 business days. If full payment is not made and received within 5 business days, the selectmen or village district commissioners may, in their discretion, decide to accept or decline the petition for submission. Failure by the municipality to inform the responsible person of the cost of notice shall be deemed a waiver of the payment requirement.

II. The full text of the proposed master plan, zoning ordinance, building code, subdivision regulation, site

plan review regulation and historic district regulation, ordinance, or amendment need not be included in the notice if an adequate statement describing the proposal and designating the place where the proposal is on file for public inspection is stated in the notice. The notice of a hearing on a proposed amendment to a zoning ordinance to be sent electronically or by first class mail shall include a statement describing, to the greatest extent practicable and in easily understood language, the proposed changes to the zoning ordinance, the areas affected, and any other information calculated to improve public understanding of the proposal.

## **Brookline Workforce Housing Analysis**

**July 2, 2021**

### **A. Workforce Housing – Key Statute Provisions**

674:58 Definitions:

II. "Multi-family housing" for the purpose of workforce housing developments, means a building or structure containing **5 or more dwelling units**, each designed for occupancy by an individual household.

II. "Reasonable and realistic opportunities for the development of workforce housing" means **opportunities to develop** economically viable **workforce housing** within the framework of a municipality's ordinances and regulations adopted pursuant to this chapter and consistent with RSA 672:1, III-e. ....

IV. "Workforce housing" means housing which is **intended for sale** and which is affordable to a household with an income of no more than 100 percent of the median income for a 4-person household for the metropolitan area or county in which the housing is located as published annually by the United States Department of Housing and Urban Development. "Workforce housing" **also means rental housing** which is affordable to a household with an income of no more than 60 percent of the median income for a 3-person household for the metropolitan area or county in which the housing is located as published annually by the United States Department of Housing and Urban Development. ....

674:59

I. In every municipality that exercises the power to adopt land use ordinances and regulations, such ordinances and regulations **shall provide reasonable and realistic opportunities for the development of workforce housing, including rental multi-family housing.** .....

II. **A municipality's existing housing stock shall be taken into consideration** in determining its compliance with this section. If a municipality's existing housing stock is sufficient to accommodate its fair share of the current and reasonably foreseeable

regional need for such housing, the municipality shall be deemed to be in compliance with this subdivision and RSA 672:1, III-e.

**B. Housing Needs Assessment**

Every April the NH Housing Finance Authority publishes a Workforce Housing Purchase and Rent Limits guideline. This outline notes Median Area Income for owner occupied housing and rental low income limits at 60% of Area Median Income. Based this outline, an owner occupied housing unit cannot sell for more than **\$428,000** and the maximum rent limit is **\$1,480 a month** for rental properties, including utilities.

In 2019 the NRPC published a report outlining housing needs for the region relative to the Workforce Housing Statute. The Report concluded that by the year 2025, the Town of Brookline would have a Workforce Housing Need of **852 units** (Table One). The report does not segment how many units should be owner occupied or rental.

Table One

Owner Occupied Workforce Affordability Limit	\$428,000
NRPC 2019 Housing Needs Assessment - Estimated total Workforce Housing Need by 2025	852 Units

**C. Existing Housing Stock – Values & Sales**

Working with the Assessing Department, a list of all housing units and their assessed values was gathered, this included owner occupied and rental units. In addition, sales of all homes in 2020 were reviewed.

1. Owner Occupied Housing Units

As summarized in Table Two, out of a total of 1,848 single family/mobile homes in the community, 1,211 (65.5%) are assessed at or below the Workforce Housing affordable price point of \$428,000. In looking at sales in 2020, out of 110 sales, 87 (79%) were at or below the Workforce Housing limit.

Given these high percentages, it is my professional opinion that Brookline has met its obligation for owner occupied Workforce Housing units.

Table Two

<b>Assessment</b>	
Assessment Single Family Homes Incl. ADU	1,848
Units at or below \$428,000 <sup>1</sup>	<b>1,211</b>
% of housing at or below Workforce Price Limit	65.53%
<b>2020 Qualified Sales - Owner Occupied</b>	
Total sales in 2020	110
Sales at or below \$428,000	87
% of sales at or below \$428,000	79%

## 2. Renter Occupied Housing Units

A review of Assessing records outlined approximately 134 “rental” housing units including Accessory Dwelling Units (ADU) as outlined in Table Three. Not all ADU units may be on the market as rental, as they are often occupied by relatives; however we have included them in this analysis. Two properties in town meet the Statutory definition of Multi-family, two six unit properties located on Main street. Workforce housing rent limits equate to \$1,480/month including utilities.

Table Three

<b>Rentals</b>	<b># Rentals</b>
Max Affordable Rent: \$1,480	
10 Duplex properties, 20 units	12
3 Duplex Condo - 6 units	6
4 three family unit - 12 units	12
2 six family unit	12
Accessory Dwelling Units - rental units?	81
Extra housing unit on a lot	11
Rental Units	134
Median Rent	?

Because of the limited inventory of rental housing, determining rent levels in the community is challenging. Working with Assessing Staff a small sample of local rental data was gathered, but was limited to single family and duplex rental units. Nine single family rental homes were found, with rents ranging from \$1,100 - \$2,950 a month<sup>2</sup>. Only one of these units met the Workforce Housing rent limits. Data from eight duplex rental units was found, with costs ranging from \$1,300 - \$1,700; two of these units met

<sup>1</sup> As the Town’s assessment ratio is 88.9%, all properties were adjusted to 100% valuation.

<sup>2</sup> Many of to single and duplex rental units did not include utilities in the rent charges.

Workforce Housing cost limits. Limited data was found relative to the apartment rental units in the community.

#### **D. Summary**

Based on this analysis, 1,211 owner occupied dwelling units exist in the community that can be considered Workforce. This figure is above the NRPC Housing Needs analysis that determined Brookline is obligated to have 852 Workforce housing units by the year 2025. Based on this, it would “appear” the Town has met its Workforce obligation and could remove or pause the existing Workforce Housing Zoning Ordinance, entering a “safe harbor”<sup>3</sup> having met its regional obligation. As the housing market is not static, this analysis should be conducted annually to assess housing conditions in the community to determine if the addition of workforce housing units required. A concern does exist that the workforce housing units are made up entirely of owner occupied units and the community has few rental housing options at this time.

---

<sup>3</sup> Safe Harbor reference refers to those communities that have a Workforce Housing inventory large enough to meet the regional need for both owner and rental occupied housing units as required by Statute.

# TITLE LXIV PLANNING AND ZONING

## CHAPTER 672 GENERAL PROVISIONS

### Purpose

#### Section 672:1

##### **672:1 Declaration of Purpose. –**

The general court hereby finds and declares that:

- I. Planning, zoning and related regulations have been and should continue to be the responsibility of municipal government;
- II. Zoning, subdivision regulations and related regulations are a legislative tool that enables municipal government to meet more effectively the demands of evolving and growing communities;
- III. Proper regulations enhance the public health, safety and general welfare and encourage the appropriate and wise use of land;
  - III-a. Proper regulations encourage energy efficient patterns of development, the use of solar energy, including adequate access to direct sunlight for solar energy uses, and the use of other renewable forms of energy, and energy conservation. Therefore, the installation of solar, wind, or other renewable energy systems or the building of structures that facilitate the collection of renewable energy shall not be unreasonably limited by use of municipal zoning powers or by the unreasonable interpretation of such powers except where necessary to protect the public health, safety, and welfare;
  - III-b. Agriculture makes vital and significant contributions to the food supply, the economy, the environment and the aesthetic features of the state of New Hampshire, and the tradition of using the land resource for agricultural production is an essential factor in providing for the favorable quality of life in the state. Natural features, terrain and the pattern of geography of the state frequently place agricultural land in close proximity to other forms of development and commonly in small parcels. Agricultural activities are a beneficial and worthwhile feature of the New Hampshire landscape. Agritourism, as defined in RSA 21:34-a, is undertaken by farmers to contribute to both the economic viability and the long-term sustainability of the primary agricultural activities of New Hampshire farms. Agricultural activities and agritourism shall not be unreasonably limited by use of municipal planning and zoning powers or by the unreasonable interpretation of such powers;
  - III-c. Forestry, when practiced in accordance with accepted silvicultural principles, constitutes a beneficial and desirable use of New Hampshire's forest resource. Forestry contributes greatly to the economy of the state through a vital forest products industry; and to the health of the state's forest and wildlife resources through sustained forest productivity, and through improvement of wildlife habitats. New Hampshire's forests are an essential component of the landscape and add immeasurably to the quality of life for the state's citizens. Because New Hampshire is a heavily forested state, forestry activities, including the harvest and transport of forest products, are often carried out in close proximity to populated areas. Further, the harvesting of timber often represents the only income that can be derived from property without resorting to

development of the property for more intensive uses, and, pursuant to RSA 79-A:1, the state of New Hampshire has declared that it is in the public interest to encourage preservation of open space by conserving forest and other natural resources. Therefore, forestry activities, including the harvest and transport of forest products, shall not be unreasonably limited by use of municipal planning and zoning powers or by the unreasonable interpretation of such powers;

III-d. For purposes of paragraphs III-a, III-b, III-c, and III-e, "unreasonable interpretation" includes the failure of local land use authorities to recognize that agriculture and agritourism operations or activities as defined in RSA 21:34-a, forestry, renewable energy systems, and commercial and recreational fisheries, when practiced in accordance with applicable laws and regulations, are traditional, fundamental and accessory uses of land throughout New Hampshire, and that a prohibition upon these uses cannot necessarily be inferred from the failure of an ordinance or regulation to address them;

III-e. All citizens of the state benefit from a balanced supply of housing which is affordable to persons and families of low and moderate income. Establishment of housing which is decent, safe, sanitary and affordable to low and moderate income persons and families is in the best interests of each community and the state of New Hampshire, and serves a vital public need. Opportunity for development of such housing shall not be prohibited or unreasonably discouraged by use of municipal planning and zoning powers or by unreasonable interpretation of such powers;

III-f. New Hampshire commercial and recreational fisheries make vital and significant contributions to the food supply, the economy, the environment, and the aesthetic features of the state of New Hampshire, and the tradition of using marine resources for fisheries production is an essential factor in providing for economic stability and a favorable quality of life in the state. Many traditional commercial and recreational fisheries in New Hampshire's rivers and estuarine systems are located in close proximity to coastal development. Such fisheries are a beneficial and worthwhile feature of the New Hampshire landscape and tradition and should not be discouraged or eliminated by use of municipal planning and zoning powers or the unreasonable interpretation of such powers.

IV. The citizens of a municipality should be actively involved in directing the growth of their community;

V. The state should provide a workable framework for the fair and reasonable treatment of individuals;

V-a. The care of up to 6 full-time preschool children and 3 part-time school age children in the home of a child care provider makes a vital and significant contribution to the state's economy and the well-being of New Hampshire families. The care provided through home-based day care closely parallels the activities of any home with young children. Family based care, traditionally relied upon by New Hampshire families, should not be discouraged or eliminated by use of municipal planning and zoning powers or the unreasonable interpretation of such powers; and

VI. It is the policy of this state that competition and enterprise may be so displaced or limited by municipalities in the exercise of the powers and authority provided in this title as may be necessary to carry out the purposes of this title.

# TITLE LXIV

## PLANNING AND ZONING

### CHAPTER 674

### LOCAL LAND USE PLANNING AND REGULATORY POWERS

#### Zoning

#### Section 674:21

##### **674:21 Innovative Land Use Controls. –**

I. Innovative land use controls may include, but are not limited to:

- (a) Timing incentives.
- (b) Phased development.
- (c) Intensity and use incentive.
- (d) Transfer of density and development rights.
- (e) Planned unit development.
- (f) Cluster development.
- (g) Impact zoning.
- (h) Performance standards.
- (i) Flexible and discretionary zoning.
- (j) Environmental characteristics zoning.
- (k) Inclusionary zoning.
- (l) Impact fees.
- (m) Village plan alternative subdivision.
- (n) Integrated land development permit option.

II. An innovative land use control adopted under RSA 674:16 may be required when supported by the master plan and shall contain within it the standards which shall guide the person or board which administers the ordinance. An innovative land use control ordinance may provide for administration, including the granting of conditional or special use permits, by the planning board, board of selectmen, zoning board of adjustment, or such other person or board as the ordinance may designate. If the administration of the innovative provisions of the ordinance is not vested in the planning board, any proposal submitted under this section shall be reviewed by the planning board prior to final consideration by the administrator. In such a case, the planning board shall set forth its comments on the proposal in writing and the administrator shall, to the extent that the planning board's comments are not directly incorporated into its decision, set forth its findings and decisions on the planning board's comments.

III. Innovative land use controls must be adopted in accordance with RSA 675:1, II.

IV. As used in this section:

- (a) "Inclusionary zoning" means land use control regulations which provide a voluntary incentive or benefit to a property owner in order to induce the property owner to produce housing units which are affordable to persons or families of low and moderate income. Inclusionary zoning includes, but is not limited to, density bonuses, growth control exemptions, and a streamlined application process.

(b) "Phased development" means a development, usually for large-scale projects, in which construction of public or private improvements proceeds in stages on a schedule over a period of years established in the subdivision or site plan approved by the planning board. In a phased development, the issuance of building permits in each phase is solely dependent on the completion of the prior phase and satisfaction of other conditions on the schedule approved by the planning board. Phased development does not include a general limit on the issuance of building permits or the granting of subdivision or site plan approval in the municipality, which may be accomplished only by a growth management ordinance under RSA 674:22 or a temporary moratorium or limitation under RSA 674:23.

V. As used in this section "impact fee" means a fee or assessment imposed upon development, including subdivision, building construction, or other land use change, in order to help meet the needs occasioned by that development for the construction or improvement of capital facilities owned or operated by the municipality, including and limited to water treatment and distribution facilities; wastewater treatment and disposal facilities; sanitary sewers; storm water, drainage and flood control facilities; municipal road systems and rights-of-way; municipal office facilities; public school facilities; the municipality's proportional share of capital facilities of a cooperative or regional school district of which the municipality is a member; public safety facilities; solid waste collection, transfer, recycling, processing, and disposal facilities; public library facilities; and public recreational facilities not including public open space. No later than July 1, 1993, all impact fee ordinances shall be subject to the following:

(a) The amount of any such fee shall be a proportional share of municipal capital improvement costs which is reasonably related to the capital needs created by the development, and to the benefits accruing to the development from the capital improvements financed by the fee. Upgrading of existing facilities and infrastructures, the need for which is not created by new development, shall not be paid for by impact fees.

(b) In order for a municipality to adopt an impact fee ordinance, it must have enacted a capital improvements program pursuant to RSA 674:5-7.

(c) Any impact fee shall be accounted for separately, shall be segregated from the municipality's general fund, may be spent upon order of the municipal governing body, shall be exempt from all provisions of RSA 32 relative to limitation and expenditure of town moneys, and shall be used solely for the capital improvements for which it was collected, or to recoup the cost of capital improvements made in anticipation of the needs which the fee was collected to meet.

(d) All impact fees imposed pursuant to this section shall be assessed at the time of planning board approval of a subdivision plat or site plan. When no planning board approval is required, or has been made prior to the adoption or amendment of the impact fee ordinance, impact fees shall be assessed prior to, or as a condition for, the issuance of a building permit or other appropriate permission to proceed with development. Impact fees shall be intended to reflect the effect of development upon municipal facilities at the time of the issuance of the building permit. Impact fees shall be collected at the time a certificate of occupancy is issued. If no certificate of occupancy is required, impact fees shall be collected when the development is ready for its intended use. Nothing in this subparagraph shall prevent the municipality and the assessed party from establishing an alternate, mutually acceptable schedule of payment of impact fees in effect at the time of subdivision plat or site plan approval by the planning board. If an alternate schedule of payment is established, municipalities may require developers to post bonds, issue letters of credit, accept liens, or otherwise provide suitable measures of security so as to guarantee future payment of the assessed impact fees.

(e) The ordinance shall establish reasonable times after which any portion of an impact fee which has not become encumbered or otherwise legally bound to be spent for the purpose for which it was collected shall be refunded, with any accrued interest. Whenever the calculation of an impact fee has been predicated upon some portion of capital improvement costs being borne by the municipality, a refund shall be made upon the failure of the legislative body to appropriate the municipality's share of the capital improvement costs within

a reasonable time. The maximum time which shall be considered reasonable hereunder shall be 6 years.

(f) Unless otherwise specified in the ordinance, any decision under an impact fee ordinance may be appealed in the same manner provided by statute for appeals from the officer or board making that decision, as set forth in RSA 676:5, RSA 677:2-14, or RSA 677:15, respectively.

(g) The ordinance may also provide for a waiver process, including the criteria for the granting of such a waiver.

(h) The adoption of a growth management limitation or moratorium by a municipality shall not affect any development with respect to which an impact fee has been paid or assessed as part of the approval for that development.

(i) Neither the adoption of an impact fee ordinance, nor the failure to adopt such an ordinance, shall be deemed to affect existing authority of a planning board over subdivision or site plan review, except to the extent expressly stated in such an ordinance.

(j) The failure to adopt an impact fee ordinance shall not preclude a municipality from requiring developers to pay an exaction for the cost of off-site improvement needs determined by the planning board to be necessary for the occupancy of any portion of a development. For the purposes of this subparagraph, "off-site improvements" means those improvements that are necessitated by a development but which are located outside the boundaries of the property that is subject to a subdivision plat or site plan approval by the planning board. Such off-site improvements shall be limited to any necessary highway, drainage, and sewer and water upgrades pertinent to that development. The amount of any such exaction shall be a proportional share of municipal improvement costs not previously assessed against other developments, which is necessitated by the development, and which is reasonably related to the benefits accruing to the development from the improvements financed by the exaction. As an alternative to paying an exaction, the developer may elect to construct the necessary improvements, subject to bonding and timing conditions as may be reasonably required by the planning board. Any exaction imposed pursuant to this section shall be assessed at the time of planning board approval of the development necessitating an off-site improvement. Whenever the calculation of an exaction for an off-site improvement has been predicated upon some portion of the cost of that improvement being borne by the municipality, a refund of any collected exaction shall be made to the payor or payor's successor in interest upon the failure of the local legislative body to appropriate the municipality's share of that cost within 6 years from the date of collection. For the purposes of this subparagraph, failure of local legislative body to appropriate such funding or to construct any necessary off-site improvement shall not operate to prohibit an otherwise approved development.

(k) Revenue from impact fees imposed upon development and collected by a municipality under RSA 674:21, V for construction of or improvement to municipal road systems may be expended upon state highways within the municipality only for improvement costs that are related to the capital needs created by the development. Such improvements may include items such as, but not limited to, traffic signals and signage, turning lanes, additional travel lanes, and guard rails. No such improvements shall be constructed or installed without approval of the state department of transportation. In no event shall impact fees be used for any improvements to roads, bridges, or interchanges that are part of the interstate highway system. Nothing in RSA 674:21, V shall be construed as allowing or authorizing additional impact fees merely by virtue of having approved the expenditure of collected fee revenue for construction of or improvement of state highways, nor shall it be construed as allowing the adoption of new impact fees devoted to assessing impacts to state highways.

(l) No later than 60 days following the end of the fiscal year, any municipality having adopted an impact fee ordinance shall prepare a report listing all expenditures of impact fee revenue for the prior fiscal year, identifying the capital improvement project for which the fees were assessed and stating the dates upon which the fees were assessed and collected. The annual report shall enable the public to track the payment, expenditure, and status of the individually collected fees to determine whether said fees were expended,

retained, or refunded.

VI. (a) In this section, "village plan alternative" means an optional land use control and subdivision regulation to provide a means of promoting a more efficient and cost effective method of land development. The village plan alternative's purpose is to encourage the preservation of open space wherever possible. The village plan alternative subdivision is meant to encourage beneficial consolidation of land development to permit the efficient layout of less costly to maintain roads, utilities, and other public and private infrastructures; to improve the ability of political subdivisions to provide more rapid and efficient delivery of public safety and school transportation services as community growth occurs; and finally, to provide owners of private property with a method for realizing the inherent development value of their real property in a manner conducive to the creation of substantial benefit to the environment and to the political subdivision's property tax base.

(b) An owner of record wishing to utilize the village plan alternative in the subdivision and development of a parcel of land, by locating the entire density permitted by the existing land use regulations of the political subdivision within which the property is located, on 20 percent or less of the entire parcel available for development, shall grant to the municipality within which the property is located, as a condition of approval, a recorded easement reserving the remaining land area of the entire, original lot, solely for agriculture, forestry, and conservation, or for public recreation. The recorded easement shall limit any new construction on the remainder lot to structures associated with farming operations, forest management operations, and conservation uses, and shall specify that the restrictions contained in the easement are enforceable by the municipality. Public recreational uses shall be subject to the written approval of those abutters whose property lies within the village plan alternative subdivision portion of the project at the time when such a public use is proposed.

(c) The submission and approval procedure for a village plan alternative subdivision shall be the same as that for a conventional subdivision. Existing zoning and subdivision regulations relating to emergency access, fire prevention, and public health and safety concerns including any setback requirement for wells, septic systems, or wetland requirement imposed by the department of environmental services shall apply to the developed portion of a village plan alternative subdivision, but lot size regulations and dimensional requirements having to do with frontage and setbacks measured from all new property lot lines, and lot size regulations, as well as density regulations, shall not apply.

(1) The total density of development within a village plan alternate subdivision shall not exceed the total potential development density permitted a conventional subdivision of the entire original lot unless provisions contained within the political subdivision's land use regulations provide a basis for increasing the permitted density of development within a village plan alternative subdivision.

(2) In no case shall a political subdivision impose lesser density requirements upon a village plan alternative subdivision than the density requirements imposed on a conventional subdivision.

(d) If the total area of a proposed village plan alternative subdivision including all roadways and improvements does not exceed 20 percent of the total land area of the undeveloped lot, and if the proposed subdivision incorporates the total sum of all proposed development as permitted by local regulation on the undeveloped lot, all existing and future dimensional requirements imposed by local regulation, including lot size, shall not apply to the proposed village plan alternative subdivision.

(e) The approving authority may increase, at existing property lines, the setback to new construction within a village plan alternative subdivision by up to 2 times the distance required by current zoning or subdivision regulations, subject to the provisions of subparagraph (c).

(f) Within a village plan alternative subdivision, the exterior wall construction of buildings shall meet or exceed the requirements for fire-rated construction described by the fire prevention and building codes being enforced by the state of New Hampshire at the date and time the property owner of record files a formal application for subdivision approval with the political subdivision having jurisdiction of the project. Exterior

walls and openings of new buildings shall also conform to fire protective provisions of all other building codes in force in the political subdivision. Wherever building code or fire prevention code requirements for exterior wall construction appear to be in conflict, the more stringent building or fire prevention code requirements shall apply.

VII. In this section, "integrated land development permit option" means an optional land use control to allow a project to proceed, in whole or in part, as permitted by the department of environmental services under RSA 489.

# TITLE LXIV PLANNING AND ZONING

## CHAPTER 674 LOCAL LAND USE PLANNING AND REGULATORY POWERS

### Workforce Housing

#### Section 674:58

##### **674:58 Definitions. –**

In this subdivision:

- I. "Affordable" means housing with combined rental and utility costs or combined mortgage loan debt services, property taxes, and required insurance that do not exceed 30 percent of a household's gross annual income.
- II. "Multi-family housing" for the purpose of workforce housing developments, means a building or structure containing 5 or more dwelling units, each designed for occupancy by an individual household.
- III. "Reasonable and realistic opportunities for the development of workforce housing" means opportunities to develop economically viable workforce housing within the framework of a municipality's ordinances and regulations adopted pursuant to this chapter and consistent with RSA 672:1, III-e. The collective impact of all such ordinances and regulations on a proposal for the development of workforce housing shall be considered in determining whether opportunities for the development of workforce housing are reasonable and realistic. If the ordinances and regulations of a municipality make feasible the development of sufficient workforce housing to satisfy the municipality's obligation under RSA 674:59, and such development is not unduly inhibited by natural features, the municipality shall not be in violation of its obligation under RSA 674:59 by virtue of economic conditions beyond the control of the municipality that affect the economic viability of workforce housing development.
- IV. "Workforce housing" means housing which is intended for sale and which is affordable to a household with an income of no more than 100 percent of the median income for a 4-person household for the metropolitan area or county in which the housing is located as published annually by the United States Department of Housing and Urban Development. "Workforce housing" also means rental housing which is affordable to a household with an income of no more than 60 percent of the median income for a 3-person household for the metropolitan area or county in which the housing is located as published annually by the United States Department of Housing and Urban Development. Housing developments that exclude minor children from more than 20 percent of the units, or in which more than 50 percent of the dwelling units have fewer than two bedrooms, shall not constitute workforce housing for the purposes of this subdivision.

# TITLE LXIV PLANNING AND ZONING

## CHAPTER 674 LOCAL LAND USE PLANNING AND REGULATORY POWERS

### Workforce Housing

#### Section 674:59

##### **674:59 Workforce Housing Opportunities. –**

I. In every municipality that exercises the power to adopt land use ordinances and regulations, such ordinances and regulations shall provide reasonable and realistic opportunities for the development of workforce housing, including rental multi-family housing. In order to provide such opportunities, lot size and overall density requirements for workforce housing shall be reasonable. A municipality that adopts land use ordinances and regulations shall allow workforce housing to be located in a majority, but not necessarily all, of the land area that is zoned to permit residential uses within the municipality. Such a municipality shall have the discretion to determine what land areas are appropriate to meet this obligation. This obligation may be satisfied by the adoption of inclusionary zoning as defined in RSA 674:21, IV(a). This paragraph shall not be construed to require a municipality to allow for the development of multifamily housing in a majority of its land zoned to permit residential uses.

II. A municipality shall not fulfill the requirements of this section by adopting voluntary inclusionary zoning provisions that rely on inducements that render workforce housing developments economically unviable.

III. A municipality's existing housing stock shall be taken into consideration in determining its compliance with this section. If a municipality's existing housing stock is sufficient to accommodate its fair share of the current and reasonably foreseeable regional need for such housing, the municipality shall be deemed to be in compliance with this subdivision and RSA 672:1, III-e.

IV. Paragraph I shall not be construed to require municipalities to allow workforce housing that does not meet reasonable standards or conditions of approval related to environmental protection, water supply, sanitary disposal, traffic safety, and fire and life safety protection.

**Source.** 2008, 299:2, eff. Jan. 1, 2010.

# TITLE LXIV PLANNING AND ZONING

## CHAPTER 674 LOCAL LAND USE PLANNING AND REGULATORY POWERS

### Workforce Housing

#### Section 674:60

##### **674:60 Procedure. –**

I. Any person who applies to a land use board for approval of a development that is intended to qualify as workforce housing under this subdivision shall file a written statement of such intent as part of the application. The failure to file such a statement shall constitute a waiver of the applicant's rights under RSA 674:61, but shall not preclude an appeal under other applicable laws. In any appeal where the applicant has failed to file the statement required by this paragraph, the applicant shall not be entitled to a judgment on appeal that allows construction of the proposed development, or otherwise permits the proposed workforce housing development to proceed despite its nonconformance with the municipality's ordinances or regulations.

II. If a land use board approves an application to develop workforce housing subject to conditions or restrictions, it shall notify the applicant in writing of such conditions and restrictions and give the applicant an opportunity to establish the cost of complying with the conditions and restrictions and the effect of compliance on the economic viability of the proposed development. The board's notice to the applicant of the conditions and restrictions shall constitute a conditional approval solely for the purpose of complying with the requirements of RSA 676:4, I(c)(1). It shall not constitute a final decision for any other purpose, including the commencement of any applicable appeal period.

III. Upon receiving notice of conditions and restrictions under paragraph II, the applicant may submit evidence to establish the cost of complying with the conditions and restrictions and the effect on economic viability within the period directed by the board, which shall not be less than 30 days.

(a) Upon receipt of such evidence from the applicant, the board shall allow the applicant to review the evidence at the board's next meeting for which 10 days' notice can be given, and shall give written notice of the meeting to the applicant at least 10 days in advance. At such meeting, the board may also receive and consider evidence from other sources.

(b) The board may affirm, alter, or rescind any or all of the conditions or restrictions of approval after such meeting.

(c) Subject to subparagraph (d), the board shall not issue its final decision on the application before such meeting, unless the applicant fails to submit the required evidence within the period designated by the board, in which case it may issue its final decision any time after the expiration of the period.

(d) If an applicant notifies the board in writing at any time that the applicant accepts the conditions and restrictions of approval, the board may issue its final decision without further action under this paragraph.

IV. A municipality may require that an applicant record restrictive covenants acceptable to the land use board that the workforce housing may not be rented to or sold to any household whose income is greater than that

specified in RSA 674:58, IV. The covenant shall be for the term specified in the regulations of the land use board. The municipality may adopt regulations to insure compliance with the covenants, which regulations may include requirements for the monitoring of the project by the municipality or by a suitable third party agency qualified to carry out such requirements, including but not limited to requiring the production of annual income verification for renters and non-owner occupiers. The land use board may consider the existence of recorded covenants or income qualification and occupancy criteria as satisfying the purpose of this paragraph if such covenants or criteria are administered by a state or federal entity.

# TITLE LXIV PLANNING AND ZONING

## CHAPTER 674 LOCAL LAND USE PLANNING AND REGULATORY POWERS

### Workforce Housing

#### Section 674:61

##### **674:61 Appeals. –**

I. Any person who has filed the written notice required by RSA 674:60, and whose application to develop workforce housing is denied or is approved with conditions or restrictions which have a substantial adverse effect on the viability of the proposed workforce housing development may appeal the municipal action to the superior court under RSA 677:4 or RSA 677:15 seeking permission to develop the proposed workforce housing. The petition to the court shall set forth how the denial is due to the municipality's failure to comply with the workforce housing requirements of RSA 674:59 or how the conditions or restrictions of approval otherwise violate such requirements.

II. A hearing on the merits of the appeal shall be held within 6 months of the date on which the action was filed unless counsel for the parties agree to a later date, or the court so orders for good cause. If the court determines that it will be unable to meet this requirement, at the request of either party it shall promptly appoint a referee to hear the appeal within 6 months. Referees shall be impartial, and shall be chosen on the basis of qualifications and experience in planning and zoning law.

III. In the event the decision of the court or referee grants the petitioner a judgment that allows construction of the proposed development or otherwise orders that the proposed development may proceed despite its nonconformance with local regulations, conditions, or restrictions, the court or referee shall direct the parties to negotiate in good faith over assurances that the project will be maintained for the long term as workforce housing. The court or referee shall retain jurisdiction and upon motion of either party affirming that negotiations are deadlocked, the court or referee shall hold a further hearing on the appropriate term and form of use restrictions to be applied to the project.

**RE: Brookline NH Water & Well Committee Report**

***Introduction:***

From 2017 through 2019 twelve residential homes were constructed along the southern portion of Russell Hill Road in Brookline, New Hampshire. A private water supply well, drilled into bedrock, was also installed for each of these homes. In 2019, several of the newly-constructed homes experienced a number of issues with their water supply, including a decrease in yield in their wells. No available stored water was observed in the well following lowering of submersible pumps at two homes within this development. In some instances, pumps could not be lowered further because of pump or drop pipe limitations, or because the static water level had dropped below the base of the well.

During this time, development of a lot at the north end of West Hill Road had also been proposed to the Planning Board and additional homes on the west side of Russell Hill Road were in various stages of construction. These additional Russell Hill Road homes were adjacent to those homes experiencing water well issues on Russell Hill Road. Concerns were raised that newly-drilled wells associated with these development may negatively influence, via fracture connectivity, existing private water supply wells.

The Brookline Water and Well Committee (WWC) was formed in early 2020 because of reports of private water wells in this region of Brookline experiencing these issues. During the February 20, 2020 planning board meeting, the above members were appointed to the WWC to further investigate the occurrence of well issues and to consider new rules and ordinances related to water supply in Brookline.

It should be noted that abnormally dry conditions in New Hampshire were recorded in June 2020 which affected private water wells outside of Russell Hill and West Hill Road developments referenced above. As of October 13, 2020, dry conditions have progressed into an extreme drought (Stage D3) encompassing 22 percent of the state, while the majority of the state remains in a state of severe drought (Stage D2; US Drought Monitor, 2020). These drought conditions have further elevated the

importance of the WWC's mission and have partially influenced the selection and language of the proposed ordinances contained in this report.

Based upon WWC members' research, discussions with state agencies, planning commissions, hydrogeologists, and local vendors, the WWC has proposed two ordinances. The WWC believes these ordinances will provide a degree of assurance that newly-constructed, private water supplies, will maintain a sustainable yield. Each of the proposed ordinances below is preceded by background and followed by supporting information. This report concludes with a number of items that should be considered under future water-related committees in Brookline.

### ***Proposed Ordinance No. 1***

In response to concerns of the new development on the north end of West Hill Road potentially exacerbating existing water supply issues on Russell Hill Road, concerned stakeholders requested a hydrogeologic study of the area to further determine the potential effects of the new developments. The November 19, 2019 Nobis Engineering, Inc. (Nobis) report details the results of this study (Nobis, 2019).

The Nobis report was reviewed with multiple consultants and vendors to determine the usefulness of similar studies in evaluating an adequate water supply for future, proposed developments. In general, those interviewed were proponents of a high-level hydrogeologic study for this purpose. No one interviewed stated such a study would guarantee a long-term source without potential for running dry.

The below proposed ordinance was discussed with the Nashua Regional Planning Commission (NRPC). The NRPC suggested that the ordinance be incorporated into the Brookline subdivision regulations. This would require consideration of the ordinance during site plan or subdivision review by the Brookline Planning Board.

As a result of these discussions, the below ordinance has been proposed to the Brookline Planning Board.

*A baseline hydrogeological study is to be required for a proposed development of more than one residence. This study is to conclude the likelihood of a long-term yield of a private water supply for future residences. The following items are to be included as part of the study:*

- *a review of surficial and bedrock geologic maps at minimum scale of 1:24,000 as available;*
- *review of well yields within a 500-foot radius of the proposed development boundary if no more than two lots are proposed. If greater than two lots are proposed, the well survey radius shall extend to 1,000 feet;*
- *a fracture trace study (ie, a photo-lineament study) at a representative scale; and,*
- *a professional opinion by a licensed professional geologist registered in the state of New Hampshire on the likelihood of an adequate water supply for each proposed residence.*

Some towns have requested hydrogeological studies for proposed developments. These have typically been paid for by the developer. These towns are Bedford, Bow, and Kingston, New Hampshire (PlanLink, 2019). Research by WWC did not locate any New Hampshire town where a baseline hydrogeological study was part of a town ordinance or rule.

On September 10, 2020, David Macclean, PG of Geolinsight, Inc. was interviewed as part of the WWC research into the proposed ordinances. Mr. Macclean suggested that the term, “hydrogeologic study” be defined so that a specific minimum standard is established for studies performed under the ordinance. On September 14, 2020, another environmental consultant was also interviewed who suggested the term, hydrogeological study, be defined for similar reasons. A definition has not yet been provided, however, the items to be included in the study are included in the proposed ordinance.

### ***Proposed Ordinance 2***

Research conducted by the WWC noted that a number of private supply wells drilled in town from 2010 to 2019 had exceptionally low measured yields during their installation. It was also noted that the State of New Hampshire does not regulate minimum yields of private water supply wells (NHDES, 2019; Attachment 1). Minimum yield guidance only exists as recommendation documents from the New Hampshire Water Well Board (5 gallons per minutes for two hours or total capacity of 600 GPM in a two hour period) and the New Hampshire Water Well Association (4 GPM for four hours).

In the absence of state regulations, several towns have enacted ordinances to require that during well construction, minimum yields be assured based upon the above guidance. The towns of Pelham, Windham, and Hempstead, New Hampshire are examples of towns that have established yield standards for newly-drilled wells.

The NRPC recommended that any yield testing standards adopted by the town be enacted as a zoning ordinance. A yield test would be required prior to the issuance of a certificate of occupancy and could be monitored and/or approved by the town building inspector. Including yield testing as a zoning ordinance would apply to all lots regardless of whether subdivision is proposed.

During research, the WWC also noted instances of dried wells where the well depth could have permitted lowering of the pump into the lower static water level. However, pump lowering would not be effective due to the existing pump or piping limitations. Piping and pump sizing are also addressed in the proposed ordinance.

As a result of the above research, the WWC proposes the following ordinance which is based upon those established by the Town of Pelham Board of Health (Attachment 2):

*The probability for a long-term sustainable yield from a single private well should be further qualified by establishing yield standards to meet or exceed those established by the NH Water Well Association.*

*All wells shall be pump tested regardless of depth to determine sustained yield. The sustained yield shall be not less than four (4) gallons per minute over a four (4) hour period. In all cases the pump test shall be completed using a submersible pump. Groundwater level measurements shall be recorded immediately before the start of the pump test for static groundwater level, and at least once every thirty (30) minutes during the pump test. In addition, the static groundwater level shall be measured within twenty-four (24) hours after the pump test and shall demonstrate water level recovery after the pump test to at least ninety percent (90%) of the pretest level. All results from pump testing must be certified by the tester (ie, New Hampshire-Licensed Well Driller under RSA 482-*

*B) and so evidenced on the State of New Hampshire Well Completion Report to be provided to the building department.*

*No Certificate of Occupancy will be issued until all the provisions of these regulations have been met, or contingencies have been made, or duly waived by the Board of Health.*

*Well pump sizing, drop tube construction, and storage tank capacity must be appropriate for the well drilled, anticipated occupancy and use of the residence, and take into consideration periods of moderate to severe drought. As such, the depth of the pump should be equidistant between the static water level and the bottom of the well.*

Members of the WWC had discussions with Roger Skillings of Skillings and Sons, and representatives of NH Water Well Association, and Capital Well Clean Water Center, Inc. As noted above, it was confirmed by these representatives that several towns had established ordinances where, prior to receiving an occupancy permit, the well must undergo a yield test to ensure the water yield is adequate.

The proposed well pump sizing, pump depth setting and piping language is included in the ordinance to encourage builders to consider periods of drought and future development when setting internal well components and piping. In one instance, a well was drilled to a depth of approximately 1,500 feet below grade and the pump was installed and set at 200 feet. The static water level subsequently dropped from 118 feet to 440 feet BGS. The homeowner then had to repeatedly hire a contractor to lower the pump as the static water level continuously dropped naturally (Machado, 2020). This could have been prevented if the pump was originally set at a depth that took into consideration periods of drought or, at a minimum, the maximum allowed pump depth based upon piping and pump capacity.

### **Additional Items**

The following items were discussed throughout the WWC's tenure but were not researched. These items should be considered under future WWC committees.

- Consider applying for federal or state grants that would support town-wide hydrogeological studies and/or cost and feasibility study of a public water supply for the town;
- Continue to engage with the Nashua Regional Planning Commission to develop GIS maps that reflect town areas of high or low risk relative to water supply;
- Initiate a survey via the town website to track private water well issues. Data will be tracked by the Brookline Conservation Committee to monitor areas of concern;
- Complete a town-wide hydrogeological study;
- Define the hydrogeological study;
- Irrigation ordinances (ie; consider restricting systems in areas where historical well problems have been identified in the past. Alternatively, consider requiring that new or existing homes wishing to install an irrigation system should demonstrate that their current well is adequate or provide documentation that shows another well for irrigation use has been dug, or current well has been upgraded to handle the additional burden;
- Installation or monitoring of existing bedrock wells to assess regional drought conditions;
- Consider creating a groundwater aquifer protection district;

- Consider language for a shared well serving two or more residential homes;
- Consider language is present that ensures well radius (75 feet) is within property boundary;
- Add language to town master plan to include protection of water resources.

### ***Closing Comments***

It is recommended that a WWC continue to be commissioned in order to research the above additional items and provide a point of contact to discuss other well water-related information to the Planning Board.

## Recommended Minimum Water Supply Capacity for Private Wells

One of the most important factors to consider when planning to purchase or build a home is the adequacy of the water supply. The amount of water available to the home can be as important as the quality of the water. How much water is adequate for a private domestic supply is a commonly asked question of NHDES and the Water Well Board. Please note that the State of New Hampshire does not regulate how much water a private well shall yield. Some towns have adopted ordinances requiring private wells produce a specific amount of water prior to issuing occupancy or building permits; check with your local authority to find out more.

Available water supply is a function of both the recovery rate and the storage volume of the well. These two factors contribute to the actual capacity of the supply particularly if the well recovery rate is low. A standard 6-inch diameter drilled well can store 1½ gallons of water per foot of well depth. The actual volume of water in storage will depend on the water level in the well and the pump setting depth.

The Water Well Board suggests that a minimum water supply capacity for domestic internal household use should be at least 600 gallons of water within a two-hour period once each day. This is equivalent to a flow rate of 5 gallons per minute (gpm) for two hours. Alternatively, the New Hampshire Water Well Association recommends a flow rate of 4 gpm for a period of four hours as an optimum water supply capacity for a private domestic supply. This volume is equivalent to 960 gallons of water within a four-hour period. Some homeowners may find these amounts to be less than desirable depending on the size of the family and/or if outdoor use is a requirement.

The following tables were developed to assist readers to interpret the recommendations above. In both tables, the overall yield is the sum of the aquifer yield to the well and the available well storage. The tables presume a pump setting of 20 feet above the bottom of the well and a static water level of 20 feet below the ground surface. However, a pump can be set anywhere in the well and the static water level changes over time.

Contact a licensed water well contractor or licensed pump installer for information about pumping tests and available options for increasing the capacity of inadequate supplies. Also see fact sheet WD-DWGB-1-13 "Determining the Reliable Capacity of a Private Water Supply Well and Pumping System" for more information.

### Recommended Minimum Capacity

The values in Table 1 provide a yield of 600 gallons of water to the home during a period of two hours of pumping.

**Table 1. Supply 600 gallons in Two Hours**

Sustained Well Yield (gpm)	Required Well Depth (ft)
0.5	400
1	360
1.5	320
2	280
2.5	240
3	200
3.5	160
4	120
4.5	80
5	---

### Recommended Optimum Capacity

The values in Table 2 provide a yield of 960 gallons of water to the home during a period of four hours of pumping.

**Table 2. Supply 960 gallons in Four Hours**

Sustained Well Yield (gpm)	Required Well Depth (ft)
0.5	600
1	520
1.5	440
2	360
2.5	280
3	200
3.5	120

Note: This fact sheet is accurate as of September 2019. Statutory or regulatory changes or the availability of additional information after this date may render this information inaccurate or incomplete.

**BOARD OF HEALTH  
RESIDENTIAL/COMMERCIAL WATER SUPPLY REGULATIONS – WELL  
ORDINANCE FOR NEW CONSTRUCTION**

**Adopted May 16, 2000  
Amended February 20, 2001  
Amended June 5, 2001  
Amended August 6, 2013**

The Board of Health of the Town of Pelham, N.H., acting under RSA 147, has, in the interest of and for the preservation of the public health, and to provide for adequate and safe wells, duly made and adopted, on May 16, 2000 and revised August 6, 2013 the following regulations:

**SECTION 1: Definitions**

1. **WELL:** Includes any pit, pipe, excavation, casing, drill hole or other source of water to be used for any purpose of supplying potable water within the Town of Pelham, NH.
2. **WATER SYSTEM:** Includes pipes, valves, fittings, tanks, pumps, motors, switches, controls and appurtenances installed or used for the purpose of storage, distribution, filtration, treatment or purification of water for any use whether or not inside a building.
3. **DWELLING UNIT:** One (1) or more rooms arranged for living and sleeping purposes with cooking and sanitary facilities for the use of one (1) or more individuals living as a single housekeeping unit.
4. **NEW CONSTRUCTION:** A new residential dwelling or commercial structure which has not been granted a Certificate of Occupancy. This excludes the expansion or replacement of existing residential or commercial structures erected prior to August 6, 2013.

**SECTION 2: Wells**

1. No well shall be installed for new construction until a building permit has been issued by the Health Officer or Deputy Health Officer. The fee for this permit shall be \$25.00.
2. The well contractor licensed under RSA 482-B shall observe reasonable sanitary measures and precautions in the performance of his/her work in order to prevent pollution or contamination of the well.

3. For new construction, there shall be a separate well for each individual parcel except in the case of water systems operating under a New Hampshire State Public Utilities Commission franchise, private water systems owned by a homeowner's association or wells serving commercial structures.

4. All wells for new construction shall be set back a minimum of seventy-five (75) feet from all septic tanks and leaching fields. Additionally, all wells for new construction shall be set back fifty (50) feet from the nearest edge of all existing traveled ways or rights-of-way and a minimum of seventy-five (75) feet from all lot lines (to avoid property encroachment) unless a Standard Release Form for Protective Well Radii has been executed and recorded by the owner of the well. The distance from a well to a septic tank may be reduced to fifty (50) feet if the sewer line meets a SDR rating of 26 or better, and the septic tank is sealed and grouted to prevent infiltration and exfiltration.

5. Burial of tree stumps, brush, and or construction materials shall not be located within the protective well radius.

#### SECTION 3: Capacities

1. Every well must supply adequate water for the purpose for which it is intended.

2. All wells shall be pump tested regardless of depth to determine sustained yield. The sustained yield shall be not less than four (4) gallons per minute over a four (4) hour period. In all cases the pump test shall be completed using a submersible pump. Groundwater level measurements shall be recorded immediately before the start of the pump test for static groundwater level, and at least once every thirty (30) minutes during the pump test. In addition, the static groundwater level shall be measured within twenty-four (24) hours after the pump test and shall demonstrate water level recovery after the pump test to at least ninety percent (90%) of the pretest level. All results from pump testing must be certified by the tester and so evidenced on the well data sheet provided to the building department.

3. Every well that has been deepened or hydro-fractured to increase its sustained yield after being drilled and / or initially tested shall be pump tested in accordance with section 2 above after the deepening or hydro-fracture effort to meet pump test requirements of this section.

#### SECTION 4: Water system

All wells to be used as a water source shall be designed, constructed, and satisfy all requirements set forth in pertinent State of New Hampshire, Department of Environmental Services Drinking Water and Groundwater Bureau and the New Hampshire Water Well Board, regulations as they exist, may be established, or may be amended in the future.

#### SECTION 5: Certificate of Occupancy

1. No Certificate of Occupancy will be issued until all the provisions of these regulations have been met or duly waived by the Board of Health in accordance with Section 6 of this ordinance.
2. A completed well data report including drilling logs must be submitted by the well driller or his agent not later than the time of requesting a Certificate of Occupancy.
3. Collection and analysis of a water sample shall be conducted by a NH Certified Well Testing Lab. No Certificate of Occupancy will be issued until a water test has been received by the Planning Department. This test shall include, but not be limited to, the following:

Test

**Primary Testing (Health)**

Bacteria  
Nitrate & Nitrite  
Arsenic  
Gross Alpha  
Uranium  
Radon\*  
VOC Screen (Volatile Organic Compounds)\*\*

**Secondary Testing (Aesthetic and Other)**

Iron  
Fluoride  
Copper  
Manganese  
Chlorides  
Turbidity  
Sodium  
PH  
Lead  
Hardness

\* Radon shall meet the NH DES recommended level of 2000 picoliters / liter.

\*\* Please note that it takes approximately two weeks to get test results so plan accordingly. If the VOC Screen is positive, further testing shall be done to determine the type of contaminant and concentration.

4. All contaminates identified under Primary Testing in Section 3, shall be mitigated to the prevailing NH DES Maximum Contaminant Level (MCL), or with respect to Radon, NH DES' recommended level by the installation of a point of entry water treatment system prior to the issuance of a Certificate of Occupancy. A water quality test demonstrating effective mitigation to the above referenced standard shall be provided to the Planning Department prior to Issuance of a Certificate of Occupancy. Backwash from water treatment systems shall not be discharged into the dwelling's sewage disposal system unless the design is sized to accommodate the additional flow.

5. The required testing and these regulations cannot be construed as a guarantee by the Town of Pelham or its agents that the water system will function satisfactorily or that all possible water quality problems have been identified and mitigated.

#### SECTION 6: Waivers by the Pelham Board of Health

1. The Board of Health, on the advice of the Health Officer or duly appointed Deputy and in the event of hardship, may waive any requirement of this ordinance except: Section 2, paragraph 1 (permit fee), paragraph 2 (contractor taking reasonable precautions), and Section 5 (certificate of occupancy).

2. In considering waivers the Board of Health shall consider, as a minimum:

- A. Whether the waiver adequately protects public health
- B. Whether the waiver adequately protects consumer safety
- C. Other extenuating circumstances

3. The Board of Health can impose conditions upon waivers, including but not limited to:

- A. Alternate means of mitigation, such as point-of-use devices in instances where point-of-entry treatment would be unreasonably expensive to install or maintain;
- B. Consumer notices
- C. Conditions to be recorded in a deed and noted on the permit.

#### SECTION 7: Enforcement

Any person violating the provisions of this regulation shall be guilty of a violation.

#### SECTION 8: Conflict with Other Ordinances

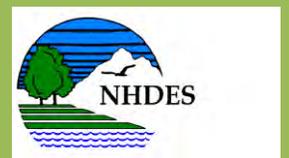

Where the requirements of State and Local Regulations differ, the more stringent shall apply.

#### SECTION 9: Severability

The invalidity of any provision of this ordinance shall not affect the validity of any other provisions.

# February 2015

## Guidance to Refine the Potable Water Definition in New Hampshire Municipal Building Codes

## Purpose and Introduction

This document provides guidance to municipalities that wish to incorporate a refined definition of “potable water” into their building codes. It is a response to inquiries from municipal officials who want to better protect the health of residents who use private wells. This document was developed by the New Hampshire Building Officials Association, New Hampshire Health Officers Association, New Hampshire Planners Association and New Hampshire Department of Environmental Services.

New Hampshire State Building Code requires that every structure equipped with plumbing fixtures and used for human occupancy be provided with a *potable water supply*. The Building Code defines potable water as “*water free from impurities in amounts sufficient to cause disease and harmful physiological effects.*” Interpreting and administering this definition has been difficult for local officials as it does not clearly state which impurities should be considered, nor the amounts in drinking water that cause human health impacts.

To assist local officials responsible for administering this portion of the building code, this document suggests a minimum list of contaminants and corresponding contaminant limits that can be used to refine the potable water definition. When incorporated into a local building code along with a requirement for water testing, *the refined definition of potable water will in some cases require treatment in order to achieve compliance* necessary for local approvals, such as issuance of an occupancy permit.

Beyond the minimum list of contaminants suggested in this document, a number of other contaminants that could cause disease and harmful health effects are often present in well water in New Hampshire. Therefore, *local conditions may warrant water testing and treatment for additional contaminants not on the minimum list*. Language presented in this document provides for municipalities to add contaminants to the minimum list.

## Section 1: The Need for Testing of Private Wells

Nearly half of New Hampshire’s residents rely on private wells as their primary source of drinking water at home.<sup>1</sup> When building or buying a home served by a private well, homeowners often assume that the water supply is free of contaminants and safe to drink. However, the occurrence of contaminants at harmful levels in well water in New Hampshire is quite common, and many of those contaminants are colorless and have no detectable taste or odor. Unlike public water systems that must regularly test drinking water for up to 90 contaminants and meet stringent water quality standards under the Federal and State Safe Drinking Water Acts, ***private wells in New Hampshire have no state or federal requirements to test for or remove contaminants, even when present at unhealthy levels.***

Under state and federal regulations for public water systems, over 90 drinking water contaminants are regulated in order to protect public health or address “aesthetic” (e.g., odor or taste) problems. There are no similar state or federal regulations for private wells.

Human exposure to some contaminants, such as certain strains of *E.coli* bacteria or high levels of nitrate, can result in immediate illness, such as gastroenteritis. Other contaminants, such as arsenic and radon, when consumed in drinking water over a long period of time, increase the risks for developing certain forms of cancer, cardiovascular diseases and neurological disorders.

For example, studies have found a correlation between private well use in New England and deaths due to bladder cancer,<sup>2</sup> and have estimated that hundreds of cases of cancer over the lifetimes of the current population in New Hampshire may be preventable by testing for and treatment of arsenic in private well water.<sup>3</sup> Children whose primary source of drinking water is a private well may be at particular risk. In 2009 the American Academy of Pediatrics (AAP) released a policy statement outlining health risks to children posed by contaminants found in groundwater.<sup>4</sup> The AAP policy recommends that pediatricians ask parents whether they have recently tested their well water and that states adopt laws to require testing of well water during real estate transfers. Ensuring that all residents have access to safe drinking water is an important public health goal.

Approximately 20 percent of private wells in New Hampshire have unhealthy levels of arsenic in drinking water. Arsenic exposure above the drinking water standard is a known risk factor for bladder cancer, as well as a variety of other serious chronic diseases.

<sup>1</sup> NHDES’s most recent estimate is 46% of N.H. residents in 2010.

<sup>2</sup> J.D. Ayotte, D. Baris, K.P. Cantor, J. Colt, G.P. Robinson, J.H. Lubin, M. R. Karagas, R.N. Hoover, J. F. Fraumeni, and D.T. Silverman (2006). *Bladder cancer mortality and private well use in New England: an ecological study. J Epidemiol Community Health*, 60:168–172

<sup>4</sup> American Academy of Pediatrics, Committee on Environmental Health and Committee on Infectious Diseases (2009). “Drinking Water From Private Wells and Risks to Children,” *Pediatrics* 123 (2009): 1599-1605. <http://pediatrics.aappublications.org/cgi/content/full/123/6/1599>

Certain contaminants found in New Hampshire’s groundwater occur naturally due to geologic or soil conditions, while others are associated with human activities. For example, New Hampshire was once known as the “Arsenic State,” with more than 300 operating arsenic mines during the 19<sup>th</sup> century.<sup>5</sup> Arsenic is common in the bedrock aquifers that supply many of the state’s wells. In New Hampshire nearly all new private wells are drilled into bedrock formations and studies indicate that one in five bedrock wells fails the state and federal health-based standard for arsenic; the number is much higher in some areas and lower in others.<sup>6</sup>

While arsenic and other contaminants occur naturally in groundwater, human sources of contamination such as leaking underground fuel tanks, chemical spills, closed landfills, road salt and other land uses may also present health risks for private well users. Volatile organic compounds (VOCs) used in fuels and a variety of commercial products including industrial cleaners and solvents sometimes find their way into groundwater. In a 2005 study by the U.S. Geological Survey, the gasoline additive methyl tertiary butyl ether (MtBE) was detected in 21 percent of private wells sampled and in 40 percent of public water systems sampled across the state, even in wells located in remote areas.<sup>7</sup> MtBE, which is no longer being added to gasoline in New Hampshire but continues to be found in our well water, has been determined by U.S. EPA to cause cancer when consumed in drinking water at levels above the health-based standard over a prolonged period of time.

## Section 2: Municipal and State Authority Involving Potable Water in Private Wells

Municipalities currently have the authority to determine what constitutes potable water as it relates to the Building Code. The State Building Code under RSA 155-A establishes minimum building standards that apply within all municipalities in New Hampshire. The State Building Code adopts by reference the International Plumbing Code (IPC), which requires a potable water supply “for every structure with plumbing fixtures and utilized for human occupancy...” per Section 602.1.

“Only potable water shall be supplied to plumbing fixtures that provide water for drinking, bathing or culinary purposes...”

*Section 602.02 Potable Water Required. International Plumbing Code (2009)*

The IPC’s definition of potable water requires drinking water to be “free from impurities present in amounts sufficient to cause disease...and conforming to the bacteriological and

Dartmouth Medical School, Dartmouth Medicine: The Magazine of the Geisel School of Medicine at Dartmouth, [http://dartmed.dartmouth.edu/winter00/html/vs\\_arsenic.shtml](http://dartmed.dartmouth.edu/winter00/html/vs_arsenic.shtml)

<sup>6</sup> J. D. Ayotte, M. Cahillane, L. Hayes, and K.W. Robinson (2012), Estimated Probability of Arsenic in Groundwater from Bedrock Aquifers in New Hampshire, 2011, USGS SIR 2012-5156.

<sup>7</sup> J. D. Ayotte, B. R. Mrazik, D. M. Argue, and F. J. McGarry, Occurrence of Methyl tert-Butyl Ether (MTBE) in Public and Private Wells, Rockingham County, New Hampshire, USGS (2004)

*chemical quality requirements of the Public Health Service Drinking Water Standards or the regulations of the public health authority having jurisdiction.”* However, the IPC definition does not refer to specific contaminants, current drinking water quality standards, or the specific authority that should be responsible for ensuring that those standards are met. In New Hampshire, as in most states, drinking water quality standards apply only to public water systems, which must provide drinking water containing less than the *Maximum Contaminant Levels (MCLs)* for regulated contaminants.<sup>8</sup> The N.H. Department of Environmental Services (NHDES) has the authority to enforce these standards to ensure public water systems provide safe water. Similar water quality standards could be applied under the IPC to private well water under local codes.

Under RSA 674:51 (Building Codes), municipalities are authorized to adopt local code requirements, provided they are at least as stringent as the State Building Code. This could be used to ensure that wells serving structures subject to the local plumbing code supply water that meets certain standards. This guide is meant to assist municipalities choosing this option. *Another option used by some municipalities is to require well testing under local health ordinances. NHDES can refer communities interested in this approach to these municipalities.*

The N.H. Water Well Board has adopted rules that establish minimum standards for well construction, siting and installation by licensed well drillers. A number of other state programs aim to prevent contamination of wells by establishing setbacks or regulating discharges to groundwater, including those that address septic systems, underground storage tanks, landfills, pesticide use, and stormwater discharges to groundwater. As stated earlier, none of these programs require well water quality testing or treatment.

**Table 1 Recommended Testing for Private Wells**

NHDES recommends having the following tests done every 3 to 5 years, except for bacteria and nitrate, which are recommended annually.

**Standard Analysis**

Arsenic	Lead
Bacteria	Manganese
Chloride	Nitrate/Nitrite
Copper	pH
Fluoride	Sodium
Hardness	Uranium*
Iron	

**Radiological Analysis**

Analytical Gross Alpha
Radon
Uranium*

**Volatile Organic Compounds (VOCs)**

\*Please note: Uranium is part of both the standard and radiological analysis groups for the State of NH Lab.

<sup>8</sup> Maximum Contaminant Levels (MCLs) are numeric water quality standards for contaminants regulated under the federal and NH Safe Drinking Water Act(s). See NHDES rules Env-Dw 702 through Env-706.

## Water Quality Testing for Private Wells

NHDES *recommends* that all private wells users test their well water for the parameters listed in Table 1.<sup>9</sup> Testing for these parameters provide a reasonable, cost-effective overview of a well’s water quality, taking into account the cost of testing, likelihood of occurrence, health risks, and aesthetics (taste, odor, staining). In addition to including common health-related contaminants, the Standard Analysis group includes parameters such as pH and hardness that might not affect health or aesthetics by themselves, but do affect the selection of appropriate treatment technologies and add very little to the cost of testing. The results of the recommended tests, together with guidance provided by NHDES fact sheets and followed by consultation with water treatment professionals, enable homeowners or builders to make informed decisions regarding treatment or other means of limiting exposure to contaminants in well water.

In terms of an absolute *minimum* list of health-related contaminants that should be tested to determine potability, *the list in Table 2 is limited to contaminants with enforceable health-based standards that apply to public water systems*, while balancing cost and the likelihood of occurrence at unsafe levels in New Hampshire well water. All of the contaminants in Table 2 are known to negatively affect human health. There are many more contaminants regulated at public water systems, with more being added routinely.

Beyond the minimum list in Table 2, *testing for other contaminants could be required by the local building code based on local groundwater conditions or general public health concerns*. For instance, most new private wells in New Hampshire are drilled into bedrock and will likely exceed the NHDES Recommended Action Level for radon (2,000 picocuries per liter), at which point a test for radon in air is recommended. Consequently, a Radiological Analysis may be warranted for bedrock wells in most places across the state. (Note: Radon gas is carcinogenic and well water is one of the pathways for radon to be present at unhealthy levels in indoor air. However, radon has not been included in Table 2 because there is no enforceable standard for radon that currently applies to public water systems.) Local officials might also want to include iron and manganese, since it is common for these contaminants to impair both the drinkability of water (due to taste)

**Table 2**  
**Minimum List of Contaminants Included in the Refined Definition of Potable Water and Applicable Drinking Water Quality Standards<sup>10</sup>**

Contaminants	Standards <sup>10</sup>
Arsenic	<= 0.01 mg/L
Bacteria	Absent
Copper	<= 1.3 mg/L
Fluoride	<= 4.0 mg/L
Lead	<= 0.015 mg/L
Nitrate (NO <sub>3</sub> -N)	<= 10 mg/L
Nitrite (NO <sub>2</sub> -N)	<= 1 mg/L
Uranium	<= 0.030 mg/L

<sup>9</sup> See the NHDES private well testing flier in Attachment 2.

<sup>10</sup> The minimum list of contaminants in Table 2 is a small subset of the contaminants for which public water systems are required to meet standards. Local programs should make information available about the health risks associated with potential groundwater contaminants. Fact sheets on each of these contaminants are available from NHDES at (603) 271-2513 and can be accessed at [www.des.nh.gov](http://www.des.nh.gov) (A to Z List, Fact Sheets).

and the usability of water for laundering, and their tendency to cause staining of plumbing fixtures. There are also concerns about the potential impact of high levels of manganese on cognitive development in children. However, there is no enforceable standard for iron or manganese that currently applies to public water systems. Sodium might also be considered for inclusion due to its health implications for people on sodium-restricted diets. Volatile Organic Compound (VOC) testing, although relatively expensive, may also be indicated for inclusion in more developed areas, given the prevalence of MtBE throughout the state due to releases of gasoline containing MtBE.

When weighing the need for testing for contaminants not included in the minimum list in Table 2, consider the following factors:

- Contaminants found in nearby wells.
- Presence of nearby known contamination sites (e.g., leaks from underground storage tanks).
- Location of past or present nearby land uses involving fuel storage, hazardous chemicals, solvents, de-greasers, pesticides, and fertilizers.
- Nearby groundwater or stormwater discharges from commercial land uses, including those with septic systems.

Information about local groundwater conditions may be available from NHDES. Contact (603) 271-0688 for guidance on finding information related to local groundwater conditions.

## Section 3: Adopting and Administering a Potable Water Standard

### Defining Potable Water in a Local Building Code

Municipalities often adopt local building codes using the State Building Code as a template with or without local modifications. Changes to a local building code require a noticed public hearing and approval by a vote by the “local legislative body” (e.g., town meeting, town or city council) per RSA 674:51,I. As noted above, municipalities that wish to adopt local water testing requirements and water quality standards for private wells may accomplish this by incorporating modified versions of two sections of the IPC into the local building code: Sub-section 602.3.3 *and* Section 202.

### Establishing Testing Requirements for Private Wells

Section 602.3 (Individual Water Supply) of the IPC applies to private wells. Within that section, sub-section 602.3.3 (Water Quality) may be modified to require the submission of a report from an accredited laboratory containing water quality test results. The test results submitted by or on behalf of an applicant for a Certificate of Occupancy (CO) would then be used to determine whether the water supply meets the definition of potable water. The original IPC language follows in blue with added language *italicized* in red.

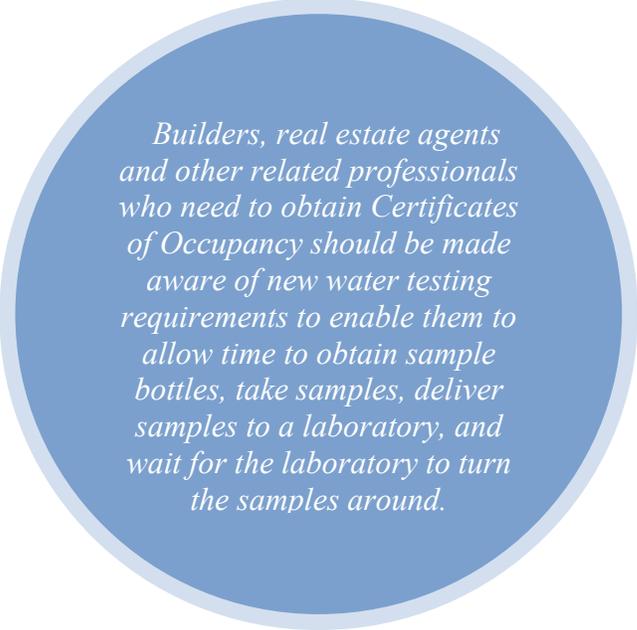

*Sub-Section 602.3.3: “Water from an individual water supply shall be approved as potable by the building code enforcement authority prior to issuance of a certificate of occupancy. A report from a laboratory accredited under the N.H. Environmental Laboratory Accreditation Program or another state program under the National Environmental Laboratory Accreditation Program shall be submitted to the building code enforcement authority. When water treatment is necessary, treated water shall be tested for the contaminants listed within the “potable water” definition or as required by the municipal code enforcement authority.”*

*Adopting this modified version of Sub-section 602.3.3 of the International Plumbing Code (IPC) establishes a clear requirement to submit water quality test results to the municipal code enforcement authority.*

## Defining Potable Water Based On Well Water Testing Results

Adopting a refined definition of potable water that lists specific contaminants and the associated water quality standards will allow code enforcement or health authorities to consistently determine whether private well water meets the local definition of potable water. As noted earlier, the term “potable water” is defined in Section 202 (General Definitions) of the IPC but the definition does not refer to specific contaminants or current drinking water quality standards. The recommended refined potable water definition below establishes that some of the most common water quality standards (see Table 2) that are applied to public water systems would also be applied to private wells in a municipality. As noted above, some municipalities may wish to add other contaminants based on local groundwater water quality concerns. There are two options here: Contaminants may be added to Table 2 to require testing and compliance *town-wide*, or local officials may rely on the phrase “free from impurities present in amounts sufficient to cause disease or harmful physiological effects” to include additional parameters *on a case-by-case basis* based on information about local groundwater conditions and threats such as those listed above in the “Water Quality Testing for Private Wells” section.

*Builders, real estate agents and other related professionals who need to obtain Certificates of Occupancy should be made aware of new water testing requirements to enable them to allow time to obtain sample bottles, take samples, deliver samples to a laboratory, and wait for the laboratory to turn the samples around.*

The original IPC language follows in blue with added language *italicized* in red. As previously noted, parameters listed in Table 2 include only contaminants with health-based drinking water standards that apply to public water systems in New Hampshire.

*Section 202 Potable Water: Water free from impurities present in amounts sufficient to cause disease or harmful physiological effects and conforming to the standards established by the New Hampshire Department of Environmental Services or U.S. EPA for the contaminants listed in [Table 2].*

## Implementing Requirements for Water Quality Testing and Treatment

The refined potable water definition, if adopted in a local building code, will require applicants for a (CO) to have the water tested by an accredited laboratory and submit the test results to the local building official. While a local code might *require* testing only for contaminants in its “potable water” definition, local officials might wish to adopt a *recommended* set of tests along the lines of Table 1. Attachment 3 to this document is NHDES’s list of accredited labs that currently provide testing for the contaminants listed Tables 1 and 2. (The list of laboratories is updated periodically and posted on NHDES’s

private well testing webpage.<sup>11)</sup> Laboratories typically group tests into packages that may or may not include all of the required or recommended contaminants; well owners should check before choosing a testing package.

Collection and delivery of water samples to a laboratory is usually the responsibility of the applicant who wishes to obtain a (CO). Laboratories typically provide both sample bottles and instructions on how to properly collect and handle water samples. Water quality test results are sent directly to the customer, who would attach the laboratory's report to the application for a (CO). Either the health officer or the building code enforcement officer would review the laboratory report to determine compliance with the water quality standards. The laboratory report will typically indicate whether the results meet state drinking water standards. If water treatment is required to remove contaminants, a second water test would be required to determine whether the treated water meets the water quality standards to be considered potable. The N.H. Department of Health and Human Services Public Health Laboratory publishes a guide entitled "Your Water Analysis" that explains what the laboratory results mean for each contaminant listed in Table 1, including their associated health or aesthetic issues and possible sources of water contamination. The publication is online at [www.des.nh.gov](http://www.des.nh.gov).<sup>12</sup>

Test results submitted with an application for a (CO) are public information and must be made available upon request. This information may be important during subsequent real estate transfers. Although the date of the most recent water quality test must be disclosed by the seller prior to execution of a purchase and sales agreement under RSA 477:4-c (Disclosure Required; Water Supply; Sewage Disposal), the statute does not require the seller to provide water test results. However, if the test results were public information by virtue of being required for a (CO), this would make the result available to prospective buyers.

The time to collect a water sample, deliver it to a laboratory, complete water testing and receive results mailed out by the laboratory to the property owner/applicant can often range from two to four weeks. If treatment is required, expect to add an additional two to four weeks to install treatment and complete a second round of water testing. Upon adoption of a building code requiring private well water testing as a condition for a (CO), it is important to provide advance notice to the public, real estate professionals, etc. regarding the additional time that may be required to obtain the (CO).

If water treatment is necessary it should remove contaminants to levels that meet water quality standards. NHDES Factsheet *WD-DGWB-2-5, Considerations When Purchasing Water Treatment Equipment* and other, contaminant-specific fact sheets may be helpful to assist property owners considering water treatment.<sup>13</sup>

## Making it Work in Your Community

For communities that wish to refine the definition of “potable water” in their building codes, developing a consensus among local stakeholders about the need to have a clear local potable water standard is an important first step. Forming a local committee, conducting public education and outreach activities, and making private well test kits available will raise community awareness about the need to have a clear standard that can be applied through a building code. Be prepared to answer questions, such as those found below in Table 2.

**Table 2**  
**Frequently Asked Questions**

<b>How many households use private wells in my municipality?</b>	The U.S. Geological Survey (USGS) has developed estimates of the population using private wells in each N.H. community in 2005. Visit <a href="http://vt.water.usgs.gov/projects/nhvtwateruse/data/NHTownSum2005.xlsx">http://vt.water.usgs.gov/projects/nhvtwateruse/data/NHTownSum2005.xlsx</a>
<b>What are the chances of being exposed to arsenic or other contaminants in N.H. through using a private well?</b>	The USGS estimates that one in five bedrock wells in NH has arsenic above 10 ug/L, the health-based limit for public water systems, but some parts of the state are much more likely than others to have high levels. The USGS has published maps that show the estimated probabilities of finding arsenic at 1, 5 and 10 ug/L in private wells. Visit <a href="http://pubs.usgs.gov/sir/2012/5156/">http://pubs.usgs.gov/sir/2012/5156/</a> . NHDES also publishes estimates of how frequently private well water will on average exceed Standard Analysis test parameters.
<b>What is the cost to do the tests listed in Table 2?</b>	Prices vary by lab but the total cost of the Standard Analysis in Table 1 (which includes all of the Table 2 contaminants) usually ranges from \$85 to \$125.
<b>Where is a nearby accredited lab that can do the water tests?</b>	NHDES publishes a list of accredited labs. See <a href="http://des.nh.gov/organization/divisions/water/dwgb/nhelap/documents/labs-private-wells.pdf">http://des.nh.gov/organization/divisions/water/dwgb/nhelap/documents/labs-private-wells.pdf</a> or search for “NHDES private wells testing.”
<b>What is the proper treatment to remove contaminants from private well water?</b>	Consult NHDES fact sheets or staff, qualified treatment professionals, and online tools to determine the proper treatment technology to remove specific contaminants. <sup>14</sup> Water testing is necessary to determine the proper treatment; for example, water softeners do not effectively remove arsenic. Visit <a href="http://des.nh.gov/organization/commissioner/pip/factsheets/dwgb/index.htm">http://des.nh.gov/organization/commissioner/pip/factsheets/dwgb/index.htm</a> (see section entitled Drinking Water Quality: Contaminants)
<b>Should the “potable water” requirement be applied to building projects that do <u>not</u> involve new wells?</b>	Applicability of the “potable water” requirement to projects that do not involve new wells is subject to the discretion of the local building official. However, well water quality can change over time. Furthermore, increased water use and increased groundwater pumping can also cause changes in water quality.

<sup>14</sup> NHDES provides assistance to help determine the proper water treatment technology based upon well water test results. For more information about water treatment, contact (603) 271-3108.

## When Adopting a Refined Potable Water Definition -- Remember to:

- *Update any local guide(s) to municipal approval processes, as well as forms (permits, checklists) to reflect newly adopted testing and treatment requirements.*
- *Identify the local official responsible for reviewing water test results and water treatment systems.*
- *Make available at municipal offices information such as NHDES's list of accredited laboratories and NHDES's flier listing recommended tests.*
- *NHDES publishes a number of fact sheets regarding the contaminants listed in Table 1 as well as other contaminants that public water systems must test for. Current versions of these fact sheets or a list with "how to obtain" information should be made available in municipal offices.*
- *Ensure test results submitted for local permit approvals are kept on file and made available upon request.*
- *Refer applicants to NELAP accredited labs for testing and to NHDES for questions regarding water treatment.*

For more information about adopting a clear potable water standard into local building regulations, contact NHDES at (603) 271-0688.

NHDES Private Well Testing Flier

# Protect Your Family's Health

## Test Your Water Today for All Common Pollutants

### Why should I test my well water?

Unhealthy levels of various contaminants are common in private wells in New Hampshire. Some of these contaminants have been linked to cancer and other diseases. Most of these contaminants have no taste, smell or color. You won't know what's in your well water unless you have it tested by a laboratory. State and local laws generally do not require testing of private well water. If you have a private well, the New Hampshire Department of Environmental Services (NHDES) strongly recommends that you have your well water tested – for all of the most common pollutants – to help protect your family's health. If a test shows that your well water has contaminants in it, NHDES can help you consider water treatment choices that work best for the level of contaminants in your water.

### How do pollutants get into well water?

Well water comes from rain and snow that soaks into the ground. As water seeps through the soil and rock, it can pick up pollutants and other materials that are present on or in the ground.

Some contaminants that are commonly found in well water at unsafe levels come from the rocks and soil that the water flows through. The most common in New Hampshire are bacteria, radon, arsenic, manganese, uranium and radium. For example, the U.S. Geological Survey estimates that one in five private wells in New Hampshire has more arsenic than is allowed in public water systems.

Other contaminants get into well water from human activities. Gasoline storage and spills, industrial/commercial activities, improper waste disposal and road salting can introduce toxic substances to the ground. Even typical residential activities, such as using fertilizers or pesticides too close to a well, spilling fuel and improperly disposing of household chemicals can contaminate well water.

### What should I test my well water for?

The following tests identify common contaminants found in well water in New Hampshire. Many private wells have been tested according to the requirements of mortgage companies or at the recommendation of well drillers, water treatment vendors, etc., but often those tests do not include all of the common contaminants that can harm your health, especially if they were done years ago. The list recommended in this flier provides a cost-effective, reasonable overview of a well's water quality. Contact an accredited laboratory for availability and pricing. *It is not necessary to do all of these tests at one time.*

#### 💧 Standard Analysis

This covers the most common contaminants (see the list on the next page). Some of these contaminants pose health-related concerns, while others only affect aesthetics (taste and odor).

#### 💧 Radiological Analysis

The rocks in New Hampshire contain naturally occurring radioactive elements that dissolve easily in well water. The recommended radiological analysis will test for uranium, analytical gross alpha and radon.

Testing for radon in air may have been required by your mortgage company; however, radon and other radioactive elements are also common in well water in New Hampshire. NHDES estimates that approximately 55 percent of private wells in New Hampshire exceed NHDES' recommended action level for radon.

#### 💧 Volatile Organic Compounds (VOCs)

The most common VOCs come from compounds found in gasoline, such as MtBE and benzene, and from industrial solvents. MtBE can be found in well water even in remote areas.

#### 💧 Additional Tests

Circumstances specific to your well or property may require additional testing not described here. For instance, NHDES does not recommend routine testing for pesticides, herbicides or other synthetic organic compounds (SOCs), mainly because of the high cost. However, such testing might be a good idea if your water has elevated nitrite or nitrate concentrations and an agricultural source is suspected, or significant amounts of pesticide have been applied near your well.

These less-routine tests may not be performed at all laboratories.

## What will testing tell me?

The laboratory report you receive will show the level at which any of the tested substances were found in your water sample. The mere presence of a contaminant in your well water does not necessarily mean that there is a problem. However, when levels exceed state or federal health standards or recommended action levels, there may be a problem and you should take steps to fix it. Several methods are available from water treatment vendors to remove contaminants from water. NHDES has fact sheets on its website covering all common water quality problems and their solutions.

## When should I test my well water?

NHDES recommends that prospective homebuyers test the water in a home with a private well before purchase.

Water quality in wells is generally stable, and if a change is going to occur, it occurs slowly. Thus the time between water quality tests, once you've purchased the home, can generally be several years if a well is properly constructed and located in a safe area. Bacteria and nitrate are exceptions; you should test for them every year.

The following conditions would call for more frequent testing:

- Heavily developed areas with land uses that handle hazardous chemicals.
- Recent well construction activities or repairs. NHDES recommends testing for bacteria after any well repair or pump or plumbing modification, but only after substantial flushing of the pipes.
- Elevated contaminant concentrations found in earlier testing.
- Noticeable variations in quality such as a change in taste, smell, or appearance after a heavy rain or an unexplained change in a previously trouble-free well, such as a strange taste or cloudy appearance.

When taking any sample, NHDES recommends that it be taken after a heavy rainstorm. These events tend to highlight conditions of improper well construction or poor soil filtration.

## Learn More

For information about private well testing, or about accredited laboratories in New Hampshire, visit the NHDES website: [www.des.nh.gov](http://www.des.nh.gov)

Go to the A to Z List and select "Private Well Testing"

NHDES recommends having the following tests done every 3 to 5 years, except for bacteria and nitrate, which are recommended annually.

### Standard Analysis

Arsenic	Lead
Bacteria	Manganese
Chloride	Nitrate/Nitrite
Copper	pH
Fluoride	Sodium
Hardness	Uranium*
Iron	

### Radiological Analysis

Analytical Gross Alpha
Radon
Uranium*

### Volatile Organic Compounds (VOCs)

\*Please note: Uranium is part of both the standard and radiological analysis for the State of NH Lab.

**Water Quality Testing for Private (Domestic) Wells:** DES recommends residents test their well water for all contaminants commonly found in New Hampshire's groundwater, listed in Table 2 below. Private well owners are encouraged to test their water wells every three to five years for the complete set of contaminants listed below. Contact an accredited laboratory to confirm the lab's capacity to complete all recommended tests and for pricing. It is not necessary to do all of these tests at one time.

<sup>1</sup> Updated 6.23.14. Subject to change. For up-to-date information, see <http://www2.des.nh.gov/CertifiedLabs/Certified-Method.aspx>.

<sup>2</sup> Some labs may not accept samples provided by the general public. Please call labs directly for details.

For more information about DES recommended private well water quality testing, see DES's Fact Sheet WD-DWGB-2-1 Suggested Water Quality Testing for Private Wells (2011) online at <http://des.nh.gov/organization/commissioner/pip/factsheets/dwgb/documents/dwgb-2-1.pdf>.

<b>Table 2 NH DES Recommendations for Private Well Testing</b>	
<b>Standard Analysis</b>	<b>Testing Frequency</b>
Arsenic Bacteria Chloride Copper Fluoride Hardness Iron Lead Manganese Nitrate/Nitrite pH Sodium Uranium	Every 3 to 5 years (except for bacteria and nitrate, which are recommended yearly)
<b>Radiological Analysis</b>	
Radon Uranium Analytical Gross Alpha	Every 3 to 5 years
<b>Volatile Organic Compounds (VOCs)<sup>3</sup></b>	
<b>VOCs</b>	Every 3 to 5 years

For more information or technical assistance related to private well testing visit NH DES's website, [www.des.nh.gov](http://www.des.nh.gov), go to the A to Z List and find Private Well Testing and visit the Private Well Testing Program webpage.

<sup>3</sup> The most common VOCs come from gasoline compounds, such as MtBE and benzene, and industrial solvents.

DWGB-21-1

2021

## Site Selection for Private Drinking Water Wells

Drinking water wells are required to be installed in certain locations following specific construction methods in order to reduce the likelihood of contamination from sources of pollution at or near the ground surface. **This document only pertains to private wells installed for domestic use purposes.** Wells regulated as a public water supply or wells installed for irrigation, geothermal or monitoring groundwater investigations have separate requirements.

NHDES regulates site selection of private wells under [RSA 482-B](#) and associated rules [We 600](#) and [RSA 485-A](#) and associated rules [Env-Wq 1000](#). These laws and rules define protective well radii [circular area(s) around the well] where certain entities or land uses are prohibited. For septic system design flows up to 750 gallons per day (residential homes up to 5 bedrooms) this radius is at least 75 feet. The Env-Wq 1000 rules define protective well radii distances where design flows exceed 750 gallons per day. The following table details well location setback requirements for a residential home up to five bedrooms or septic design flows up to 750 gallons per day.

RESIDENTIAL DRINKING WATER WELL LOCATION SETBACKS	
Entity	Setback (ft.)
Effluent Disposal Area (leach field/bed)	75 <sup>1</sup>
Septic Tank	75 <sup>2</sup>
Property Boundary	75
Livestock Pen	75 (100 for dug wells)
Automobile Salvage Yard	75
Underground Storage Tanks (containing gas or diesel fuel)	250
Storage of Regulated Substance (except gas or diesel fuel)	75
Solid Waste Disposal Site	75
Bulk Storage of Material (ex. fertilizer, manure, salt)	75
Stump Dump	75 <sup>3</sup>
State Highway Right-of-Way	50 <sup>4</sup>
Sewer Component	50 <sup>5</sup>
Surface Water / Swamp	50 <sup>6</sup>
Public Road Surface	75 <sup>7</sup>
Other Sources of Contamination	75

### Notes:

<sup>1</sup> NHDES site visit and approval required for wells within 25 feet of an effluent disposal area.

<sup>2</sup> Setback can be 50 feet if SDR 26 pipe is used and the tank is plastic or coated with a sealant to prevent infiltration and exfiltration.

<sup>3</sup> The burial of on-site tree stumps is not considered solid waste if greater than 75 feet from a well. As such, wells must be 75 feet from stump burial sites.

<sup>4</sup> A well that is constructed within 50 feet from a state highway right-of-way or in a location that does not allow or provide for adequate surface drainage is not eligible for DOTs well replacement program.

<sup>5</sup> Under certain conditions the distance to septic system components to water supply lines may be less than 50 feet. Contact NHDES for site-specific information.

<sup>6</sup> 50-foot setback required from all surface waters including inundated wetlands, bogs, and swamps.

<sup>7</sup> Setback reduction requirements must be followed if a road surface is within 75 feet of the well.

Some municipalities in New Hampshire have adopted local regulations pertaining to on-lot setback distances for private wells. Water Well Contractors and property owners should contact the local building code official to inquire as to whether additional well siting criteria apply.

If there is a location on a property where all setbacks can be met, all efforts to install the well at that location must be taken. In these cases, the homeowner may need to remove debris, trees and/or have the driller construct a temporary landing or path for access. *If you can comply with the setbacks, you must comply.* A well (bedrock, dug, gravel, point) that meets all setback requirements may be constructed as stipulated in We 600 without any special methods of construction or setback reduction requirements.

**SETBACK REDUCTION REQUIREMENTS**

If site conditions prevent compliance with one or more setback requirements, well installation may be prohibited or the water well contractor must follow *setback reduction requirements* (We 602.13 through We 602.16). *When setbacks cannot be met, the water well contractor must alert the property owner of the potential for contamination at the proposed location* and inform the homeowner that they may need to consult with a septic designer to receive approval for a well location before it is drilled. Refer to fact sheet [DWGB 21-8, “Drinking Water Well Locations Relative to Septic Systems”](#) for important information on drilling new well and replacement wells on lots with septic systems.

**Non-bedrock well installations that do not meet setbacks** – For dug wells, point wells and gravel wells, the *setback reduction requirements* include the submittal of a Setback Reduction Form with the Well Completion Report. No special methods of construction apply to dug wells or point wells. Gravel wells installed by methods that allow for grouting, must be grouted.

**Bedrock well installations that do not meet setbacks** – For bedrock wells proposed to be installed on a property where setbacks cannot be met, and *all* efforts to meet the setbacks are not practicable, the well is to be installed one of the following ways:

**OBTAIN SETBACK REDUCTION FORM:**

1. **Obtain a written acknowledgement** from the property owner using the [Setback Reduction Form](#) and submit with the [Well Completion Report](#).
2. Install no less than 40 feet of casing, with no less than 10 feet into competent rock.
3. Seal the annular space outside of the well casing with *grout* material.

OR

**USE SPECIAL METHODS OF CONSTRUCTION:**

1. Inform the homeowner that setbacks are not met and the risks involved.
2. **Install a minimum casing length** per the tables defined in the We 600 rules (shown below, derived from the Pythagorean Theorem). The minimum casing length is from ground surface.
3. Seal the annular space outside of the well casing with *grout* material.

Note: The Setback Reduction Form is not the Well Release Form required in the septic system approval process.

**Grouting of Well Casings** is required when setbacks are not met. This means the void space between the outside of the casing and the natural earth needs to be filled with an impervious material (neat cement, cement-sand grout, cement bentonite grout or high solids bentonite grout). We 600 specifies the methods for grouting bedrock wells and gravel wells. Grouting requirements do not apply to dug wells, point wells or wells constructed with drive and wash methods.

**For Additional Information**

Please contact the Drinking Water and Groundwater Bureau at (603) 271-1974 or [waterwellprogram@des.nh.gov](mailto:waterwellprogram@des.nh.gov) or visit our website at [www.des.nh.gov](http://www.des.nh.gov).

Minimum Casing Length (from ground surface) Where a 75-foot Setback is Required	
Horizontal Setback (ft.)	Minimum Casing Length (ft.)
75 or greater	20
70-74	27
65-69	37
60-64	45
55-59	51
50-54	56
45-49	60
40-44	63
35-39	66
30-34	69
25*-29	71
*NHDES must inspect any proposed well location within 25 feet of a septic system.	

*Note: This fact sheet is accurate as of September 2019. Statutory or regulatory changes or the availability of additional information after this date may render this information inaccurate or incomplete.*

2020

## Suggested Water Quality Testing for Private Wells

If you have a private well, then water quality testing should be important to you and your family. Some contaminants in drinking water have been linked to cancer and toxicity, posing a risk to human health. Many contaminants often have no taste, odor or color. Their presence can only be determined by laboratory testing.

While there is no state requirement to have your well water tested (although mortgage lenders and some municipalities require testing at sale or before occupancy), the New Hampshire Department of Environmental Services recommends that all homeowners with private wells do so.

### Contamination of Wells

Well water originates as rain and snow that then filters into the ground. As it soaks through the soil, the water can dissolve materials that are present on or in the ground, becoming contaminated.

Some contaminants are naturally occurring in soil and rock. These include bacteria, arsenic, radon, uranium and other minerals.

Other contaminants find their way onto the land from human activities. Industrial and commercial activities, improper waste disposal, road salting and fuel spills can introduce hazardous substances to the ground. However, even typical residential activities, such as the use of fertilizers and pesticides, fueling of lawn equipment and disposal of household chemicals, can contaminate the ground when done improperly. That is why taking measures to protect your well from contamination is so important.

### Recommended Tests

The following tests identify common contaminants found in our state's well water. Although more tests could be added, this list provides a cost-effective, reasonable overview of a well's water quality. Contact an accredited laboratory for availability and pricing. It is not necessary to do all of the tests at one time. For a list of accredited laboratories, visit [des.nh.gov](http://des.nh.gov) and search for Private Well Testing.

### Standard Analysis

This basic analysis covers the most common contaminants (see list below). Some of these contaminants pose health-related concerns, while others only affect aesthetics (taste and odor) or provide information needed in order to determine the appropriate treatment for the water.

### **Radiological Analysis**

New Hampshire's geology contains naturally occurring radioactive elements that dissolve easily in well water. A basic radiological analysis will test for uranium, analytical gross alpha and radon gas.

Radon is a common well water problem in New Hampshire and testing for it may be required by your lender or your municipality. Presently, there are no federal or state standards for radon in drinking water, only suggested action levels. NHDES estimates that approximately one-third of private wells in New Hampshire exceed NHDES' suggested action level, so radiological testing is encouraged.

### **Per- and Polyfluoroalkyl Substances (PFAS)**

PFAS have been found in a significant percentage of private wells in New Hampshire. NHDES revised its private well testing recommendations in 2019 to include PFAS. For more information and a list of laboratories that provide PFAS testing services that are accredited by NHDES, see the [Laboratory Testing Guidelines](#) document on the NH PFAS Investigation website.

### **Volatile Organic Compounds (VOCs)**

The most common VOCs come from gasoline compounds (such as MtBE and benzene) and industrial solvents. MtBE can be found in well water even in remote areas.

### **Additional Tests**

Circumstances relative to your well may indicate additional testing not described here. For instance, NHDES does not recommend routine testing for pesticides, herbicides, or synthetic organic compounds, mainly because of the high cost. However, such testing might be warranted if your water has elevated nitrite/nitrate concentrations or if significant amounts of pesticide have been applied near the well. These less routine tests may not be available at all laboratories.

### **When to Test**

NHDES recommends that regular testing be performed at the intervals shown in the chart below. Prospective homebuyers should test the water in a home with a private well before purchase. Water quality in wells is generally stable, and if a change is going to occur, it occurs slowly. Thus the interval between water quality tests, once you have purchased the home, can generally be in terms of years (see chart) if a well is properly constructed and located in a safe area.

However, the following conditions would indicate more frequent testing:

- Heavily developed areas with land uses that handle hazardous chemicals.
- Recent well construction activities or repairs. NHDES recommends taking a bacterial test after any well repair or pump or plumbing modification, but only after substantial flushing of the water system.
- Contaminant concentrations above state or federal standards found in earlier testing.
- Noticeable variations in quality such as a water quality change after a heavy rain or an unexplained change in a previously trouble-free well, for example, funny taste, cloudy appearance, etc.

When taking any sample, NHDES recommends that it be taken after a heavy rainstorm. These events tend to highlight conditions of improper well construction or poor soil filtration.

**Contaminants and Testing Frequency**

<b>Testing Frequency</b>	
<b>Standard Analysis</b> Arsenic Bacteria Chloride Copper Fluoride Hardness Iron Lead Manganese Nitrate/Nitrite pH Sodium Uranium	Every 3 to 5 years (except for bacteria and nitrate, which are recommended yearly)
<b>Radiological Analysis</b> Radon Uranium Analytical Gross Alpha	Every 3 to 5 years
<b>PFAS</b>	Every 3 to 5 years
<b>VOCs</b>	Every 3 to 5 years

**What the Tests Tell You**

Results will reveal the level at which any of the tested substances were found in your water sample. The mere presence of these contaminants in well water does not necessarily imply that there is a problem. However, when levels exceed state or federal health standards, you should take steps to correct the situation. Several methods are available from commercial contractors to treat contaminated water. After you receive your test results visit NHDES' [Be Well Informed website](#) for an interpretation of your results along with information about treatment options based on your results.

**For More Information**

Please contact the Drinking Water and Groundwater Bureau at (603) 271-2513 or [dwgbinfo@des.nh.gov](mailto:dwgbinfo@des.nh.gov) or visit our website at [des.nh.gov](http://des.nh.gov).

Note: This fact sheet is accurate as of July 2019. Statutory or regulatory changes or the availability of additional information after this date may render this information inaccurate or incomplete.

# Town of Amherst

## Development Regulations

### Subdivision Regulations

2-1

## **Part 2 – SUBDIVISION REGULATIONS**

### **Article 1 - General requirements**

#### **201 Authority**

Pursuant to the authority vested in the Amherst Planning Board by the voters of the Town of Amherst and in accordance with the provisions of NH-RSA 674:35, the Amherst Planning Board adopts the following regulations governing the subdivision of land in the Town of Amherst, New Hampshire.

##### **201.1 Purpose**

The Subdivision Regulations are intended to facilitate housing and other construction that can be developed in such a manner to promote the most appropriate use of the land, encourage environmentally sound planning to conserve open space, retain and protect important natural and cultural features; and provide for efficient use of land and community services to advance the goals stated in the Master Plan and in accordance with RSA 674.21, Innovative Land Use Controls.

##### **201.2 Objectives**

- A. To maintain rural character, preserving farmland, forests, grasslands, wetlands, and maintaining rural views.
- B. To preserve those areas of the site that have the highest ecological value, including, for example, wildlife habitats, (areas of highest conservation value as identified by the NH Fish and Game's Wildlife Action Plan), and water resources (Drinking water supply areas and watersheds, wetlands, streams, and rivers.)
- C. To locate buildings and structures on those portions of the site that are the most appropriate for development, and avoiding development in areas ill-suited for development, including, for example, , areas with poor soil conditions, a high water table, that are subject to frequent flooding, or that have excessively steep slopes.
- D. To preserve historic, archeological, and cultural features on the site.
- E. To create a contiguous network of open spaces or "greenways" by linking the common open spaces within the subdivision to open spaces on adjoining lands wherever possible.
- F. To reduce the impacts on water resources by minimizing land disturbance and the creation of impervious surfaces and stormwater runoff.
- G. To reduce the amount of roads, sidewalks, and stormwater management structures that must be built and maintained.
- H. To minimize the impact of residential development on the municipality, neighboring properties, and the natural environment.

#### **202 Application Procedure**

##### **202.1 Application**

All applications made to the Planning Board, whether for formal or informal

consideration, shall be submitted to the Office of Community Development at least thirty (30) days prior to the date of a Planning Board meeting at which the applicant wishes to appear.

A. Application for proposed subdivision may be presented as follows:

1. Preliminary Conceptual phase, where a map of the site is presented, showing the site and neighboring properties, which includes:
  - The relative ecological condition of the site, based on the NH Fish and Game Wildlife Action Plan.
  - Wetlands, surface waters, and aquifers at the site.
  - Open space, trails, and recreation areas in the subject and neighboring parcels.
  - Soils designated of prime or local importance as shown in USDA NRCS mapping.
2. Design Review phase at which abutters must be notified,
3. Final Review phase of the application at which abutters must be notified.

**202.2** A completed application within the meaning of RSA 676:4 I (b) shall constitute a completed application form, a complete list of abutters including the owner, applicant and any professionals whose stamp appears on the plan, three (3) sets of addressed gummed mailing labels, the payment of a fee as per approved schedule of fees, as well as all of the items specified in Section 211, Paragraphs 211.1, 211.2, and 211.4 as appropriate and shall include any specific factual material required by the Planning Board, unless waived by the Planning Board during the subdivision process, including such materials as traffic studies, water supply/hydrogeologic studies, environmental impact studies, or similar materials necessary to make informed decisions as to the impact of a proposed subdivision or development.

**202.3** The Planning Board, upon a showing of good cause by the applicant, may waive any provision of these Subdivision Regulations. It is the applicant's responsibility to submit waiver requests in writing, citing the provision requested to be waived, and the reasons for requesting the waiver.

**202.4** For Planning Board agenda purposes only, inclusion of submission documents required by Section 211 shall be considered complete. The Planning Board shall receive and vote to accept an application only at a public meeting after notification of abutters as per RSA 676:4 I (d).

**202.5** Applications and plans for Final Review phase will be reviewed by the Zoning Administrator for conformance with these subdivision requirements and applicants will

be notified by regular mail of any deficiencies which must be corrected in order to be placed on a Planning Board agenda for Planning Board Final Review of the application.

- 202.6** After such notice, the applicant may revise the plan/s. The revised plan, which must provide the information required by subdivision regulations shall be resubmitted at least fifteen (15) days prior to the Planning Board meeting at which the applicants wishes to appear. Approval of State agencies is mandatory for applications to be approved in the Final Review phase.
- 202.7** Adherence to these requirements will place applications on the next available Planning Board agenda for consideration, within constraints imposed by the number of applications received. Assignment to agenda will be in the order of receipt.
- 202.8** The Preliminary Conceptual phase is intended to address the suitability of the land for subdivision and for review of the basic concept of the proposal in general terms such as desirability of types of development for an area, and under the Master Plan. This review shall not bind either the applicant or the Planning Board.
- 202.9** The Design Review phase continues this informational exchange between the Board and the applicant, and these discussions are encouraged for major subdivisions, subdivisions proposing new roads, and subdivisions applied for under the Integrated Innovative Housing Ordinance. This review shall not bind either the applicant or the Planning Board.
- 202.10** Material presented for this discussion should include plats and information as described in Section 211. Discussions are vital to sound planning and to let both the applicant and the Board study the widest range of possible configurations. In addition, the suitability of the proposal can be determined with a minimum burden of expense on the applicant.

### **203 General Regulations**

- 203.1** The Planning Board shall, in the exercise of the authority granted pursuant to NH RSA 674:36, review all proposed subdivisions with a view toward determining the impact that the proposed subdivision will have on various Town services; and to that end, determining whether such proposed subdivision, if permitted, would create one (1) of the following conditions:
- A. Constitute a scattered or premature subdivision of land as would involve danger or injury to health, safety, or prosperity by reason of the lack of water supply, drainage, transportation, schools, fire department, or other public services;
  - B. Necessitate an excessive expenditure of public funds for the supply of such services.
- If, after such review, the Board determines that the proposed subdivision would cause either of the aforementioned conditions, then the Board shall so inform the applicant and indicate that the applicant may modify the proposal to avoid the aforementioned conditions; and in doing so, the said Board may, considering all the circumstances,

specify the extent to which the particular proposed subdivision may be developed in any given year, as well as establish the minimum duration of time for the total development of such particular subdivision. The Board shall state in its records any modifications it will require.

If during review of an application, professional or engineering review is employed by the Planning Board, the costs of such review shall be borne by the applicant for approval. An estimated fee shall be placed in escrow with the Town prior to commencement of the third-party review. If the escrow amount has been expended prior to completion of the Planning Board's review, an additional escrow amount will be requested prior to proceeding with the review. If any escrow amount remains at the conclusion of the review, it will be returned to the applicant.

**203.3** The "Roadway and Utility Standards" and "Stormwater Regulations" of the Town of Amherst are incorporated into these Subdivision Regulations by reference.

**204 Agreement to Approvals**

Acceptance and approval by the Board of the submission shall constitute an agreement between the Town and the applicant that subdivision and development of the land in question shall be done as detailed on the final plat/s. Deviation from the approved final plat requires the consent of the Board.

**205 Action of the Board**

**205.1** After due notice as required by RSA 676:4 I (d), the Planning Board shall hold a public hearing within thirty (30) days of accepting an application for Final Review. The applicant and abutters shall be notified of said hearing in fashion consistent with RSA 676:4 (g).

**205.2** The Board must act to approve, modify, or disapprove a plat within sixty-five (65) days of the acceptance of the complete application unless the time for action has been extended an additional ninety (90) days by the Selectmen or unless the applicant has waived the requirement for action within the time periods specified herein; and consent to such extension is agreeable to both parties. If the Board fails to act and has obtained no extension from the Selectmen or waiver from the applicant, then said applicant may obtain from the Selectmen an order directing the Board to act within thirty (30) days. Failure of the Board to act upon such order of the Selectmen, shall constitute grounds for the Board of Selectmen, upon petition of the applicant, to issue an order approving the application, if the Board determines that the proposal complies with existing subdivision regulations and zoning and other ordinances.

**205.2** The approved final design plat shall be recorded with the Registrar of Deeds, Hillsborough County, prior to any sale or transfer of land within the subdivision. The recording of such approved plats shall, without further action, modify the official map of the Town of Amherst. Such recording shall not constitute acceptance by the Town of any street, easement, or open space shown thereon.

- 205.3** No street or open space will be accepted by the Town until such time as all improvements have been carried out as shown on the final plat, or in accordance with other options as indicated in Section 213.1 of these regulations, subject to any conditions established by the Planning Board at the time of final design plat approval and compliance with all State and local regulations applicable thereto. Acceptance shall then take place only upon the acceptance by the Selectmen of the Town of a Warranty Deed to the premises so dedicated.

## **ARTICLE 2 -- PLAT REQUIREMENTS**

### **206 Compliance with Regulations**

- 206.1** No subdivision of land shall be made or land cleared for conversion purposes, and no land in any subdivision shall be sold or offered for sale or lease, and no street or utility construction shall be started until a final design plat, prepared in accordance with the requirements of the regulations, has been approved by the Board, and other required permits have been issued.
- 206.2** The subdivider shall familiarize himself with all State and Town regulations relative to the health, buildings, roads, and other pertinent data, so that he is aware of the obligations and standards expected.

### **207 Character of Land for Subdivision**

All land to be subdivided shall be, in the judgment of the Board, of such character that it can be used for building purposes without danger to public health or safety, or to the environment. Land subject to periodic flooding, poor drainage, or other hazardous conditions, shall not ordinarily be subdivided. Land with inadequate capacity for sanitary sewage disposal shall not be subdivided. Plats for the subdivision of land shall conform with all regulations of the Board, the Zoning Ordinances, and the Water Pollution Control Regulations and other applicable by-laws, ordinances, and regulations at both State and local levels.

### **208 Lot Layout**

The layout of lots shall conform to the requirements of the Zoning Ordinance when in force and shall be appropriate for the intended construction.

### **209 Preservation of Existing Features**

Due regard shall be given to the preservation and protection of existing features, trees, scenic points, brooks, streams, rock outcroppings, water bodies, high value ecological habitats, other natural resources, historic landmarks, stone walls, and other significant features. Originality in lot layout will be encouraged to achieve the best possible relationship between the development and existing features on the property.

## **210 Submission Documents**

### **210.1 Design Review Phase**

- A. Tentative plats for discussions should be sufficiently clear to show all site conditions. Plans should not be at a scale greater than one hundred (100) feet to the inch. Six (6) paper prints are filed with the application detailing the general concept of the proposal and indicating the form of subdivision sought.
- B. Plans for a residential development proposed under the Integrated Innovative Housing Ordinance (IIHO) should include calculations of density allowed as of right, as well as any density bonus proposed, and rationale for granting the bonus.
- C. Suitability of the soils present on a tract may be paramount to the type of development on such tract and soils testing should be directed toward establishing soils type and suitability, indicating on plans: boundaries, topography, wetlands, ledge, streams, existing roads, new roads, structures, soils, types, adjacent development.

### **210.2 Final Review Phase**

- A. Final plat/s, three (3) full size copies, ten (10) 11"X17" copies of paper prints and PDF/A copies of the full submission showing the following:
  - 1. Boundary of subdivision area, including bearings and distance on every lot line;
  - 2. Topography with sufficient detail to indicate stormwater runoff;
  - 3. Streams, seasonal runoffs, brooks, ponds, wetlands (poorly or very poorly drained soils);
  - 4. The subdivision's relation to existing roads;
  - 5. Existing structure(s);
  - 6. Adjacent structures within one hundred (100) feet of parcel boundaries;
  - 7. Site location map, showing proposed subdivision in relation to major roads;
  - 8. The subdivider or his agent(s) shall arrange to have soils investigations, including test pits and required Site Specific Soils Mapping (SSSM), witnessed by the Town Health Officer or their designee. Wetland areas, if present on the site, shall be delineated by a Certified Wetland Scientist. The results of soils investigations to be placed on plans and include, but not limited to, soils data showing results and location of test pits and perc tests, a statement that tests meet the criteria established by State and Local authorities for the design of a septic system;
  - 9. Location of four thousand (4,000) square feet per single family unit reserved for septic systems. Additional soils tests, after Final Review approval, may be required.

10. North arrow;
  11. Graphical scale;
  12. Date of layout and dates of revision.
  13. Professional stamp(s) of any Licensed Land Surveyor, Soil Scientist, Certified Wetland Scientist, Professional Engineer, and Subsurface Designer responsible for preparation of the Plat.
- B. Drainage calculations for proposed culverts or drainage structures, including driveway culvert size. These should be submitted for review in the form of a drainage report or memorandum with sufficient back up data to demonstrate compliance with the Amherst Stormwater Regulations and facilitate review by a third party;

C. Legal Data Required

When applicable to a specific subdivision, the following are required in form and substance approved by Town Counsel prior to approval of a subdivision plat:

1. Agreement to convey to the Town land to be used for streets and other public purposes, with transfer of title to such interests to be effective on such date as the Town accepts such land.
2. Covenants which shall include a definitive statement of the method of ownership of the common land or open space. The intent herein is to guarantee that ownership and taxation of common land be equitably apportioned to individual owners for his/her lot/unit.
3. Covenants permanently restricting the common land or open space from any future subdivision.
4. Easements and right-of-way over property to remain in private ownership including a street.
5. Rights to drain onto or across other property, whether public or private, deeds covering any land to be used for public purposes, easements, right to drain onto or across private or public property shall be submitted to, and approved by the Board of Selectmen with the approval of Town Counsel, the Department of Public Works, and/or any other appropriate agency.

All documents required hereunder shall be submitted in final, executable, recordable form satisfactory to Town Counsel as part of the Final Review Phase.

**210.3 Final Plat(s)**

- A. All final Plats must show:
1. Name of municipality;

Town of Amherst Development Regulations  
Subdivision Regulations

2-8

2. Name of subdivision;
  3. Name and address of subdivider;
  4. Name and address of abutters;
  5. Existing roads or driveways within two hundred (200) feet of the subdivision;
  6. Existing and proposed lot lines;
  7. Proposed names of new streets or private roads and driveways servicing three (3) or more dwelling units, shall have appropriate road names as approved by the Board of Selectmen or their designee;
  8. Street address and Lot designations compliant with Assessing Office and Fire/EMS Department requirements.
  9. Area reserved for stumps;
  10. Location of existing and proposed easements, IF NONE, SO STATE ON PLANS;
  11. Deed restrictions, IF NONE, SO STATE ON PLANS;
  12. Building setback lines;
  13. Parks;
  14. Recreation facilities;
  15. Conservation trails;
  16. Significant natural or manmade features;
  17. Water mains;
  18. Sanitary sewers;
  19. Storm water sewer or drain lines, and any water quality treatment facilities;
  20. Existing utilities, telephone, electric, gas;
  21. Proposed placement of telephone, electric, gas;
  20. Boundaries of Zoning Districts within the subdivision;
  21. Boundaries of other municipalities;
  22. Land use designation per Zoning Maps;
  23. Location of driveways accessing public road and indication of sight distances.
- B. Additional Final Plat Documents to be Submitted:
1. A statement of suitability of land for development;

2. A statement of work to be completed on existing streets to meet minimum standards;
3. Method of sanitary sewerage disposal;
4. Method of supplying water;
5. Road profiles and cross sections, including driveways for Class B reduced frontage lots;
6. Approval/s from any other Municipal, State or Federal Agency which may have jurisdiction. Applicable permit numbers shall be listed on the plan;
7. Name and seal of engineer or land surveyor licensed by the State of New Hampshire;
8. Statement that final plat is based on a boundary survey with a maximum error of closure of 1 in 10,000 certified by an Engineer or Surveyor registered with the State of New Hampshire, distances shall be to the nearest hundredth (100<sup>th</sup>) of a foot and bearings to the nearest one (1) second;
9. Stations, radii, curve data, and paving widths of streets;
10. Lot dimensions showing area in square feet and acres;
11. A written acknowledgment of the subdivider's responsibility for maintenance, and the assumption by him of liability for injuries and damages that may occur on any land to be dedicated for public use, until such land has been legally accepted by the Town;
12. Accurate locations of all monuments to be set at street intersections, points of curvature and tangency of curved streets, and at angles of lots;
13. Drainage calculations for proposed culverts or drainage structures, including driveway culvert size. These calculations shall be presented in a Drainage Report/Memorandum demonstrating compliance with the requirements of Amherst Stormwater Regulations, and suitable for third party review;
14. Floor plans and architectural drawings of proposed units in an IHO residential project;
15. Indication on plan of what area is dedicated to open space, and method of dedication;
16. A statement of approval from appropriate municipal agency if subdivision is to be served by public water supply or sewer;
17. Volume and page reference sufficient to indicate the subdivider's derivation of

title in the event only one (1) parent tract is involved, and if the subdivision constitutes an assemblage of several tracts, the plat shall contain a title reference of each and indicate where each of the lots is situated with reference to the assembled tracts. All lots shall be numbered so as to coincide with the Town of Amherst tax map numbers by parent tract numbers.

- a. No subdivision shall be finally approved until the Planning Board is provided with a certificate in writing from the Tax Collector that all tax liens (other than those that apply to April 1, of the tax year in which the subdivision is being approved) have been paid and cleared.
  - b. That Section 211 of the subdivision regulations shall require that any plan presented for final approval contain a depiction on the plan by dotted lines of the lot lines of the parent tract(s) as identified in the notes.
  - c. That the identity of any lien holder or mortgages (including volume and page references where said liens are recorded) that exist at the time such approval is given are listed and certified by an attorney.
17. Statement regarding choice of building or bonding of any proposed road layout with improvements (Option 1 or 2, see Section 213.0 - New Roads and Improvements and Building Permits);
18. Approval of Town Counsel of legal data in final, executable, recordable form on:
- a. The agreement to convey to the Town, land to be used for streets and other public purpose;
  - b. Any covenants dealing with methods of ownership of common land or open space. The intent herein is to guarantee that ownership and taxation of common land be equitably apportioned to individual owners for his/her lot/unit and common land. With respect to covenants and other recordable documents, no Building Permit shall be issued until the applicant has provided photo copies of the recorded instrument to the Town identifying the recorded item to be in place;
  - c. Any covenants restricting use or future use of land within a subdivision to those permitted in the Zoning Ordinance as well as restrictions on number of bedrooms;
  - d. Any proposed easements;
  - e. Any proposal to increase drainage onto or across other property, whether public or private;
  - f. A recordable Warranty Deed for any land/road to be accepted by the Town.
19. Estimate from appropriate contractors of cost installation

- of all roads / improvements shown on plan;
20. Space reserved on plat for endorsement by all appropriate agencies;
  21. Erosion & Sedimentation Control Plan prepared by a Licensed Professional Engineer. As a minimum, all Erosion & Sedimentation Control Plans shall be consistent with the requirements of the Amherst Stormwater Regulations as amended from time to time.
  22. List all State and local permits, variances and waivers granted;
  23. Study or review of, unless waived by the Planning Board;
    - a. Fiscal impact,
    - b. Environmental impact,
    - c. Traffic,
    - d. Water supply,
    - e. Drainage Report,
    - f. Hydrogeological,
    - g. Other, as deemed necessary by the Planning Board.
  24. Statement regarding a phasing plan in accordance with Section 3.19 of the Amherst Zoning Ordinance.

**210.4 Submission Documents for Lot Line Change and Recording**

- A. Completed Planning Board application form with appropriate documents.
- B. Three (3) full size paper prints, ten (10) 11"X17" paper prints and original.
- C. Site location map.
- D. Site map showing:
  1. Name of municipality,
  2. Name and address of owner/s,
  3. Boundaries (including bearings) certified with name, address, and seal of licensed surveyor with the following statement entered on the plat and signed by the Surveyor. I hereby certify that this plan is based on an actual field survey and has a maximum error of closure of 1 in 10,000. (For lot line change only);
  4. Location of all monuments found or to be set (For lot line change only);
  5. North Point;
  6. Bar scale;
  7. Date of layout and date of any revision;

8. Names and addresses of abutters as defined in the Zoning Ordinance;
9. Location of existing or proposed easements (if none, so state on plan/s);
10. Deed restrictions (if none, so state on plan/s);
11. Name, seal, and signature of land surveyor (licensed by New Hampshire);
12. Lot dimensions, area of lot/s in square feet, area of lot/s in acres;
13. Volume and page references sufficient to indicate derivation of title/s; 4. New lot lines (shown solid) and former lot lines to be eliminated (shown dotted) with, if necessary, the following note entered on the plat; Lot/Parcel number is not to be considered a separate building lot but will henceforth be considered as part of premises known as lot number \_\_\_\_\_.

For Consolidation and Lot Line Change(s):

15. All existing buildings on lot/s (for Lot Line Change Only);
16. Soils Conservation Service soils type overlaid on plan (for Lot Line Change only);
17. Zoning district boundaries on parcel, if any.

#### **210.5 Lot Consolidation**

All lot consolidations shall be completed using the form designated by the Planning Board and must comply with the current Amherst Zoning and Subdivision Regulations. Signed copies of the form shall be recorded at the Hillsborough County Registry of Deeds and the Amherst Assessors office per RSA 674:39a.

#### **210.6 Voluntary Merger**

- A. Upon application by the owner, the Planning Board shall approve the merger of two or more contiguous preexisting approved or subdivided lots or parcels for the purpose of municipal regulation and taxation, unless the merger would create a violation of current regulations. No public hearing or notice shall be required. The owner shall complete a lot merger form which is available from the Amherst Planning Department. The Form shall be submitted to the Planning Department for endorsement by the Planning Board and recording in the HCRD, and shall be filed with or mailed to the Town Assessor.
- B. No parcel or parcels merged under these provisions shall thereafter be separately transferred without subdivision approval.

### **211 New Roads and Improvements and Building Permits**

- 211.1** Any subdivision which requires road system layout and construction will have such improvements installed in accordance with the Roads and Utility Standards as detailed in Part 3 of these regulations. The subdivider shall elect to comply with Option 1 or

Option 2 as described below and shall so note on subdivision plans submitted to the Planning Board for final approval and such notation shall become binding on his successors, heirs or assigns.

- A. **OPTION 1:** The road system or part of a road system and any other planned or required improvement is entirely completed prior to acceptance. An as-built road plan is furnished to and approved or disapproved by the Town upon installation of the base course of bituminous concrete. The road/improvements are accepted by the Board of Selectmen, deeded to the Town; and a Maintenance Bond (Irrevocable Letter of Credit) sufficient to cover a two-year guarantee period or such greater period as may be required by the Planning Board is furnished to the Planning Board. Any deeds are recorded. Building Permits and Driveway Permits may then be issued.
- B. **OPTION 2:** The road system or part of a road system and any other planned or required improvement is not entirely completed prior to acceptance. Roads and improvements are completed except for installation of final wearing course of pavement as described in the Roadway and Utility Standards. A Completion Bond or other form of surety, in a form and amount acceptable to the Planning Board, shall be furnished to the Board to assure completion of the road/improvement covered by the bond. An as-built plan shall be furnished to and approved by the Office of Community Development upon installation of the base course of bituminous concrete.

- 211.2** Along a road or portion of a road covered by a Completion Bond, building permits may be issued upon acceptance of the surety by the Planning Board.
- 211.3** Within twenty-four (24) months of the issuance of a Certificate of Occupancy for a structure on any new public road or portion of a new public road, or the occupancy of fifty percent (50%) of the homes along such road, the road shall be completed in accordance with the final approved plans, prior to the issuance of any further building permits on such road. If no Certificates of Occupancy have been issued on the road, the Completion Bond shall be extended until such time as conditions for acceptance of the road are met.
- 211.4** The road will be accepted by the Town only following the completion of the road and receipt of an acceptable maintenance bond as detailed in Option 1 above. No road will be accepted by the Town unless at least one (1) Certificate of Occupancy has been issued on the new road.
- 211.5** Until the road construction has been accepted, the subdivider, developer, or his successors shall be responsible for the maintenance of the streets, including winter maintenance of snow plowing, sanding and other protection, which obligation shall be made part of the requirements of the Completion Bond.
- 211.6** Upon satisfactory completion of the road system as judged by the Office of Community

Development and the Department of Public Works of the Town of Amherst, said road system will be accepted by the Board of Selectmen and shall be properly deeded by the applicant to the Town. The subdivider, developer, or his successors shall provide the Town with a Maintenance Bond.

**211.7** During construction, periodic inspections by a licensed Professional Engineer shall be performed at the applicant's expense to ensure the new construction is generally in conformance with the approved plans for the improvements and with Town standards and requirements.

**211.8 Bonding**

1. Option 1: The road system or other improvement is completed in accordance with Section 213.1 - Option 1, a Maintenance Bond (Irrevocable Letter of Credit) shall be filed with the Planning Board by the subdivider, developer, or his successors, in a form and amount sufficient to cover any and all costs which may arise due to deficiencies in the quality of the completed road or other improvements, as determined by the Office of Community Development and the Department of Public Works.

The Maintenance Bond shall be reviewed by Town Counsel. The surety shall be for a period of two (2) years following acceptance of the improvement/s.

2. Option 2: The road system or other improvement is completed to the extent called for in Section 213.1 - Option 2. A Completion Bond (Irrevocable Letter of Credit), in a form and amount acceptable to the Planning Board and sufficient to cover any and all costs necessary to complete the improvements, is filed with the Office of Community Development based on an estimate prepared by the Project Engineer; and shall include, but not be limited to, the cost of such items as streets, lighting, sidewalks, public improvements, extension or installation of water or sewer lines, drainage improvements, setting road bounds, public parks or recreation areas, or other such improvements as required by the Planning Board in the approval of the Final Subdivision Plat. The Completion Bond shall remain in effect until completion and acceptance of the road or other public improvements. Estimated costs for interim winter plowing and other maintenance shall be included in the amount of the bond. In the event that the completion of the road extends beyond two (2) years after base course construction, the Maintenance Bond shall be extended to cover a five (5) year period after acceptance of the road.

3. The bond or other form of surety, shall be reviewed by Town Counsel.

**211.9** After completion of a road system / improvement, a Maintenance Bond (Irrevocable Letter of Credit) as required in Option 1 shall be filed with the Office of Community Development. If more than two (2) years have elapsed from the start of construction until the completion and acceptance of the road, the maintenance period shall be

extended to five (5) years.

**211.10** In the case of a water or sewer system, the Maintenance Bond shall extend for a period of five (5) years.

**211.11** Before any work may commence on a subdivision, the subdivider, developer, or his successors shall file with the Office of Community Development a Certificate of Insurance including liability.

**211.12 Permits**

If, during the course of execution of a subdivision the subdivider, developer, or his successors shall violate the conditions of the subdivision approval, the Zoning Ordinances, or the Subdivision Regulations of the Town of Amherst, the Planning Board may notify the Zoning Administrator of such violation and request that no further building permits or certificates of Occupancy be issued until:

1. The violation(s) has been satisfactorily corrected as judged by the Zoning Administrator;
2. A bond to cover the correction of the violation(s) has been accepted by the Board of Selectmen.

**211.13 Pre-construction Meeting.**

For subdivisions which require any new road construction, a pre-construction meeting shall be required by the Planning Board. The pre-construction meeting shall be held no more than three (3) months or less than thirty (30) days prior to commencement of any activity on the site. The purpose of the pre-construction meeting is to ensure that all parties involved with the development of the project, including, but not limited to, the owner and/or developer, the contractors and builders, the Town's Engineer, the Building Inspector and the Public Works Director or Designee, are familiar with the approved design, the terms and conditions of the approval and that all performance surety is accurate and in place. In addition to the individuals listed previously, representatives from the Planning Board and the Selectmen's representative to the Planning Board may attend the meeting.

**211.14 Third Party Review and Inspection Required**

All proposed public improvements as well as other aspects of subdivision construction shall be inspected and approved by a third-party engineering consultant on behalf of the town, at the expense of the subdivider, owner, developer or their assigns, periodically during construction and prior to acceptance by the Town.

**212 Design for Open Space**

**212.1 Open Space Shown on Town Plan.** Where a proposed park, playground, or other open

space is shown on the maps of the Master Plan is located in whole or in part in a proposed subdivision, the Board shall require substantial compliance with such Master Plan. As a condition of approval of the Final Phase, the Board may require that the area shown thereon as open space be offered for dedication to the Town. The Board shall not require such dedication in excess of fifteen percent (15%) of the total area of the subdivision without reasonable compensation, and if the Town does not take steps within a period of one (1) year from the date of approval of the subdivision to acquire the portion of the open space in excess of said fifteen percent (15%), the subdivider may submit to the Board a plan for subdivision of such portion, provided such additional subdivision does not exceed the total number of family dwelling units permitted by the Zoning Ordinances for the applicable district, and meets requirements of these subdivision regulations.

**212.2 Other Open Space.** If no such open space, park, or playground is shown on the maps of the Master Plan within the boundaries of a proposed subdivision, the Board may, where it deems desirable, require that the Final Plat show one (1) or more sites of character, size, shape, and location suitable to be used as community open space or park, in area not to exceed fifteen percent (15%) of the total area of the subdivision. In the case of cluster subdivision, open space shall be not less in area than as provided in the Zoning Ordinance. Such areas of open space, whether privately or publicly owned, shall have a sufficient legal restriction recorded in the Hillsborough County Registry of Deeds land records to assure permanence of use as open space. Open space land in private ownership shall be deeded in such a way that it will assure operation or maintenance of the land in an orderly manner suitable for the purpose intended. The Planning Board, in its discretion, may require additional provisions for protection of open space and its intended use.

**212.3 Trees and Plantings.** Due regard shall be given to preservation of existing features, trees, scenic points, and other natural and historic resources within the subdivision. The Board may require additional tree planting and other landscaping appropriate to the area being developed. Removal of topsoil or surplus materials from the subdivision area shall not be permitted unless in accord with the Zoning Regulations. Existing trees on lots and open space land shall be preserved wherever feasible, unless otherwise directed by the Board. Species of street trees and other landscaping shall be in accordance with the requirements of the Non-Residential Site Plan Regulations.

**214.4 Development of Open Space.** On land to be used as active recreation open space, undesirable growth and debris may be removed. Wooded buffers and brook areas shall be left in their natural state. Active recreation open space shall be graded properly to dispose of surface water and shall be seeded with lawn grass. An area, not to exceed one (1) acre, for the purpose of burying stumps, boulders, and other natural waste may

be designated on the Final Plat in accordance with state regulation and other local requirements. This area must be filled in on an "as-you-go" basis and finally covered with at least twelve (12) inches of soil and four (4) inches of topsoil and seeded with lawn grass or other suitable ground cover such that the area is protected from erosion and is as close to its natural condition as possible two (2) years after the seeding as judged by the Community Development Director or their designee. There shall be no deposition, dumping, or storage of waste or other natural or man-made material, supplies, or equipment on any subdivision of land designated as open space excepting that specifically designated for the disposal of natural waste as described above. No work, removal, or filling shall be done, nor shall the existing natural characteristics of open space land be altered from the original condition until a site plan, prepared by a surveyor or engineer licensed by the State of New Hampshire, shall have been approved by the Board.

**212.5 Invasive Species.** Applicant shall, to the greatest extent practicable, eradicate invasive plant species on the property as a condition of receiving a Certificate of Occupancy. The Director of Community Development, or their designee shall inspect the property to determine compliance with this regulation prior to issuance of a Certificate of Occupancy.

**213 Subdivisions Containing Reduced Frontage Lots.**

**213.1 General**

It shall be the purpose of this section to provide for a means whereby the Planning Board may approve subdivisions containing lots with reduced frontage as a means of access to back lots, provided minimum conditions are met by the developer concerning the extent of their utilization for said purpose.

**213.2 Conditions and Restrictions.**

- A. Reduced frontage shall be a minimum of thirty-five (35) feet on the public way.
- B. The driveway portion of reduced frontage lots shall be an integral portion of and attached to the back lot.
- C. Class A reduced frontage provides access to one (1) back lot.
- D. Class B reduced frontage provides access to two (2) back lots.
- E. No subdivision plan providing for reduced frontage lots shall be approved unless the total acreage of such plan is a minimum of ten (10) acres for each reduced frontage lot(s) sought. Twenty (20) acres could produce two (2) reduced frontages, etc.
- F. No Class B reduced frontage shall be located so as to enter onto a public road within five hundred (500) feet of any existing or proposed street intersection on the public

road (unless the frontage enters at an existing intersection), or be located within five hundred (500) feet of another existing or proposed reduced frontage lot/s on the same side of the public road.

- G. The use of reduced frontage lots shall be restricted when, in the opinion of the Planning Board, such use is in conflict with the long range plan for the Town or creates unusual traffic problems or conditions.
- H. The driveway area of Class B reduced frontage lots, approved by the Planning Board, shall be depicted on the final plat as a shaded area, being a corresponding portion of the two (2) lots to be serviced by this frontage. At the time of Submission of documents for the final phase, the applicant shall provide the Planning Board with a declaration of covenants and restrictions satisfactory to Town Counsel which shall provide for the mutual recognition of easements between the two (2) lots, a provision for the maintenance of the driveway, and a suitable dedication which shall ensure that such driveway shall never become a Town road.

**213.3 Construction Requirements.**

- A. Class A reduced frontage lot: Subject to any construction requirements in the Town of Amherst Driveway Regulations.
- B. Class B frontage lots: The driveway shall be constructed in conformance with the following requirements:
  - 1. Removal of all loam, muck, stumps, and other improper road foundation material within the limits of the right-of-way. In embankment areas, suitable foundation material shall be placed in one (1) foot layers and compacted to form a stable sub-grade.
  - 2. Ledge and boulders shall be removed to at least eight (8) inches below sub-grade and replaced with sand or bank run gravel.
  - 3. Proper drainage shall be installed as indicated on the Final Plat, in accordance with the requirements of the Stormwater Management Regulations of the Town of Amherst.
  - 4. The grade of the driveway shall not be more than eight (8) percent nor less than one (1) percent.
  - 5. Approved street signs, culvert posts, and delineators for curbing, catchbasins and guardrails shall be installed in accordance with the requirements of MUTCD and/or AASHTO Standards as directed by the Board of Selectmen and paid for by the developer.

**214 Classification of Streets**

The classifications of Town streets shall be as defined in the Official Map, and the classification of new streets and streets now shown on such plan shall be as determined by the Board. The standards of design applicable to Town roads shall be those contained in the Roadway and Utility Standards for the Town of Amherst, applicable at the time construction is undertaken.

**215 Pedestrian Walks**

Where necessary, in the judgment of the Board, rights-of-way for pedestrian travel and access may be required between subdivisions or its parts, or between a subdivision and public property.

**216 Underground Utilities.**

All utilities within the bounds of a proposed subdivision which now includes new roads shall be placed underground. Where underground utilities are to be furnished from a public source; all necessary mains, branch off-sets to each lot, and fire hydrants shall be installed by the subdivider, as approved by the corporation or municipal department having jurisdiction and to the satisfaction of the governing body and without expense to the Town. Utility assets that are required to be above ground shall be located as far from the edge of pavement as practicable.

**ARTICLE 3 -- ADMINISTRATION AND ENFORCEMENT**

**217 Modifications**

The requirements of the foregoing regulations may be modified when, in the opinion of the Board, specific circumstances surrounding a subdivision or condition of the land in such subdivision indicate that such modification will properly carry out the purpose and intent of the Master Plan and of these regulations.

**218 Acceptance of Streets**

Nothing herein intended to modify the requirements of law with reference to the acceptance of streets by the Town. Nothing herein is intended to modify or control the construction, reconstruction, or extension of roads by the Town or State.

**219 Other Regulations**

Where these regulations are in conflict with other local or State Ordinances, the more stringent shall apply.

**220 Enforcement**

These regulations shall be enforced by the Board of Selectmen or its duly authorized representative.

**221 Penalties**

Any owner, or agent of the owner of any land located within a subdivision who transfers or sells

any land before a plat of the said subdivision has been approved by the Planning Board and recorded or filed in the Office of the Registrar of Deeds shall be assessed penalties as provided in RSA 676:16.

**222 Appeals**

Any person aggrieved by an official action of the Board, may appeal there from to the Superior Court as provided by RSA 676:15.

TOWN OF CHESTER  
BUILDING CODE

**Article 1 – Building Code**

**Purpose and Authority**

**1.1 - Title** - This Ordinance shall be known and cited as the Building Ordinance of the Town of Chester, New Hampshire and shall be construed to insure public safety and health insofar as they are dependent upon building construction.

**1.2 - Minimum Requirements** - The provisions of this Ordinance shall be held to be the minimum requirements for the preservation of life and health and safety of the inhabitants of the Town of Chester and shall be controlling as to all buildings and structures subject to this Ordinance, except where more stringent requirements are provided under the statutes of the State of New Hampshire.

**1.3 - Other Town Regulations** - No provisions of the Town Zoning Ordinance or any other legal statute pertaining to the location, use or construction of buildings shall be nullified by the provisions of this Ordinance.

**1.4 - Administration** - The provisions of this Ordinance and enforcement of its requirements will be by the Board of Selectmen and/or the Building Official. (5/10/2011)

**Article 2 – Building Code**

**Application for a Building Permit**

**2.1 - Permits** - A permit issued by the Building Official shall be required before beginning operations of placement of foundations, alterations, repair or placement on a lot of a building or structure. Applications for permits shall be submitted in such form as the Building Official prescribes and shall be signed by or authorized by the owner.

**2.2 - Plans** - Applications for permits shall be accompanied by plans with sufficient clarity and detail dimensions to show the nature and character of the work to be performed. The building Official may waive the requirement for filing plans when the work involved is of a minor nature.

**2.3 - Performance** - All work performed under building permits shall conform to the plans and specifications filed with the application.

**2.4 - Limitations of Permit** - Construction must commence within six (6) months after issuance of the building permit. If construction is not commenced within this time period, the applicant must reapply. Construction must be complete within one (1) year after issuance of the building permit. If construction is not completed within this time period, the applicant must reapply. (5/9/2017)

**2.5 - Certificate of Occupancy** - No areas of building or other structures which are hereinafter constructed, reconstructed or altered shall be occupied and no premises shall be used except for agriculture until a Certificate of Occupancy has been issued by the Building Inspector. No Certificate of Occupancy shall be issued for any premises unless the proposed use of the land, buildings and other structures herein shall comply with the provisions of this Ordinance or a variance issued by the Board of Adjustment and all applicable health, safety, fire, building codes, regulations and ordinances.

**2.6 - Board of Adjustment** - An applicant for a building permit whose application has been refused by the Building Official, or parties who have been ordered by the Building Official to incur expense in connection with construction or parties aggrieved by a decision by the Building Official on a matter left by this Ordinance to his/her approval or discretion, may appeal from such action by filing within ten (10) days from date of refusal , order or decision, a written appeal, signed by the owner of property involved with the Zoning Board of Adjustment.

**2.7 - Saving Clause** - Nothing in the Ordinance as adopted shall be construed to affect any suit or proceeding now in progress or any rights acquired or liability incurred or any cause or causes of actions accrued or existing under any Town Ordinance.

**2.8 - Validity** - The invalidity of any section or provision of this Ordinance, hereby adopted, shall not invalidate other sections or provisions thereof.

**2.9 - Fees for Permits** - A fee shall be charged for all permits issued under the terms of this Ordinance as determined by the Town of Chester Board of Selectmen. (7/21/2016)

**2.10 - Enforcement** - Upon any well-founded information that this Ordinance is being violated, the Board of Selectmen shall, on their own initiative, take steps to enforce the provisions of this Ordinance by seeking an injunction in the Superior Court or by any other appropriate legal action. Whoever violates any of the provisions of this Ordinance shall be punished on conviction by a fine in accordance with N.H. RSA 155-A:8 and RSA 676:17, which is currently \$275.00 per day of violation for a first offense and \$550.00 per day of violation for a subsequent offense. The fines may be assessed beginning upon the day after the conviction date or upon the day after the date on which the violator receives written notice from the Town that the violator is in violation, whichever is earlier. (5/10/2011)

## **Article 3 – Building Code**

### **Building Code**

**3.1 - Building Code** - All dwellings and structures shall comply with the requirements in the New Hampshire State Building Code, as established by NH RSA 155-A, and as may be amended from time to time. (5/10/11)

#### **3.1.1 - Special Provisions**

3.1.1.1 - Sprinkler Systems (as previously adopted and amended 1987 and 2003).

Sprinkler systems shall be installed in all conversions and new construction of all multi-family dwellings, all duplexes, all manufactured housing, all clustered dwellings of any type per NFPA 13D Standard for the Installation of Sprinkler Systems in One and Two-Family Dwellings and mobile homes.

3.1.1.2 - Nothing herein shall prohibit the use of native lumber in such equivalent grade and sized as may be approved by the Code Official.

3.1.1.3 – Water Well Quality Testing - (8/28/2019) - Prior to the issuance of a Certificate of Occupancy for any dwelling supplied by a newly drilled private well system, the builder or property owner shall submit to the Building Inspector the water quality test results, from a NH Certified Well Testing Lab, for the NHDES recommended Standard Analysis as stated in Environmental Fact Sheet <sup>1,2</sup> WD-DWGB-2-1 dated 2011, as may be amended. All of the bureau's fact sheets are on-line at:

<http://des.nh.gov/organization/commissioner/pip/factsheets/dwqb/index.htm>

The test results shall show a comparison to the appropriate State or Federal Health Advisory standards, such as, the EPA maximum contaminate level standards. All tested parameters' results shall be disclosed to the purchaser of a property prior to closing. Such evidence of disclosure may be requested by the Building Inspector.

This requirement cannot be construed as a guarantee by the Town of Chester or its agents that the water system will function satisfactorily or that the system will remain at the tested levels.

<sup>1</sup> The NH DES fact sheet, "Suggested Water Quality Testing for Private Wells", further recommends that this analysis be completed every 3-5 years (except for bacteria and nitrate which are recommended yearly).

<sup>2</sup> Arsenic testing is included in the recommended standard analysis, WD-DWGB-2-1.

Additional Information & Recommendations - When taking any sample, DES recommends that it be taken after a heavy rainstorm. These events tend to highlight conditions of improper well construction or poor soil filtration.

## **Article 4 – Building Code**

### **Permit Fee Schedule**

*(Revision as presented and approved on July 11, 2019 at the Public Hearing held by the Board of Selectmen for that purpose)*

*Effective July 11, 2019*

Permit fees are calculated as the estimated construction cost<sup>1</sup> multiplied by \$7.00 per \$1,000 of construction cost. In all cases the square footage is as calculated by the Building Official from plans as submitted by the applicant. (Please see the example worksheet at the end of the Building Code.) Construction costs are calculated as:

## Residential

**Application Fee:** \$25 to be collected at time of application; non-refundable. To be deducted from cost of permit when issued.

**Living Space** – \$120.00 per square foot of living space. Calculated by the square footage of the outside perimeter times the number of stories – includes all living space accessible by stairways. Adjustments are made for inaccessible areas as needed. Finished basements are calculated as square footage of living space. Walk up attics are calculated as living space.

**Outbuildings** (Garages / carports / barns / storage buildings/ sheds / farm stands and other structures for agritourism) - 51.00 per square foot of area. Calculated by the square footage of the outside perimeter of the area. Second story areas are calculated by use – either same rate, or adjusted for storage or living space.

**Storage areas identified within residential structures** - \$22.00 per square foot of storage area –may include basement areas, accessible attic storage and garage / barn loft areas.

**Decks / Porches** - \$48.00 per square foot of area – calculated by the square footage of the outside perimeter of the area. Farmers porches and covered decks are treated the same. Three-season rooms are considered living space.

**Change of use or conversion of space** - \$150 minimum plus \$0.15 per square foot of effected area of new living space. Applies to conversions of basement, storage, attic, and any other areas as converted to habitable space.

**Renovations** – without adding additional footprint or stories - \$56.00 per square foot of area. Does not include change of use or increase in living space – existing space renovation only.

**Residential Swimming Pools** –In-ground \$0.56 per square foot: Above-ground- \$80.00. Additional trade fees may apply, such as mechanical and / or electrical as required.

## Commercial

Permit fees are calculated as the estimated construction cost <sup>1</sup> multiplied by \$7.00 per \$1000 of construction cost. In all cases the square footage is as calculated by the Building Official from plans as submitted by the applicant. Construction costs are calculated as:

**Application Fee:** \$100 to be collected at time of application; non-refundable. To be deducted from cost of permit when issued.

**Commercial Occupancy – New Construction** - \$124.00 per square foot – calculated by the square footage of the outside perimeter times the number of stories. Includes any residential occupancy other than R-3 (one-two family and town houses).

**Commercial Renovations-** without additional footprint or stories: \$200 for first 1000 square feet; \$12 per 100 square foot after, rounded to nearest 100 feet.

**Outbuildings** (Garages / carports / barns / storage buildings / sheds / farm stands and other structures for agritourism) - \$51.00 per square foot of area. Calculated by the square footage of

the outside perimeter of the area. Second story areas are calculated by use – either same rate, or adjusted for storage or living space.

**Commercial Swimming Pools** – In-ground \$0.50 per square foot; Above-ground- \$80.00. Additional trade fees may apply, such as mechanical and/or electrical as required.

### **Other Fees**

**Building Permit Fee Transfer or Renewal** – 50% of original permit fee. Only a single renewal allowed, after that the project must be re-permitted from the beginning.

Permits become invalid unless work is commenced within 180 days of permitting. Permits expire 12 months from issue date and must be renewed to remain valid. Trade permits cannot be transferred.

#### **Demolition Permit:**

Residential: \$0.30 per square foot of demolition.

Commercial: \$0.60 per square foot of demolition.

#### **Re-Inspection Fee - \$50.00**

The Building Official upon inspection, which warrants repeat inspections and/or returns to the same site for the same inspection, may assess this fee.

#### **Septic System Permit:**

\$75.00 per Septic Design Plan Review

\$50.00 - Re-review of an amended or altered plan

\$50.00 – first test pit

\$35.00 – each additional test pit on same lot

#### **Driveway Permit:**

New – residential/per driveway: \$100.00

Improvement – residential/per driveway: \$50.00

New – commercial/multi-family: \$200.00

Improvement – commercial/multi-family: \$150.00

\$50.00 – septic system install (includes replacements)

#### **Electrical Permit:**

Residential \$80.00

Commercial \$125.00

#### **Plumbing Permit:**

Residential \$80.00

Commercial \$125.00

#### **Mechanical Permit:**

Residential \$80.00

Commercial \$125.00

#### **Masonry Permit:**

Residential \$80.00

Commercial \$125.00 per flue

**Generator Permit\***

Residential \$80.00

Commercial \$100.00 per 20kw or portion thereof

\*Propane generators require gas permitting from the Chester Fire Department.

**After the Fact Permit Fee** – Minimum fee imposed is \$100.00 and/or a fine of up to \$50.00 per day (whichever is greater) may be charged for all work started without a permit. The fine period starts when the work is started and runs until a permit is issued. Fines must be paid before the permit can be issued. This applies to all permitting.

**<sup>1</sup> Construction Cost Estimates**

- Residential living space is the average of construction cost of multi-family, one- and two-family as provided by International Code Council (ICC) Building Valuation Data – August 2018
- Commercial is the average of construction cost of mercantile, business, and assembly (A-2) as provided by International Code Council (ICC) Building Valuation Data – August 2018
- Storage cost is as set for basements as provided by International Code Council (ICC) Building Valuation Data – August 2018

**The Chester Fire Department issues the following permits:**

**Gas Appliance (such as furnace, fireplace, kitchen stove, heater, etc.)**

Residential \$65.00 per unit

Commercial \$65.00 per 2000 square feet or portion thereof or \$65.00 per unit whichever is greater

**Chimney – excludes brick fireplace**

Residential \$65.00

Commercial \$65.00 per flue

**Gas Piping & Tanks/Cylinders**

Residential \$65.00

Commercial \$65.00 per 2000 square feet or portion thereof.

**Wood Stove/Pellet Stove** \$50.00 per unit

**Oil Burner**

Residential \$65.00 per unit

Commercial \$65.00 per 2000 square feet or portion thereof or \$65.00 per unit whichever is greater

**Sprinkler Systems**

Residential – single family \$75 per dwelling unit

Commercial \$75.00 per 2000 square feet or portion thereof or \$75.00 per unit whichever is greater

Plan amendments/revisions \$75.00

Re-inspection \$50.00

**Place of Assembly Operational/Occupancy** \$65.00

Required for all areas determined to be “place of assembly”. This fee is in addition to all other permitting.

<b>Blasting/Explosive</b>	\$65.00 up to 7 days
See Chester Fire Chief for scheduling	\$80.00 up to 60 days

**Fireworks Display** (Consult Chester Fire Chief)

All fireworks displays require a Fire Department detail to be present. The minimum fee for such detail is \$400.00 and covers up to the first four (4) hours of detail. Time beyond four (4) hours is billed at the standard Chester Fire Department detail rate per firefighter.

**Re-Inspection Fee** \$100.00

The Fire Department Official upon inspection, which warrants repeat inspections and/or returns to the same site for the same inspection, may assess this fee.

<b>Incident Reports</b>	Fire / EMS – Less than one year	\$20.00
	Fire / EMS – More than one year	\$30.00

<b>Detail Fees</b>	Fire / EMT	\$45.00 / hour / person
--------------------	------------	-------------------------

**\*Example Building Permit Calculation:** An example is shown for a 24' X 40' residential one-story building with a full, unfinished basement, 6' x 8' front porch, 12' X 12' deck and 24' x 28' car garage.

Fees consistent with posted fee schedule as dated 8/1/19									
Use Group	R-3			Construction Type			VB

**ORDINANCE #**  
**Town of Goffstown**  
**ORDINANCE OF THE Board of Selectmen**  
The Board of Selectmen of the Town of Goffstown ordain as follows:

I. **TITLE:** This ordinance shall be known as the “Certificate of Occupancy Requirements-Water Quality” ordinance of the Town of Goffstown.

II. **AUTHORITY:** RSA 147:1, RSA 41:14-b

III. **DECLARATION OF PURPOSE:** The Town of Goffstown is supportive of development and expanded access to quality housing, but the town has a legitimate interest in protecting the public’s health, safety and welfare. As such the purpose of this ordinance is to meet those goals by including basic water quality standards in the certificate of occupancy permit process for new development when serviced by private wells.

It is with the above purpose in mind that the Board of Selectmen hereby ordain that any person or company seeking a certificate of occupancy, must first obtain evidence that the associated private well meets minimum water quality standards.

IV. **REQUIREMENTS:**

A. A permit must be obtained before any drinking well is installed, and must be accompanied by a scaled diagram of the location. Diagram must show existing or proposed subsurface disposal system on that and adjacent lots. The applicable fee as established by the Board of Selectmen shall accompany the application. The plan shall be submitted with the site address, map and lot number.

B. In all new construction, prior to issuance of a Certificate of Occupancy, and in all well replacements, the applicant shall submit and/or provide a current water quality report from a laboratory accredited under the N.H. Environmental Laboratory Accreditation Program which shows the associated private well meets minimum Department of Environmental Services drinking water quality standards for the following contaminants: Bacteria, Chloride, Sodium, Iron, Manganese, pH, Hardness, Fluoride, Nitrate/Nitrite, Lead, Arsenic, Volatile Organic Compounds (VOC), and Radon.

C. All test results shall be submitted to the Building Official, and meet minimum water quality standards prior to the issuance of a Certificate of Occupancy.

V. **ENFORCING AUTHORITY:** The Goffstown Building Official shall enforce the provisions of this ordinance.

VI. **WAIVERS:** The Board of Selectmen retains the authority to waive any provisions of this ordinance after due deliberation at a duly noticed meeting.

VII. **EXCLUSIONS:** The provisions of this ordinance shall not apply to the Town, its School District or other Town departments acting in their governmental capacity.

**VIII. PENALTIES:** Any person found to be in violation of this ordinance shall be guilty of a violation. Pursuant to RSA 502 A:11-a, the Circuit Court shall have jurisdiction over prosecution of said violation.

- A. Fines may be up to the maximum allowed by law (\$1200.00)
- B. All fines collected shall enure to The Town of Goffstown.

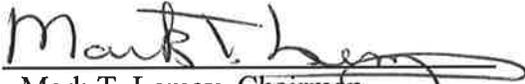

**IX. SEVERABILITY:** Should any provisions of this ordinance be declared invalid or unconstitutional by a court, such declaration shall not be deemed to affect any other section of this ordinance.

**X. PROCEDURE:** This ordinance shall take effect upon passage.

Public Hearing Dates: 7:00 pm on 2/12/18 and 2/26/18  
 Public Hearing Notices: Published in the Union Leader on 1/30/18;  
 Posted at: Town Hall, Library, and town website on 1/30/18  
 Adoption Date: 3/12/18  
 Effective Date: 3/12/18

**BOARD OF HEALTH  
RESIDENTIAL/COMMERCIAL WATER SUPPLY REGULATIONS – WELL  
ORDINANCE FOR NEW CONSTRUCTION**

**Adopted May 16, 2000  
Amended February 20, 2001  
Amended June 5, 2001  
Amended August 6, 2013**

The Board of Health of the Town of Pelham, N.H., acting under RSA 147, has, in the interest of and for the preservation of the public health, and to provide for adequate and safe wells, duly made and adopted, on May 16, 2000 and revised August 6, 2013 the following regulations:

**SECTION 1: Definitions**

1. **WELL:** Includes any pit, pipe, excavation, casing, drill hole or other source of water to be used for any purpose of supplying potable water within the Town of Pelham, NH.
2. **WATER SYSTEM:** Includes pipes, valves, fittings, tanks, pumps, motors, switches, controls and appurtenances installed or used for the purpose of storage, distribution, filtration, treatment or purification of water for any use whether or not inside a building.
3. **DWELLING UNIT:** One (1) or more rooms arranged for living and sleeping purposes with cooking and sanitary facilities for the use of one (1) or more individuals living as a single housekeeping unit.
4. **NEW CONSTRUCTION:** A new residential dwelling or commercial structure which has not been granted a Certificate of Occupancy. This excludes the expansion or replacement of existing residential or commercial structures erected prior to August 6, 2013.

**SECTION 2: Wells**

1. No well shall be installed for new construction until a building permit has been issued by the Health Officer or Deputy Health Officer. The fee for this permit shall be \$25.00.
2. The well contractor licensed under RSA 482-B shall observe reasonable sanitary measures and precautions in the performance of his/her work in order to prevent pollution or contamination of the well.

3. For new construction, there shall be a separate well for each individual parcel except in the case of water systems operating under a New Hampshire State Public Utilities Commission franchise, private water systems owned by a homeowner's association or wells serving commercial structures.

4. All wells for new construction shall be set back a minimum of seventy-five (75) feet from all septic tanks and leaching fields. Additionally, all wells for new construction shall be set back fifty (50) feet from the nearest edge of all existing traveled ways or rights-of-way and a minimum of seventy-five (75) feet from all lot lines (to avoid property encroachment) unless a Standard Release Form for Protective Well Radii has been executed and recorded by the owner of the well. The distance from a well to a septic tank may be reduced to fifty (50) feet if the sewer line meets a SDR rating of 26 or better, and the septic tank is sealed and grouted to prevent infiltration and exfiltration.

5. Burial of tree stumps, brush, and or construction materials shall not be located within the protective well radius.

#### SECTION 3: Capacities

1. Every well must supply adequate water for the purpose for which it is intended.

2. All wells shall be pump tested regardless of depth to determine sustained yield. The sustained yield shall be not less than four (4) gallons per minute over a four (4) hour period. In all cases the pump test shall be completed using a submersible pump. Groundwater level measurements shall be recorded immediately before the start of the pump test for static groundwater level, and at least once every thirty (30) minutes during the pump test. In addition, the static groundwater level shall be measured within twenty-four (24) hours after the pump test and shall demonstrate water level recovery after the pump test to at least ninety percent (90%) of the pretest level. All results from pump testing must be certified by the tester and so evidenced on the well data sheet provided to the building department.

3. Every well that has been deepened or hydro-fractured to increase its sustained yield after being drilled and / or initially tested shall be pump tested in accordance with section 2 above after the deepening or hydro-fracture effort to meet pump test requirements of this section.

#### SECTION 4: Water system

All wells to be used as a water source shall be designed, constructed, and satisfy all requirements set forth in pertinent State of New Hampshire, Department of Environmental Services Drinking Water and Groundwater Bureau and the New Hampshire Water Well Board, regulations as they exist, may be established, or may be amended in the future.

#### SECTION 5: Certificate of Occupancy

1. No Certificate of Occupancy will be issued until all the provisions of these regulations have been met or duly waived by the Board of Health in accordance with Section 6 of this ordinance.
2. A completed well data report including drilling logs must be submitted by the well driller or his agent not later than the time of requesting a Certificate of Occupancy.
3. Collection and analysis of a water sample shall be conducted by a NH Certified Well Testing Lab. No Certificate of Occupancy will be issued until a water test has been received by the Planning Department. This test shall include, but not be limited to, the following:

Test

**Primary Testing (Health)**

Bacteria  
Nitrate & Nitrite  
Arsenic  
Gross Alpha  
Uranium  
Radon\*  
VOC Screen (Volatile Organic Compounds)\*\*

**Secondary Testing (Aesthetic and Other)**

Iron  
Fluoride  
Copper  
Manganese  
Chlorides  
Turbidity  
Sodium  
PH  
Lead  
Hardness

\* Radon shall meet the NH DES recommended level of 2000 picoliters / liter.

\*\* Please note that it takes approximately two weeks to get test results so plan accordingly. If the VOC Screen is positive, further testing shall be done to determine the type of contaminant and concentration.

4. All contaminates identified under Primary Testing in Section 3, shall be mitigated to the prevailing NH DES Maximum Contaminant Level (MCL), or with respect to Radon, NH DES' recommended level by the installation of a point of entry water treatment system prior to the issuance of a Certificate of Occupancy. A water quality test demonstrating effective mitigation to the above referenced standard shall be provided to the Planning Department prior to Issuance of a Certificate of Occupancy. Backwash from water treatment systems shall not be discharged into the dwelling's sewage disposal system unless the design is sized to accommodate the additional flow.

5. The required testing and these regulations cannot be construed as a guarantee by the Town of Pelham or its agents that the water system will function satisfactorily or that all possible water quality problems have been identified and mitigated.

#### SECTION 6: Waivers by the Pelham Board of Health

1. The Board of Health, on the advice of the Health Officer or duly appointed Deputy and in the event of hardship, may waive any requirement of this ordinance except: Section 2, paragraph 1 (permit fee), paragraph 2 (contractor taking reasonable precautions), and Section 5 (certificate of occupancy).

2. In considering waivers the Board of Health shall consider, as a minimum:

- A. Whether the waiver adequately protects public health
- B. Whether the waiver adequately protects consumer safety
- C. Other extenuating circumstances

3. The Board of Health can impose conditions upon waivers, including but not limited to:

- A. Alternate means of mitigation, such as point-of-use devices in instances where point-of-entry treatment would be unreasonably expensive to install or maintain;
- B. Consumer notices
- C. Conditions to be recorded in a deed and noted on the permit.

#### SECTION 7: Enforcement

Any person violating the provisions of this regulation shall be guilty of a violation.

#### SECTION 8: Conflict with Other Ordinances

Where the requirements of State and Local Regulations differ, the more stringent shall apply.

#### SECTION 9: Severability

The invalidity of any provision of this ordinance shall not affect the validity of any other provisions.

## WATER SUPPLY REGULATIONS:

### Section 1: Authority and Purpose

- 1.1 The Board of Selectmen of the Town of Windham, N. H. acting under R.S.A Chapter 147:1, and by any other power thereto enabling and acting hereunder and in accordance therewith, has, in the interest of protecting public health and ensuring appropriate development, duly made and adopted the following regulations.
- 1.2 The word "well" as used in these regulations, shall include any pit, pipe, excavation, casing, drill hole or other source of water to be used for any purpose of supplying water in Windham, N.H.
- 1.3 The words "water system" as used in this regulation, shall include pipes, valves, fittings, tanks, pumps, motors, switches, controls and appurtenances installed or used for the purpose of storage, distribution, filtration, treatment or purification of potable water for any use whether or not inside a building.
- 1.4 The words "Potable Water" as used in this regulation shall mean: Water that is safe and fit for human consumption as defined by the International Plumbing Code subject to testing, per the parameters listed in New Hampshire Department of Environmental Services Standard Analysis.

### Section 2: Wells Approval Process

- 2.1 No well shall be constructed until the Town of Windham Building Inspector has issued a permit. For each well constructed after the effective date of these regulations there shall be:
  - a) A well construction permit application;
  - b) A well construction permit;
  - c) A well certificate of completion report;
  - d) A well driller's log report.
  - e) Water Analysis
- 2.2 No permit shall be issued except to persons licensed under RSA 482-B unless a statutory exemption is applicable.
- 2.3 The well contractor shall observe reasonable sanitary measures and precautions in the performance of his/her work in order to prevent contamination of the well. Disinfection procedures should be followed as outlined in the NH DES Environmental Fact Sheet WD-WSEB-1-2, as may be amended.
- 2.4 There shall be a separate well for each dwelling or a connection to an approved well system. The Town of Windham Building Inspector Health Officer may allow more than one dwelling to be served by a single well if said well complies with the well yield requirements State of New Hampshire well requirements and an easement has been granted, which has been recorded at the Registry of Deeds and a copy of the recorded document is on file with the Community Development Department.

- 2.5 All wells shall be situated a minimum of 75 feet from any septic system leach field.
  - 2.5.1 If placement of a well is necessary within 74-50 feet of the owners septic system leach field, a waiver from NH DES must be granted and provided to the Community Development Department as part of the application.
  - 2.5.2 If placement of a well is necessary within 74-50 feet of any abutting properties septic system leach field, a "standard release form" is required to be approved by NH DES, recorded with the registry of deeds (see RSA 485-A:30-b), and provided to the Community Development as part of the application.
  - 2.5.3 If placement of a well is necessary within 74-50 feet of any abutting properties septic system leach field and there is an existing NH DES waiver to the abutter's well, this must be provided to the Community Development Department as part of the application.
  - 2.5.4 Well easement on adjacent land or dedicated open space can be substituted for a well release. The easement must be recorded at the Registry of Deeds and a recorded copy provided to the Community Development Department as part of the application.
- 2.6 The well location shall be shown on a sketch plan, which shall show the distance from at least two permanent landmark and 50' from the edge of pavement from any State or Town Road.
- 2.7 Drilled Wells:
  - 2.7.1 A six-inch (6") casing of seventeen pound per foot pipe shall be required.
  - 2.7.2 This casing shall be set sufficiently into solid bedrock to act as a seal to keep out surface water; a minimum of ten feet (10') shall be considered sufficient.
- 2.8 Point wells and dug wells:
  - 2.8.1 Point wells shall follow the well design guidelines outlined in the NH Environmental Services Fact Sheet WD-DWGB-1-6 as amended.
  - 2.8.2 Dug Wells shall follow the well design guidelines outlined in the NH Environmental Services Fact Sheet WD-DWGB-1-4 as amended.
- 2.9 Every well must supply adequate potable water for the purpose for which it is intended and shall provide satisfactory evidence of continuing capability to do so. The following are guidelines for what will be considered satisfactory and may be varied by the Town of Windham Building Inspector in cases where there is otherwise demonstrated an adequate supply of water for the purpose for which the well is intended.
  - 2.9.1 The well construction details and pump test results must be documented and provided to the Town on a form available from the Community Development Department.

2.9.2 The pump test must be overseen and documented by a licensed water well contractor or licensed pump installer, or a licensed geologist or professional engineer with appropriate qualifications. If a well fails to meet the required pumping rate and performance standards, the Town of Windham Building Inspector may allow the additional water volume needed to be met by adding a water storage tank to the domestic water system.

2.10 The Town requires that all drinking water wells are tested for the contaminants listed within the NHDES "Standard Analysis" as published by NHDES within its Water Testing Guide. The results must demonstrate that contaminant levels in raw water are below state and federal Maximum Contaminant Levels (MCLs) or are removed to below MCLs through the use of a water treatment system.

Each well shall be tested at the wellhead prior to allowing the building framing to begin. The well is required to be tested again prior to the issuance of a certificate of occupancy at the kitchen faucet for any parameters that failed to meet the recommended levels.

Lead and Copper should be tested from home's internal plumbing. Bacteria should be tested at wellhead and from internal plumbing.

2.11 Required, additional Test Parameters;

VOCs (solvents and hydrocarbons) (special bottle required)

Radon (special bottle required)

Analytical Gross alpha (AGA),

### Section 3: Well Yield Requirement

3.1 WELL YIELD TEST REQUIREMENT - The supply well must be able to provide 960 gallons over a four-hour period. This volume can be met by a combination of the aquifer yield to the well and water storage within the well borehole. Considering the available well storage volume, the minimum well recovery rate (aquifer yield) must be calculated using the following equation:

3.2 Minimum Required GPM =  $\frac{960 \text{ gallons} - \text{Available Storage Volume}}{240 \text{ minute}}$

3.3 Available Storage Volume = [(Pump Depth -- 20 feet) – DEPTH TO STATIC Water LEVEL Depth] X 1.5 gallons/foot:

3.4 This equation assumes a well diameter of 6-inches. If the well is another diameter, use one of the following values in the Available Storage Volume equation:

\_\_\_\_\_ 3-inch = 0.4 gallons/foot

\_\_\_\_\_ 4-inch = 0.7 gallons/foot

\_\_\_\_\_ 5-inch = 1.0 gallons/foot

\_\_\_\_\_ 7-inch = 2.0 gallons/foot

\_\_\_\_\_ 8-inch = 2.6 gallons/foot

- 3.5 Upon completion of the drilling and development of the well, the well must be pumped with a submersible pump located at the likely depth the permanent well pump would be set and at least 25 feet above the bottom of the well.
- 3.6 The determination of the usable well yield must be performed by completing a pump test up to four hours in duration.
- 3.7 The pumping level must always be at least 20 feet above the pump intake during the pump test.
- 3.8 The pump test can be terminated in less than four hours if the water level draw down rate is measured as less than 1 -inch per MINUTE FOR at least a 30-minute period and the pumping rate being maintained is no less than four gallons per minute.
- 3.9 Upon completion of the pump test, the water level must fully recover within 24 hours of cessation of pumping to the static water level measured prior to commencement of the pump test. The pumping Test Log shall be signed and submitted to the Town of Windham Building Inspector for review and approval.
- 3.10 The Well must have a minimum aquifer Yield of no less than 2 gallon per minute.
- 3.11 Some common statistics for sample a six-inch diameter well:

$$\frac{\text{GPM Required Storage}}{\div 1.5} = \text{Well Depth} + \text{safety factor} = \text{Required Well Depth}$$

2	480	320	365 + depth to swl
2.5	360	240	285 + depth to swl
3	240	160	205 + depth to swl

Where swl = static water Level

#### Section 4: Water Systems Installation

- 4.1. There shall be a separate water system for each dwelling, and it shall not be constructed or materially altered hereafter until the Town of Windham Building Inspector has given a permit. The Town of Windham Building Inspector will require a description of the installation with each application for such permit. Emergency work for repairs or service of existing equipment not amounting to substantial renovation or overhaul may be done without a permit.
- 4.2. The electric supply lines from the house to the well pit or pitless adapter shall be enclosed in a 160 lb. pressure pipe, said pipe to be of the same size as the water supply pipe.
- 4.3. All pumps, motors and tanks shall be placed on a suitable foundation and all equipment and parts of the system that may require adjustment-or service shall be made readily accessible.
- 4.4. Pump house, pump or pipe pits and wells shall be designed and constructed so as to prevent flooding and otherwise to prevent the entrance of pollution or contamination.

- 4.5. The Town of Windham Building Inspector shall require the installation of all necessary switches, controls and devices and the satisfactory performance pressure and operating test of the system before final approval and the test must demonstrate that the system will deliver adequate pressure and volume consistent with the well and the well requirements. The Town of Windham Building Inspector must be given at least 24 hours notice of when the installation is ready for inspection.

Section 5: Certificate of Occupancy

- 5.1 No certificate of occupancy can be issued until all the provisions of these regulations have been met. The required inspections and these regulations cannot be construed as a guarantee by the Town of Windham or its agents that the water system will function satisfactorily or have continuous water quality or quantity.

Section 6: Waivers

- 6.1 The Building Inspector may grant exceptions to any part of these regulations, except for Section 2.5 and 2.6 which can only be granted by the Board of Health, with respect to any particular case when, in its opinion the enforcement thereof would do manifest injustice, and the applicant has proven that the same degree of public health and environmental protection required under these regulations can be achieved without strict application of a particular provision(s).

If an applicant or aggrieved party wishes to appeal a decision granted under this Section, that appeal must be made to the Board of Health within 10 business days of the decision being made.

Section 7: Unconstitutionality Clause

- 7.1 Each section of these regulations shall be construed as separate to the end that if any section, item, sentence, clause or phrase shall be held invalid for any reason, the remainder of these rules and regulations shall continue in full force and effect.

Section 8: Effective Date

- 8.1 These regulations shall take effect upon approval by the Board of Selectmen, publication and being recorded by the Town Clerk, Town of Windham, N.H.

Approved: April 21, 2014

**ARTICLES I-XVI: SECTIONS Z100 - Z1600**

**ARTICLE I: PREAMBLE**

**SECTION 100 PREAMBLE**

**100:1** In pursuance of authority conferred by Chapter 674, Section 16 as amended, New Hampshire Revised Statutes Annotated, 1984, and for the purpose of promoting the health, safety, morals, prosperity, convenience or general welfare, as well as efficiency and economy in the process of development of the incorporated Town of Atkinson, New Hampshire, by securing safety from fire, panic and other dangers, providing adequate areas between buildings and various rights of way, by preserving the rural charm now attached to our town, the promotion of good civic design and arrangements, wise and efficient expenditures of public requirements, and by other means, now therefore the following ordinance is hereby enacted by the voters of the Town of Atkinson, New Hampshire, in official meeting convened.

## **ARTICLE II: ZONING MAP AND INTERPRETATION**

### **SECTION 200 ZONING MAP**

**200:1** For the purpose of this Ordinance, the Town of Atkinson is divided into districts as shown on the Zoning Map filed with the Town Clerk and dated March, 1990, and includes the following: (RR-3) Rural Residential 3 acres; (RR-2) Rural Residential-2 acres; (TR-2) Town Residential; (C) Commercial; (C-I) Commercial-Industrial; (C-P) Commercial-Professional; and (TC) Town Center.

### **SECTION 210 DESIGNATION**

**210:1** The location and boundaries of zoning districts are established as shown on the attached Zoning Map. The Zoning Map is hereby made part of these regulations and incorporated herein.

### **SECTION 220 COPIES OF ZONING MAP**

**220:1** Regardless of the existence of other printed copies of the Zoning Map, the Official Zoning Map, which shall be located in the Office of Town Clerk, shall be the final authority as to the current zoning status of the land and water areas, buildings, and other structures in the town.

### **SECTION 230 INTERPRETATION OF ZONING DISTRICT BOUNDARIES**

**230:1** Where uncertainty exists in respect to the boundary of any zoning districts on the Zoning Map, the Board of Adjustment shall determine the location of such boundary.

### **SECTION 240 LOTS IN TWO ZONING DISTRICTS**

**240:1** Where a District boundary line divides a lot of record at the time such zone-boundary line is adopted, the regulation for the less restricted part for such lot shall extend not more than 30 feet into the more restricted part provided the more restricted lot has frontage on a street in the less restricted district; otherwise no encroachment on a more restricted lot shall be permitted.

Where a district boundary line divides a lot of record at the time such zone boundary line is adopted, the more restricted zone may be extended throughout the lot of record (into the less restricted zone). (1990)

### **SECTION 250 APPLICATION OF REGULATIONS**

**250:1** Except as hereinafter provided, no building or structures shall be erected, moved, altered, or expanded and no land, building or structure shall be occupied for use unless in conformity with these regulations herein specified for the district in which it is located or proposed to be located. Any use not specifically permitted by these regulations shall be deemed prohibited. (1982)

## ARTICLE III: DEFINITIONS

### SECTION 300 DEFINITIONS

**300:1** *For the purpose of this ordinance, certain terms are defined as provided in this section (and appear in alphabetical order).*

**100-YEAR FLOOD** – see “base flood”. (2008)

**A1** **ABUTTER** *means any person whose property is located in New Hampshire and adjoins or is directly across the street or stream from the land under consideration by the local land use board. For purposes of receiving testimony only, and not for purposes of notification, the term "abutter" shall include any person who is able to demonstrate that his/her land will be directly affected by a proposal under consideration. (1984)*

**A2** **ACCESSORY BUILDING OR USE** *A building or use subordinate to the main building or use and customarily incidental to the main purpose of such building or use. (1959)*

**A3** **AGRICULTURAL AND FOREST USES** *shall be such uses generally associated with agriculture and forestry endeavors, specifically excluding the establishment of permanent sawmill operations, but including the keeping of livestock. (1982)*

**A4** **AGRICULTURAL USE** *Land containing at least (5) acres which is used for raising livestock or agricultural or forest products; including farm structures and the storage agricultural equipment; riding and boarding stables; and, as an accessory use, sale of agricultural products. Agricultural use shall not include permanent sawmill operations and non-residential uses shall meet the non-residential requirements of this ordinance. (1990)*

**A5** **ALTERNATIVE FACILITIES and TECHNOLOGIES** *Innovative siting techniques for use with WCF, such as clock towers, bell towers, steeples, light poles and similar alternative design mounting structures which conceal the presence of antennas; also utility pole and cable based technologies. (2000)*

**A5** **AREA OF SPECIAL FLOOD HAZARD** *Is the land in the floodplain within the Town of Atkinson subject to a one-percent or greater possibility of flooding in any given year. The area is designated on the FIRM as Zones A and AE. (2008)*

**B1** **BASE FLOOD** *means the flood having a one-percent possibility of being equaled or exceeded in any given year. (2008)*

**B2** **BASEMENT** *means any area of a building having its floor sub grade on all sides. (2008)*

**B3** **BEDROOM** *A room in a dwelling unit that can accommodate individuals for sleeping. With the exception of single-family detached residences, any living space 80 square feet or larger in size which is not designed to be constructed as a living room, dining area, kitchen, bathroom, combination utility room/laundry, or storage room shall be considered a potential bedroom in calculating the number of bedrooms present in a proposed residential building plan.*

**B4** **BUILDING** – See structure. (2008)

- B5 BUILDING PERMIT** A document issued by the Building Inspector signifying that all approvals and prerequisite permits have been obtained. A building permit allows specified construction activity to commence. (1992)
- C1 CARRIER** A company that provides personal wireless services, also referred to as a provider. (2000)
- C2 COLLECTOR ROAD** A collector road is a street that penetrates neighborhoods, collecting traffic from local streets in the neighborhoods and channeling it to and from an arterial road. It must be constructed to town specifications and may not be designed as a permanent "dead end" road.
- C3 COLLOCATION** The placement of more than one antenna on a supporting structure. (2000)
- C4 COMMERCIAL CONSERVATION DEVELOPMENT** An optional commercial development which provides public access to dedicated open space and features energy efficient construction. (2013)
- C5 CONVENTIONAL HOUSING** means any and all forms of housing built in compliance with the 1990 BOCA Codes. (1993)
- D1 DENSITY** The number of dwelling units per acre of land. (Density is established by zoning ordinance provisions contained in Article V and VI.) (1992)
- D2 DEVELOPMENT** means any man-made change to improve or unimproved real estate, including but not limited to buildings or other structure, mining, dredging, filling, grading, paving, excavating or drilling operation or storage of equipment or materials. (2008)
- D3 DWELLING UNIT** A self-contained living unit, either detached from or attached to other living units. (1992)
- E1 ENCLOSED STORAGE** Fully enclosed (all sides) with roof and ancillary to primary use. (1997)
- E2 ESSENTIAL SERVICES** All essential services shall be considered non-residential use and shall be subject to Site Plan Review. This includes the erection, construction or major alteration by any governmental agency, public utility company or private owner of any underground and/or overhead utilities, including poles, commercial equipment and accessory equipment thereto. Essential on-site services shall include sewage disposal and services, water supply systems and such buildings necessary for the furnishing of essential services. (1990)
- F1 FAIR SHARE AMOUNT** A number representing the proportionate quantity of living units to be accommodated by a municipality in order to provide adequate housing for individuals and families having a low-moderate income within a region.
- F2 FAMILY** Two (2) or more individuals living as a group and consisting of an adult male(s) and/or adult female(s) and children, if any.

- F3 FAMILY DAY CARE HOME** A residence occupied by the provider in which child care is regularly provided for any part of the day (but less than 24 hours except in emergencies) for 1 to 6 children from one or more unrelated families. The maximum of six children includes children under six years of age who are living in the home and children related to the applicant who are received for child care. (1990)
- F4 FAMILY GROUP DAY-CARE HOME** A residence occupied by the provider in which care is regularly provided for any part of the day (but less than 24 hours except in emergencies) for 7 to 12 children from one or more unrelated families. The maximum of 12 children includes children under six years of age who are living in the home and children related to the applicant who are received for child care. (1990)
- F5 FEMA** means the Federal Emergency Management Agency. (2008)
- F 6 FLOOD OR FLOODING** means a general and temporary condition of partial or complete inundation of normally dry land areas from: (2008)
- 1) the overflow of inland or tidal waters, or
  - 2) the unusual and rapid accumulation or runoff of surface waters from any source.
- F7 FLOOD INSURANCE RATE MAP (FIRM)** means the official map incorporated with this ordinance, on which FEMA has delineated both the special flood hazard areas and the risk premium zones applicable to the Town of Atkinson. (2008)
- F8 FLOOD INSURANCE SDTUDY (FIS)** means an examination, evaluation and determination of flood hazards and, if appropriate, corresponding water surface elevations, or an examination, evaluation and determination of mudslide (i.e., mudflow) and/or flood-related erosion hazards.
- F9 FLOODPLAN OR FLOOD-PRONE AREA** means any land area susceptible to being inundated by water from any source (see definition of FLOODING). (2008)
- F10 FLOOD PROOFING** means any combination of structural and non-structural additions, changes, or adjustments to structures which reduce or eliminate flood damage to real estate or improved real property, water and sanitation facilities, structures and their contents. (2008)
- F11 FLOODWAY** – see Regulatory Floodway. (2008)
- F12 FRONTAGE** The length of the front lot line. For a corner lot, frontage shall mean the combined length of the contiguous lot lines bordering on right-of-ways. (2000)
- F13 FUNCTIONALLY DEPENDENT USE** means a use that cannot perform its intended purpose unless it is located or carried out in close proximity to water. The term includes only docking and port facilities that are necessary for the loading/unloading of cargo or passengers, and ship building/repair facilities but does not include long-term storage or related manufacturing facilities. (2008)

- G1 GENERAL/CONVENIENCE STORE** *A commercial establishment providing incidental household and personal items for purchase by the public and occupying a total retail and storage floor area of no more than 2,000 square feet.*
- G2 GROSS FLOOR AREA** *Gross floor area is the total floor area designed for occupancy and use including basement and other storage areas provided, however, that stairways, elevator wells, rest rooms and lounge areas, common hallways and building service areas shall not be included in the computation of such floor area. (1990)*
- G3 GROUP CHILD-CARE CENTER** *Either a full-day or half-day child-care facility (whether or not the facility is known as day nursery, nursery school, kindergarten, cooperative, child-development center, day-care center, center for the developmentally disabled, progressive school or by any other name) by which services are regularly provided for any part of a day, but less than 24 hours, to 13 or more children. (1990)*
- G4 GUEST HOUSE** *shall mean any place consisting of a room or group of rooms located in a residence where accommodations for sleeping purposes, with or without the privileges of using the kitchen, are provided for a price. No more than two bedrooms shall be used for such purposes. (1982)*
- H1 HISTORIC STRUCTURE** *means any structure that is:*
- 1) Listed individually in the National Register of Historic Places (a listing maintained by the Department of Interior) or preliminarily determined by the Secretary of the Interior as meeting the requirements for individual listing on the National Register;
  - 2) Certified or preliminarily determined by the Secretary of the Interior as contributing to the historical significance of a registered historic district or a district preliminarily determined by the Secretary to qualify as a registered historic district;
  - 3) Individually listed on a state inventory of historic places in states with historic preservation programs which have been approved by the Secretary of the Interior; or  
Individually listed on a local inventory or historic places in communities with historic preservation programs that have been certified either:
    - (i) by an approved state program as determined by the Secretary of the Interior; or directly by the Secretary of the Interior in states without approved programs. (2008)
- H2 HOME OCCUPATION** *is the accessory use of a dwelling for a business nature conducted by the residents thereof which is clearly secondary to the dwelling use for living purposes and which does not change the character thereof or adversely affect adjacent properties or the neighborhood. Home Occupation includes Family Group Day-Care home facilities and professional, business office uses, such as a small office, doctor's, stockbroker's, bookkeeper's, designer's, manager's and other professional consultants' offices.*
- H3 HOME PRODUCE AND PRODUCTS** *means and includes everything of an agricultural nature grown, produced or conditioned on the property of the resident, also such articles as are manufactured or altered by members of the household of the bona fide resident of any property. (1959)*

- H4 HOUSEHOLD** A family or group of individuals occupying one (1) living unit.
- H5 HOUSING ASSISTANCE PROGRAM** Financial incentives offered by state or federal agencies to increase the number of affordable and available dwelling units for individuals, families, and elderly.
- I1 INTERIOR WAREHOUSE STORAGE** Storage that is ancillary to a commercial or professional activity and does not occupy more than 45 percent of the gross floor area of each business. (1991)
- J1 JUNK** Any scrap, waste, reclaimable material or debris such as: unregistered vehicles, inoperable vehicles, tires, vehicle parts, equipment, paper, metal, glass, building materials, household appliances, machinery, brush, wood, lumber, etc., whether or not stored, for sale or in the process of being dismantled, destroyed, processed, salvaged, stored, baled disposed or other use or disposition, the accumulation of which is detrimental or injuries to the neighborhood. (1999)
- L1 LIGHT INDUSTRY/LIGHT MANUFACTURING** The fabrication and/or development of tangible goods by means of processes which are (a) neither obnoxious nor injurious by reason of the production or emission of odor, dust, smoke, refuse matter, fumes, noise vibration, or similar conditions, (b) nor dangerous to the comfort, peace, enjoyment, health, and safety of the community, (c) nor lending to its disturbance or annoyance.
- L2 LIVING UNIT** The structure and indoor space occupied by one or more individuals living together as a single housekeeping unit with cooking, living, sleeping, and sanitary facilities. (See also dwelling unit and single family residence.)
- L3 LOCAL ROAD** A local road is a street that provides direct access to abutting land and channels it to and from a collector road.
- L4 A LOT** is a parcel of land having its principal frontage upon a right of way. (1982)
- L5 LOT CORNER** A lot abutting two or more right-of-ways at their intersection or upon two parts of the same right-of-way that forms an interior angle of less than one hundred thirty-five (135) degrees. For a corner lot in a residential zone, the minimum depth of yard from every lot line bordering a right-of-way shall be the depth of yard required for front yards along that right-of-way. (2000)
- L6 LOT DEPTH** The shortest distance measured from the front lot line to the rear lot line. For lots where the front and rear lot lines are not parallel, the lot Depth shall be measured by drawing several evenly separated lines from the front to the rear lot line, at right angles to the front lot line, and averaging the length of these lines. (2000)
- L7 A LOT OF RECORD** is an individual lot lawfully recorded in the Registry of Deeds of Rockingham County, New Hampshire, and/or Essex County, Massachusetts, which conformed with the Town zoning requirements in effect at the time of its recording. (1982)
- L8 LOT LINE** Any line which separates a lot from any other lot, land or right-of-way. (2000)

- L9 LOT LINE FRONT** *The one lot line that divides a lot from a right-of-way. If the front lot line is not a straight line, then for the purpose of this ordinance, other lot dimensional requirements dependent on the front lot line shall be measured from a straight line located completely within the lot area and parallel to a line joining the two points where the side lot lines intersect the front lot line. (2000)*
- L10 LOT LINE REAR** *The lot line which most nearly qualifies as the line most distant and opposite from the front lot line. If the rear lot line is not a straight line, then for the purpose of this ordinance, other lot dimensional requirements dependent on the rear lot line shall be measured from a straight line located completely within the lot area and parallel to a line joining the two points where the side lot lines intersect the rear lot line. (2000)*
- L11 LOT LINE SIDE** *Any lot line other than the front lot line or the rear lot line. (2000)*
- L12 LOT THROUGH** *shall mean a lot bounded on two non-adjacent sides by right-of-ways, provided, however; that is any lot qualifies as being both a “lot, corner”, and a “lot, through” as herein defined, such lot shall be deemed a “lot, corner” for the purpose of this ordinance. For a through lot in a residential zone, the minimum depth of yard from every lot line bordering a right-of-way shall be the depth of yard required for front yards along that right-of-way. (2000)*
- L13 LOW-MODERATE INCOME** *An income level that is no more than 80% of the median household income of the Standard Metropolitan Statistical Area (SMSA) or county (if the municipality in which the individual or family resides is not located within an SMSA).*
- L14 LOWEST FLOOR** *means the lowest floor of the lowest enclosed area (including basement). An unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access or storage in an area other than a basement area is not considered a building’s lowest floor; provided, that such an enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirements of this ordinance. (2008)*
- M1 MANUFACTURED HOME** *means for floodplain management purposes, a structure, transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. For floodplain management purposes, the term “manufactured home” includes park trailers, travel trailers, and other similar vehicles placed on site for greater than 180 consecutive days. This includes manufactured homes located in a manufactured park or subdivision. (2008)*
- M2 MANUFACTURED HOME PARK OR SUBDIVISION** *means for floodplain management purposes, a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale. (2008)*
- M3 MANUFACTURED HOUSING** *Pursuant to New Hampshire Revised Statutes Annotated 674:31, manufactured housing shall mean a structure, transportable in one or more sections, which, in the traveling mode, is 8 body feet or more in width and 40 body feet or more in length, or when erected on site, is 320 square feet or more and which is built on a permanent chassis and designed to be used as a dwelling with or without a permanent foundation when connected to required utilities which include plumbing, heating, and electrical heating systems. Such housing, built in conformance with national codes, shall*

be almost indistinguishable from conventional site-built housing. (See Legislative findings, 1986, 91:1)

- M4 MANUFACTURED HOUSING PARK** A parcel of land under single or common ownership or control which contains, or is designed, laid out, or adapted to accommodate 2 or more manufactured houses. Premises used solely for storage or display of manufactured housing are excluded. (See RSA 205-A:II)
- M5 MEAN SEA LEVEL** means the National Geodetic Vertical Datum (NGVD) of 1929 or other datum, to which base flood elevations shown on a community's Flood Insurance Rate Map are referred. (2008)
- M6 MEDIAN INCOME** The middle figure of an array of income derived from data provided by the U.S. Bureau of the Census.
- M7 A MOBILE HOME** is a home which is mobile, a unit similar to a trailer; it is equipped with running water and sanitary facilities, bath facilities and toilet. This term shall apply to such vehicles, regardless of the removal of wheels, the placing of mobile home on a foundation, or the construction of accessory buildings. (1959)
- M8 MULTI-FAMILY DWELLING** A building containing three (3) or more living units.
- N1 NEW CONSTRUCTION** means, for the purposes of determining insurance rates, structures for which the "start of construction" commenced on or after the effective date of an initial FIRM or after December 31, 1974, whichever is later, and includes any subsequent improvements to such structures. For floodplain management purposes, **new construction** means structures for which the **start of construction** commenced on or after the effective date of a floodplain management regulation adopted by a community and includes any subsequent improvements to such structures. (2008)
- N2 NONCONFORMING USE** means a building, structure, or use of land lawfully existing at the time of enactment of this ordinance and which does not conform to the regulations of the district in which it is situated. (1982)
- O1 OFF-SITE SEWAGE SYSTEM** A system of piped sewer and all its adjunct treatment facilities which is located on land other than that allocated for development density and calculations as essential services and for which review and approval by the New Hampshire Water Supply and Pollution Control Commission has been received. (1990)
- O2 OFF-SITE WATER SYSTEM** A system of piped water for human consumption whose source is located on land other than that allocated for development density calculations and for which review and approval by the New Hampshire Water Supply and Pollution Control Commission, Division of Water Supply, has been received.
- O3 ON LOT** On Lot means located on the same site as the building for which services or facilities are provided. For purposes of a rural cluster development it shall mean as being located on the entire parcel for which a planned residential development permit is being sought. (1990)
- O4 deleted 2020**

- P1 PERMANENT RESIDENTS** *A family shall be considered permanent residents when they have used any buildings continuously as a residence for a period of six months or more. (1959)*
- P2 PERSONAL SERVICE ESTABLISHMENT** *A business enterprise whose primary purpose is to accommodate the personal needs of an individual(s), such as banking, shoe repair, hair salon, and dressmaking/tailoring.*
- P3 A PRIMARY/PERMANENT RESIDENCE** *is a place of abode used by an individual who has, through all of his actions, demonstrated a current intent to designate that place of abode as his principal place of physical presence for the indefinite future to the exclusion of all others. The status of primary/permanent residence is not lost or interrupted by a temporary absence if there is an intent to return to it as the principal place of physical presence. (1982)*
- P4 PRIME WETLANDS** *Prime wetlands are wetlands of significant value that are designated because of their uniqueness, fragility and or unspoiled character pursuant to RSA 482-A:15 and as codified in New Hampshire Wetlands Bureau Code of Administrative Rules, Chapter Wt 700. (2003)*
- P5 PRIVATE OUTDOOR RECREATION** *means recreational activity taking place on private property by consent of the owner(s) of said property and for which no admission or membership fees are required to participate. Such activity is considered an ancillary use to primary residential use. (1985)*
- P6 PRIVATE SCHOOL** *A commuter school operated by a non-governmental agency for the purpose of providing an elementary or secondary academic education equivalent to that required in public schools in the state of New Hampshire. Any such school shall be approved by the state Department of Education and shall comply with all of its regulations.*
- P7 PROFESSIONAL OFFICE** *An enterprise conducted by an individual or group practice characterized by a high level of training or proficiency in a particular pursuit, study, or science, such as medicine, dentistry, law, and engineering.*
- P8 PUBLIC OUTDOOR RECREATION** *shall include uses such as golf courses, boating facilities, and any other participating recreation sport activities, but specifically excluding activities designed as commercial spectator sports. (1982)*
- Q1 QUALIFIED SOILS SCIENTIST** *is interpreted to mean a person qualified in soil classification and who is recommended or approved by the Rockingham County Conservation District Supervisors. (1979)*
- R1 RECREATIONAL VEHICLE is defined as: (2008)**
- 1) *built on a single chassis;*
  - 2) *400 square feet or less when measured at the largest horizontal projection;*
  - 3) *designed to be self-propelled or permanently towable by a light duty truck; and*

- 4) *designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational, camping, travel or seasonal use.*
- R2** **REGULATORY FLOODWAY** *means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than a designated height. (2008)*
- R3** **RESIDENTIAL CONSERVATION DEVELOPMENT** *An optional commercial development which provides public access to dedicated open space and features energy efficient construction. (2013)*
- R4** **RETAIL ENTERPRISE** *An establishment engaged in selling goods or merchandise to the general public for personal or household consumption and rendering services incidental to the sale of such goods. (1999)*
- R5** **RIGHT OF WAY** *means Class I - Class V highways as defined in RSA 230 if such highways are paved, or streets shown on subdivision plats approved by the Atkinson Planning Board. (1976)*
- S1** **A SECONDARY/SEASONAL RESIDENCE** *is any place of abode that is not used by an inhabitant as a primary/permanent residence.*
- S2** **SELF-SERVICE STORAGE FACILITY (MINI-WAREHOUSE)** *A one-story structure containing separate, individual, and private storage spaces ranging in size between 30 and 400 square feet which are individually leased or rented for varying periods of time. Such facilities shall be enclosed by a fence and shall be used for dead storage only, i.e. individuals leasing or renting storage space may only pick-up and drop-off items for storage. Items prohibited from being stored include: flammable liquids, hazardous or toxic chemicals or explosives (including fireworks) and/or items that would create noxious or offensive odors, dust, noise, or vibration. A business office will be allowed for conducting the business. (1997)*
- S3** **SERVICE ROADS AND/OR PRIVATE ROADS** *are those facilities that are designed for any slow and light traffic and shall be "dead end" roads as part of a rural cluster development. (1982)*
- S4** **SINGLE FAMILY RESIDENCE** *A detached living unit occupied by one family unit only. (See also dwelling unit and living unit.)*
- S5** **SPECIAL FLOOD HAZARD AREA** *see "Area of Special Flood Hazard". (2008)*
- S6** **START OF CONSTRUCTION** *includes substantial improvements, and means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, placement, or other improvement was within 180 days of the permit date. The actual start means either the first placement of permanent construction of a structure on site, such as the pouring of slab or footings, the installation of pipes, the construction of columns, or any work beyond the stage of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footing, piers, or foundations or the erection of temporary forms; nor does it include the installation of the*

*property of accessory buildings, such as garages or sheds not occupied as dwelling units or part of the main structure. (2008)*

**S7** **STRUCTURE** *Anything constructed or erected on or in the ground, or in the water, or an attachment to something having a fixed location on the ground, such as buildings, permanent or temporary; signs, carports, porches and other building features, including communications towers and antennas but not including sidewalks, fences, driveways, septic systems, boundary markers and field or garden walls or embankment retaining walls. (1999)*

**S8** **STRUCTURE** *means for flood plain management purposes, a walled and roofed building, including a gas or liquid storage tank that is principally above ground, as well as a manufactured home. (2008)*

**S9** **A SUBSTANDARD LOT** *is a lot which qualifies as a lot of record as of the effective date of the adoption or amendment of this ordinance regarding area, frontage, depth, yards, and/or coverage applicable in the district where the lot is located. (1982)*

**S10** **SUBSTANTIAL DAMAGE** *means damage of any origin sustained by a structure whereby the cost of restoring the structure to its before damaged condition would equal or exceed 50 percent of the market value of the structure before the damage occurred. (2008)*

**S11** **SUBSTANTIAL IMPROVEMENT** *means any combination of repairs, reconstruction, alteration, or improvements to a structure in which the cumulative cost equals or exceeds fifty percent of the market value of the structure. The market value of the structure should equal. (2008)*

1) *the appraised value prior to the start of the initial repair or improvement, or*

2) *in the case of damage, the value of the structure prior to the damage occurring.*

*For the purposes of this definition substantial improvement is considered to occur when the first alteration of any wall, ceiling, floor or other structural part of the building commences, whether or not that alteration affects the external dimensions of the structure. This term includes structures that have incurred substantial damage, regardless of actual repair work performed. The term does not; however, include any project for improvement of a structure required to comply with existing health, sanitary, or safety code specifications which are solely necessary to assure safe living conditions or any alteration of a "historic structure", provided that the alteration will not preclude the structure's continued designation as a "historic structure".*

**T1** **TEAROOM/COFFEE SHOP** *A commercial eating establishment designed to accommodate the community and offering its residents beverages and food served exclusively at tables and/or counters. Such service shall be limited to a seventy-five (75) seat capacity. Operating hours may be set by order of the Police Department upon approval by the Selectmen of the Town.*

**T2** **TOWER** *A structure which is designed and constructed to support one or more antennas used by commercial wireless telecommunications facilities, and includes all appurtenant devices attached to it. (2000)*

- T3** **TOWNHOUSE** A multi-family unit with 2, 3 or 4 dwelling units per building and no dwelling unit to be located above another. (2001)
- T4** **A TRAILER COACH** means any vehicle or similar portable structure, having no foundation other than wheels, jacks or skirting, and having none of the following: running water, sanitary facilities, bath facilities and toilet. This term shall apply to such vehicles regardless of the removal of wheels, the placing of a trailer coach on a foundation, or the construction of the accessory buildings.
- V1** **VIOLATION** means the failure of a structure or other development to be fully compliant with the community's flood plain management regulations. A structure or other development without the elevation certificate, other certificates, or other evidence of compliance required in 44 CFR § 60.3(b)(5), (c)(4), (c)(10), (d)(3), (e)(2), (e)(4), or (e)(5) is presumed to be in violation until such time as that documentation is provided. (2008)
- W1** **WATER SURFACE ELEVATION** means the height, in relation to the National Geodetic Vertical Datum (NGVD) of 1929, (or other datum, where specified) of floods of various magnitudes and frequencies in the floodplains. (2008)
- W2** **WETLANDS** Those areas of the Town that contain bodies of water (either man-made or natural), fresh water marshes, perennial and intermittent streams, and soils classified as poorly or very poorly drained. Such areas are to be defined by the High Intensity Soil Map Standards developed by the Society of Soils Scientists of Northern New England in 1986, as amended, and by the on-site soils investigation of a New Hampshire certified soils scientist. [Effective 06/01/89]
- W3** **WILDLIFE REFUGE** shall be an area designated for the preservation of wildlife species.
- W4** **WIRELESS COMMUNICATIONS FACILITY** Any structure, antenna, tower or other device used to provide a discrete commercial telecommunication service by a single provider to a broad base of unrelated users, generally including, but not limited to: cellular telephone, personal communications services, specialized mobile radio, and paging. (2000)
- Y1** **YARD FRONT** shall mean a yard extending across the full width of a lot between the front lot line and the nearest point of any building on the lot and the "Minimum" front yard means the minimum depth of a front yard on a lot between the front line and the nearest point of any building on the lot. (2000)
- Y2** **YARD REAR** shall mean a yard extending across the full width of a lot between the rear lot line and the nearest point of any building on the lot and the "Minimum" rear yard means the minimum depth of a rear yard on a lot between the rear lot line and the nearest point of any building on the lot. (2000)
- Y3** **YARD SIDE** shall mean a yard extending from the front yard to the rear yard of a lot between a side lot line and the nearest point of any building on the lot and the "Minimum" side yard means the minimum width of a side yard on a lot between a side lot line and the nearest point of any building on the lot. (2000)

## ARTICLE IV: GENERAL PROVISIONS

### SECTION 400 GENERAL PROVISIONS

**400:1** No owner or occupant of land in any district shall permit fire or other ruins to be left, but shall remove the same within one year. Said structure is to be boarded up and secured within 30 days to the satisfaction of the Police and Fire Departments, so as not to present any risk to the community. The Town will have the right to complete the securing process and to place liens against the property to cover the town's costs of so doing, pursuant to RSA 155-B. (1992)

**400:2** Any uses that may be obnoxious or injurious by reason of the production or emission of odor, dust, smoke, refuse matter, fumes, noise vibrations, or similar conditions, or that are dangerous to the comfort, peace, enjoyment, health, safety of the community or lending to its disturbance or annoyance are prohibited in any district. No privately-owned land in any district shall be used for the dumping of or storage of hazardous wastes or junk. (1982, 1984)

**400:3 Substandard Lots** (2012)

- a. Any building or use otherwise permitted in the district shall be permitted on a substandard lot, provided that such substandard lot is legally buildable in all other respects as of the effective date of this ordinance and amendments, or at any time thereafter.
- b. The Board of Adjustment may grant a special exception to the requirements of subparagraphs "a" above provided the substandard lot meets all of the following criteria:
  - 1) It is located in a subdivision which was approved by the Planning Board and duly recorded in the Rockingham County Registry of Deeds prior to June 1978.
  - 2) It is part of a subdivision in which at least 80% of the total number of lots therein have been previously improved.
  - 3) It consists of one or more acres of buildable land.
  - 4) It has road frontage of at least one hundred fifty feet (150').
  - 5) It is able to meet the requirements of Z400:4, Z410:7-9, Z530g, and WS300.
  - 6) Its improvement will not endanger the public health and welfare. (1989)

**400:4** On existing lots of record that are less than the required minimum in all residential zones, no building shall be located closer than thirty feet (30') to the right-of-way line, or closer than the average setback of the houses on the immediately adjacent lots, whichever shall be greater. In no case shall a building be located closer than fifteen feet (15') to the side lines or rear lot line. (1986)

**400:5** In all circumstances where soils characteristics and/or soils boundaries must be designated and utilized in order to comply with land use requirements in the Town of Atkinson, an on-site investigation conducted by a New Hampshire certified soils scientist shall be made using the High Intensity Soil Map Standards developed by the Society of Soil Scientists of Northern New England in 1986 as amended. Material developed by the U.S. Soil Conservation Service in 1978 may be utilized for general background and reference purposes. [Effective 06/01/89]

**400:6 DELETED 1994**

**400:7 Land Application of Septage.** The land application of septage containing disease-causing bacteria and infectious viruses and protozoa; the stockpiling in any form, and the land spreading of Class B sewage sludge containing heavy metals, pathogens, parasites and hazardous organic chemicals, is not allowed in the Town of Atkinson, New Hampshire. This ordinance shall not apply to any facility owned and/or operated by the Town of Atkinson for the disposal of sewage/septage/sludge generated within the Town of Atkinson, New Hampshire. (1998)

**400:8 Eminent Domain.** Property acquired through “Eminent Domain” shall be restricted to use to Local, State, or Federal governmental public sector uses, and only if said uses provide direct access and use to and by the public. Private or Public development of such land, solely for financial gain or revenue enhancement, is prohibited. (2006)

## **SECTION 410 WETLANDS ZONING**

**410:1 Purpose.** In the interest of public health, convenience, safety, and welfare, the regulation of wetlands areas is intended to guide the use of area of land with standing water or extended periods of high water table.

- a. To protect persons and properties from the danger of floods by preserving natural floodwater storage areas.
- b. To prevent the Town from incurring the costs of constructing sewer lines and treatment facilities which will be necessitated by the unwise development of unsuitable areas.
- c. To prevent development on soils which will contribute to the pollution of surface and groundwater necessary to supply domestic water needs.
- d. To preserve recharge areas necessary to maintain adequate groundwater supply and augment stream flow during dry periods.
- e. To protect existing water quality.
- f. To protect presently existing natural wetland wildlife habitats.
- g. To discourage chronic stress on wetland environments contributed by modification of water flow patterns and rates.

- h. To encourage uses that can be safely and appropriately located in wetland areas. (1978)

**410:2 (DELETED: TOWN MEETING OF MARCH 1986. SEE SECTION Z300:1, W1.)**

**410:3 WETLAND BOUNDARIES**

- a. Wetland boundaries shall be determined by the on-site investigation of New Hampshire certified soils scientist using the High Intensity Soil Map Standards developed by the Society of Soil Scientists of Northern New England in 1986, as amended, and shall address the boundaries of all wetlands a defined in Section Z300:W1. In addition, the results of a visual inspection of the vegetation and natural features of property extending 100 feet beyond the boundaries of the on-site survey shall be provided in order to assure fulfillment of the purposes of this ordinance.
- b. The results of an on-site soils investigation of the subject property and of any visual inspection of property contiguous to the subject property shall be placed on file with the Planning Board. High Intensity Soil Map Standards shall be available from the U. S. Soil Conservation Service Office and shall be on file with the Planning Board, Town Clerk, and Conservation Commission.

**410:4 Appeals.** In the event that a wetland or wetland boundary is incorrectly designated, any person so aggrieved by such a designation may present evidence of such incorrect designation to the Planning Board. (1979) [Effective 06/01/89]

**410:5 Permitted Uses.** Permitted uses in designated wetland areas are any uses that are compatible with the purposes specified in Section 410:1 and do not involve significant alteration of the wetland. Such uses include:

- a. Forestry and tree farming in accordance with the recommendation of the Rockingham County Forester.
- b. Water sources.
- c. Wildlife habitat and habitat development.
- d. Conservation areas, nature trails, and passive recreational uses.
- e. Open space areas.
- f. Scientific study area-plant identification, wetland ecology, bird and wildlife identification, outdoor laboratory studies, and establishment of self-guiding nature trails.
- g. Agricultural uses except the keeping of livestock and farm buildings. (1982)

**410:6 Easements, Rights of Way.** Streets, roads, and other access ways and utility rights of way or easements through wetlands which involve dredge and/or fill operations may be permitted provided that:

- a. The street, road, access way or utility right of way or easement is located and constructed in a manner which creates minimum detrimental impact on all designated wetlands areas.
- b. The street, road, access way or utility right of way or easement is essential to the productive use of land not zoned under the provisions of this ordinance.
- c. Such location and construction is compatible with the intent and purpose of this ordinance. After permission for such uses has first been received from the New Hampshire Wetlands Board and the Atkinson Conservation Commission, approval for such uses shall be obtained as part of subdivision and/or site plan approval or, if not applicable, by special exception from the Board of Adjustment.

**410:7 Minimum Lot Size.** Areas designated as freshwater marshes, perennial or intermittent streams, or soils which are poorly or very poorly drained may not be used to satisfy minimum lot size requirements except where Soils Based Lot Sizing is specifically allowed for minimum lot sizing (see Section 610:3). (1993)

**410:8 Buffer Zones (1998)**

- a. No waste disposal system nor building from which human or animal waste is generated, shall be constructed within a 100' horizontal distance from a designated wetland boundary or from intermittent streams. (This does not apply to existing or replacement systems.) (1993)
- b. All attached and detached residential or commercial garages shall be minimum of 100 feet from the edge of wetland. (This does not apply to existing construction.) (1998)

**410:9 BUFFER ZONES. DELETED 1993**

**410.10 PRIME WETLANDS (2010)**

The following seven wetlands are designated prime wetlands according to the requirements of RSA 482-A:15 and Chapter Env-Wt 700 of the DES administrative rules.

Wetland Name	Description
Hall Farm Pond	10+/- acre wetland located south of NH Rte. 111 and north of Hall Farm road, primarily on Tax Map 16, Lot 9.
Hog Hill Brook	17.5+/- acre wetland which extends southeast of Island Pond Road, located primarily on Tax Map 20, Lot 7 and extending onto Tax Map 16, Lot 64 and Tax Map 21, Lot 1.
Stewart Farm Pond	21+/- acre wetland located due west of Stewart Farm Road and northeast of Village Drive, primarily on Tax Map 12, Lot 1.
West Sawmill Swamp	121+/- acre wetland extending across the northern Atkinson border with Hampstead and located directly west of upper Maple Avenue, on Tax Map 18.

East Sawmill Swamp	58+/- acre wetland located directly east of upper Maple Avenue, on Tax Map 19.
Hovey Meadow Wetland	13+/- acre wetland located north of Pope Road and east of West Side Drive, primarily on Tax Map 17, Lot 86 and extending onto Tax Map 12, Lots 3 and 4.
Bryant Brook	69+/- acre wetland located on the southern border between Atkinson and Plaistow, primarily on Tax Map 10, Lot 7, and extending onto Tax Map 9, Lot 62-22 and Tax Map 5, Lot 48.
Wright Farm Pond	46 +/- acre wetland bordered by Sawmill Road, Summit Drive, Walker Road, Merrill Drive, Meeting Rock Road and Bittersweet Lane, primarily on Tax Map 13, Lot 96.

Note: The wetlands listed here were evaluated by procedures described in Method for the Comparative Evaluation of Non-Tidal Wetlands in New Hampshire, published by the New Hampshire Department of Environmental Services (1991). Details of the analysis may be found in Town of Atkinson Prime Wetlands Study, Natural Resource Consulting Services. (December 2002)

An undisturbed natural buffer zone of at least 150 feet in width shall be maintained between any designated Prime Wetland, as defined in RSA 482-A:15 and adopted by Town Meeting, and any new development, including but not limited to structures, dwellings, septic systems, and roads. Exempted from this requirement are those uses permitted under §410.5. those lots separated from the Prime Wetlands by an existing public road, and variances allowing the construction of additions and extensions to residential buildings which existed prior to the effective date of this section. Nothing herein is intended to prohibit the rebuilding or redevelopment of any portion of a residential lot which has already been improved, or developed and regularly maintained as of the effective date of this section.

#### **410.11 Water Flow Monitoring (2010)**

- a. All water companies dealing in or with Atkinson shall install and maintain a water-flow meter on all existing and future water lines at the point where they cross the town line between Atkinson and any abutting town. The meter must be installed and operating within 90 days of passage of this amendment. There shall be a fine of \$1000 a day for every day thereafter that the meter has not been installed and operating.
- b. The meter shall record and provide the flow direction of any water traveling through that pipeline across town lines, including the volume of water being transferred, the frequency, date, and rate of transfer. All readings and data obtained from this monitoring shall be provided to the Town of Atkinson within 10 days of each recording.
- c. It shall be a violation of this section to make any material false statement concerning water flow or to tamper with any water-flow monitoring device. The Board of Selectmen, after each notice and hearing, may impose an administrative fine not to exceed \$2000 for each offense upon any person of company which knowingly violates this provision. The Board of Selectmen may also assess additional fines upon any person/company which has received written notification from the Board of Selectmen regarding violations of this

chapter, if the violations have not been mitigated/corrected within 30 days of receipt of the notification.

- d. The Board of Selectmen shall have the authority to direct the Atkinson Code Enforcement Officer or another town official of their choosing to have at-will access to the metering device and to make unscheduled verification and accuracy checks of the meter and data it provides. Measurements of water use shall be made with sufficient frequency to insure the accuracy of total water usage volume.
- e. Exemption: This chapter shall not apply to a temporary, discrete water transfer arising from an emergency event in Atkinson or Hampstead, such as a catastrophic failure of either town's water system. This temporary exemption shall be allowed only after a declaration by the Atkinson Board of Selectmen that such an emergency does exist.

## **SECTION 420 FLOODPLAIN MANAGEMENT ORDINANCE (03/11/2008)**

### **4A20:1 Purpose**

Certain areas of the Town of Atkinson, New Hampshire are subject to periodic flooding, causing serious damages to properties within these areas. Relief is available in the form of flood insurance as authorized by the National Flood Insurance Act of 1968. Therefore, the Town of Atkinson, New Hampshire has chosen to become a participating community in the National Flood Insurance Program, and agrees to comply with the requirements of the National Flood Insurance Act of 1968 (P.L. 90-488, as amended) as detailed in this Floodplain Management Ordinance.

### **420:2 Establishment**

This ordinance, adopted pursuant to the authority of RSA 674:16, shall, be known as the town of Atkinson Floodplain Management Ordinance. The regulations in this ordinance shall overlay and supplement the regulations in the Town of Atkinson Zoning Ordinance, and shall be considered part of the Zoning Ordinance for purposes of administration and appeals under state law. If any provision of this ordinance differs or appears to conflict with any provision of the Zoning Ordinance or other ordinance or regulation, the provision imposing the greater restriction or more stringent standard shall be controlling.

The following regulations in this ordinance shall apply to all lands designated as special flood hazard areas by the Federal Emergency Agency (FEMA) in its "Flood Insurance Study for the County of Rockingham, N.H.", dated May 17, 2005, or as amended, together with the associated Flood Insurance Rate Maps dated May 17, 2005, or as amended, which are declared to be a part of this ordinance and are hereby incorporated by reference.

### **420:3 Definitions**

The following definitions shall apply only to this Floodplain Management Ordinance, and shall not be affected by the provisions of any other ordinance of the Town of Atkinson.

- a. "Area of Special Flood Hazard" is the land in the floodplain within the Town of Atkinson subject to a one-percent or greater possibility of flooding in any given year. The area is designated on the FIRM as Zones A and AE.
- b. "Base Flood" means the flood having a one-percent possibility of being equaled to exceeded in any given year.
- c. "Basement" means any area of a building having its floor sub grade on all sides.
- d. "Building" – see "structure".
- e. "Development" means any man-made change to improved or unimproved real estate, including but not limited to buildings or other structures, mining, dredging, filling, grading, paving, excavating or drilling operation or storage of equipment or materials.
- f. "FEMA" means the Federal Emergency Management Agency.
- g. "Flood" or "Flooding" means a general and temporary condition of partial or complete inundation of normally dry land areas from:
  - 1) the overflow of inland or tidal waters, or
  - 2) the unusual and rapid accumulation or runoff of surface waters from any source.
- h. "Flood Insurance Rate Map" (FIRM) means the official map incorporated with this ordinance, on which FEMA has delineated both the special flood hazard areas and the risk premium zones applicable to the Town of Atkinson.
- i. "Flood Insurance Study" (FIS) means an examination, evaluation and determination of flood hazards and, if appropriate, corresponding water surface elevations, or an examination, evaluation and determination of mudslide (i.e., mudflow) and/or flood-related erosion hazards.
- j. "Floodplain" or "Flood-prone area" means any land area susceptible to, being inundated by water from any source (see definition of "Flooding").
- k. "Flood proofing" means any combination of structural and non-structural additions, changes, or adjustments to structures which reduce or eliminate flood damage to real estate or improved real property, water and sanitation facilities, structures and their contents.
- l. "Floodway" see "Regulatory Floodway".
- m. "Functionally dependent use" means a use that cannot perform its intended purpose unless it is located or carried out in close proximity to water. The term includes only docking and port facilities that are necessary for the loading/unloading of cargo or passengers, and ship building/repair facilities but does not include long-term storage or related manufacturing facilities.

- n. “Highest adjacent grade” means the highest natural elevation of the ground surface prior to construction next to the proposed walls of a structure.
- o. “Historic Structure” means any structure that is:
- 1) Listed individually in the National Register of Historic Places (a listing maintained by the Department of Interior) or preliminarily determined by the Secretary of the Interior as meeting the requirements for individual listing on the National Register;
  - 2) Certified or preliminarily determined by the Secretary of the Interior as contributing to the historical significance of a registered historic district or a district preliminarily determined by the Secretary to qualify as a registered historic district;
  - 3) Individually listed on a state inventory of historic places in states with historic preservation programs which have been approved by the Secretary of the Interior; or  
Individually listed on a local inventory of historic places in communities with historic preservation programs that have been certified either:
    - i) by an approved state program as determined by the Secretary of the Interior; or
    - ii) directly by the Secretary of the Interior in states without approved programs.
- p. “Lowest Floor” means the lowest floor of the lowest enclosed area (including basement). An unfinished or flood resistant enclosure, usable solely for parking of vehicles, building access or storage in an area other than a basement area is not considered a building’s lowest floor; provided, that such an enclosure is not built so as to render the structure in violation of the applicable non-elevation design requirements of this ordinance.
- q. “Manufactured Home” means for floodplain management purposes, a structure, transportable in one or more sections, which is built on a permanent chassis and is designed for use with or without a permanent foundation when connected to the required utilities. For floodplain management purposes, the term “manufactured home” includes park trailers, travel trailers, and other similar vehicles placed on site for greater than 180 consecutive days. This includes manufactured homes located in a manufactured home park or subdivision.
- r. “Manufactured Home Park or Subdivision” means for floodplain management purposes, a parcel (or contiguous parcels) of land divided into two or more manufactured home lots for rent or sale.
- s. “Mean sea level” means the National Geodetic Vertical Datum (NGVD) of 1929 or other datum, to which base flood elevations shown on a community’s Flood Insurance Rate Map are referenced.

“New construction” means, for the purposes of determining insurance rates, structures for which the “start of construction” commenced on or after the effective date of an initial FIRM or after December 31, 1974, whichever is later, and includes any subsequent improvements to such structures. For floodplain management purposes, *new construction* means structures for which the *start of construction* commenced on or after the effective date of a floodplain management regulation adopted by a community and includes any subsequent improvements to such structures.

- t. “100-year flood” – see “base flood”.
- u. “Recreational Vehicle” is defined as:
  - 1) built on a single chassis;
  - 2) 400 square feet or less when measured at the largest horizontal projection;
  - 3) designed to be self-propelled or permanently towable by a light duty truck; and
  - 4) designed primarily not for use as a permanent dwelling but as temporary living quarters for recreational, camping, travel or seasonal use.
- v. “Regulatory floodway” means the channel of a river or other watercourse and the adjacent land areas that must be reserved in order to discharge the base flood without cumulatively increasing the water surface elevation more than a designated height.
- w. “Special flood hazard area” – see “Area of Special Flood Hazard”
- x. “Structure” means for floodplain management purposes, a walled and roofed building, including a gas or liquid storage tank that is principally above ground, as well as a manufactured home.
- y. “Start of Construction” includes substantial improvements, and means the date the building permit was issued, provided the actual start of construction, repair, reconstruction, placement, or other improvement was within 180 days of the permit date. The actual start means either the first placement of permanent construction of a structure on site, such as the pouring of slab or footings, the installation of piles, the construction of columns, or any work beyond the stage of excavation; or the placement of a manufactured home on a foundation. Permanent construction does not include land preparation, such as clearing, grading and filling; nor does it include the installation of streets and/or walkways; nor does it include excavation for a basement, footings, piers, or foundations or the erection of temporary forms; nor does it include the installation on the property of accessory buildings, such as garages or sheds not occupied as dwelling units or part of the main structure.
- z. “Substantial damage” means damage of any origin sustained by a structure whereby the cost of restoring the structure to its before damage condition would equal or exceed 50 percent of the market value of the structure before the damage occurred.

aa. "Substantial Improvement" means any combination of repairs, reconstruction, alteration, or improvements to a structure in which the cumulative cost equals or exceeds fifty percent of the market value of the structure. The market value of the structure should equal:

- 1) the appraised value prior to the start of the initial repair or improvement; or
- 2) in the case of damage, the value of the structure prior to the damage occurring.

For the purposes of this definition, "substantial improvement" is considered to occur when the first alteration of any wall, ceiling, floor, or other structural part of the building commences, whether or not that alteration affects the external dimensions of the structure. This term includes structures that have incurred substantial damage, regardless of actual repair work performed. The term does not; however, include any project for improvement of a structure required to comply with existing health, sanitary, or safety code specifications which are solely necessary to assure safe living conditions or any alteration of a "historic structure", provided that the alteration will not preclude the structure's continued designation as a "historic structure".

bb. "Violation" means the failure of a structure or other development to be fully compliant with the community's flood plain management regulations. A structure or other development without the elevation certificate, other certificates, or other evidence of compliance required in 44CFR § 60.3(b)(5), (c)(10), (d)(3), (e)(2), (e)(4), or (e)(5) is presumed to be in violation until such time as that documentation is provided.

cc. "Water surface elevation" means the height, in relation to the National Geodetic Vertical Datum (NGVD) of 1929, (or other datum, where specified) of floods of various magnitudes and frequencies in the floodplains.

#### **420:4 Permits**

All proposed development, as defined in this ordinance, in any special flood hazard area shall require all applicable permits.

#### **420:5 Construction Requirements**

The Building Inspector shall review all building permit applications for new construction or substantial improvements to determine whether proposed building sites will be reasonably safe from flooding. If a proposed building site is located in a special flood hazard area, all new construction or substantial improvements shall:

- a. be designed (or modified) and adequately anchored to prevent flotation, collapse, or lateral movements of the structure resulting from hydrodynamic and hydrostatic loads, including the effects of buoyancy;
- b. be constructed with materials resistant to flood damage;
- c. be constructed by methods and practices that minimize flood damages; and

- d. be constructed with electrical, heating, ventilation, plumbing, and air conditioning equipment, and other service facilities that are designed and/or located so as to prevent water from entering or accumulating within the components during conditions of flooding.

#### **420:6 Water and Sewer Systems**

Where new or replacement water and sewer systems (including on-site systems) are proposed in a special flood hazard area the applicant shall provide the Building Inspector with assurance that these systems will be designed to minimize or eliminate infiltration of flood waters into the systems and discharges from the systems into flood waters, and on-site waste disposal systems will be located to avoid impairment to them or contamination from them during periods of flooding.

#### **420:7 Certification**

For all new or substantially improved structures located in Zones A and AE, the applicant shall furnish the following information to the Building Inspector:

- a. the as-built elevation (in relation to NGVD) of the lowest floor (including basement) and include whether or not such structures contain a basement.
- b. if the structure has been flood proofed, the as-built elevation (in relation to NGVD) to which the structure was flood proofed.
- c. any certification of food proofing.

The Building Inspector shall maintain the aforementioned information for public inspection, and shall furnish such information upon request.

#### **420:8 Other Permits**

The Building Inspector shall not grant a building permit until the applicant certifies that all necessary permits have been received from those governmental agencies from which approval is required by federal or state law, including Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. 1334.

#### **420:9 Watercourses**

- a. In riverine situations, prior to the alteration or relocation of a watercourse the applicant for such authorization shall notify the Wetlands Bureau of the New Hampshire Department of Environmental Services and submit copies of such notification to the Building Inspector, in addition to the copies required by RSA 482-A:3. Further, the applicant shall be required by submit copies of said notification to those adjacent communities as determined by the Building Inspector, including notice of all scheduled hearings before the Wetlands Bureau and/or the Planning Board in consideration of Section 410.
- b. The applicant shall submit to the Building Inspector, certification provided by a registered professional engineer, assuring that the flood carrying capacity of an altered or relocated watercourse can and will be maintained.

- c. Along watercourses with a designated Regulatory Floodway no encroachments, including fill new construction, substantial improvements, and other development are allowed within the floodway unless it has been demonstrated through hydrologic and hydraulic analyses performed in accordance with standards engineering practices that the proposed encroachment would not result in any increase in flood levels within the community during the base flood discharge.
- d. Until a Regulatory Floodway is designated along watercourses, no new construction, substantial improvements, or other development (including fill) shall be permitted within Zone AE on the FIRM, unless it is demonstrated by the applicant that the cumulative effect of the proposed development, when combined with all existing and anticipated development, will not increase the water surface elevation of the base flood more than one foot at any point within the community.
- e. The Building Inspector or the Planning Board when the development pertains to subdivision or site plan review, shall obtain, review, and reasonably utilize any floodway data available from Federal, State, or other sources as criteria for requiring that all development located in Zone A meet the following floodway requirement:
- f. "No encroachments, including fill, new construction, substantial improvements, and other development are allowed within the floodway that would result in any increase in flood levels within the community during the base flood discharge".

#### **420:10 Special Flood Hazard Areas**

In special flood hazard area the Building Inspector shall determine the 100-year flood elevation in the following order of precedence according to the data available:

- a. In Zone AE, refer to the elevation data provided in the community's Flood Insurance Study and accompanying FIRM.
- b. In Zone A, the Building Inspector shall, obtain, review, and reasonably utilize any 100-year flood elevation data available from any federal, state or other source including data submitted for development proposals submitted to the community (i.e., subdivisions, site approvals).
- c. The Building Inspector's 100-year flood elevation determination will be used as criteria for requiring in Zones A and AE that:
  - 1) All new construction or substantial improvement of residential structures have the lowest floor (including basement) elevated to or above the 100-year flood elevation.
  - 2) That all new construction or substantial improvements of non-residential structures have the lowest floor (including basement) elevated to or above the 100-year flood level; or together with attendant utility and sanitary facilities, shall:

- i) be floodproofed so that below the 100-year flood elevation the structure is watertight with walls substantially impermeable to the passage of water;
- ii) have structural components capable of resisting hydrostatic and hydrodynamic loads and the effects of buoyancy; and
- iii) meet all standards of Section 60.3 (b) (1) of the National Flood Insurance Program Regulations and the elevation and anchoring requirements for “manufactured homes” in Paragraph (c) (6) of Section 60.3.
- iv) for all new construction and substantial improvements, fully enclosed areas below the lowest floor that are subject to flooding are permitted provided they meet the following requirements:
  - A) the enclosed area is unfinished or flood resistant, usable solely for the parking of vehicles, building access or storage;
  - B) the area is not a basement;
  - C) shall be designed to automatically equalize hydrostatic flood forces on exterior walls by allowing for the entry and exit of floodwater. Designs for meeting this requirement must either be certified by a registered professional engineer or architect or must meet or exceed the following minimum criteria: A minimum of two openings having a total net area of not less than one square inch for every square foot of enclosed area subject to flooding shall be provided. The bottom of all openings shall be no higher than one foot above grade. Openings may be equipped with screens, louvers, or other coverings or devices provided that they permit the automatic entry and exist of floodwater.

**420:11 Variances and Appeals**

- a. Any order, requirement, decision or determination of the Building Inspector made under this ordinance may be appealed to the Zoning Board of Adjustment as set forth in RSA 676:5.
- b. If the applicant, upon appeal, requests a variance as authorized by RSA 674:33, I (b), the applicant shall have the burden of showing in addition to the usual variance standards under state law that:
  - 1) the variance will not result in increased flood heights, additional threats to public safety, or extraordinary public expense.
  - 2) if the requested variance is for activity within a designated regulatory floodway, no increase in flood levels during the base flood discharge will result.

- 3) the variance is the minimum necessary, considering the flood hazard, to afford relief.
- c. The Zoning Board of Adjustment shall notify the applicant in writing that:
- 1) the issuance of a variance to construct below the base flood level will result in increased premium rates for flood insurance up to amounts as high as \$25 for \$100 of insurance coverage; and
  - 2) such construction below the base flood level increases risks to life and property.
- Such notification shall be maintained with a record of all variance actions.
- d. The community shall:
- 1) maintain a record of all variance actions, including the justification for their issuance; and
  - 2) report such variances issued in its annual or biennial report submitted to FEMA's Federal Insurance Administrator. (3/11/2008)

#### **SECTION 430 REMOVAL OF NATURAL DEPOSITS**

**430:1** No gravel pit, or quarry, and no removal of sod or loam shall be permitted in a residential district except as herein provided:

- a. The Board of Adjustment shall approve the temporary operation of a pit or quarry which is incidental to the improvement of land provided that such operation will not create a traffic condition detrimental to the neighborhood or hazardous to the use of the highway, and provided that such operation will not create noise or dust to the extreme extent that it will be detrimental to the health or comfort of nearby residents. The Board of Adjustment shall determine the effective duration for which such a permit may be issued, and upon application may approve renewal of such permit upon re-determination of the conditions under which such permit may be allowed. After no more than two hundred and fifty (250) days after the last use of the pit or quarry as a source of supply, the area shall be re-graded and left in a slightly condition and protected against erosion.
- b. The Board of Adjustment shall allow the removal of sod or loam provided that all facilities for excavating, handling or storing shall be removed and the area shall be re-graded and re-seeded to assure the premises are left in a slightly condition and protected against erosion. Such removal and regrading shall be accomplished within (1) ninety (90) consecutive days after the depletion of the deposit or completion of the work for which the deposit was opened, or (2) two hundred and fifty (250) consecutive days after the last use of the deposit as a source of supply.
- c. Before the approval by the Board of Adjustment for the operation of a pit or quarry or the removal of sod or loam, there shall be a bond filed with the Town Clerk in

amount sufficient to cover the cost of meeting the condition of items (1) and (2) above.

**430:2** No processing of sand, gravel, stone, loam, or other natural deposits shall be permitted in a residential district. (1959)

**430:3** In applying the above standards and in reviewing application for the removal of natural deposits, the Board of Adjustment shall apply, as appropriate, such sections of the New Hampshire Statutes, in particular Section 155E, dealing with the removal of deposits.

#### **SECTION 440 GENERAL FARMING AND THE KEEPING OF ANIMALS**

**440:1** With the exception of mink raising, and fox raising, general farming activity and the keeping of animals for other purposes shall be permitted provided the following criteria are met: (1999)

- a. Large animals (horses, cattle, or sheep) shall be contained within the owner's property.
- b. Large animals (horses, cattle, pigs, or sheep) shall not be kept on lots of less than one acre. No more than one large animal shall be kept on a one-acre lot; no more than three (3) animals on a two-acre lot; and no more than five (5) animals on a three-acre lot. (1999)
- c. The keeping of animals shall not create health or safety hazards to immediate abutters or the community at large.
- d. In residential areas, stables or shelters for large animals shall be located a minimum distance of fifteen feet (15') from any lot line; and corral fences shall be a minimum of five feet (5') from any lot line. (1999)
- e. In all districts, owners shall be responsible for all damages and expenses incurred in the capturing and holding of escaped animals by Town officials. In addition, a fine shall be levied under guidelines established by the Board of Selectmen whenever a Town official is called out to capture an animal. (1984)

#### **SECTION 450 ACCESSORY USES: HOME OCCUPATIONS**

**450:1** All home occupations except those exempted under Section 450:4 shall be required to apply for a Home Occupation Permit. (1992)

**450:2** A permit for a home occupation shall be allowed in residential zones by special exception from the Board of Adjustment if the occupation complies with the following:

- a. A proposed occupation shall be incidental and secondary to the use of the property as a dwelling and shall not consume more than 20% of the gross residential building space, and not change the residential character of the premises thereof. (1992)

- b. Unless exempted by Section 450:4-a, no home occupation shall take place in a multi-family dwelling.
- c. The occupation may be carried on by the occupant's immediate family residing at that location and by one or more additional employees whose aggregate hours of work at that location do not exceed eighty hours per week (80 hours/week). The foregoing limitations on the aggregate hours of work per week by additional employees shall not apply in the case of medical, dental or veterinary home occupations. (2007)
- d. There shall be no physical evidence of equipment or materials outside the dwelling.
- e. Adequate off-street parking areas must be provided. Parking areas in excess of those necessary for normal residential purposes may be allowed in side and rear yards only provided the residential character of the environment is preserved. (1992)
- f. When necessary, further restrictions shall be placed on the occupation in order to comply fully with Article IV, Section 400:2 of this ordinance.
- g. A permit to operate a home occupation shall be issued to the owner/occupant only and is not transferable to a subsequent owner. A permit to operate a home occupation shall be issued to the owner/occupant only, and is transferable to a subsequent owner who will certify to the Zoning Board of Adjustment in writing that he or she will continue the home occupation on the same terms and conditions as the previous owner/occupant. (2007)
- h. The applicant shall complete and sign a form that sets forth the nature of the home occupation and provides details of the business and its scope of operation.
- i. No home occupation that will result in heavy truck use in excess of 20,000 lbs. gross vehicle weight shall be allowed. (1992)
- j. Vehicles registered to a home business or occupation must comply with the provisions of Section 480:1. (1992)

**450:3 Nature of the Permit**

- a. Permits shall be issued by the Board of Adjustment.
- b. Prior to the issuance of a permit, the Board of Adjustment shall hold a public hearing. Abutters will be notified of the time and date of the hearing by certified mail, such letter to include a description of the home occupation applied for and its location.
- c. Before a permit is granted, mandatory building inspections shall be made by the Town if it is a Family Group Day-Care Home facility, or if the public is to be served or persons outside the family are to be employed at the proposed location or if hazardous materials are to be stored there. In addition, a formal site plan review may be required if deemed necessary.

- d. No more than one business permit can be in effect for any one location.
- e. A permit is valid only for two (2) years and only for the owner/occupant and location for which it is issued. A renewal permit shall be required after two (2) years.
- f. Annual inspections of the home occupation/home business premises may be required subsequent to the issuance of a permit in order to confirm compliance with the conditions of the original special exception granted. If, in the opinion of the Board of Selectmen, the business practices originally set forth and defined in the initial approval have changed, it shall revoke the permit that was issued. Permit holders whose permits are revoked may make application to the Board of Adjustment for a new permit based on the changed circumstances of the business.

**450:4 Fees**

- a. There will be an initial permit fee as set by the Selectmen plus the cost of certified mail to each abutter including the applicant and the cost of all initial
- b. Any inspection required by the Town subsequent to the issuance of a permit shall be paid by the permit holder. Any renewal permit shall require a fee as determined by the Board of Selectmen.

**450:5 Exemptions from permit application requirements**

- a. Home occupations in which neither customers nor vehicles come to the location where the business activity takes place and at which no sign is displayed and no outside person is to be employed and there is no outward appearance of business activity.
- b. Agricultural activity, including farming and forestry, in which products are grown on the premises and sold on or off the premises.
- c. Home occupations for which permits were officially issued by the Planning Board and in effect on or before March 8, 1984, with such permits automatically becoming subject to Section 450:2-f. (1984)

**450:6** The repair and/or sales of automobiles and other vehicles for business purposes is not permitted in residential zones and Town Center. (1990)

**SECTION 460 ACCESSORY DWELLING UNIT**

**460:1** The objectives of this section are to:

- a. Provide housing to extend family members and affording all parties the necessary privacy and living arrangements conducive to harmonious habitation in a single family residence;
- b. Provide dwelling units to meet the needs of smaller households, both young and old;

- c. Provide dwelling units in single-family neighborhoods that are appropriate for different housing needs;
- d. Preserve the intent of single-family housing by placing strict physical limitations on size and access to the accessory dwelling unit;
- e. Protect the single-family residential character of a neighborhood by ensuring that the accessory dwelling unit is permitted only in an owner-occupied residence and under such conditions as to protect the property values and the health, safety and welfare of the neighborhood and the public.

**460:2** An “accessory dwelling unit” (or “ADU”) is a residential living unit that is within or attached to a single-family dwelling and that provides independent living facilities for one or more persons, including provisions for sleeping, eating, cooking and sanitation on the same parcel of land as the principal dwelling unit it accompanies.

**460:3** An Accessory Dwelling Unit shall be allowed in all zoning districts where single-family dwellings are permitted. Pursuant to RSA 674:21.II Conditional Use Permit may be granted by the Planning Board upon finding that the proposal complies with all of the following criteria a-k.

- a. The accessory dwelling unit shall be subject to the standards and conditions for as set forth in the Town of Atkinson Zoning Ordinance.
- b. No more than one accessory dwelling unit shall be allowed per single-family dwelling. The accessory living unit shall be within or attached to the single-family dwelling and shall not be permitted within detached accessory structures located on the same lot as the single-family dwelling.
- c. The combination of a single-family dwelling and accessory dwelling unit shall not be converted to a condominium or any other form of legal ownership distinct from the ownership of the existing single-family dwelling.
- d. The single-family dwelling unit or the accessory dwelling unit shall be owner-occupied and both dwelling units shall remain in common ownership by the primary resident.
- e. Accessory dwelling units will not be allowed as part of duplex housing or multi-family housing.
- f. The accessory dwelling unit and any related changes to the property shall be designed so that the appearance remains that of a single family residence and is consistent with the single family character of other residence in the neighborhood.
- g. The accessory dwelling unit shall have convenient and direct access to the principal dwelling unit through an interior door between the principal dwelling and accessory dwelling unit. The accessory dwelling unit shall have independent means of ingress and egress.

- h. The accessory dwelling unit shall be no more than 1,000 square feet in size and shall be clearly accessory to the principal dwelling unit. The accessory dwelling unit shall have no more than 2 bedrooms.
- i. Two parking spaces shall be provided for the accessory dwelling unit.
- j. Any and all consideration shall be in accordance with the building standards of the Town of Atkinson in effect at the time of construction.
- k. In accordance with the standards of the Town and regulations adopted by the New Hampshire Department of Environmental Services (NH DES) in compliance with RSA 485-A:38, the water and septic facilities whether separate or shared shall be adequate to service both the existing single-family dwelling and the accessory living unit. Proof or adequacy of these facilities shall include: an existing septic plan approved by the NH DES and a site inspection by a NH licensed septic designer verifying the proper function of the existing system; or a new replacement septic plan approved by the NH DES.

## **SECTION 470 SIGNS**

**470:1 Purpose.** These regulations have been created to permit signage for the following uses: Commercial, Commercial-Industrial, Commercial Professional, Municipal, Residential, reference, directional, temporary and traffic. While recognizing that esthetics and design quality are difficult to legislate, it is the intent and purpose of this section to preserve the rural beauty of the town as well as the safety and well-being of the inhabitants and at the same time, allow reasonable signage by regulating their type, number, location, color, illumination and size.

### **470:2 Definitions**

**S1 Sign.** Any device, fixture, placard or structure that uses any color, form, graphic, illumination, symbol or writing to advertise, announce the purpose of, or identify the purpose of a person or entity or to communicate information of any kind to the public.

**T1 Temporary Sign.** Any sign that is used only for a limited time and is not permanently mounted.

**470:3 Permit required.** No sign identifying or advertising a business shall be erected, hung, altered or repaired without a sign permit. Temporary signs are excluded from this provision. Permit approval is obtained from the Building Inspector. The applicant or his agent must submit a set of plans, to scale, showing the sign, its dimensions, location and method of illumination, as well as the materials and colors to be used in its construction. Upon approval, said permit shall be issued by the Building Inspector after the application fee is paid. Permit fee is determined by the Board of Selectmen. (1994)

**470:4 Government exception.** Provisions of this Ordinance shall not apply to conventional directional and identification signs and markers erected by federal, state or local government agencies.

**470:5 Compliance. DELETED 1993**

#### **470:6 General Provisions**

- a. Only one sign shall be permitted on the immediate premises, except where specifically allowed within this Ordinance.
- b. No signs advertising a business shall be permitted off the premises.
- c. No scrolling, blinking, moving, reflective, inflating, noise producing, odor or vapor producing signs are allowed.
- d. Banners and portable signs are not to be used as permanent signage.
- e. All signs may be illuminated by exterior light sources provided such lighting is shielded to protect adjacent properties and vehicular traffic. Internally lit signs are permitted only in C, CI and CP zones.
- f. No neon, flashing or moving lights are allowed to be visible from the exterior of buildings.
- g. Commercial grade materials such as plexiglass, vinyl, stone and wood are preferred. (1994)
- h. Colors are limited to a total of three per sign/structure, with one being the background. Bright, reflective colors are not allowed. White is not considered a color. (1994)
- i. All signs may have a maximum of two faces with the exception of signs in the C, CI and CP zones.
- j. Letters affixed to buildings are considered signs.
- k. **DELETED 1994**
- l. No sign shall be placed within any public right-of-way.

**470:7 Temporary Signs.** Temporary signs identifying an upcoming event are permitted to be displayed not more than four (4) weeks before the event and shall be removed within ten (10) days following the event. Temporary signs include but are not limited to flags, banners, portable signs, for rent, sale and yard sale signs. National, state and municipal flags are allowed.

**470:8 Signs in Residential Zone.** The following signs are permitted when located on the lot:

- a. Home business signs no larger than five (5) square feet per face with no more than two faces and for as long as the business is permitted per Article VI Section 450 Accessory Uses: Home Occupations.
- b. Name plates. Non-commercial signs showing property numbers, names of occupants of the premises or other identification.
- c. Temporary Signs (e.g., for sale, lease, rental, construction, improvement of property) are permitted for the duration of the activity. Area of each face of the sign

may not exceed five (5) square feet and shall be allowed for the duration of these activities.

- d. Permanent subdivision identification signs. One ground sign per main entrance into a development with a maximum of two per development. Signs shall be set back from vehicle or pedestrian traffic and beyond the highway right-of-way. The area of each face of the sign shall not exceed twenty (20) square feet.
- e. Non-residential signs. One sign identifying a non-residential use in a residential zone is permitted by Special Exception from the Board of Adjustment. The sign shall be limited to the following square area:
  - 1) five (5) square feet per face in a conventional residential development.
  - 2) one (1) square feet per face in a rural cluster residential development of detached single-family dwellings.

**470:9 Signs in the C, CI and CP zones, Commercial Area in Cluster Recreational Developments and Town Center District.** Each business shall be allowed one identification sign. (1994)

- a. In buildings that have more than one permitted business, the following signs are allowed when located on the lot:
  - 1) one sign with a maximum height of twelve (12) feet not to exceed fifteen (15) square feet per face.
  - 2) individual signs which shall not exceed ten (10) square feet with a maximum of two surfaces.
- b. In buildings that have one permitted business, the following signs are allowed when located on the lot:
  - 1) one sign not exceeding fifteen (15) square feet per face with a maximum of two faces and a maximum height of twelve (12) feet.
- c. Non-residential signs. One sign per non-residential use in a residential zone is permitted by Special Exception from the Board of Adjustment. The sign shall be limited to five (5) square feet.

**470:10 Signs in Commercial Industrial and Commercial/Professional Zones.** Every commercial park shall be allowed to have one sign to be located at or near the main entrance.

- a. Maximum height of twenty (20) feet (15 feet if within 200 feet of a residential zone) and maximum width of eight (8) feet. No single surface can be more than one hundred and twelve (112) square feet and the total square footage is not to exceed two hundred twenty-four (224) square feet.
- b. One sign per business not to exceed fifteen (15) square feet per face.

**470:11 Agricultural Signs.** For the purpose of agricultural, multiple signs (e.g., for advertising the farm name, location and items for sale) are allowed on the immediate premises. Signage shall not exceed a total of fifteen (15) square feet.

**470:12 Existing signs.**

- a. **Removing or reconstructing signs.** Grandfathered and/or non-conforming signs. Signs that exist at the time of passage of this ordinance may remain in use in the same location. If for any reason, replacement or reconstruction becomes necessary, a sign permit shall be required. Nothing in this ordinance shall prohibit the ordinary maintenance and repair of non-conforming signs. (1994)
- b. **Relocating signs.** Any sign that is moved to another location on the same or other premises shall be considered a new sign and a permit shall be secured for any work performed in connection therewith when required by this article.

**470:13 Obsolete signs.** Any sign now or hereunder existing which no longer advertises a bona fide business conducted, product sold or activity or campaign being conducted shall be removed by the owner, agent or person having the beneficial use of the building, structure or lot upon which such sign may be found within ten (10) days after written notification from the Code Enforcement Officer. Failure to comply with such notice constitutes a violation of terms of this Ordinance. (1992)

**470:14 Political Advertising.** Political signs and political advertising signs are permitted consistent with the requirements of RSA 664:17 Political Advertising.

**470:15 Severability.** The invalidity of any provision of this Section shall not affect the validity of any other provision.

## **SECTION 480 STORAGE OF VEHICLES**

**480:1** In residential areas, with the exception of farm vehicles, commercial vehicles parked on the premises must be wholly screened from the view of abutting property either by natural screening or by fencing at least equal in height to that of the vehicle itself. Commercial vehicles in excess of 20,000 pounds gross vehicle weight are not permitted to be routinely parked in Residential Districts. (1999)

## **SECTION 490 REDUCTION OF FRONTAGE REQUIREMENTS**

**490:1** The Board of Adjustment may reduce frontage requirements by no more than 33 and 1/3% where street layouts and lot shapes may lend greater usage of the property under consideration, provided, however, that at the building line, a distance of the required frontage is being met. This means in an RR-3, 250' between lot lines; in an RR-2, 200' between lot lines; and in a TR-2 area, 200' between lot lines. (1982)

## **SECTION 4100 SMALL WIND ENERGY SYSTEMS ORDINANCE (2010)**

**4100:1 Purpose.** This small wind energy systems ordinance is enacted in accordance with RSA 674:62-66, and the purposes outlined in RSA 672:1-III-a. The purpose of this ordinance is to accommodate small wind energy systems in appropriate locations, while protecting

the public's health, safety and welfare. In addition, this ordinance provides a permitting process for small wind energy systems to ensure compliance with the provisions of the requirements and standards established herein.

#### 4100:2 Definitions

**Meteorological tower (met tower)** Includes the tower, base plate, anchors, guy wires and hardware, anemometers (wind speed indicators), wind direction vanes, booms to hold equipment for anemometers and vanes, data loggers, instrument wiring, and any telemetry devices that are used to monitor or transmit wind speed and wind flow characteristics over a period of time for either instantaneous wind information or to characterize the wind resource at a given location. For the purpose of this ordinance, met towers shall refer only to those whose purpose are to analyze the environmental factors needed to access the potential to install, construct or erect a small wind energy system.

**Modification** Any change to the small wind energy system that materially alters the size, type or location of the small wind energy system. Like-kind replacements shall not be constructed to be a modification.

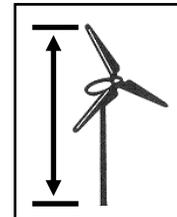

**Net Metering** The difference between the electricity supplied to a customer over the electric distribution system and the electricity generated by the customer's small wind energy system that is fed back into the electric distribution system over a billing period.

**Power grid** The transmission system, managed by ISO New England, created to balance the supply and demand of electricity for consumers in New England.

**Shadow flicker** The visible flicker effect when rotating blades of the wind generator cast shadows on the ground and nearby structures causing a repeating pattern of light and shadow.

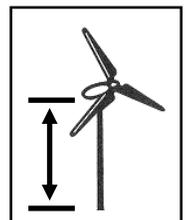

**Small wind energy system** A wind energy conversion system consisting of a wind generator, a tower and associated control or conversion electronics, which has a rated capacity of 100 kilowatts or less and will be used primarily for onsite consumption.

**System height** The vertical distance from ground level to the tip of the wind Generator blade when it is at its highest point.

**Tower** The monopole, guyed monopole or lattice structure that supports a wind generator.

**Tower height** The height above grade of the fixed portion of the tower, excluding the wind generator.

**Wind generator** The blades and associated mechanical and electrical conversion components mounted on top of the tower whose purpose is to convert kinetic energy of the wind into rotational energy used to generate electricity.

#### 4100:3 Procedure for Review

- a. Building Permit: Small wind energy systems and met towers are an accessory use permitted in all zoning districts where structures of any sort are allowed. No small wind energy system shall be erected, constructed, or installed without first receiving a building permit from the building inspector. A building permit shall be required for any physical modification to an existing small wind energy system. Met towers that receive a building permit shall be permitted on a temporary basis not to exceed 3 years from the date the building permit was issued.
  
- b. Application: Applications submitted to the building inspector shall contain a site plan with the following information:
  - 1) Property lines and physical dimensions of the applicant's property.
  - 2) Location, dimensions and types of existing major structures on the property.
  - 3) Location of the proposed small wind energy system, foundations, guy anchors and associated equipment.
  - 4) Tower foundation blueprints or drawings.
  - 5) Tower blueprints or drawings.
  - 6) Setback requirements as outlined in this ordinance.
  - 7) The right-of-way of any public road that is contiguous with the property.
  - 8) Any overhead utility lines.
  - 9) Small wind energy system specifications, including manufacturer, model, rotor diameter, tower height, tower type, nameplate generation capacity.
  - 10) Small wind energy system that will be connected to the power grid shall include a copy of the application for interconnection with their electric utility provider.
  - 11) Sound level analysis prepared by the wind generator manufacturer or qualified professional engineer.
  - 12) Electrical components in sufficient detail to allow for a determination that the manner of installation conforms to the NH State Building Code.
  - 13) Evidence of compliance or non-applicability with Federal Aviation Administration requirements.
  - 14) List of abutters to the applicant's property.
  
- c. Abutter and Regional Notification: In accordance with RSA 674:66, the building inspector shall notify all abutters and local governing body by certified mail at the applicant's request upon application for a building permit to construct a small wind energy system. The public will be afforded 30 days to submit comments to the building inspector prior to the issuance of the building permit. The building inspector shall review the application for regional impacts per RSA 36:55. If the proposal is determined to have potential regional impacts, the building inspector shall follow the procedures set forth in RSA 36:57, IV.

**4100:4 Standards**

- a. The building inspector shall evaluate the application for compliance with the following standards:
  - 1) Setbacks: The setbacks shall be calculated by multiplying the minimum setback requirement number by the system height and measured from the center of the tower base to property line, public roads, or nearest point on the foundation of an occupied building.
    - i) Small wind energy systems must meet all setbacks for principal structures for the zoning district in which the system is located.
    - ii) Guy wires used to support the tower are exempt from the small wind energy system setback requirements. Guy wire must be anchored on subject/applicant's property.

Minimum Setback Requirements			
Occupied Buildings on Participating Landowner Property	Occupied Buildings on Abutting Property	Property Lines of Abutting Property and Utility Lines	Public Roads
0	1.5	1.5	1.5

- 2) Tower: The maximum tower height shall be restricted to 35 feet above the tree canopy within 300 feet of the small wind energy system. In no situation shall the tower height exceed 150 feet.
- 3) Sound Level: The small wind energy system shall not exceed 55 decibels using the A scale (dBA), as measured at the site property line, except during short-term events such as severe wind storms and utility outages. Certification of compliance shall be provided by professional engineer or manufacturer.
- 4) Shadow Flicker: Small wind energy systems shall be sited in a manner that does not result in significant shadow flicker impacts. Significant shadow flicker is defined as more than 30 hours per year on abutting occupied buildings. The applicant has the burden of proving that the shadow flicker will not have significant adverse impact on neighboring or adjacent uses. Potential shadow flicker will be addressed either through siting or mitigation measures.
- 5) Signs: All signs including flags streamers and decorative items, both temporary and permanent, are prohibited on the small wind energy system, except for manufacturer identification or appropriate warning signs.
- 6) Code Compliance: The small wind energy system shall comply with all applicable sections of the New Hampshire State Building Code.
- 7) Aviation: The small wind energy system shall be built to comply with all applicable Federal Aviation Administration regulations including but not

limited to 14 C.F.R., part 77, subpart B regarding installations close to airports, and the New Hampshire Aviation regulations, including but not limited to RSA 422-b and RSA 424.

- 8) Visual Impacts: It is inherent that small wind energy systems may pose some visual impacts due to the tower height needed to access wind resources. The purpose of this section is to reduce the visual impacts, without restricting the owner's access to the optimal wind resources on the property.
  - i) The applicant shall demonstrate through project site planning and proposed mitigation that the small wind energy system's visual impacts will be minimized for surrounding neighbors and the community. This may include, but not be limited to information regarding site selection, wind generator design or appearance, buffering and screening of ground mounted electrical and control equipment. All electrical conduits shall be underground, except when the financial costs are prohibitive.
  - ii) The color of the small wind energy system shall either be the stock color from the manufacturer or painted with a non-reflective, unobtrusive color that blends in with the surrounding environment. Approved colors include but are not limited to white, off-white or gray.
  - iii) A small wind energy system shall not be artificially lit unless such lighting is required by the Federal Aviation Administration (FAA). If lighting is required, the applicant shall provide a copy of the FAA determination to establish the required markings and/or lights for the small wind energy system.
- 9) Approved Wind Generators: The manufacturer and model of the wind generator to be used in the proposed small wind energy system must have been approved by the California Energy Commission or the New York State Energy Research and Development Authority, or a similar list approved by the State of New Hampshire, if available.
- 10) Utility Connection: If the proposed small wind energy system is to be connected to the power grid through net metering, it shall adhere to RSA 362-A:9.
- 11) Access: The tower shall be designed and installed so as not to provide step bolts or a ladder readily accessible to the public for a minimum height of 8 feet above the ground. All ground-mounted electrical and control equipment shall be labeled and secured to prevent unauthorized access.
- 12) Clearing: Clearing of natural vegetation shall be limited to that which is necessary for the construction, operation and maintenance of the small wind energy system and as otherwise prescribed by applicable laws, regulations and ordinances.

#### **4100:5 Abandonment**

- a. At such time that a small wind energy system is scheduled to be abandoned or discontinued, the applicant will notify the building inspector by certified U.S. mail of the proposed date of abandonment or discontinuance of operations.
- b. Upon abandonment or discontinuance of use, the owner shall physically remove the small wind energy system within 90 days from the date of abandonment or discontinuance of use. This period may be extended at the request of the owner and at the discretion of the building inspector. "Physically remove" shall include, but not be limited to:
  - 1) Removal of the wind generator and tower and related above-grade structures.
  - 2) Restoration of the location of the small wind energy system to its natural condition, except that any landscaping, grading or below-grade foundation may remain in its same condition at initiation of abandonment.
- c. In the event that an applicant fails to give such notice, the system shall be considered abandoned or discontinued if the system is out-of-service for a continuous 12-month period. After the 12 months of inoperability, the building inspector may issue a Notice of Abandonment to the owner of the small wind energy system. The owner shall have the right to respond to the Notice of Abandonment within 30 days from the Notice receipt date. After review of the information provided by the owner, the building inspector shall determine if the small wind energy system has been abandoned. If it is determined that the small wind energy system has been abandoned, the building inspector shall withdraw the Notice of Abandonment and notify the owner of the withdrawal.
- d. If the owner fails to respond to the Notice of Abandonment or if, after review by the building inspector, it is determined that the small wind energy system has been abandoned or discontinued, the owner of the small wind energy system shall remove the wind generator and tower at the owner's expense within 3 months of receipt of the Notice of Abandonment. If the owner fails to physically remove the small wind energy system after the Notice of Abandonment procedure, the building inspector may pursue legal action to have the small wind energy system removed at the owner's expense.

**4100:6 Violation** It is unlawful for any person to construct, install or operate a small wind energy system that is not in compliance with this ordinance. Small wind energy systems installed prior to the adoption of this ordinance are exempt from this ordinance except when modifications are proposed to the small wind energy system. Hobby systems having output of 1 kilowatt (peak) are exempt from this ordinance.

#### **4100:7 Penalties**

Any person who fails to comply with any provision of this ordinance or a building permit issued pursuant to this ordinance shall be subject to enforcement and penalties as allowed by NH Revised Statutes Annotated Chapter 676:17.

**4100:8 Severability**

The invalidity of any subsection or provision of this Article shall not invalidate any other subsection or provision thereof.

## ARTICLE V: ZONING DISTRICT REGULATIONS

### SECTION 500 ZONING DISTRICT OBJECTIVES AND GUIDELINES

**500:1** The purpose and the designation of each of the districts listed in this Article follow.

**500:2 (RR-3) Rural Residential-3.** This area is limited to agricultural, forestry, and certain other non-intensive uses as provided for in Section 510. Low density residential and related uses are permitted in this district where it is not inconsistent with the comprehensive Master Plan for the town. The purposes of this lot density designation are to prevent premature development of land, to retain certain areas for non-intensive uses, to protect the public health, and to prevent development which would be a burden on town services.

**500:3 (RR-2) Rural Residential-2.** This area is limited to agricultural, forestry, and low density residential uses. Other related uses as provided for in Section 520 are permitted and must be consistent with the comprehensive Master Plan. These areas designated for Rural Residential-2 allow for development, but require adequate lots in order to minimize community services, protect the public health, and prevent premature development beyond the capability of soil conditions with moderate to severe limitations.

**500:3.1 (RR2/SCR) Sports Complex/Residential Subdistrict.** This area in town for Recreational/Sports amenities and other public and common facilities that cannot otherwise be provided under conventional land development procedures, together with limited non-residential uses to support the same and the neighborhood. Such development must contain a minimum of 250 acres and be part of a rural residential cluster development, provided such development also meets the requirements contained in the RR-2 District. Such developments are hereinafter referred to as "Rural Residential and Recreational Cluster Developments" (RRRCD) and may contain alternative design housing. (2006)

**500:4 (TR-2) Town Residential-2.** This is the prime residential area in town and is designated in land areas where soil limitations are less severe and accessibility to community services such as police, fire station, and schools are more readily available. Residential and other compatible and complementary uses as provided for in Section 530 are permitted in this district and detailed densities are dependent upon land suitability. This district is intended to have the majority of the community's permanent residents in the area, densities consistent with soil conditions, and lot sizes which protect the public health, provide ample open space, and maintain the present rural nature of the town.

**500:5 (C) Commercial.** This is a district designated in the town and is designed to continue the New England character of providing services and shopping opportunities to the residents of the community and to visitors. It is a district that is designated to promote the pleasant residential characteristics and shopping environment of a neighborhood.

- 500:6 (C-I)**      **Commercial-Industrial.** This district allows for the establishment of small-scale manufacturing opportunities along with shopping and service opportunity locations. It is an area that must take into consideration accessibility to truck and rail traffic and the availability of utilities or the lack thereof. The accommodations of present home occupations outgrowing present quarters are the purpose of creating and locating this district. Facilities need to be in harmony with abutting districts which may contain residential uses. To accomplish this harmony, all material or products outside of the building must be suitably screened from streets and residential abutters. (1999)
- 500:7 (C-P)**      **Commercial-Professional.** This district provides for commercial-professional development and would serve as a transition zone between the commercially/industrially zoned area and any residentially zoned area. The district is intended to accommodate the outgrowth of present home businesses and to establish an area necessary to support the existing need for low impact services.
- 500:8 (TC)**      **Town Center.** This district is created to provide a community center for the townspeople of Atkinson while observing and retaining the historic qualities which now exist in the area. Provision for professional services and public government and civic services is a major objective in this district designation.
- 500:9 (HD)**      **Historic District. District dissolved - Ballot 6/13/92**

## **SECTION 505    SCENIC VISTA AND PRONOUNCED LANDSCAPE REGULATION (1998)**

- 505:1**      Areas designated in the 1980 Master Plan as scenic vistas and pronounced landscapes (see Scenic & Cultural Map, page 32 of the 1980 Master Plan) are needed to maintain the rural character of the community. The following Sections are aimed at preserving these valuable assets.
- 505:2**      Preservation of scenic vistas and pronounced landscapes in residentially zoned districts is encouraged by allowing an increase in the density of allowable units provided; however, that sufficient information has been provided to the Planning Board during subdivision review to document the adequate protection of the vista or pronounced landscape. (See Section 600:6c)

## SECTION 510 – PERMITTED USES

The following uses are permitted in the Rural Residential-3 acre (RR-3), Rural Residential-2 acre (RR-2), Sports Complex/Residential Subdistrict (SCR), Town Residential-2 acre (TR-2), Commercial (C), Commercial-Industrial (C-I), Town Center (TC) and Commercial-Professional (CP) districts:

PERMITTED USES	ZONES							
	RR3	RR 2	TR2	TC	C-I	C	C-P	RR2/SC R
<b>a</b> Agricultural & forest uses	Y	Y	Y	Y	N	Y	N	Y
<b>b</b> Single family convention housing	Y	Y	Y	Y	N	N	N	Y
<b>c</b> Private outdoor recreation	Y	Y	Y	Y	N	Y[4]	N	Y
<b>d</b> Public outdoor recreation	Y	Y	Y	Y[4]	N	Y[4]	N	Y
<b>e</b> Wildlife refuge	Y	Y	N	Y	N	N	N	Y

[Effective 06-01-89.]
1 - Rear and side yard requirements for private outdoor recreational installations are 15 feet.
2 - Maximum height of accessory buildings is 15 feet. No limitations for agricultural uses.
3 - 75 feet is required if parking is permitted in the front yard.
4 - 100 feet if abutting a residential district.
5 - Calculations to be based on buildable land only.
6 - Not presently used.
7 - 150 feet from the zone line if abutting a residential district.
8 - If parking is permitted in the front yard, 75 feet is required of which 25 feet shall not be paved.
9 - In RR2, the SCR Subdistrict permits alternative design residential buildings that shall be no more than 55 feet in height. Alternative design buildings in excess of 35 feet in height shall have a setback of 400 feet from the building to the property line and/or town roads.

## ARTICLE VI: RURAL CLUSTER

### RESIDENTIAL DEVELOPMENT

#### SECTION 600 OVERVIEW AND PROVISIONS

##### 600:1 Permitted Uses

- a. Townhouse developments in a cluster concept with 2, 3 or 4 units per building are permitted in any district except the commercial, commercial professional and commercial-industrial district within the Town of Atkinson and may be exempt from the provisions of Lot and Yard Regulations Minimum Required, but subject to the conditions which follow.
- b. Single Family residential cluster subdivisions that permit dwelling units to be grouped on lots or sites with dimensions, frontages and setbacks as defined in Section 600:8 b., and reduced from conventional requirements or on land under condominium ownership shall be permitted in any district except the commercial, commercial professional and commercial-industrial district within the Town of Atkinson and may be exempt from the provisions of Lot and Yard Regulations Minimum Required, but subject to the conditions which follow. (2001)
- c. Rural Residential Recreational Cluster Development with the SCR Subdistrict, as permitted in Section 620, which dimensions, height restrictions, and setbacks as provided therein, are subject to the conditions which follow, except where such provisions are in conflict with Section 620, in which case those provisions of Section 620 shall prevail. (2006)

##### 600:2 The purposes of rural cluster development and to which purposes any such development must adhere, to the following:

- a. To preserve the natural beauty of existing rural roads within the Town of Atkinson and to encourage less intensive residential development within areas not presently served by existing public water and sewer services.
- b. To establish living areas within the Town that provide for a balance of community needs, such as a diversity of housing opportunities, adequate recreation and open space areas, easy accessibility to those and other community facilities, and pedestrian and vehicular safety.
- c. To provide for an efficient use of land, streets, and utility systems.
- d. To stimulate new approaches to land and community development.

##### 600:3 Rural cluster development shall be permitted in any district in which conventional residential development is permitted except in those areas where existing public and/or common water and sewer systems cannot provide adequate services to additional housing development. In such a case, rural cluster development shall be prohibited until

such systems are improved, modified, or expanded to properly serve additional housing development.

**600:4** Manufactured housing may be permitted in a rural cluster development designed exclusively for such housing in any residential district, provided such housing meets all other requirements of this ordinance. Manufactured housing parks may be permitted in a rural cluster development in an RR-3 and TR-2 district provided such housing meets all other requirements of this ordinance.

**600:5** The tract of single or consolidated ownership at the time of application shall be:

- a. distant from the existing town road as follows:
  - 1) Alternative Design Residential Buildings as permitted in the SCR Subdistrict under section 620 shall be four 400' distant from the perimeter boundary and/or town roads. (2006)
  - 2) the location of three and four Unit Townhouse structures shall be 300' distance from existing town roads.
  - 3) single family detached and two family structures shall be 200' distance from existing town roads. (1993)
- b. subject to approval by the Planning Board under the Planning Enabling Legislation -- Regulation of Subdivision of Land -- whether or not land is to be subdivided.

**600:6** The maximum number of dwellings permitted in any rural cluster development shall be determined by utilizing the required density of land area per dwelling unit for that district. (1992)

- a. In addition, each rural cluster development shall be entitled to one additional dwelling unit for every 100 feet in depth added to the required landscaped buffer described in Section Z600:11 below. Such entitlement shall be based on a formula of 1 dwelling unit bonus/10 acre area. This does not apply to low-moderate developments.
- b. For the purpose of this section the maximum buildable area to be used in determining the maximum number of dwelling units permitted shall exclude all wetland soils, all lands with slopes greater than 25% and all proposed roads. (1993)
- c. Cluster subdivisions which are specifically designed to preserve scenic vistas and pronounced landscapes (as designated in the Community Facilities Chapter of the Atkinson Master Plan) shall be entitled to compute the number of allowed units utilizing soil based lot sizing as defined by the Society of Soils Scientists of Northern New England (SSSNE) Special Publication #4, "Soil Based Lot Sizing", Version 1 (September 2003, as revised), using the method implemented by the planning board under the Land Subdivision Control Regulations. Protection of said vistas and landscapes is to be accomplished by not allowing them to be developed nor be obstructed in view through protective or

conservation easements. This provision does not apply to low-moderate developments, where the low-moderate incentive is utilized. (See Section 505:2) (1998) (2013)

- d. Conservation subdivisions which are specifically designed to save energy and preserve public access open space, shall be entitled to compute the maximum number of dwelling units utilizing soil based lot sizing as defined by the Society of Soils Scientists of Northern New England (SSSNNE) Special Publication #4, "Soil Based Lot Sizing", Version 1 (September 2003, as revised), using the method implemented by the planning board under the Land Subdivision Control Regulations or Site Development Plan Regulations, as applicable. (2013)

**600:7 Development Density**

- a. Townhouse developments shall not exceed eight (8) dwelling units per any single acre within the area being developed, except for Alternative Design Residential Buildings in the SCR Subdistrict. (2006)
- b. Single family cluster developments shall not exceed four (4) dwelling units per any single acre within the area being developed. (2001)

**600:8 Dimensional Requirements**

- a. Rural cluster development shall not be required to conform to the minimum frontage, setback, and lot sizes required in the zoning ordinance, but shall be so designed and constructed as to achieve the purposes of rural cluster development set forth in these regulations.
- b. All dwellings within a single family residential cluster development shall conform to no less than the minimum dimensional requirements specified herein:

1)	Lot Frontage	25'
2)	Lot Depth	125'
3)	Front Yard	30'
4)	Rear Yard	50'
5)	Side Yard	15'*

\* if the sprinkler system requirement is waived for a subdivision, 25' side yards shall be required throughout the development. (2001)

- c. Alternative Design Residential Buildings in excess of thirty-five (35') feet in height shall have a perimeter setback of 400' to the property boundary line and/or town roads. (2006)

**600:9** The following uses shall be permitted:

- a. development of one-family structures on parcels of 10 acres or more;
- b. development of one- and/or two-family structures on parcels of 20 acres or more;

- c. development of one-family, two-family, and/or three and four-unit town-house dwellings on parcels of 30 acres or more;
- d. incidental private recreational uses.
- e. development of Rural Residential Recreational Cluster Developments on parcels of 250 acres or more situated in the RR2-SCR District. (2006)

**600:10** The development may be served by common water and septic systems, the design and construction of which must be approved by the state and local authorities.

**600:11 Perimeter Buffers Requirements (2020)**

- a. The perimeter buffer serves to provide separation from and transition between abutting land uses (e.g. residential, non-residential, conservation lands) and existing town roads. Trees and other vegetation shall be retained. Trees, vegetation or invasive species deemed a hazard by the Atkinson Tree Warden may be removed on an individual basis or identified as part of a buffer management plan.
- b. The perimeter buffer shall comprise the following and any combination of the following:
  - i. Natural forest or landscape features or densely planted with trees and understory along the road frontage. A buffer management plan shall be provided as part of the application; or
  - ii. Managed forest or a combination of managed forest and other natural landscape features. A buffer management plan shall be provided as part of the application; or
  - iii. Restored buffer through replanting of trees and understory vegetation. A buffer management plan shall be provided as part of the application; or
  - iv. Natural forest or other vegetation, meadow or other landscape features such as wetlands that do not require active management to maintain.
- c. Rural Cluster Residential Developments shall be subject to the following perimeter buffer requirements:
 

i. Multi-family cluster developments	100 feet width
ii. Fee simple ownership subdivision	50 feet width
iii. Condominium ownership	100 feet width
- d. The perimeter buffer shall extend around the perimeter of the entire parcel being developed and along existing town roads. No grading, land disturbance or construction (e.g. structure or common facility such as playground, gazebo, pavilion, clubhouse), excepting for primary access roads, utility crossings and trails for non-motorized recreation, shall be permitted in the perimeter buffer.

- e. No portion of the perimeter buffer shall be included as part of any lot defined for construction of a dwelling.
  - f. All building envelopes defined for construction of a dwelling shall have a 20 foot setback from the perimeter buffer.
- 600:12** All parking within a rural cluster development shall be provided at a rate of not less than two (2) spaces per single dwelling unit.
- 600:13** Emergency vehicle access shall be provided to all structures within the rural cluster development.
- 600:14** At least fifty percent (50%) of the total land area, exclusive of roads, public or purposes of this Article, permanent open space is defined as lands used for active agriculture or forestry guided by a forest management plan, natural landscapes that are actively maintained, and lands permanently protected from development (e.g. structures, construction activity, stormwater management) and uses permitted under Section 600:15 (2020).
- 600:15** Such common land shall be restricted to open space recreational uses such as tot lot, park, swimming pool, tennis courts, playground, playfield, or conservation. (2020)
- 600:16** Except for residential conservation subdivisions, such common land shall have suitable access to a road only within the development.
- 600:17** Except for residential conservation subdivisions, open space, common areas, common facilities, private roadways, and other features within the rural cluster development shall be protected by covenants running with the land and shall be conveyed by the property owners to a homeowner's association so as to guarantee the following:
- a. The continued use of land for the intended purposes.
  - b. Continuity of proper maintenance for those portions of the development requiring maintenance.
  - c. The availability of funds required for such maintenance. Recovery for loss sustained as a result of casualty, condemnation or otherwise.
  - d. A homeowner's association of tenancy-in-common or similar form of ownership, that the membership and obligation of the residents of the rural cluster development be automatic upon conveyance of title or lease to single dwelling units. Homeowners association, tenancy-in-common, or similar form of ownership shall include lien provisions and shall be subject to review and approval by the Planning Board.
  - e. The usage of all Open Space associated with a Cluster shall remain under the direction and control of the Homeowners of that Cluster so that the homeowner's access and usage of the land is protected. Said access and usage shall also be protected by the developer during the developer's stewardship of the Open Space, until such time as it is transferred to the Homeowners Association. (2002)
- 600:18** The rural cluster development plan shall show the layout of all streets and roads.

- a. All streets and roads shall be built to Town Subdivision requirements for new public roads whether or not they are offered to the Town for public acceptance.
- b. Town road requirements may be modified by the Planning Board for roads where deemed applicable. All roads shall be built as hard surface roads to standards approved by the Planning Board and the Road Agent and may remain in private ownership.

**600:19** A site plan for the entire tract at a scale of 1"=100' and the developed portion at 1"-50' shall be prepared by either a professional land planner, registered architect, registered professional engineer, or registered land surveyor. The site plan shall be submitted in accordance with the subdivision regulations for the Town of Atkinson, and the location of parks and open space shall be shown on the plan.

**600:20** The review of any rural cluster development conducted by the Planning Board under these regulations shall ascertain that adequate provisions have been made by the owner or his authorized agent for the following:

- a. Traffic circulation and access including adequacy of adjacent streets, entrances and exits, traffic flow, sight distances, curb cuts, turning lanes, and existing or recommended traffic signalization.
- b. Pedestrian safety and access.
- c. Off-street parking and loading.
- d. Emergency vehicle access.
- e. Fire protection as it applies to the proximity of buildings to one another and to the existence of firefighting water sources.
- f. Storm water drainage based upon a minimum of a ten (10) year storm frequency, utilizing on-site absorption and/or positive outfall.
- g. Recreational facilities.
- h. Water supply and wastewater disposal approved by a civil or sanitary engineer registered in New Hampshire.
- i. Environmental factors such as protection against pollution, noise, odor, and the protection of natural features.
- j. Landscaping in keeping with the general character of the surrounding areas.
- k. Signing and exterior lighting.
- l. Submission of proposal along with abutting property owners' names and addresses shall be in accordance with the Town of Atkinson Subdivision Regulations in order to provide for timely notification to abutters of public hearing to review said parcel.

- m. In addition, the Planning Board shall review the plan to assure compliance with the provisions of the standards set forth in these regulations and other town regulations and ordinances. The Planning Board shall also ascertain that the plan minimizes the encroachment of the rural cluster development upon neighborhood land uses.

**600:21 A performance bond** and other legal data shall be submitted as required by the Planning Board to ensure the completion of streets, buffers, and amenities in accordance with the accepted plans and subdivision regulations of the Town of Atkinson as adopted or hereafter.

**600:22** The owner, his agent or his successors or assigns will make no alterations or additions or deletions from the approved Rural Cluster Development Plan except as approved in advance by the Planning Board. All requests for changes to the approved plan shall be made in writing to the Board and shall be accompanied by such documents as the Planning Board shall deem necessary to explain the requested change. The Board shall determine if the requested change is minor or major in nature.

- a. Minor changes. A minor change shall be one which respects the approved plan's basic land allocations in terms of use and intensity, the type and variety of facilities and dwelling units being approved, and/or the timing for providing these facilities, but shall not include any increase in the overall density of the development. The Board may hold a public hearing on the proposed change with proper notification to all abutters, including those of the original proposed development as well as any additional ones which may have been created by development activity within the development itself. The Board shall then act to approve or disapprove with written notification to the owner of its action. Any approved changes involving changes in any lot boundaries shall be recorded as a subdivision change in the Registry of Deeds.
- b. Major changes. Any requested change which the Board determines does not qualify as a minor change shall be required to be submitted as a separate rural cluster development plan in accordance with these regulations and procedures.

**600:23** The Planning Board shall adopt such procedures as part of the subdivision regulations as it may deem necessary in order to insure sufficient public review of any cluster proposal and to insure compliance with these and other town ordinances and regulations. (1982)

## **SECTION 610 INCLUSIONARY HOUSING ACCOMMODATION INCENTIVE SYSTEM (3/10/2009)**

### **610:1A Purpose Statement**

The purpose of this Article are as follows:

- a. To encourage and provide for the development of affordable workforce housing;
- b. To ensure the continued availability of a diverse supply of home ownership and rental opportunities for low to moderate income households.

- c. To meet the goals related to affordable and workforce housing provisions set forth in the town's Master Plan; and
- d. To comply with the requirements of SB 342, An Act establishing a mechanism for expediting relief from municipal actions which deny, impede, or delay qualified proposals for workforce housing (RSA 674:58-61).

In the course of implementing this ordinance, the Town of Atkinson has considered the region's affordable housing needs as described in the Rockingham Planning Commission's Housing Needs Assessment and the Rockingham Planning Commission's Regional Fair Share Analysis.

### **610:1B Authority**

This innovative land use control Article is adopted under the authority of RSA 674:21, and is intended as an "Inclusionary Zoning" provision as defined in RSA 674:21(I)(k) and 674:21 (IV)(a) as well as RSA 672:1, III-3, effective July 2009, which states:

"All citizens on the state benefit from a balanced supply of housing which is affordable to persons and families of low and moderate income. Establishment of housing which is decent, safe, sanitary and affordable to low and moderate income persons and families is in the best interests of each community and the state of New Hampshire, and serves a vital public need. Opportunity for development of such housing shall not be prohibited or unreasonably discouraged by use of municipal planning and zoning powers or be unreasonable interpretation of such powers.

### **610:1C Definitions**

- A. Affordable:** Affordable means housing with combined rental and utility costs or combined mortgage loan debt services, property taxes, and required insurance that do not exceed 30 percent of a household's gross annual income.
- B. Multi-family housing:** Multi-family housing for the purpose of workforce housing developments, means a building or structure containing 5 or more dwelling units, each designed for occupancy by an individual household. (Adopted 2009)
- C. Reasonable and realistic opportunities for the development of workforce housing:** opportunities to develop economically viable workforce housing within the framework of a municipality's ordinance and regulations adopted pursuant to this chapter and consistent with RSA 674:I, III-e.
- D. Workforce housing/owner occupied:** housing which is intended for sale and which is affordable to a household with an income of no more than 100 percent of the median income for a 4-person household for the metropolitan area or county in which the housing is located as published annually by the United States Department of Housing and Urban Development.
- E. Workforce housing/renter occupied:** rental housing which is affordable to a household with an income of no more than 60 percent of the median income for a 3-person household for the metropolitan area or county in which the housing is located as published annually by the United States Department of Housing and Urban Development. Housing developments that exclude minor children from more than 20 percent of the units, or in which more than 50 percent of the dwelling units have fewer

than two bedrooms, shall not constitute workforce housing for the purposes of this subdivision.

- F. **Area Median Income (AMI):** the medial income of the greater region, either the HUD Metropolitan or Non-Metropolitan Fair Market Rent Area to which the community belongs, as is established and updated annually by the United States Department of Housing and Urban Development. Income considers both wage income and assets.
- G. **Market Rate Housing:** any units within a development, whether the unit is to be owner or renter occupied, that is intended to be available for sale or occupancy at the prevailing market value for the area similar to comparable real estate transaction.

#### **610:2A Qualification for Higher Density**

A proposed development must meet the following pre-requisites in order to apply for incentive provisions of Section 610:3.

- a. **At least 20 percent of the total dwelling units** within the parcel must be dedicated to low-moderate income dwellings;
- b. The development must be eligible for review as a Rural Cluster Residential Development as provided in Article VI, Section 600; and
- c. The development may include single family, duplex, or multi-family units with up to eight units per building.

#### **610:2B Appeal**

Any person aggrieved by a Planning Board decision that constitutes a denial of a Conditional Use Permit due to noncompliance with one or more of the provisions of this ordinance may appeal that decision to the Superior Court, as provided for in RSA 677:15. A Planning Board decision on the issuance of a Conditional Use Permit cannot be appealed to the Zoning Board of Adjustment (RSA 676:5 III).

#### **610:2C Procedural Requirements/Applicant**

- a. **Notice of Intent to Build Workforce Housing.** Any person who applies to the Planning Board for approval of a development that is intended to qualify as workforce housing under this subdivision shall file a written statement of such intent as part of the application.
- b. **Waiver.** Failure to file such a statement shall constitute a waiver of the applicant's rights under RSA 674:61 (the builder's remedy) but shall not preclude an appeal under other applicable laws.
- c. In any appeal where the applicant has failed to file the statement required by this section, the applicant shall not be entitled to a judgment by a court on appeal that allows construction of the proposed development, or otherwise permits the proposed workforce housing development to proceed despite its nonconformance with the municipality's ordinance or regulations.

## 610:2D Procedural Requirements/Planning Board and Applicant

- a. **Notice of conditions.** If the Planning Board approves an application to develop workforce housing subject to conditions or restrictions, it shall:
- 1) Notify the applicant in writing of such conditions and restrictions; and
  - 2) Give the applicant an opportunity to establish the cost of complying with the conditions and restrictions and the effect of compliance on the economic viability of the proposed development.

The Board's notice to the applicant of the conditions and restrictions shall constitute a conditional approval solely for the purpose of complying with the requirements of RSA 676:4 I (i). It shall not constitute a final decision for any other purpose, including the commencement of any applicable appeal period.

- b. **Submission of evidence to establish cost of complying with conditions.** Upon receiving notice of conditions and restrictions as described above, the applicant may submit evidence to establish the cost of complying with the conditions and restrictions and the effect on economic viability within the period directed by the board, which shall not be less than 30 days.

c. **Review of evidence.**

- 1) Upon receipt of such evidence, the Board shall allow the applicant to review the evidence at the Board's next meeting for which 10 days notice can be given, and shall give written notice of the meeting to the applicant at least 10 days in advance. At such meeting, the board may also review and consider evidence from other sources.
- 2) The Board may affirm, alter, or rescind any or all of the conditions or restrictions of approval after such meeting.

d. **Final Decision.**

- 1) The Board shall not issue its final decision on the application before such meeting, in C.2 above, unless the applicant fails to submit the required evidence within the period designated by the board, in which case it may issue its final decision any time after the expiration of the period.
- 2) If an applicant notifies the board in writing at any time that the applicant accepts the conditions and restrictions of approval, the board may issue its final decision without further action under this paragraph.

- e. **Appeals.** Any person who has failed the written notice and whose application to develop workforce housing is denied or is approved with conditions or restriction which have a substantial adverse effect of the viability of the proposed workforce housing development may appeal the municipal action to the Superior Court under RSA 677:4 or RSA 677:15 seeking permission to develop the proposed workforce housing.

**610:3 Incentive System**

- a. The maximum number of living units permitted shall be determined using soil based lot sizing as defined by the Society of Soils Scientists of Northern New England (SSSNNE) Special Publication #4, "Soil Based Lot Sizing", Version 1. (September 2003, as revised) (2013)
- b. Developments qualifying for consideration under Section 610:2 shall be granted the following modifications in design specifications:
  - 1) The requirement under 600:5-a (2) of 300 feet distance from town road for 3 to 8 townhouse structures shall be reduced to 200 feet.
  - 2) The parcel size of 20 and 30 acres for multi-family structures (section 600:9) shall be reduced to 10 acres.
  - 3) The requirement of 50% common land (Section 600:14) shall be reduced to 40% covenanted common land to be maintained as permanent open space (2001).
  - 4) Each building may contain up to eight units.

**610:4 Structural Standards**

- a. Units designed and designed for the accommodation of workforce housing families shall meet the use provisions of the underlying zoning district.
- b. Manufactured housing and multi-family dwellings are an acceptable structure for workforce housing accommodation provided the units meet local, state, and federal codes and regulations.
- c. Units designated for use by workforce housing families shall be designed to be suitable for family needs. Design considerations shall include the floor area of rooms, the relationship and number of room types, sanitary facilities, cooking facilities, siting of structures and outdoor uses, as well as access and building code provisions.
- d. A determination of the number of bedrooms in workforce housing structures shall be reviewed by the Planning Board prior to approval of the development. In order to assure reasonable family accommodation, the following breakdown of workforce housing units shall be adhered to:

<u>Bedrooms/Unit</u>	<u>% of Total</u>
One bedroom/unit	25% or less
Two or three bedrooms/units	65% or more
Four or more bedrooms/units	10% or less

The breakdown above may be varied only by requirements of a housing assistance program.

**610:5 Applicable Provisions.** All developments qualifying for review as workforce housing must meet the provisions of the latest adopted local regulations and ordinances except as they are amended by Section 610 et. seq. inclusive.

**610:6 General Requirements of Workforce Housing Units**

- a. **Architectural compatibility.** The dwellings qualifying as workforce housing shall be compatible in architectural style and exterior appearance with the market rate dwellings of similar size and type. The workforce housing units must be interspersed with market rate units of the same type.
- b. **Phasing.** The phasing plan for the development shall provide for the development of workforce housing units concurrently with the market-rate units.

**610:7 Affordability**

a. **Certification of Income Levels.**

- 1) To ensure that only eligible households purchase/rent the designated affordable housing units, the purchaser/renter of a workforce housing unit must submit copies of their last three years federal income tax returns and written certification, verifying that their annual income level, combined with household assets, does not exceed the maximum level as established by this ordinance.
- 2) The tax returns and written certification of income and assets must be submitted to the developer of the housing units, or the developer's agent, prior to the transfer of title.
- 3) A copy of the tax return and written certification of income and assets must be submitted to all parties charged with administering and monitoring this ordinance, within 30 days following the transfer of title.

b. **Assurance of continued affordability.**

- 1) Workforce housing units offered for sale shall require a lien, granted to the Town of Atkinson be placed on each workforce housing unit.
- 2) The value of the lien shall be equal to the difference between the fair market value of the unit and its reduced affordable sale price, which is indexed according to the qualifying income standards.
- 3) The municipality's lien is inflated over time at a rate equal to the Consumer Price Index (CPI).
- 4) Future maximum resale values shall be calculated as the fair market value minus the CPI adjusted lien value.
- 5) Subsequent sales are not limited based on income targets, but the combination of maintenance of the municipality's lien and adherence to this Article's definitions of affordable housing for a period of 30 years.

**NOTE:** *The provisions above are established to be consistent with NHHFA's Value Retention Model, which is required if the community wishes to have NHHFA administer their inclusionary housing ordinance. Alternate mechanisms of continued affordability could be utilized.*

- a. Workforce housing rental units shall limit annual rent increases to the percentage increase in the are median income, except to the extent that further increases are made necessary by hardship or other unusual conditions.
- b. **Documentation of restrictions.** Deed restrictions, restrictive covenants, or contractual arrangements related to dwelling units established under this Article must be documented on all plans filed with the town's Planning Board and with the Registry of Deeds.

**610:8 Administration, Compliance and Monitoring**

- a. This Article shall be administered by the Planning Board.
- b. **Certificate of Occupancy.** No certificate of occupancy shall be issued for a workforce housing unit without written confirmation of the income eligibility of the tenant or buyer of the workforce housing unit and confirmation of the rent or price of the workforce housing unit as documented by an executed lease or purchase and sale agreement.
- c. Ongoing responsibility for monitoring the compliance with resale and rental restrictions on workforce housing units shall be the responsibility of the New Hampshire Housing Finance Authority.
- d. **Annual report.** The owner of a project containing workforce housing units for rent shall prepare an annual report certifying that the gross rents of affordable units and the household income of tenants of workforce housing units have been maintained in accordance with this Article. Such reports shall be submitted to the New Hampshire Housing Finance Authority or their designee and shall list the contract rent and occupant household incomes of all workforce housing units for the calendar year.

**610:9 Relationship to other ordinances and regulations.**

No portion of this ordinance shall nullify the provisions of any other town ordinance provisions which relate to environmental protection, water supply, sanitary disposal traffic safety, and fire and life safety protection. Where workforce housing applicants propose a development of single family homes or mixed single family and multi-family homes, all provisions of the subdivision and site plan regulations shall apply unless waived by the Planning Board. Where workforce housing applicants propose a development of multi-family units or mixed commercial and multi-family units, the site plan regulations shall apply unless waived by the Planning Board.

**610:10 Conflict.** If any provision of this ordinance is in conflict with the provisions of other ordinances, the more restrictive provision shall apply, except for any provision relating to lot size, setbacks, or density, in which case the provisions of this ordinance shall apply.

**SECTION 620 GOLF AND SPORTS COMPLEX /RESIDENTIAL SUB-DISTRICT ("SCR SUBDISTRICT") (2006)**

- a. Within the existing RR-2 District in the southwestern corner of the Town there is created a Subdistrict known as a Sports Complex/Residential Sub-district (SRC).

Except as otherwise provided herein, all other restrictions and requirements applicable to the RR-2 District shall apply to all uses and structures within the SCR Subdistrict.

- b. Except as to "RRRCD Developments" (defined below), all land lying within the SCR Subdistrict shall continue to have all of the benefits and to be subject all of the restrictions of and for the RR-2 District.

- c. The SCR Subdistrict is composed of all the land bounded as follows: Beginning on the southwest side of North Broadway at the Haverhill, Massachusetts State Line; thence running

- 1) Northwesterly by the southerly line of North Broadway and Providence Hill Road to a point one hundred and twenty-five (125) feet easterly of the Salem Town Line; thence
- 2) Southwesterly by a line one hundred and twenty-five (125) feet easterly of the Salem Town Line to the easterly line of Shannon Road; thence
- 3) Southerly by the easterly side of Shannon Road to a point one hundred and twenty-five (125) feet northerly of the Salem Town Line; thence
- 4) Easterly southerly and easterly again, by a line one hundred and twenty-five (125) feet northerly, and easterly of the Salem Town Line; and the Haverhill, Massachusetts State Line, to the southwestern side of Jericho Road; thence
- 5) Southeasterly by the southwestern side of Jericho Road to the Haverhill, Massachusetts State Line; thence
- 6) Easterly by the Haverhill, Massachusetts State Line to the point of beginning.

**620:1** Recreational/sports amenities and other public and common facilities that cannot otherwise be provided under conventional land development procedures and together with limited non-residential uses to support the same and the neighborhood shall be permitted in rural residential cluster developments located within the SCR Subdistrict. Such developments are hereinafter referred to as "Rural Residential and Recreational Cluster Developments" (RRRCD) and are subject to the following.

- a. such developments must contain a minimum of 250 acres,
- b. such development are included as part of a rural residential cluster development application, and

c. such developments also meet the requirements contained in this Ordinance.

**620:2** Tracts for non-residential use within a RRRCD, shall be delineated and legally described by metes and bounds and shall be shown on a site plan to be recorded in the Rockingham County Registry of deeds upon approval by the Planning Board.

**620:3** Non-residential uses within the RRRCD shall be limited to the following privately owned or publicly owned uses designed to serve the community at large with the following amenities:

- a. Sports facilities such as golf courses, health clubs and recreational and related facilities, (including a "Country club" banquet facility for not more than 650 people) but specifically excluding activities designed as spectator sports; the area of a RRRCD occupied by an outdoor sports facility, such as a golf course, may be used to fulfill certain minimum open space requirements of this ordinance.
- b. Food service facilities;
- c. Bank (branch);
- d. One neighborhood convenience store (2,000 sq. ft. total area);
- e. Professional buildings;
- f. Small retail shops not exceeding 6,000 sq. ft. in total area.
- g. Such non-residential accessory uses as may be permitted by this Ordinance.

**620:4 Open Space**

- a. All designated open space areas which are submitted by the applicant as part of, or in conjunction with, a RRRCD development shall be included in calculations for meeting the requirements for open space, buffers, and dwelling unit density as specified in Section Z600.
- b. Non-residential tracts within the RRRCD shall be exempted from the requirements of Sections Z600:17 unless such tracts are transferred by legal title to parties described in Section 620:8a (1) and (2) below.

**620:5** Within the SCR Subdistrict, and within a RRRCD whose occupancy is limited by covenants to elderly, as defined hereinbelow, multi-family Alternative Design Residential Buildings, as defined below, shall be permitted subject to the following:

- a. No such Alternative Design Residential Buildings shall exceed fifty-five (55) feet in height as calculated under Sections 501 and 503 of the International Building Code.
- b. Any Alternative Design Residential Buildings that exceed thirty-five (35) feet in height or that exceed four units per building shall be set back a minimum of four hundred (400) feet from the abutting property line and/or town roads.

- c. The term “Alternative Design Residential Buildings” means any residential housing structures which meet a zoning district’s density and use requirements, but which do not necessarily meet requirements for size, height, minimum yard, or number of units per structure contained elsewhere in this Ordinance.

**620:6**

- a. “Elderly” shall mean appropriately covenanted dwelling units which legally restrict, under the provisions of the Federal Fair Housing Act, and this ordinance occupancy to residents all of whom are fifty-five (55) years of age or older. To ensure the occupancy of elderly dwelling units by the elderly, the following covenants will be recorded on each Deed to a dwelling unit:”

- 1) *This covenant shall be enforced by the Homeowner’s Association and may be enforced by the Selectmen of the Town of Atkinson;*

This covenant shall run with the title to the dwelling unit and be binding on all successors-in-interest; and

- 2) *This dwelling unit has been approved by the Atkinson Planning Board, on the basis that it shall be occupied as the residence for and by persons all of whom are fifty-five (55) years of age or older and as such, it shall be so occupied.*

- b. To this end, dwelling units shall only be sold to buyers who execute an affidavit that:

- 1) The dwelling unit is to be occupied as the residence of persons all of whom are fifty-five (55) years or older;

- 2) Such buyers will not acquire the dwelling unit for purposes of or with the intent to resell or lease such dwelling unit so that the dwelling unit will be occupied by persons under the age of fifty-five (55) years, and;

- 3) All occupants are or will be at the time of closing, fifty-five (55) years of age or older.

- c. This covenant shall run for the benefit of the Town of Atkinson, a municipal corporation, situated in the State of New Hampshire, and may be enforced by the Selectmen of the Town of Atkinson and further shall be enforced by the Homeowner’s Association.

**620:7 Residential Density**

- a. Residential dwelling unit density shall conform to the requirements of the RR-2 District. However, in order to provide for private, non-subsidized elderly housing alternatives, and where public or community water systems, and municipal, public or community sewage treatment plants and services are available, the residential density within a RRRCD shall be calculated on the basis of four (4) bedrooms per one (1) acre lot.

- b. Any Alternative Design Residential Building that is greater than four (4) dwelling units per building and which contains one (1) bedroom dwelling units shall have

those one (1) bedroom dwelling units counted as if they were two (2) bedroom dwelling units for purposes of calculating the residential density.

- c. Such Alternative Design Residential Buildings shall be allowed to exceed four (4) units per building, but no exceed more than forty (40) units per building.

**620:8** All open space, outdoor recreational areas, including golf courses, and enclosed recreational and sports facilities which are part of a RRRCD shall be held by the owners of the RRRCD and shall be subject to the following conditions:

- a. All open space areas shall be held by the developer unless and/or until ownership and obligatory management of a designated tract, or any defined increment of it, is transferred by legal title and held by one or more of the following entities:
  - 1) In common, by all property owners within the tract, or portion of it to tenancy-in-common requirements set forth in Section Z600:17 of this Ordinance.
  - 2) In common, by all lot or unit owners which comprise the RRRCD in accordance with Section Z600:17 of this Ordinance.
  - 3) By a non-profit organization whose members undertake the cost of maintaining or operating the outdoor recreational area or enclosed facility.
  - 4) By a privately-held or publicly-held organization whose performance is guaranteed by recorded covenants running with the land to ensure operation and maintenance of the outdoor recreational areas and indoor facilities in accordance with the site plan. Such recorded covenants shall be enforceable by the Town of Atkinson.
- b. Land designated as non-residential open space and/or non-residential outdoor recreational area shall meet the following requirements:
  - 1) It shall be covenanted in perpetuity as open space.
  - 2) It shall be held by the owner(s) or successors in interest of the enterprise(s) for which said land use is used.
  - 3) It shall be permanently maintained for purposes of public or private recreation, conservation, park or public easements, water and sewerage systems and/or agriculture.
  - 4) It shall be integrated with the residential segment(s) of the RRRCD although residential units or lots need not front directly on such land.
- c. All agreements, deed restrictions, and methods of management of the land shall be approved by the Planning Board to ensure their compliance with the requirements of this Section.

**620:9** Site requirements shall include, but not be limited to the following:

- a. In order to limit the impact of the non-residential facilities within a RRRCD, no more than seven percent (7%) of the RRRCD shall be allotted to the siting of the non-residential buildings, and no more than twenty-five percent (25%) of said seven percent (7%) shall be occupied by the foundation footprints of the non-residential buildings themselves.
- b. Non-residential buildings shall be architecturally compatible with residential structures within the RRRCD.
- c. Non-residential uses shall have access from an interior road in the developments, shall be separated from residential areas by adequate visual screening and landscaping buffers, and shall be set back as follows:
  - 1) Front: No structure or parking area shall be closer than 30 feet from an internal roadway.
  - 2) Side and rear: No structure or parking area shall be closer than one hundred (100) feet from residential structures.
- d. Each non-residential use may have a maximum of one indirectly lighted sign not to exceed a sixteen (16) square-foot area. No sign shall be so illuminated as to cause a disturbance to neighboring residential units.

**620:10** Approval for each non-residential use shall run with the use initially permitted. Any changes in such use shall require Site Plan Review by the Planning Board for that building or use proposed to be change.

**620:11** Except as otherwise provided herein, and except to the extend such would be in conflict with the provisions of this Section 620, residential and non-residential uses shall be subject to all other applicable sections of this Ordinance as well as to all subdivision regulations, site plan development regulations, and other regulations and ordinances of the Town.

## **SECTION 630 PLANNED RESIDENTIAL AND RECREATIONAL DEVELOPMENT (DELETED 4/97)**

## **SECTION 640 RESIDENTIAL CONSERVATION DEVELOPMENTS**

### **640:1 Purpose and Requirements**

The purpose of this article is to encourage and provide incentives for conservation oriented development. The requirements for a project to be considered as a residential conservation development are:

- a. The development must be eligible for review as a Rural Cluster Residential Development as provided in Article VI, Section 600; and
- b. The development must feature energy efficient construction; and

- c. The development must have dedicated open space which guarantees public access and use of the open space.

#### **640:2 Authority**

The innovative land use control article is adopted under the authority of RSA 674:21. Notwithstanding other provisions of Atkinson's Zoning Ordinance, authority is hereby given to the Planning Board, as allowed under RSA 674:21, II, to issue a special use permit to modify the requirements for conservation developments to accommodate energy certification and site specific circumstances of the parcel being developed.

#### **640:3 Energy Efficient Requirements**

All construction in the development must meet baseline levels for energy efficient construction by using either the National Green Building Standard (NGBS ICC 700) bronze level or higher verification, or the U.S. Green Building Council Leadership in Energy and Environmental Design (LEED) program's baseline or higher certification. The choice of which of these minimum standards to use at the discretion of the developer. The Planning Board may, at its discretion, issue a special use permit to use a different energy efficient building standard providing it has provisions for independent certification.

#### **640:4 Open Space Requirements**

To qualify for consideration, a development must dedicate 50% of the total parcel area as open space and 50% of the open space must be Contiguous Public Access Open Space (CPAOS). The CPAOS must be deeded to the Town of Atkinson (under RSA 36-A:4) or placed under an easement with an appropriate conservation organization.

The Planning Board May issue a Special Use Permit to allow the CPAOS to not be contiguous due to special site conditions or compelling public purpose.

If the easement is not held by the Town of Atkinson the easement holder shall be a qualified organization within the meaning of Section 170 (h) (3) of the United States Internal Revenue Code of 1954 as presently amended and as the same way hereafter be amended or changed from time to time, which organization has among its purposes the conservation or preservation of land and water areas. The easement holder shall have the power to assign the easement to a like organization. The developer shall bear the cost of endowing the easement and easement monitoring. This cost shall be determined by the easement holder and proof that an easement deed to a suitable organization has been filed shall be a condition of final approval of the development.

#### **640:5 Open Space Design Criteria**

Areas containing the following shall be considered high priority for inclusion in the CPAOS:

- a. Prime wetlands, riparian areas, wetlands, streams and buffers for those resources
- b. Critical or high quality wildlife habitat areas
- c. Significant stands of trees or significant individual trees

- d. Cultural and historic resources (e.g., stone walls, historic homes and structures)
- e. Existing trails, old farm roads, cart paths
- f. Areas that connect to undeveloped open space on adjacent properties
- g. Ridgelines, particularly those that continue through the parcel
- h. Viewshed areas and scenic vistas
- i. Public water supply sources and water supply protection buffers

The CPAOS must primarily consist of land which is accessible and usable by the public, or which meets some compelling public purpose. The planning board shall consult with and seek a recommendation from the conservation commission about the design of the CPAOS and, if in the opinion of the planning board the CPAOS meets these criteria the CPAOS criteria will be satisfied when the project is implemented according to the CPAOS design.

#### **640:6 Open Space Uses**

Any use of the CPAOS is subject to approval of the planning board and conservation commission and shall demonstrate that such uses will not negatively impact the natural amenities preserved through the conservation subdivision design.

The following uses generally are permitted in the CPAOS, unless specifically prohibited or restricted as a condition of subdivision approval to protect important natural features or characteristics of the parcel:

- a. Forest management
- b. Agricultural cultivation and pastures
- c. Passive (non-motorized) trails and recreational uses
- d. Snowmobile trails
- e. Hunting and fishing
- f. Utility infrastructure, including community wells
- g. Parking areas for access to the CPAOS

The following uses are generally too intrusive to be permitted in either the open space or the CPAOS:

- a. Cell phone towers
- b. Water towers

### **640:5 Open Space Protection**

The CPAOS shall be retained in a natural, undisturbed state, except for those activities permitted and approved as provided above, or as required for active management according to a conservation agreement and management plan written by a qualified natural resource professional.

The removal of soils, trees and other natural features from the designated open space is prohibited, except as consistent with conservation objectives or permitted uses as provided above.

### **640:8 Incentive System**

The maximum number of living units permitted shall be determined using soil based lot sizing as defined by the Society of Soils Scientists of Norther New England (SSSNNE) Special Publication #4, "Soil Based Lot Sizing", Version 1. (September 2003, as revised)

- a. The development may include single family, duplex, or multi-family units with up to eight units per building.
- b. The parcel size of 20 and 30 acres for multi-family structures (section 600:9) shall be reduced to 10 acres.
- c. The requirement under 600:5-a of 300 feet distance from a town road for three (3) to eight (8) townhouse structures shall be reduced to 200 feet.

### **640:9 Conceptual Design Review**

All applicants considering a residential conservation development are encouraged to participate in a preliminary design review with the Planning Board and conservation commission to discuss the characteristics of the site and proposed development plan in conceptual terms.

### **640:10 Conservation Development Occupancy Permit Requirements**

No Certificate of Occupancy shall be issued by the Town of Atkinson for any unit in a conservation development until a Leadership in Energy and Environmental Design (LEED) Certificate, proof of National Green Building Standards (NGBS) verification or proof of energy efficiency (if a special use permit allows a different standard) has been filed with the Planning Office.

### **640:11 Relationship to Other Ordinances and Regulations**

No portion of this ordinance shall nullify the provisions of any other town ordinance provisions which relate to environmental protection, water supply, sanitary disposal, traffic safety, and fire and life safety protection. Where applicants propose a conservation development of single family homes or mixed single family and multi-family homes, all provisions of the subdivision and site plan regulations shall apply unless waived by the Planning Board. Where applicants propose a conservation development consisting of multi-family units or mixed commercial and multi-family units, the site plan regulations shall apply unless waived by the Planning Board.

**640:12 Conflict**

If any provision of this ordinance is in conflict with the provisions of other ordinances, the more restrictive ordinance shall apply, except for any provision relating to lot size, setbacks or density, in which case the provisions of this ordinance shall apply.

## ARTICLE VII: NONCONFORMING USES

### SECTION 700 NONCONFORMING USES

**700:1** Any nonconforming use, as that term is defined in Article III, may be continued in its present form except as provided herein:

- a. No extension, expansion, enlargement, or alteration of a nonconforming use will be allowed without the granting of a Special Exception by the Board of Adjustment. This Special Exception shall be issued in the form of a special permit which shall expire within one (1) year unless acted upon by the permittee.
- b. A nonconforming use of a building or premises which has been abandoned shall not thereafter be returned to such nonconforming use. When any nonconforming use of a structure is abandoned for a period in excess of one year, the structure shall not thereafter be used except in conformance with the regulations of the district in which it is located.
- c. A nonconforming use may not be changed subsequently to another nonconforming use of the same premises.
- d. Nothing in this ordinance shall prevent the reconstruction, repairing, rebuilding, and continued use of any nonconforming building or structure damaged by fire, collapse, explosion, or Acts of God, subsequent to the date of the ordinance, provided that the restoration activity commences within two (2) years of the damaged incident. Such restoration will not require a variance. (3/10/2009)
- e. A Special Exception shall be granted by the Board of Adjustment provided the following conditions are met for the non-conforming use:
  - 1) There is no diminution of the value of surrounding properties.
  - 2) It would be of benefit to the public interest.
  - 3) It would result in substantial justice being done.
  - 4) It would comply with Sections WS300 of the Atkinson Water Supply and Sewage Disposal Regulations
- f. OTHER NON-CONFORMING USES:

Business uses, which have existed for at least 20 years under continuous common ownership shall be granted a Special Exception from the Zoning Board of Adjustment once the following procedures are met:

The Applicant shall submit a sworn affidavit attesting and confirming that:

- 1) The applicant has owned and operated the business for at least 20 continuous years.

- 2) The uses of the property during that 20-year period were open and discoverable.

Once the special exception is granted, the applicant shall submit a present site plan depicting the present physical aspects of the property. This will be used as a guideline for any future changes, which must be approved by the Zoning Board of Adjustment. Also, the business must then comply with current annual town inspections. (2001)

**700:2 Seasonal Conversion**

A change in the status of a dwelling from a seasonal, recreational, or secondary home to a home which is intended to be used as a primary or year-round dwelling shall be considered a change in the use of the existing building according to the building code of the Town of Atkinson and shall require upgrading to state and local water supply and sewage disposal regulations in effect at the time of such change in status. Before any permits for structural alteration or change in use are issued by the Building Inspector and the Health Officer, a special exception from the Board of Adjustment shall be obtained, the granting of which shall include, but not be limited to, compliance with the following requirements:

- a. A review by the Health Officer.
- b. Compliance with Sections WS300 of Atkinson's Water Supply and Sewage Disposal Regulations.
- c. Written consent by the New Hampshire Water Supply and Pollution Control Commission (NHWSPCC).

**700:3** Automobile and vehicle repair and or sales are not a home business within the intent of this ordinance and such businesses are to take place only in the commercial and commercial-industrial districts of the town. Existing non-conforming businesses of this type shall not be enlarged or expanded. Nothing in this article shall be construed as preventing a homeowner/resident from repairing his own vehicle on his own property or occasional sale of the homeowner's/residents private vehicle.

**700:4** Any owner or resident of a home damaged due to fire, flood, or acts of God may place a manufactured or mobile home or trailer on his/her property during a rebuilding of such residence. A two-year occupancy permit for residency in the temporary home or trailer is required and shall be issued by the Building Inspector after all utility connections are determined to be in compliance with electrical and sanitary codes. (1987 and 3/10/2009)

**700:5** The Board of Selectmen may issue a six-month occupancy permit for residency in a manufactured or mobile home or trailer on property where a new residence is under construction. Such permit shall be subject to renewal for a further six-month period provided there is substantial progress shown in the construction of the residence.

## **(1987) ARTICLE VIII: WIRELESS COMMUNICATIONS FACILITIES**

**(Adopted 2000)**

### **SECTION 800: WIRELESS COMMUNICATIONS FACILITIES**

#### **800:1 Purpose**

The purpose of this Article is to establish regulations for the siting of Wireless Communications Facilities (WCF), within the Town of Atkinson, while balancing the interest of Residents, Telecommunication Providers and their Customers, and ensuring coordinated development that minimizes adverse impacts.

#### **800:2 Applicability**

- a. The terms of this article shall apply to WCF proposed to be located on Town property, on privately owner property, and on property owned by any other governmental entity.
- b. WCF shall not be considered essential services, infrastructure, non-public utilities as defined or used elsewhere in the Town's ordinance and regulations. Siting for WCF is a use of land, and as such is subject to the Town's zoning ordinance and other applicable regulation.
- c. This Article shall not govern any tower or installation of any antenna that is owned and operated by a federally licensed amateur radio operator when the tower or antenna is used for the exclusive purpose of amateur radio operations.

#### **800:3 District Regulations and Siting Standards**

- a. All new WCF installations shall be subject to Planning Board Site Plan Approval. Applications for collocation of antenna on existing facilities shall be expedited unless there is additional impact on the site. All WCF installations will require a Building Permit.
- b. Antennas or towers located on property owned, leased, or otherwise controlled by the Town are exempt from the siting requirements of Article VIII, Section 800:3 c through i, provided the facility will be at least partially available for public purpose. Such Town property must be at least 350 feet above sea level. (2007)
- c. WCF which utilize towers, are a permitted use in the Industrial Zone.
- d. WCF which utilize Alternative Facilities and Technologies may be permitted in all Zones.
- e. Collocation is encouraged.
- f. Height, tower facilities: must be less than 200 feet above the average existing ground level adjoining the structure.

- g. Height, alternative facilities: May be permitted to increase the height of existing structures no more than 20 feet. This increase shall only be permitted once for each structure.
- h. Setbacks, Tower facilities: All towers shall comply with the building setback provisions of the zoning district where located.
- i. Fall Zone, Tower Facilities: The minimum distance from the base of a tower to any property line, roadway, dwelling, business, institution, recreation area, parking area or other public area shall be at a minimum, the distance equal to the height of the facility.
- j. All towers shall be self-supporting types. (2007)
- k. To ensure the structural integrity of towers and antennas, the owner of a tower shall ensure that it is constructed and maintained in compliance with standards contained in local and state building codes. (2007)
- l. When any WCF is proposed which may be visible from any other New Hampshire municipality within a 20-mile radius, there shall be a written notification of such application to all those municipalities. Notification shall be at the applicant's expense as part of the abutter notification procedure of the application. (2007)

**800:4 Lighting, Signage, Security**

- a. Lighting:
  - 1) WCF shall be lighted only if the FAA requires for navigational purposes.
  - 2) Lighting for equipment shelters shall be shielded from abutting properties.
- b. Signage: Signs shall be limited to those required for cautionary and advisory purposes. No logos, banners, flags or combinations of paint colors associated with corporate identification will be allowed.
- c. Security: WCF Towers shall be surrounded by a security barrier.

**800:5 Abandonment**

Each commercial carrier who receives approval for a WCF shall post financial surety (bond, letter of credit, or case escrow account) to guarantee that the facility will be dismantled and removed, within 90 days of notice from the Town, when the facility is no longer being used (after 1 year of non use) for the wireless communications purpose for which is was originally permitted.

**800:6 Severability**

The invalidity of any subsection or provision of this Article shall not invalidate any other subsection or provision thereof.

## ARTICLE IX: ENFORCEMENT

### SECTION 900 ENFORCEMENT

- 900:1** It shall be the duty of the Board of Selectmen, and the Board is hereby given power and authority, to enforce the provisions of this ordinance. (1959)
- 900:2** There shall be a Building Inspector who shall administer the provisions of this ordinance and report violations to the Board of Selectmen.
- 900:3** The Board of Selectmen shall annually appoint a Building Inspector. In the event of death, disability, resignation, or disqualification of the Building Inspector, the Selectmen shall appoint a Building Inspector to serve in his place. The Board of Selectmen may, for cause and majority vote, disqualify the Building Inspector at any time.
- 900:4** The Building Inspector shall issue any and all permits requested when such a permit is in accordance with the provisions of this ordinance. Application for a permit shall be made on forms provided by the Building Inspector. (1959)
- 900:5** After passage of this ordinance, it shall be unlawful to erect any building or alter the bulk of any building or relocate any building or change the use of any land or building without first obtaining a permit from the Building Inspector. (1959)
- 900:6** Deleted (1991)
- 900:7** Exteriors of a building shall be completed within two (2) years from the date of issue of the foundation permit, regardless of yearly renewal. (1999)
- 900:8** In case any building or structure or part thereof is or is proposed to be erected, constructed, altered, or reconstructed, or any land is or is proposed to be used in violation of this ordinance, the Building Inspector or Town Counsel, or the owner of any adjacent or neighboring property who would be specially damaged by such violation, may, in addition to other remedies provided by law, institute injunction, mandamus, abatement, or any other appropriate action or proceeding to prevent or enjoin or abate or remove such unlawful erection, construction, alteration, or reconstruction. (1984)

## ARTICLE X: BOARD OF ADJUSTMENT

### SECTION 1000 BOARD OF ADJUSTMENT

- 1000:1** Within thirty (30) days after the adoption of this ordinance and thereafter as terms expire or vacancies occur, the Board of Selectmen shall make appointments to a Board of Adjustment of five members conforming in duties to the provisions of Chapters 673 and 674 of the New Hampshire Revised Statutes Annotated. Thereafter as terms expire or vacancies occur, the appointing authority shall be responsible for filling vacancies and maintaining full membership of the Board of Adjustment.
- 1000:2** The Board of Adjustment shall conform in membership and term of office to the provisions of Chapter 673, New Hampshire Revised Statutes Annotated as amended, 1984.
- 1000:3** In addition to the general powers granted said Board by Chapter 673, it may, in harmony with and subject to its provisions:
- a. Permit in a Commercial district manufacturing which is incidental to a retail business where articles are sold at retail on the premises and where not more than five (5) operators are employed in such manufacturing.(1997)

## **ARTICLE XI: AMENDMENTS**

### **SECTION 1100 AMENDMENTS**

**1100:1** This ordinance may be amended pursuant to the Revised Statutes Annotated of the State of New Hampshire as amended. (1981)

## **ARTICLE XII: PENALTY**

### **SECTION 1200 PENALTIES AND REMEDIES**

**1200:1** Any violation of the zoning ordinance subdivision regulations, or site development plan review regulations, shall be made punishable pursuant to RSA 676:17, as amended. (3/10/2009)

## **ARTICLE XIII: SAVING CLAUSE**

### **SECTION 1300 SAVING CLAUSE**

**1300:1** The invalidity of any provision of this ordinance shall not affect the validity of any other provision.(1959)

## **ARTICLE XIV: EFFECTIVE DATE**

### **SECTION 1400 EFFECTIVE DATE**

**1400:1** This ordinance shall take effect upon its passage. (1959)

## ARTICLE XV: REPEAL OF PRIOR ORDINANCES

### SECTION 1500 REPEAL OF PRIOR ORDINANCES

- 1500:1** Any and all zoning ordinances heretofore enacted by the Town of Atkinson are hereby repealed.
- 1500:2** Adopted October 20, 1959.
- 1500:3** Amended March 10, 1964; March 9, 1965; October 11, 1966; March 12, 1968; March 7, 1972; March 6, 1973; March 5, 1974; March 4, 1975; March 2, 1976; June 7, 1978; March 13, 1979; March 11, 1980; March 14, 1981; March 9, 1982; March 17, 1984; March 12, 1985; April 23, 1985; March 11, 1986; March 10, 1987; March 8, 1988; November 8, 1988; March 14, 1989; March 13, 1990; March 12, 1991; February 12, 1992; March 10, 1992; April 29, 1992; June 13, 1992; March 9, 1993; March 8, 1994; March 14, 1995; April 8, 1997; March 10, 1998; March 9, 1999; March 14, 2000, March 13, 2001, March 12, 2002, March 11, 2003, March 9, 2004, March 14, 2006, December 20, 2006, March 13, 2007, March 11, 2008, March 10, 2009, March 9, 2010, December 21, 2010, March 8, 2011, March 13, 2012 and March 21, 2017.

## **ARTICLE XVI: PUBLIC SCHOOL IMPACT FEES**

**(Adopted 3/10/98)**

### **SECTION 1600: PUBLIC SCHOOL IMPACT FEES**

#### **1600:1 Authority**

This Ordinance is established pursuant to NHRSA §674:21, I(m) as an innovative land use control.

#### **1600:2 Purpose**

This Ordinance is intended to:

- a. Provide adequate school system capacity to accommodate increasing public school enrollment generated by new residential development in the Town of Atkinson;
- b. Assess an equitable proportion of growth-related capital facility costs of school capacity to new residential development in proportion to the demands created by that development.

#### **1600:3 Findings**

The voters of the Town of Atkinson have made the following findings:

- a. This Ordinance is consistent with the Master Plan adopted by the Atkinson Planning Board in 1990.
- b. This Ordinance is consistent with the Capital Improvements Program prepared and adopted by the Atkinson Planning Board in 1990.
- c. The impact fee methodology and supporting study ("Methodology for the Calculation of School Impact Fees in the Towns of the Timberlane Regional School District", dated September 22, 1997, prepared by Bruce C. Mayberry, Planning Consultant), hereafter referred to as "the methodology and supporting study" are reasonable, proportional, support this Article, and are consistent with NHRSA §674:21, V.;
- d. Recent and projected growth rates necessitate an excessive expenditure of public funds in order to maintain adequate facility standards and to promote and protect the public health, safety and welfare;
- e. Each type of residential development described in the methodology and supporting study will create a need for construction, equipping or expansion of public capital facilities of the District for education;
- f. The imposition of public school impact fees is one of the methods of insuring that public expenditures are not excessive and that new residential development

supports a proportionate share of the cost of public capital facilities necessary to accommodate the development;

- g. The fees adopted are derived from and do not exceed the costs of:
  - 1) Providing additional public capital facilities for education as necessitated by or benefitting the new residential development from which the fees were levied;
  - 2) Compensating the Town of Atkinson for expenditures made for existing public education facilities that were constructed or financed in anticipation of future residential growth.
- h. This Ordinance sets forth and is based upon a reasonable methodology and analysis for determination of the impact of new residential development on the need for and costs of public capital educational facilities in the District and for Atkinson, and provides a rational nexus between the impacts of new residential development and the assessment of fees pursuant to this Ordinance;
- i. The Timberlane School District provides an efficient and effective way for each Town within the District to provide educational services for its citizens and that combining their resources in the District, pursuant to the intermunicipal agreement and the Ordinance, regardless of the location of a particular public educational facility, is a reasonable, efficient and effective way to provide public educational services to citizens of the District and is consistent with New Hampshire law and the Articles of Agreement of the Timberlane Regional School District as entered into (and amended) by the Town of Atkinson;
- j. It is reasonable, equitable and consistent with the supporting methodology that this Public School Impact Fee Ordinance apply to all unbuilt units in previously approved subdivisions;
- k. Impact fees collected for recoupments meet the legal requirements for collection, are supported by the methodology and supporting study, and the amount is reasonable.

#### **1600:4 Definitions**

- a. **Feepayer:** The applicant named on the application for a building permit for any activity which will result in new residential construction of any kind, or the alteration or conversion of any structure which results in a net increase of one or more residential dwelling units.
- b. **New Residential Development:** Any activity which creates a net increase in the number of residential dwelling units within the Town of Atkinson, whether through new construction or conversion of existing structures.
- c. **School Capital Facilities:** Public educational facilities and equipment owned by the Timberlane Regional School District.

**1600:5 Imposition of School Capital Facilities Impact Fee**

- a. Any applicant, who, upon the adoption of this Ordinance, seeks a building permit for any activity which will create a net increase in residential dwelling units in the Town of Atkinson, is hereby required to pay a school impact fee in the manner and amount set forth in this Ordinance and the methodology and supporting study as referenced above.
- b. An applicant may request from the Planning Board a partial or full waiver of school impact fee payments in amounts equal to the value of land, facilities construction, or other contributions toward school capital facilities.
- c. No building permit for new residential development requiring payment of a school impact fee shall be issued until the amount of the school impact fee has been determined by the Selectmen or their assigns.
- d. An applicant undertaking the development of dwelling units for occupancy by persons age 55 and over, and only where such occupancy shall be maintained through deed restrictions or through compliance with Federal Programs, may apply for a Waiver from the Planning Board to be exempted from School Impact Fees otherwise required by this article. Waiver Criteria to be met are: (2007)
  - 1. Development shall not create an impact on education costs for the School District.
  - 2. Development shall have a Home Owners Association, with Bylaws and Procedures to assure the over 55 status of all residents is maintained.

**1600:6 Computation of School Impact Fee**

- a. The amount of the school impact fee shall be determined by the Recommended Impact Fee Assessment Schedule contained in the *Methodology for the Calculation of School Impact Fees in the Towns of the Timberlane Regional School District*, September 22, 1997 (page 27) which is included by reference as part of this Ordinance.
- b. The school impact fee methodology and supporting study including the assessment schedule may be updated annually, subject to the adoption of such changes by the Planning Board. Such updates may provide for adjustments based upon the most recent data available from the U.S. Census, local school enrollment data, estimates of the number of housing units in Atkinson, property tax assessment data, interest and discount rates, and current construction cost information.
- c. In the case of residential units created by a change of use, redevelopment, or expansion or modification of an existing use, the school impact fee shall be based upon the net positive increase in the number of dwelling units resulting from the development.

### **1600:7 Payment of School Impact Fees**

No building permit shall be issued for new residential development until the feepayer has established an acceptable schedule for payment of such fee with the Town of Atkinson. No Certificate of Occupancy shall be issued for new residential development which is subject to a school impact fee assessment until such time as the fee is paid in full.

### **1600:8 Appeals**

- a. Disputes regarding the amount of the school impact fee may be submitted to the Planning Board, provided that an independent school impact fee calculation study for the new residential development is provided to the Board for consideration. The Planning Board shall review the submitted study and render its decision. Any and all costs incurred by the Town in the review of such a study shall be paid by the feepayer.
- b. The decision of the Planning Board may be appealed to the Superior Court as provided by NHRSA §677:15.

### **1600:9 Administration of Funds Collected**

- a. All school impact fees collected shall be properly identified and promptly transferred for deposit into a School Impact Fee Account. This account shall be considered a special revenue fund account, and under no circumstances shall school impact fee revenues or interest accrued thereto be transferred into the General Fund.
- b. The Town Treasurer shall have custody of all school impact fee accounts, and shall pay out the same only upon written orders of the Board of Selectmen. The Board of Selectmen shall annually order the release of school impact fee accounts to the Timberlane Regional School District, upon a demonstration by the District that programmed expenditures are eligible for reimbursement by school impact fees.

The Town Treasurer shall record and maintain the date, the person(s) making payment, and the tax map and lot reference number of the property of all school impact fees which have been paid under this Ordinance for a period of no less than six years from the date of payment. At the end of each fiscal year, the Town Treasurer shall make a report to the Board of Selectmen and the Timberlane Regional School District, providing a detailed account of all school impact fee transactions made during the year.

- c. Funds withdrawn from the School Impact Fee Account shall be used solely for transfer to the Timberlane Regional School District for the purpose of funding the planning, design, construction, expansion, or equipping of public school facilities in the Timberlane Regional School District. Impact fees may be used to reimburse the Timberlane Regional School District for the value of public school capacity already constructed in anticipation of growth, or school capacity to be developed in the future to meet the growth demands. Impact fees may also be used by the Timberlane Regional School District to pay debt service on such

bonds or similar debt instruments, to the extent that such expenditures are related to developing capacity within the Timberlane Regional School District.

**1600:10 Refund of Fees**

- a. FeePAYERS may apply to the Board of Selectmen for a refund of the school impact fee, plus accrued interest, six (6) years from the date of collection of said fee. A refund will only be due if the Timberlane Regional School District has failed to appropriate said fee(s) on public school facility capacity improvements as defined herein.
- b. The Board of Selectmen shall annually provide all feepayers of record who are due a refund of a school impact fee, a written notice of the amount due, including accrued interest.

**1600:11 Scattered and Premature Development**

No provision of this Ordinance shall limit the authority of the Atkinson Planning Board to protect against development which is scattered and premature as provided in NHRSA §674:36 II; requires an excessive expenditure of public funds; or is otherwise contrary to the Town of Atkinson Zoning Ordinance, Subdivision Regulations, or Site Development Plan Regulations.

**1600:12 Review of Fee Calculations**

The school impact fee assessment schedule contained in the *Methodology for the Calculation of School Impact Fees in the Towns of the Timberlane School District*, September 22, 1997, shall be reviewed by the Board of Selectmen and the Planning Board at least once every five years, and may be periodically amended after a public hearing of the Planning Board, although the schedule may be amended no more frequently than annually.

---

## ARTICLE XVII: MS4 ILLICIT DISCHARGE DETECTION AND ELIMINATION

(Adopted 3/12/19)

### 1700.1 PURPOSE AND INTENT

The purpose of the Illicit Discharge Detection and Elimination (IDDE) ordinance is to provide for the health, safety, and general welfare of the citizens of Atkinson through the regulation of non-storm water discharges to the storm drainage system to the maximum extent practicable as required by federal and state law. The IDDE ordinance establishes methods for controlling the introduction of pollutants into the municipal separate storm sewer system (MS4) in order to comply with requirements of the EPA National Pollutant Discharge Elimination System (NPDES) and MS4 permit process. The objectives of this ordinance are to:

Regulate the contribution of pollutants to the MS4 by storm water discharges by any user.

1. Prohibit illicit connections and discharges to the MS4.
2. Establish legal authority to carry out all inspection, surveillance, monitoring, and enforcement procedures necessary to ensure compliance with this ordinance.

### 1700.2 DEFINITIONS

For the purposes of this ordinance, the following terms shall mean:

- a. **Authorized Enforcement Agency**. Employees or designees of the Board of Selectmen designated to enforce this ordinance.
- b. **Best Management Practices (BMPs)**. Schedules of activities, prohibitions of practices, general good housekeeping practices, pollution prevention and educational practices, maintenance procedures, and other management practices to prevent or reduce the discharge of pollutants directly or indirectly to storm water, receiving waters, or storm water conveyance systems. BMPs also include treatment practices, operating procedures, and practices to control site runoff, spillage or leaks, sludge or water disposal, or drainage from raw materials storage.
- c. **Illegal Discharge**. Any direct or indirect non-storm water discharge to the storm drain system, except as exempted in Section 8 of this ordinance.
- d. **Illicit Connections**. An illicit connection is defined as either of the following:
- e. Any drain or conveyance, whether on the surface or subsurface that allows an illegal discharge to enter the storm drain system including but not limited to any conveyances that allow any non-storm water discharge including sewage, process wastewater, and wash water to enter the storm drain system and any connections to the storm drain system from indoor drains and sinks, regardless of whether said drain or connection had been previously allowed, permitted, or approved by an authorized enforcement agency or,
- f. Any drain or conveyance connected from a commercial or industrial land use to the storm drain system that has not been documented in plans, maps, or equivalent records

and approved by an authorized enforcement agency.

- g. **Industrial Activity**. Activities subject to NPDES Industrial Storm Water Permits as defined in 40 CFR, Section 122.26 (b)(14).
- h. **Municipal Separate Storm Sewer System (MS4)**. The system of conveyances (including sidewalks, roads with drainage systems, municipal streets, catch basins, curbs, gutters, ditches, man-made channels, or storm drains) owned and operated by the Town of Atkinson and designed or used for collecting or conveying storm water, and that is not used for collecting or conveying sewage.
- i. **National Pollutant Discharge Elimination System (NPDES) Storm Water Discharge Permit**. means a permit issued by EPA (or by a State under authority delegated pursuant to 33 USC § 1342(b)) that authorizes the discharge of pollutants to waters of the United States, whether the permit is applicable on an individual, group, or general area-wide basis.
- j. **Non-Storm Water Discharge**. Any discharge to the storm drain system that is not composed entirely of storm water.
- k. **Pollutant**. Anything which causes or contributes to pollution. Pollutants may include, but are not limited to: paints, varnishes, and solvents; oil and other automotive fluids; non-hazardous liquid and solid wastes and yard wastes; refuse, rubbish, garbage, litter, or other discarded or abandoned objects, ordinances, and accumulations, so that same may cause or contribute to pollution; floatables; pesticides, herbicides, and fertilizers; hazardous substances and wastes; sewage, fecal coliform and pathogens; dissolved and particulate metals; animal wastes; wastes and residues that result from constructing a building or structure; and noxious or offensive matter of any kind.
- l. **Storm Drainage System**. Publicly-owned facilities by which storm water is collected and/or conveyed, including but not limited to any roads with drainage systems, municipal streets, gutters, curbs, inlets, piped storm drains, pumping facilities, retention and detention basins, natural and human-made or altered drainage channels, reservoirs, and other drainage structures.
- m. **Storm Water**. Any surface flow, runoff, and drainage consisting entirely of water from any form of natural precipitation and resulting from such precipitation.
- n. **Storm Water Management Plan**. A document which describes the Best Management Practices and activities to be implemented by a person or business to identify sources of pollution or contamination at a site and the actions to eliminate or reduce pollutant discharges to Storm Water, Storm Water Conveyance Systems, and/or Receiving Waters to the Maximum Extent Practicable.
- o. **Wastewater**. Any water or other liquid, other than uncontaminated storm water, discharged from a facility.

### 1700.3. APPLICABILITY

This ordinance shall apply to all water, pollutants or other substances entering the storm drain system generated on any developed and undeveloped lands unless explicitly exempted by the

Board of Selectmen.

#### **1700.4 COMPATIBILITY WITH OTHER REGULATIONS**

The requirements of this ordinance are in addition to the requirements of any other ordinance, rule, regulation, or other provision of law, and where any provision of this ordinance imposes restrictions different from those imposed by any other ordinance, rule, regulation, or other provision of law, whichever provision is more restrictive or imposes higher protective standards for human health or the environment shall control.

#### **1700.5 DISCHARGE PROHIBITIONS**

##### **1700.5.1 Prohibition of Illegal Discharges**

No person shall throw, drain, or otherwise discharge, cause, or allow others under its control to throw, drain, or otherwise discharge into the MS4 any pollutants or waters containing any pollutants, other than storm water.

The commencement, conduct or continuance of any illegal discharge to the storm drain system is prohibited except as described as follows and if it is determined that the activity is causing an adverse impact:

1. The following discharges are exempt from discharge prohibitions established by this ordinance: water line flushing, landscape irrigation, diverted stream flows, rising ground waters, uncontaminated ground water infiltration, uncontaminated pumped ground water, discharges from potable water sources, foundation drains, air conditioning condensation, irrigation water, springs, water from crawl space pumps, footing drains, lawn watering, individual residential car washing, flows from riparian habitats and wetlands, dechlorinated swimming pool discharges, and street wash water.
2. Discharges or flow from firefighting, and other discharges specified in writing by the Board of Selectmen as being necessary to protect public health and safety.
3. Discharges associated with dye testing, however this activity requires a verbal notification to the Board of Selectmen prior to the time of the test.
4. The prohibition shall not apply to any non-storm water discharge permitted under an NPDES permit, waiver, or waste discharge order issued to the discharger and administered under the authority of the United States Environmental Protection Agency (EPA).

##### **1700.5.2 Prohibition of Illicit Connections**

1. The construction, use, maintenance or continued existence of illicit connections to the storm drain system is prohibited.
2. The prohibition in #1 expressly includes, without limitation, illicit connections made in the past, regardless of whether the connection was permissible under law or practices applicable or prevailing at the time of connection.
3. A person is considered to be in violation of this ordinance if the person connects a line

conveying sewage to the MS4 system or allows such a connection to continue.

4. Improper connections in violation of this ordinance must be disconnected and redirected, if necessary, to an approved onsite wastewater management system or the sanitary sewer system upon approval of the Board of Selectmen.
5. Any drain or conveyance that has not been documented in plans, maps or equivalent, and which may be connected to the storm sewer system, shall be located by the owner or occupant of that property upon receipt of written notice of violation from the Board of Selectmen requiring that such locating be completed. Such notice will specify a reasonable time period within which the location of the drain or conveyance is to be determined, that the drain or conveyance be identified as storm sewer, sanitary sewer or other, and that the outfall location or point of connection to the storm sewer system or other stormwater discharge point be identified. Results of these investigations are to be documented and provided to the Board of Selectmen.

#### **1700.6 SURFACE WATER PROTECTION**

Every person owning property through which surface waters or a watercourse passes, or such person's lessee, shall keep and maintain that part of the surface waters or watercourse within the property free of trash, debris, excessive vegetation, and other obstacles that would pollute, contaminate, or significantly retard the flow of water through the watercourse. In addition, the owner or lessee shall maintain existing privately owned structures within or adjacent to a watercourse, so that such structures will not become a hazard to the use, function, or physical integrity of the watercourse.

#### **1700.7 REQUIREMENT TO PREVENT, CONTROL, AND REDUCE STORM WATER POLLUTANTS BY THE USE OF BEST MANAGEMENT PRACTICES**

The Board of Selectmen will adopt requirements identifying Best Management Practices for any activity, operation, or facility which may cause or contribute to pollution or contamination of storm water, the storm drain system, or waters of the United States.

#### **1700.8 NOTIFICATION OF SPILLS**

Notwithstanding other requirements of law, as soon as any person responsible for a facility or operation, or responsible for emergency response for a facility or operation has information of any known or suspected release of materials which are resulting or may result in illegal discharges or pollutants discharging into storm water, the storm drain system, or waters of the United States, said person shall take all necessary steps to ensure the discovery, containment, and cleanup of such release. Failure to provide notification of a release as provided above is a violation of this ordinance.

#### **1700.9 VIOLATIONS, ENFORCEMENT, AND PENALTIES**

##### **1700.9.1 Violations.**

It shall be unlawful for any person to violate any provision or fail to comply with any of the requirements of this ordinance. Any person who has violated or continues to violate the provisions of this ordinance, may be subject to the enforcement actions outlined in this section or may be restrained by injunction or otherwise abated in a manner provided by law.

In the event the violation constitutes an immediate danger to public health or public safety, the Board of Selectmen is authorized to enter upon the subject private property, without giving prior notice, to take any and all measures necessary to abate the violation and/or restore the property. The Board of Selectmen is authorized to seek costs of the abatement as outlined in Section 17.

#### **1700.9.2 Warning Notice.**

When the Board of Selectmen finds that any person has violated, or continues to violate, any provision of this ordinance, or any order issued hereunder, the Board of Selectmen may serve upon that person a written Warning Notice, specifying the particular violation believed to have occurred and requesting the discharger to immediately investigate the matter and to seek a resolution whereby any offending discharge will cease. Investigation and/or resolution of the matter in response to the Warning Notice in no way relieves the alleged violator of liability for any violations occurring before or after receipt of the Warning Notice.

#### **1700.9.3 Suspension of MS4 Access due to the Detection of Illicit Discharge**

Any person discharging to the MS4 in violation of this ordinance may have their MS4 access terminated if such termination would abate or reduce an illicit discharge. The Board of Selectmen will notify a violator of the proposed termination of its MS4 access. The violator may petition the Board of Selectmen for a reconsideration and hearing.

A person commits an offense if the person reinstates MS4 access to premises terminated pursuant to this Section, without the prior approval of the Board of Selectmen.

The Town of Atkinson IDDE Administrative Program Implementation Procedure is available in the Board of Selectmen's Office at Town Hall, 21 Academy Ave, Atkinson, NH 03811.

## REVISION HISTORY:

12/10/97

**1500:3.A.** 1990 added (date confirmed)

**1500:3.B.** 1990 added (date conformed)

**1500:3.C. & 1500:6.A. & 1500:12.** Amended date of document from 9/5/97 to 9/22/97.

**1500:3.G.** .....adopted are derived **and** from and.... *deleted "and"*

**1500:5.C.** Removed reference to Building Inspector.

**1500:7\*\*\*** *Add the following bolded language to the end of the existing sentence as follows:*

...as the fee is paid in full **regardless of when the building permit was issued.**

**1500:10.A.** Amended as follows:

## ORIGINAL LANGAUGE:

FeePAYERS may apply to the Board of Selectmen for a refund of the school impact fee, plus accrued interest, six (6) years from the date of collection of said fee. A refund will only be due if the Timberlane Regional School District has failed to appropriate the municipal share of the capital improvement costs required to provide school facility capacity improvements which are funded, in part, by school impact fees.

## AMENDED LANGUAGE:

FeePAYERS may apply to the Board of Selectmen for a refund of the school impact fee, plus accrued interest, six (6) years from the date of collection of said fee. A refund will only be due if the Timberlane Regional School District has failed to appropriate said fee(s) on public school facility capacity improvements as defined herein.

12/18/97

**1500:5.C.** Added new section providing waivers for elderly housing.

## 12/23/97

A. Amend Section 1500:5.C. by adding "or through compliance with Federal Programs";

B. 1500:6.A. Delete "as amended"

C. 1500:7 Delete "...regardless of when the building permit was issued."

## \*\*\* PRECAUTIONARY NOTE:

The language as amended above (**1500:7**) was made at the request of the Atkinson Planning Board. The Rockingham Planning Commission has reservations regarding the legality of the proposed amended language, and strongly encourages review by Town Counsel prior to the Planning Board's final vote on the Ordinance.

**GROWTH  
MANAGEMENT AND TIMING OF DEVELOPMENT ORDINANCE**

**ARTICLES I - II: SECTIONS GM110 - GM216**

**SECTION 128 SUNSET PROVISIONS**

**128:1** This ordinance shall terminate at the conclusion of Town Meeting in March, 1992, unless appropriate action is taken to extend this ordinance.

This Ordinance was allowed to Sunset, March 10, 1992

**HISTORIC DISTRICT ORDINANCE**

**SECTION HD10 AND ARTICLES I - XI, SECTIONS HD100 - HD1100**

**SECTION DELETED March 9, 1993**

## LAND SUBDIVISION CONTROL REGULATIONS

### SECTIONS SD100 - SD1200

#### SECTION 100 AUTHORITY

- 100:1** Pursuant to the authority vested in the Atkinson Planning Board by the voters of the Town of Atkinson, NH, and in accordance with the provisions of Chapter 674:35 of the New Hampshire Revised Statutes Annotated, 1983, the Atkinson Planning Board adopts the following regulations governing the subdivision of land in the Town of Atkinson, New Hampshire.

#### SECTION 200 DEFINITIONS (IN ALPHABETICAL ORDER)

- B1 Board** means the Planning Board of the Town of Atkinson, New Hampshire.
- C1 Community wastewater system** A non-municipal wastewater collection, treatment and disposal system that serves an average of at least twenty-five (25) individuals daily, year-round, or that has at least fifteen (15) service connections.
- C3 Community water system** A public water system which serves at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents.
- E1 Engineer** means the duly designated engineer of the Town of Atkinson, or if there is no such official, the planning consultant or official assigned by the Atkinson Planning Board.
- E2 Erosion** The wearing away of the land surface by the action of wind, water or gravity.
- L1 Lake shore area** Any area within one thousand feet (1000') of the average high water level of a lake or pond; an area to be determined by extending a perpendicular line drawn in a horizontal direction from the average high water level of a lake or pond.
- M1 Measure** A specific procedure designed to control runoff, erosion or sediment.
- M2 Municipal wastewater system** A wastewater collection, treatment and disposal system that services an average of at least twenty-five (25) individuals daily year-round or that has at least fifteen (15) service connections and that is owned and operated by a municipal or regional government.
- M3 Municipal water supply** A water supply system that serves an average of at least twenty-five (25) individuals daily year-round or that has at least fifteen (15) service connections and that is owned and operated by a municipal or regional government.
- P1 Plat** means the final map, drawing or chart on which the subdivider's plan of subdivision is presented to the Atkinson Planning Board for approval and which, if approved, will be submitted to the Register of Deeds of Rockingham County for recording.

- R1 Runoff** The portion of precipitation that makes its way overland toward stream channels or lakes.
- S1 Sediment** Solid material, both mineral and organic, that is in suspension, is being transported, or has been moved from its site of origin by air, water or gravity as a product of erosion.
- S2 Slope** The steepness of the land surface. Slope is expressed in percent by dividing a horizontal distance into the change in elevation that occurs within the distance. For the purpose of this regulation, the slope of a tract of land shall be determined by finding the average slope across each proposed lot, excluding wetlands, measured perpendicular to two foot contours. For lots with variable elevation, the composite average slope for each soil type, excluding wetlands, will be used to compute the minimum lot size.
- S3 Soil scientist** means the duly designated soil scientist of the Town of Atkinson or, if there is no such official, the planning consultant or official approved by the Atkinson Planning Board.
- S4 Soil type** As defined by the National Cooperative Soil Survey. When a tract of land has more than one soil type, all the soil types will be taken into consideration.
- S5 Soil Type determination** The soil type as determined by a qualified soil scientist as designated by the Rockingham County Conservation District using the standards of the National Cooperative Soil Survey.
- S6 Street** means and includes street, avenue, boulevard, road, alley, highway, and other way exclusive of driveways serving not more than two adjacent lots.
- S7 Subdivision** means the division of a lot, tract, or parcel of land into 2 or more lots, plats, sites, or other divisions of land for the purpose, whether immediate or future, of sale, rent, lease, condominium conveyance or building development. It includes resubdivision and, when appropriate to the context, relates to the process of subdividing or to the land or territory subdivided. The division of a parcel of land held in common and subsequently divided into parts among the several owners shall be deemed a subdivision under these regulations.
- W1 Wetlands** The wetlands in Atkinson are those areas of the Town that contain fresh water marshes, perennial and intermittent streams, and soils classified as poorly or very poorly drained. Such areas are to be defined by the National Cooperative Soil Survey conducted by the U. S. Department of Agriculture Soil Conservation Service and by the on-site soils investigation of a qualified soils scientist if such investigation is required by the Planning Board.

### **Section 300 GENERAL REQUIREMENTS**

The subdivider shall observe the general requirements and principles of land subdivision which follow.

## **SECTION 310 STREETS**

- 310:1** The arrangement of streets in the subdivision shall provide for the continuation of the principal streets in adjoining subdivisions or for their proper projection when adjoining property is not subdivided, and shall be of a width at least as great as that of such existing connecting streets.
- 310:2** All streets within the subdivision shall be built in accordance with the Town's Road Specifications and Regulations. (1990)

## **SECTION 320 ADEQUACY OF LAND**

- 320.1** Land of such character that it cannot be safely used for building purposes because of exceptional danger to health or peril from fire, flood or other menace shall not be platted for residential occupancy, nor for such other uses as may increase danger to health, life or property or aggravate the flood hazard, until appropriate measures have been taken by the owner or his agent to lessen such hazards.
- 320:2** In areas not currently served by public sewer systems, it shall be the responsibility of the subdivider or his agent to provide adequate information to prove that the area of each lot is adequate to permit the installation and operation of an individual sewage disposal system (septic tank and drain field). Such information shall consist of the report of the health officer regarding seepage and other tests he may require. The subdivider or his agent shall provide the required soil scientist, subsequent analyses, and all necessary equipment and labor for the making of those tests.
- 320:3** Subdivisions may be required to provide for recreational areas, open spaces, and green spaces of adequate proportions, using New Hampshire state standards compiled by the Department of Resources and Economic Development and the Office of Energy and Planning as minimum area guidelines. (2011)
- 320:4** In the case of industrial development, copies of state or federal permits for pretreatment and discharge or subsurface disposal shall be required.

## **SECTION 330 WATER SUPPLY FOR FIRE PROTECTION**

- 330:1** Subdivision shall be reviewed by the Atkinson Fire Chief to determine the availability of a water supply for fire protection under guidelines and standards set forth in the NFPA Pamphlet 1231 "Suburban and Rural Firefighting". The Chief's recommendations, in writing, will be considered by the Planning Board before final approval of the proposed subdivision plan. Any improvements required by the Planning Board shall be bonded.

## **SECTION 340 CONSTRUCTION SITE RUNOFF EROSION AND SEDIMENT CONTROL STANDARDS**

- 340:1** No subdivision plan or site plan involving five (5) or more acres shall be granted approval unless it includes plans for runoff, erosion and sediment control.
- 340:2** The developer shall bear the final responsibility for the design, installation and construction of all required runoff, erosion and sediment control measures.

### **340:3 PURPOSE AND STANDARDS**

- a. The purpose of these standards is to safeguard persons, protect property, prevent damage to the environment and promote the public welfare by guiding, regulating, and controlling the design, construction, use, and maintenance of any development or other activity that disturbs or breaks the topsoil or results in the movement of earth on land during construction.
- b. An Erosion and Sediment Control Report and plans, adhering to the standards of this regulation, shall be submitted with a Subdivision application, if applicable, and shall be prepared and certified by a licensed NH Professional Engineer.
- c. An Erosion and Sediment Control Plan is not required for the following activities:
  - 1) Any emergency activity that is immediately necessary for the protection of life, property, or natural resources.
  - 2) Existing nursery and agricultural operations conducted as a permitted primary use or accessory use.
- d. The Performance Guarantee required in Section 703 shall be sufficient to cover all costs of improvements, landscaping, maintenance of improvements for such period as specified by the Planning Board, and engineering and inspection costs to cover the cost of failure or repair of improvements installed on the site.

### **340:4 EROSION AND SEDIMENT CONTROL PLAN REQUIREMENTS (2020)**

- a. The Erosion and Sediment Control Plan shall include the following:
  - 1) A natural resources map identifying soils, forest cover, and resources protected under other sections of the Land Development Regulations, Zoning Ordinance or other local regulations.
  - 2) A sequence of construction of the development site, including stripping and clearing; rough grading; construction of utilities, infrastructure, and buildings; and final grading and landscaping. Sequencing shall identify the expected date on which clearing will begin, the estimated duration of exposure of cleared areas, areas of clearing, installation of temporary erosion and sediment control measures, and establishment of permanent vegetation.
  - 3) All erosion and sediment control measures necessary to meet the objectives of this regulation throughout all phases of construction and after completion of development of the site. Depending upon the complexity of the project, the drafting of intermediate plans may be required at the close of each season.4) Seeding mixtures and rates, types of sod, method of seedbed preparation, expected seeding dates, type and rate of lime and fertilizer application, and kind and quantity of mulching for both temporary and permanent vegetative control measures.
  - 5) Provisions for maintenance of control facilities, including easements and estimates of the cost of maintenance.
- b. Modifications to the Erosion and Sediment Control plan shall be processed and approved or

disapproved by the Planning Board by written authorization to the permittee as follows.

- 1) Major amendments of the approved Erosion and Sediment Control plan.
- 2) Field modifications of a minor nature may be approved by the Town Engineer or other municipal staff upon inspection.

### **340:5 BEST PRACTICES FOR SUBDIVISION APPLICATIONS (2020)**

- a. All Subdivision applications must submit the following information and shall comply with the following standards.
  1. Apply best management practices that accommodate the increased runoff caused by changed soil and surface conditions during construction, including strong perimeter controls and soil stabilization methods. Sediment in stormwater runoff shall be contained by the use of sediment basins or other acceptable methods until the disturbed area is stabilized. Techniques that divert upland runoff away from disturbed slopes shall be used.
  2. Identify, locate, and show elevation, grades and/or contours at intervals of not more than two (2) feet for the existing and proposed drainage ways, drainage easements, drainage structures, and any surface water bodies.
  3. Identify and relatively locate and include drawings and specifications for each erosion and sediment control measure and structure proposed during construction, noting those measures that will become permanent structures retained after construction. Erosion and sediment control measures and structures shall be designed in accordance with the New Hampshire Stormwater Manual Volume 3: Erosion and Sediment Controls During Construction (NH Department of Environmental Services, December 2008, as amended) or new standards and guidance as released or adopted by the NH Department of Environmental Services.
  4. Include drawings, details and specifications for proposed flood hazard prevention measures and structures and for proposed temporary stormwater management facilities.
  5. Ensure that disturbance to or removal of vegetation, grading or other construction will be done in such a way that will minimize soil erosion. Whenever practical, natural vegetation shall be retained, protected and supplemented to function as buffers.
  6. Construction sites must be stabilized within five days of clearing or inactivity in construction. Temporary application of seed and/or mulch may be required by the Planning Board to protect exposed critical areas during development. Techniques shall be employed to prevent the blowing of dust or sediment from the site. In areas where final grading has not occurred, temporary stabilization measures should be in place within 7 days for exposed soil areas within 100 feet of a surface water body or wetland and no more than fourteen (14) days for all other areas. Permanent stabilization should be in place no more than 3 days following the completion of final grading of exposed soil areas. At the close of the construction season, the entire site must be stabilized, using a heavy mulch layer, or another method that does not require germination to control erosion.
  7. Waste Removal and Disposal

- a. All waste generated on the site shall be controlled and discarded properly including but not limited to building materials, concrete and concrete washout effluent, chemicals, litter and sanitary wastes.
- b. Waste shall not be discharged to the municipal MS4 system.

### **340:6 INSPECTION AND ENFORCEMENT (2020)**

- a. The agent designated by the Planning Board shall make inspections as described below and shall either approve that portion of the work completed or shall notify the applicant/property owner and the Planning Board when and how the construction activity(s) fails to comply with the approved erosion and sediment control plan. All plans bearing the stamp of approval of the designated agent shall be maintained at the site during construction. In order to obtain inspections, the applicant/property owner shall notify the designated agent at least one week before the following required site inspections:
  - 1. Proposed erosion and sediment control measures are located and staked on the site before the start of construction.
  - 2. Erosion and sediment control measures are in place and stabilized.
  - 3. Site clearing and preparation has been completed.
  - 4. Rough grading has been completed.
  - 5. Final grading has been completed.
  - 6. Close of the construction season.
  - 7. Final landscaping has been completed.
- b. The permittee or his/her agent shall make regular inspections of all control measures in accordance with the inspection schedule outlined on the approved Erosion and Sediment Control Plan(s). The purpose of such inspections will be to determine the overall effectiveness of the control plan and the need for additional control measures. All inspections shall be documented in written form and submitted to the agent designated by the Planning Board at the time interval specified in the approved plan.
- c. The Town or its designated agent shall enter the property of the applicant as deemed necessary to make regular inspections to ensure the validity of the reports filed under Section B.
- d. Stop-Work Order. In the event that any person holding a site development permit pursuant to this ordinance violates the terms of the permit or implements site development in such a manner as to materially adversely affect the health, welfare, or safety of persons residing or working in the neighborhood or development site so as to be materially detrimental to the public welfare or injurious to property or improvements in the neighborhood, the Town may issue a Stop-Work Order.
- e. Violation and Penalties. No person shall construct, enlarge, alter, repair, or maintain any grading, excavation, or fill, or cause the same to be done, contrary to or in violation of any

terms of this ordinance. Any person violating any of the provisions of this ordinance may be fined and each day during which any violation of any of the provisions of this ordinance is committed, continued, or permitted, shall constitute a separate offense. Upon finding of such violation, such person, partnership, or corporation shall be levied a fine of not more than \$ 500.00 for each offense. In addition to any other penalty authorized by this section, any person, partnership, or corporation convicted of violating any of the provisions of this ordinance shall be required to bear the expense of such restoration.

### **340:7 POST CONSTRUCTION STORMWATER MANAGEMENT STANDARDS (2021)**

**See Appendix A - (SD 20)**

### **SECTION 350 PAVING /DRAINAGE /SIDEWALKS**

**350:1** Pavement and drainage facilities, curbs and sidewalks, when required, shall be installed and constructed in accordance with the standard specifications of the Town of Atkinson, NH, and, in all cases, must be constructed under the supervision of the engineer.

### **SECTION 360 PROHIBITIONS**

**360:1** Reserve strips of land which, in the opinion of the Planning Board, show an intent on the part of the subdivider to control access to land dedicated or to be dedicated to public use shall not be permitted. (1960)

**360:2 Subdivisions** will not be allowed in cases where such scattered or premature subdivision of land would involve danger or injury to health, safety, or prosperity by reason of the lack of water supply, drainage, transportation, schools, fire department, or other public services, or necessitate an excessive expenditure of public funds for the supply of such services.

**360:3** Subdivisions on land acquired through "Eminent Domain" shall be restricted in use to Local, State, or Federal governmental public sector uses, and only if said uses provide direct access and use to and by the public. Private or Public development of such land solely for financial gain or revenue enhancement, is prohibited. (2005)

### **SECTION 370 COMPLIANCE**

**370:1** (2011)

The proposed subdivision shall conform to the Zoning Ordinance of the Town of Atkinson, NH. Where strict conformity to the subdivision regulations would cause undue hardship or injustice to the owner of the land, a subdivision plan substantially in conformity with the regulations may be approved by the board provided that the spirit of the regulations and public convenience and welfare will not adversely be affected.

- a. Any request for a waiver to the requirements of these regulations shall be submitted in writing to the Planning Board. The basis for any waiver granted by the Planning Board shall be recorded in the minutes of the Board. The Planning Board may only grant a waiver if the Board finds, by majority vote, that:
  - 1) Strict conformity would post an unnecessary hardship to the applicant and waiver would not be contrary to the spirit and intent of the regulations; or
  - 2) Specific circumstances relative to the subdivision or conditions of the land in such subdivision, indicate that the waiver will properly carry out the spirit and intent of the regulations.

## **SECTION 380 BOND/SURETY**

### **380:1**

- a. Before approval of a subdivision by the Planning Board, there shall be filed a bond, cash, or sureties by the subdivider in an amount sufficient to cover the cost of the preparation of the streets and the construction of public or community water supply system improvements if proposed. This bond or sureties shall be approved as to form and surety by the legal Counsel of the Town of Atkinson, NH, and conditioned on the completion of such improvement and/or annual review of the bond's sufficiency. (2002)
- b. The developer must provide and maintain appropriate escrow monies in an amount determined by the Town Engineer for anticipated inspection and testing services to be rendered during execution of the work. (2006)

### **380:2** All bonds shall be made out in the name of:

Town of Atkinson: \_\_\_\_\_, Selectmen

If desired, a reference such as "Millpond Road Bond; John Doe, Owner" may be added. Three signatures are required for withdrawal, that of the Treasurer and two members of the Board of Selectmen, preferably one being the member serving Ex-Officio on the Planning Board. Signature cards should be presented with the bond. A set of withdrawal slips should be available in order to expedite the release of the bond.

### **380:3** After receipt of conditional subdivision application approval from the Planning Board, an applicant may elect to commence work on construction of infrastructure related to said subdivision, in accordance with the conditionally approved plans and any conditions attached to said approval, but prior to final signature by the Board Chairman/Vice Chairman and recording of the subdivision plat at the Registry of Deeds, provided that: (1) all required State project permits necessary for the work have been issued and received by the Planning Board; (2) the full Performance Bond value has been determined and approved by the Town Engineer; (3) the Town of Atkinson has received a cash surety in an amount equal to ten-percent of the full value of the Performance Bond. Said cash surety will be held by the Town until such time as the full Performance Bond is accepted by the Town and/or all required project work is completed in accordance with the project plans. Said cash surety will serve as a guarantee that work completed prior to recording of the final plat will be done in a workman like manner and

not become a threat to the public or adjoining landowners; and (4) the developer has provided appropriate escrow monies to compensate the Town Engineer for inspection and testing services rendered during execution of the work. In utilizing this option, the developer recognizes that no building permits will be issued until such time as all conditions of his approval have been fulfilled and the subdivision plat has been duly recorded at the Registry of Deeds. (1998)

- 380:4** No occupancy permits shall be granted for any structure accessed by any new street within a subdivision until:
- a. All utilities including water, storm drainage, electric and telephone have been installed and have been deemed fully operational by the appropriate authorities over the entire length of the frontage of the lot upon which such structure is located; and
  - b. All roadway construction has progressed to at least the point of installation of the base course of hot bituminous pavement; and
  - c. All on-site safety related improvements required by the Planning Board or applicable State Agencies with competent jurisdiction must be completed to the Building Codes prior to issuance of certificates of occupancy. (2006)

### **SECTION 390 NATIONAL FLOOD INSURANCE PROGRAM (2008)**

For subdivisions and site plans that involve land designated as “Special Flood Hazard Areas” (SFHA) by the National Flood Insurance Program (NFIP):

- 390:1** The Planning Board shall review the proposed development to assure that all necessary permits have been received from those governmental agencies from which approval is required by federal or state law, including Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. 1334.
- 390:2** The Planning Board shall require that all proposals for development greater than 50 lots or 5 acres, whichever is the lesser, include Base Flood Elevation (BFE) data within such proposals (i.e., floodplain boundary and 100-year flood elevation).
- 390:3** The Planning Board shall require the applicant to submit sufficient evidence (construction drawings, grading and land treatment plans) so as to allow a determination that:
- a. all such proposals are consistent with the need to minimize flood damage;
  - b. all public utilities and facilities, such as sewer, gas, electrical and water systems are located and constructed to minimize or eliminate flood damage; and
  - c. adequate drainage is provided so as to reduce exposure to flood hazards.

## **SECTION 400 REGULATING SIZE OF LOTS IN A SUBDIVISION**

### **SECTION 410 PURPOSE**

**410:1** The Planning Board of the Town of Atkinson, NH hereby adopts these regulations in accordance with the provisions of RSA 674:36-IIa in order to protect the Town against the danger to health, safety, and prosperity occasioned by the lack of municipal water and sewer and to prevent the excessive expenditure of public funds for the supply of such services.

### **SECTION 420 MINIMUM LOT SIZES**

**420:1** In addition to meeting the requirements of the zoning ordinance for the district wherein the subdivision is located, each lot shall also be in conformance with Table 1 (page 6):

- a. The table contains the required minimum lot sizes for specific soils for single-family residences of not more than four bedrooms.
- b. Protection of water supplies (well water) from contamination by subsurface wastewater disposal systems is factored into Table 1.
- c. In subdivisions where a community water supply system is to be provided, minimum lot sizes may not be decreased by any factor on the minimum requirement as stated in Table 1.
- d. Lot sizes for residential (5 or more bedrooms).
  - 1) Minimum lot sizes shall be proportionally larger than the minimum lot size given in Table 1 by the following formula:

Lot size =  $N/4 \times$  (lot size from Table 1) where N is the number of bedrooms

## **SECTION 500 PROCEDURE FOR SUBDIVISION**

### **SECTION 510 APPLICATION FOR APPROVAL**

**510:1** Whenever any subdivision is proposed to be made and before a contract for the sale of, or offer to sell, such subdivision or any part thereof shall have been negotiated, and before any application for a permit for the erection of a structure thereon shall be made, the owner thereof or his agent shall make application for approval of such subdivision to the Planning Board of the Town of Atkinson, NH. The application shall be considered a completed application at such time as it contains sufficient information to allow the board to proceed with a formal consideration of the proposal. The application shall conform to the specifications contained in these regulations.

**510:2** The Planning Board may require a professional engineering review or other type of technical review deemed necessary for preliminary consultation submissions and formal application submission under the Land Subdivision Control Regulations. The cost of such review shall be borne by the applicant. (2011)

## **SECTION 520 PRELIMINARY CONSULTATION REGULATIONS**

- 520:1** Preliminary consultations and review of a proposal shall be separate and apart from formal consideration by the Board and shall not bind either the applicant or the Board. Time limits for acting upon a proposal shall not apply until preliminary review is concluded, the application is complete, and the subdivision has been accepted for formal consideration by the Board.
- 520:2** A preliminary consultation and review of the basic concept of the subdivision proposal must be held at a regular meeting of the Board. No formal public notice shall be required. A required preliminary layout, which constitutes part of the completed application, as described in Section SD 600, may be filed by the applicant at this time.
- 520:3** A second preliminary consultation and review of the proposal, if required by the Board or sought by the applicant, shall be held only after the Board has notified the applicant and abutters by certified mail at least 10 days prior to the consultation. A notice to the general public shall be given at the same time by posting or by publication, and it shall describe the proposal and identify the applicant and the location. All cost of such notice shall be paid by the applicant in advance of the consultation meeting. A required layout; may require a professional engineering review, the cost of which is to be borne by the subdivider; and may require specific changes in the preliminary plan which shall be communicated to the developer in writing. Should the Board disapprove of the preliminary layout in its entirety, it shall state its reasons for such disapproval in writing.

## **SECTION 530 FORMAL CONSIDERATION**

- 530:1** **Submission.** The subdivider shall submit a completed application to the Board 15 days prior to a regular Planning Board meeting, at which time the completed application shall be accepted.
- 530:2** **Notification.**
- a. Of formal submission. The Planning Board shall notify the applicant and abutters by certified mail at least 10 days prior to the date on which the formal submission of the subdivision application will take place. A notice to the general public shall be given at the same time by posting or by publication, and it shall describe the proposal and identify the applicant and the location. All cost of such notice shall be paid by the applicant in advance of the formal submission.
  - b. Of public hearing. The Planning Board shall notify the applicant and abutters by certified mail at least 10 days prior to the date on which a public hearing on the subdivision application will take place. A notice to the general public shall be given at the same time by posting and by publication, and it shall describe the proposal and identify the applicant and the location. All cost of such notice shall be paid by the applicant in advance of the formal submission.
  - c. Simultaneous notice. If a notice of public hearing is included in the notice of formal submission, additional notice of the public hearing shall not be required.

**530:3 Time limitations.**

- a. Upon determination by the board that a submitted application is complete according to the board's regulations, the board shall begin formal consideration and shall act to approve, conditionally approve, or disapprove within 65 days, subject to extension as provided for in paragraph (c) below. (2002)
- b. The applicant shall meet the requirements for filing final plats and data, as outlined in Section SD700, within 60 days of submission of the completed application.
- c. The Board may apply to the selectmen to extend the formal consideration period for up to 90 additional days before acting to approve or disapprove the application.
- d. A subdivision that has been granted a conditional approval shall have one (1) year from the date of conditional approval to fulfill the conditions or the approval is revoked and the plan must come back for review. (1993; 1997)

**530:4 Expedited Review Applications** which conform to the following circumstances may be formally submitted and approved at one or more board meetings:

- a. Applications which do not create lots for building purposes.
- b. With the exception of rural cluster residential developments, applications which create no more than three (3) lots for building development purposes.

Such applications; however, regardless of the circumstances, shall not be approved without notice of formal submission to abutters and public as required in Section 530:2a above. In addition, a public hearing, with notice as provided in Section 530:2b above, shall be held if requested by the applicant or by abutters any time prior to approval or disapproval or if the Board determines to hold a hearing.

**530:5 Offers of cession.** The subdivider shall tender offers of cession, in a form certified as satisfactory by the corporation counsel, of all land included in streets, highways or parks not specifically reserved by him; but approval of the plat by the Board shall not constitute an acceptance by the Town of the dedication of any street, highway, park or other public space.

**530:6 Approval/disapproval.** In case of disapproval of any application submitted to the planning board, the ground for such disapproval shall be adequately stated upon the record of the Board.

**SECTION 600 PRELIMINARY LAYOUT**

**600:1** The subdivider shall file with the Board four copies of a preliminary layout at a scale of not more than 100 feet to the inch showing or accompanied by the following information:

- a. Location at Town base map scale (1" = 1000') showing zoning classification, precise area of site, major roads and intersections, community facilities, existing and proposed development and north arrow.

- b. Proposed subdivision name; name and address of owner of record, subdivider and consultants and the seals; date, north point and bar scale; and street names and area of subdivision (in acres).
- c. Names of owners of record abutting properties, abutting subdivision names, street easements, building lines, alleys, parks, and public open spaces and similar facts regarding property within two hundred feet (200') of proposed subdivision.
- d. Location of property lines and their dimensions, existing easements and buildings.
- e. Location, name and widths of existing and proposed streets and highways.
- f. Existing and proposed water mains, sewers, culverts, drains, water courses and ponds.
- g. Where the topography is such as to make difficult the inclusion of any items mentioned above, the preliminary layout shall show the boundaries of proposed easements over and under private property. Such easements shall be not less than 20 feet in width and shall have satisfactory access to existing or public ways.
- h. A topographic plan showing two-foot contour intervals. Slope will be indicated for each lot as described in Section 200-S2.
- i. Bench marks will be properly located on a fixed object with a direct site to proposed leach fields and septic tanks.
- j. Location of soil test pits and logs of all soil explorations in accordance with the standards of the National Cooperative Soil Survey. Season high water table, depth to bedrock and depth to firm sub-layers (hardpan) should be specified.
- k. Soil boundaries, soil symbols and slopes from most recent National Cooperative Soil Survey.
- l. An estimate of the rate of runoff before and after development using the Soil Conservation Service Method for a 25 year, 24-hour rainfall. (For subdivisions larger than five acres.)
- m. Approximate location and plan for each proposed soil erosion and sediment control measure approved by the Rockingham County Conservation District. (For subdivisions larger than five acres.)
- n. Preliminary designs of any structures which may be required to control runoff.
- o. An estimate of stormwater drainage capacity and location of all storm sewers, culverts and similar measures. The capacity of the stormwater facilities shall be based on the estimated rate of runoff after construction for a 10-year, 24-hour rainfall, using the Soil Conservation Service method.

- p. Location of all parcels of land proposed to be dedicated to public use and the conditions of such dedication and a copy of such private deed restrictions as are intended to cover part or all of the tract.
- q. Location, size, and height of proposed street and/or subdivision signs.
- r. Location of any land proposed to be reserved as permanent recreational space, open space, and/or green space.
- s. Where the preliminary layout submitted covers only a part of the subdivider's entire holding, an informal sketch to show the prospective future street system of the unsubmitted part shall be furnished, and the street system of the submitted part shall be considered in the light of adjustments and connections with the street system of the part not submitted.

## **SECTION 700 PLATS AND DATA FOR FINAL APPROVAL**

- 700:1** Final plat shall be drawn in ink on drawing cloth or mylar at a scale of not less than 50 feet to an inch. Where necessary, the plat may be on several sheets accompanied by an index showing the entire subdivision.
- 700:2** For larger subdivisions the final plat may be submitted for approval progressively in contiguous sections satisfactory to the Board. Plat sizes shall conform to the requirements of the Rockingham Registry of Deeds.
- 700:3** Final plat shall show the following:
  - a. Tract boundary lines, right-of-way lines of streets, easements, and other rights-of-way, and property lines of residential lots and other sites, with dimensions to one one-hundredths (1/100) of a foot, bearings to the nearest minute, and radii, arc, and central angles of all curves.
  - b. Name and right-of-way width of each street and other right-of-way.
  - c. Locations, dimensions, and purpose of any easements.
  - d. Lot number to identify each lot or site which shall be assigned by the Town of Atkinson.
  - e. Purpose for which sites, other than residential lots, are dedicated or reserved.
  - f. Location and description of monuments. Each change in direction in a line shall be marked by an iron bound or other permanent monument.
  - g. Names of record owners of adjoining land.
  - h. Reference to recorded subdivision plats of adjoining platted land by record name, date and number.
  - i. Certification by surveyor or engineer as to accuracy of survey and plat. (Minimum 1 to 10,000 field closure.)

- j. Location of all land parcels including current book and page reference.
- k. Statement of owner dedicating streets, right-of-way, and any sites for public use.
- l. Title, scale, north arrow, and date.
- m. Existing and proposed centerline profile of existing and proposed streets drawn at a scale of 1" = 50' horizontal and 1" = 10' vertical.
- n. Drawings showing the natural drainage ways on the construction site and surrounding area.
- o. Drawings showing the identification of and relative location of the proposed measures for runoff, erosion and sediment control.
- p. Drawings showing changes in drainage ways and structures pertaining to overall water management.
- q. Topographic plan showing two-foot contour intervals before development and after development for any change in natural water flow.
- r. Drawings and specifications and calculations for each proposed runoff, soil erosion, and sediment control measure. (For subdivisions larger than five acres.)
- s. Approximate timing schedule indicating the anticipated starting and completion dates of the development sequence and time of exposure of each area prior to the completion of effective runoff, erosion and sediment control measures. (For subdivisions larger than five acres.)
- t. Actual locations and invert elevations of all storm water and sanitary sewage systems and water supply and hydrant systems. Locations may be shown on the plan and elevations on the profile if so desired.
- u. House numbers of each lot as assigned by the Town of Atkinson.
- v. Drainage calculations. (1997)
- w. All engineered plans to be stamped by a Certified Engineer. (1997)
- x. Applicants to provide a time-line for the completion of all off-site improvements. (1997)
- y. Any additional information the Planning Board may deem necessary in order to apply the regulations contained herein. (1997)
- z. A signed statement by the owner and applicant shall appear on all pages of a subdivision plat which are intended to be recorded at the Registry of Deeds. This statement shall read we the undersigned owner and applicant acknowledge that the Subdivision Regulations, Road Specifications and Regulations and Zoning Ordinance of the Town of Atkinson are a part of this plat and understand that approval of this plat is contingent upon completion of all requirements of said Regulations and Ordinances, excepting only any requirements waived by the

Planning Board in the approval of this plat or any variances granted by the Zoning Board of Adjustment affecting this plat. (2002)

- aa. In the event the subdivision is to be served by a public or community water supply system, the applicant shall submit complete design plans of all water supply system components, including water distribution lines and appurtenances, as well as supporting design calculations prepared by a Licensed Professional Engineer. The design calculations shall demonstrate that the proposed water system complies with all applicable requirements of the State of New Hampshire for potable water and in addition demonstrate that the system is capable of delivering water for fire fighting purposes, at a flow rate of 500 gallons a minute and 20 PSI static pressure if it is the intent of the system to do so. (2002)

**700:4 Dredge and fill operations**

- a. Whenever a dredge and/or fill operation is inherent in the development of a subdivision, and before the final plat shall be approved or disapproved, the subdivider shall submit to the Planning Board a copy of a dredge and fill permit for such operation officially approved by the New Hampshire Wetlands Board.

**700:5 Alteration of Land (Site Specific ) Permit**

- a. Whenever an earth disturbance significantly alters more than 100,000 square feet of contiguous terrain, the sub divider shall submit to the Planning Board a copy of an Alteration of Land (Site Specific) Permit for such operation officially approved by the Water Supply and Pollution Control Commission.

**SECTION 800 FILING OF PLANS**

**800:1** The Chairman or Secretary of the Planning Board shall transmit record of any changes so authorized to the Register of Deeds of Rockingham County.

**800:2** All plans submitted for recording in the registry of deeds shall be on suitable reproducible tracing material other than paper with a thickness of not less than .002 of one inch, with all marking on the material to be with India or other permanent ink.

**800:3** The size of all plans is limited to any of the following dimensions:

- a. 8 1/2" x 11"
- b. 11" x 17"
- c. 17" x 22"
- d. 22" x 34"

or such specifications and sizes of prints as may be required by the Register of Deeds in order to insure suitable, permanent records.

**800:4** After the certificate or notice has been filed with the Register of Deeds of the county, no plat will be filed or recorded in the offices of said Register of Deeds until it has been approved by the Planning Board, and such approval has been endorsed in writing on the plat in such manner as the Planning Board may designate.

- 800:5** After such plat is approved and filed, subject, however, to review by court as hereinafter provided, the streets and parks shown on such plat shall be and become a part of the official map of the municipality.
- 800:6** The filing or recording of a plat of a subdivision without the approval of the Planning Board as required hereby shall be void.

## **SECTION 900 CHANGES IN APPROVED PLANS**

- 900:1** **Minor changes.** A minor change shall be one which respects the approved plan's basic land allocations in terms of use and intensity, the type and variety of facilities and buildings being approved, and/or the timing for providing these facilities, but shall not include any increase in the overall density of the development. The Board shall give proper notification of the proposed change to the public and to all abutters. If requested by the applicant or by an abutter, the Board shall hold a public hearing on the proposed change. The Board shall act to approve or disapprove the change with written notification to the owner of its action. Any approved changes involving changes in any lot boundaries shall be recorded in the Registry of Deeds.
- 900:2** **Major changes.** Any requested change which the Board determines does not qualify as a minor change shall be required to be submitted as a separate plan in accordance with these regulations and procedures.

## **SECTION 1000 RELATIONSHIP BETWEEN STATE AND LOCAL REGULATIONS**

- 1000:1** Where both state and local regulations are applicable, the more stringent regulation shall take effect. If the state regulation addresses an issue not included in the local regulation or if the local regulation addresses an issue not included in the state regulations, that regulation shall automatically apply.

## **Section 1100 SAVING CLAUSE**

- 1100:1** Where any provision included within these regulations is found to be unenforceable by law, it shall be considered severable from the remainder of the regulation and shall not be construed to invalidate any other provision in these regulations.

## **SECTION 1200 AMENDMENTS**

- 1200:1** These regulations may be amended or rescinded by the Planning Board, but only following public hearing on the proposed change.
- 200:2** Adopted 10/20/59.

21XCH	100000	253DH	160000	32XBH	100000	366+H	NA	46XCH	195000
21XDH	140000	253EH	NA	32XCH	120000	36XBH	110000		

“NA” means not allowed. “+” means any slope or any number. Minimize lot size interpretation is based on Table 1, page 226 of the Draft Water Quality Management Plan, Southern Rockingham Commission 208 Project and further evaluations.

---

Soil types listed below have one or more limiting characteristics making the soil type “NA” or requiring on-site investigation no matter what other characteristics of the soil may be present. (Effective date: June 1, 1989)

<b><u>Soil Type</u></b>	<b><u>Minimum Lot Size</u></b>	<b><u>Soil Type</u></b>	<b><u>Minimum Lot Size</u></b>
5+++H	NA, poorly drained soil	+66+H	NA, fill does not meet standards for Fill Material (see Kay to Soil Types)
6+++H	NA, very poorly drained soil	+75+H	NA, floodplain soil
76+++H	On-site evaluation needed		

## APPENDIX A –

### POST CONSTRUCTION STORMWATER MANAGEMENT STANDARDS FOR SUBDIVISION REGULATIONS

#### ELEMENT A: Purpose and Goals

1. Purpose and Goals. The purpose of post construction stormwater management standards is to provide reasonable guidance for the regulation of stormwater runoff to protect local natural resources from degradation and prevent adverse impacts to adjacent and downstream land, property, facilities and infrastructure. These standards regulate discharges from stormwater and runoff from land development projects and other construction activities to control and minimize increases in stormwater runoff rates and volumes, soil erosion, stream channel erosion, and nonpoint source pollution associated with stormwater runoff.

The goal of these standards is to establish minimum stormwater management requirements and controls to protect and safeguard the general health, safety, and welfare of the public in the Town of Atkinson. This regulation seeks to meet that goal through the following objectives:

- a. Minimize increases in stormwater runoff from any development to reduce flooding, siltation and streambank erosion and maintain the integrity of stream channels.
- b. Minimize increases in nonpoint source pollution caused by stormwater runoff from development which would otherwise degrade local water quality.
- c. Minimize the total volume of surface water runoff which flows from any specific site during and following development to not exceed the pre-development hydrologic condition to the maximum extent practicable as allowable by site conditions.
- d. Reduce stormwater runoff rates and volumes, soil erosion and nonpoint source pollution, wherever possible, through stormwater management controls and to ensure that these management controls are properly maintained and pose no threat to public safety or cause excessive municipal expenditures.
- e. Protect the quality of groundwater resources, surface water bodies and wetlands.

#### ELEMENT B: Minimum Thresholds for Applicability

1. The Post-Construction Stormwater Management Standards apply to subdivisions that result in creation of a private road or a road intended for adoption as a public road. All stormwater runoff generated from the proposed private or public roadway(s) and any other stormwater runoff contributing to the roadway stormwater management system(s) shall be managed and treated in full compliance with these standards.
2. For subdivisions comprising lots with frontage on existing private or public roadways, roadside drainage and any other stormwater runoff from the new lots discharging to the roadside drainage system must be managed for: stormwater runoff quantity/volume; and water quality treatment if stormwater is discharged to the municipality's drainage system subject to the EPA MS4 permit. A driveway permit for access to a state highway or municipal roadway is required

including required drainage controls. The following requirements in this regulation for a complete stormwater management control plan will be subject to Planning Board approval or their designee. Site specific conditions shall be considered with respect to applicability of the following requirements.

**ELEMENT C: *Stormwater Management for New Development***

1. All proposed stormwater management practices and treatment systems shall meet the following performance standards.
  - a. Stormwater management and erosion and sediment control practices shall be located outside any specified buffer zones unless otherwise approved by the Planning Board. Alternatives to stream and wetland crossings that eliminate or minimize environmental impacts shall be considered whenever possible.
  - b. Low Impact Development (LID) site planning and design strategies must be used to the maximum extent practicable (MEP) to reduce stormwater runoff volumes, protect water quality, and maintain predevelopment site hydrology. Low Impact Development (LID) techniques with the goals of protecting water quality, maintaining predevelopment site hydrology. Low Impact Development (LID) techniques that preserve existing vegetation, reduce the development footprint, minimize or disconnect impervious area, and use enhanced stormwater BMP's (such as raingardens, bioretention systems, tree box filters, and similar stormwater management landscaping techniques) shall be incorporated into landscaped areas excluding perimeter landscaped or other buffers when required for the development. Capture and reuse of stormwater is strongly encouraged. The applicant must document in writing why LID strategies are not appropriate when not used to manage stormwater.
  - c. All stormwater treatment areas shall be planted with native plantings appropriate for the site conditions: trees, grasses, shrubs and/or other native plants in sufficient numbers and density to prevent soil erosion and to achieve the water quality treatment requirements of this section.
  - d. Salt storage areas shall be fully covered with permanent or semi-permanent measures and loading/offloading areas shall be located and designed to not drain directly to receiving waters and maintained with good housekeeping measures in accordance with NH DES published guidance. Runoff from snow and salt storage areas shall enter treatment areas as specified above before being discharged to receiving waters or allowed to infiltrate into the groundwater. See NHDES published guidance fact sheets on road salt and water quality, and snow disposal at <http://des.nh.gov/organization/commissioner/pip/factsheets/wmb/index.htm>.
  - e. Surface runoff shall be directed into appropriate stormwater control measures designed for treatment and/or filtration to the maximum extent practicable and/or captured and reused onsite.

- f. All newly generated stormwater from new development shall be treated on the development site. A development plan shall include provisions to retain natural predevelopment watershed areas on the site by using the natural flow patterns.
- g. Runoff from impervious surfaces shall be treated to achieve at least 80% removal of Total Suspended Solids and at least 50% removal of both total nitrogen and total phosphorus using appropriate treatment measures, as specified in the NH Stormwater Manual. Volumes 1 and 2, December 2008, as amended or other equivalent means. Where practical, the use of natural, vegetated filtration and/or infiltration practices or subsurface gravel wetlands for water quality treatment is preferred given its relatively high nitrogen removal efficiency. All new impervious area draining to surface waters impaired by nitrogen, phosphorus or nutrients shall be treated with stormwater BMP's designed to optimize pollutant removal efficiencies based on design standards and performance data published by the UNH Stormwater Center and/or included in the latest version of the NH Stormwater Manual.
- h. Measures shall be taken to control the post-development peak runoff rate so that it does not exceed pre-development runoff. Drainage analyses shall include calculations comparing pre- and post-development stormwater runoff rates (cubic feet/second) and volumes (cubic feet) for the 1-inch rainstorm and the 2-year, 10-year, 25-year, and 50-year 24-hour storm events. Refer to Section 3.e. below for precipitation data references required for sizing and design of stormwater management practices and infrastructure. Similar measures shall be taken to control the post-development runoff volume to infiltrate the groundwater recharge volume  $GR_v$  according to the following ratios of Hydrologic Soil Group (HSG) type versus infiltration rate multiplier: HSG-A: 0.4; HSG-B: 0.25; HSG-C: 0.1; HSG-D: 0.00. For sites where infiltration is limited or not practicable, the applicant must demonstrate that the project will not create or contribute to water quality impairment.
- i. The design of the stormwater drainage systems shall provide for the disposal of stormwater without flooding or functional impairment to streets, adjacent properties, downstream properties, soils, or vegetation.
- j. The design of the stormwater management systems shall account for upstream and upgradient runoff that flows onto, over, or through the site to be developed or re-developed, and provide for this contribution of runoff.
- k. Whenever practicable, native site vegetation shall be retained, protected, or supplemented. Any stripping of vegetation shall be done in a manner that minimizes soil erosion.

## 2. Submission Requirements for Stormwater Management Report and Plans.

- a. All applications shall include a comprehensive Stormwater Management Plan (SMP). The SMP shall include a narrative description and an Existing Conditions Site Plan showing all pre-development impervious surfaces, buildings and structures; surface water bodies and

wetlands; drainage patterns, sub-catchment and watershed boundaries; building setbacks and buffers, locations of various hydrologic group soil types, mature vegetation, land topographic contours with minimum 2-foot intervals and spot grades where necessary for sites that are flat.

- b. The SMP shall include a narrative description and a Proposed Conditions Site Plan showing all post-development proposed impervious surfaces, buildings and structures; temporary and permanent stormwater management elements and best management practices (BMP), including BMP GIS coordinates and GIS files; important hydrologic features created or preserved the site; drainage patterns, sub-catchment and watershed boundaries; building setbacks and buffers; proposed tree clearing and topographic contours with minimum 2-foot intervals. The plans shall provide calculations and identification of the total area of disturbance proposed on the site (and off site if applicable) and total area of new impervious surface created. A summary of the drainage analysis showing a comparison of the estimated peak flow and volumes for various design storms (see Table 1. Stormwater Infrastructure Design Criteria) at each of the outlet locations shall be included.
- c. The SMP shall describe the general approach and strategies implemented, and the facts relied upon, to meet the goals of Element A and Element C.: The SMP shall include design plans and/or graphical sketch(es) of all proposed above ground LID practices.
- d. The SMP shall include calculations of the change in impervious area, pollution loading and removal volumes for each best management practice, and GIS files containing the coordinates of all stormwater infrastructure elements (e.g. catch basins, swales, detention/bioretention areas, piping).
- e. The SMP shall include a description and a proposed Site Plan showing proposed erosion and sediment control measures, limits of disturbance, temporary and permanent soil stabilization measures in accordance with the NHDES Stormwater Manual Volume 3 (most recent version) as well as a construction site inspection plan including phased installation of best management practices and final inspection upon completion of construction.
- f. The SMP shall include a long-term stormwater management BMP inspection and maintenance plan (see Element E) that describes the responsible parties and contact information for the qualified individuals who will perform future BMP inspections. The inspection frequency, maintenance and reporting protocols shall be included.
- g. The SMP shall describe and identify locations of any proposed deicing chemical and/or snow storage areas. SMP will describe how deicing chemical use will be minimized or used most efficiently.
- h. In urbanized areas that are subject to the EPA MS4 Stormwater Permit and will drain to chloride-impaired waters, any new developments and redevelopment projects shall submit a description of measures that will be used to minimize salt usage, and track and report

amounts applied using the UNH Technology Transfer Center online tool (<http://www.roadsalt.unh.edu/Salt/>) in accordance with Appendix H of the NH MS4 Permit.

3. General Performance Criteria for Stormwater Management Plans.

- a. All applications shall apply site design practices to reduce the generation of stormwater in the post-developed condition, reduce overall impervious surface coverage, seek opportunities to capture and reuse and minimize and discharge of stormwater to the municipal stormwater management system.
- b. Water Quality Protection.
  - i. No stormwater runoff generated from new development or redevelopment shall be discharged directly into a jurisdictional wetland or surface water body without water quality treatment that conforms to the requirements of this regulation.
  - ii. All developments shall provide adequate management of stormwater runoff and prevent discharge of stormwater runoff from creating or contributing to water quality impairment.
- c. Onsite groundwater recharge rates shall be maintained by promoting infiltration through use of structural and non-structural methods. The annual recharge from the post development site shall maintain or exceed the annual recharge from pre-development site conditions. Capture and reuse of stormwater runoff is encouraged in instances where groundwater recharge is limited by site conditions All stormwater management practices shall be designed to convey stormwater to allow for maximum groundwater recharge. This shall include, but not be limited to:
  - i. Maximizing flow paths from collection points to outflow points.
  - ii. Use of multiple best management practices.
  - iii. Retention of and discharge to fully vegetated areas.
  - iv. Maximizing use of infiltration practices.
  - v. Stormwater System Design Performance Standards.
- d. Stormwater system design, performance standards and protection criteria shall be provided as prescribed in Table 1 below. Calculations shall include sizing of all structures and best management practices, including sizing of emergency overflow structures based on assessment of the 100-year 24-hour frequency storm discharge rate.
- e. The sizing and design of stormwater management practices shall utilize new precipitation data from the Northeast Region Climate Center (NRCC) [or the most recent precipitation atlas published by the National Oceanic and Atmospheric Administration \(NOAA\)](#) for the sizing and design of all stormwater management practices. See the NRCC website at <http://precip.eas.cornell.edu/>.
- f. All stormwater management practices involving bioretention and vegetative cover as a key functional component must have a landscaping plan detailing both the type and quantities of plants and vegetation to be in used in the practice and how and who will manage and maintain this vegetation. The use of native plantings appropriate for site conditions is strongly encouraged for these types of stormwater treatment areas. The landscaping plan

must be prepared by a registered landscape architect, soil conservation district office, or another qualified professional.

4. Spill Prevention, Control and Countermeasure (SPCC) Plan.

Any existing or otherwise permitted use or activity having regulated substances in amounts greater than five gallons, shall submit to the local official such as Fire Chief, Emergency Response Official a SPCC plan for review and approval. The Plan will include the following elements:

- a. Disclosure statements describing the types, quantities, and storage locations of all regulated substances that will be part of the proposed use or activity.
- b. Owner and spill response manager's contact information.
- c. Location of all surface waters and drainage patterns.
- d. A narrative describing the spill prevention practices to be employed when normally using regulated substances.
- e. Containment controls, both structural and non-structural.
- f. Spill reporting procedures, including a list of municipal personnel or agencies that will be contacted to assist in containing the spill, and the amount of a spill requiring outside assistance and response.
- g. Name of a contractor available to assist in spill response, contaminant, and cleanup.
- h. The list of available clean-up equipment with instructions available for use on-site and the names of employees with adequate training to implement containment and clean up response.

**ELEMENT D: Stormwater Management for Redevelopment**

1. Redevelopment (as applicable to this stormwater regulation) means:

- a. Any construction, alteration, or improvement that disturbs existing impervious area (including demolition and removal of road/parking lot materials down to the erodible subbase) or expands existing impervious cover by any amount, where the existing land use is commercial, industrial, institutional, governmental, recreational, or multifamily residential.
- b. Any redevelopment activity that results in improvements with no increase in impervious area shall be considered redevelopment activity under this regulation if capital cost of improvements is greater than 30% of the appraised property value.
- c. Any new impervious area over portions of a site that are currently pervious.
- d. The following activities are not considered redevelopment:
  - Interior and exterior building renovation.
  - Resurfacing of an existing paved surface (e.g. parking lot, walkway or roadway).
  - Pavement excavation and patching that is incidental to the primary project purpose, such as replacement of a collapsed storm drain.
  - Landscaping installation and maintenance.

2. Redevelopment applications shall comply with the requirements of Sections C.2 Submission Requirements for Stormwater Management Report and Plans, C.3 General Performance Criteria for Stormwater Management Plans, and C.4 Spill Prevention, Control and Countermeasure (SPCC) Plan.
3. For sites meeting the definition of a redevelopment project and having less than 60% existing impervious surface coverage, the stormwater management requirements will be the same as other new development projects. The applicant must satisfactorily demonstrate that impervious area is minimized, and LID practices have been implemented on-site to the maximum extent practicable.
4. For sites meeting the definition of a redevelopment project and having more than 60% existing impervious surface area, stormwater shall be managed for water quality in accordance with one or more of the following techniques, listed in order of preference:
  - a. Implement measures onsite that result in disconnection or treatment of 100% of the additional proposed impervious surface area and at least 30% of the existing impervious area and pavement areas, preferably using filtration and/or infiltration practices.
  - b. If resulting in greater overall water quality improvement on the site, implement LID practices to the maximum extent practicable to provide treatment of runoff generated from at least 60% of the entire developed site area.
5. Runoff from impervious surfaces shall be treated to achieve at least 80% removal of Total Suspended Solids and at least 50% removal of both total nitrogen and total phosphorus using appropriate treatment measures, as specified in the NH Stormwater Manual. Volumes 1 and 2, December 2008, as amended or other equivalent means. All new impervious area draining to surface waters impaired by nitrogen, phosphorus or nutrients shall be treated with stormwater BMP's designed to optimize pollutant removal efficiencies based on design standards and performance data published by the UNH Stormwater Center and/or included in the latest version of the NH Stormwater Manual.

#### **ELEMENT E: Stormwater Management Plan and Site Inspections**

1. The Town Engineer or Planning Board designee shall submit inspection reports for stormwater management infrastructure construction according to a construction inspection sequence agreement prepared and endorsed by the applicant. This construction agreement may also include bond/surety release amounts corresponding with completed construction per the construction sequence agreement.
2. The applicant shall provide that all stormwater management and treatment practices have an enforceable operations and maintenance plan and agreement to ensure the system functions as designed. This agreement will include all maintenance easements required to access and inspect the stormwater treatment practices, and to perform routine maintenance as necessary to ensure proper functioning of the stormwater system. The operations and maintenance plan shall specify the parties responsible for the proper maintenance of all stormwater treatment practices. The operations and maintenance shall be provided to the Planning Board as part of the application prior to issuance of any local permits for land disturbance and construction activities.

3. The property owner shall bear responsibility for the installation, construction, inspection, and maintenance of all stormwater management and erosion control measures required by the provisions of these regulations and as approved by the Planning Board, including emergency repairs completed by the town.

#### **ELEMENT F. Stormwater Management Plan Recordation**

1. Stormwater management and sediment and erosion control plans shall be incorporated as part of any approved site plan. A Notice of Decision acknowledging the Planning Board approval of these plans shall be recorded at the Registry of Deeds. The Notice of Decision shall be referenced to the property deed (title/book/page number) and apply to all persons that may acquire any property subject to the approved stormwater management and sediment control plans. The Notice of Decision shall reference the requirements for maintenance pursuant to the stormwater management and erosion and sediment control plans as approved by the Planning Board.
2. The applicant shall provide legally binding documents (e.g. that run “with the land”) for filing with the registry of deeds which demonstrate that the obligation for maintenance of stormwater best management practices and infrastructure runs with the land and that the Town has legal access to inspect the property to ensure their proper function or maintain onsite stormwater infrastructure when necessary to address emergency situations or conditions.
3. Easements:  
Where a development is traversed by or requires the construction of a privately owned watercourse, drainage way, culvert, bridge or other stormwater infrastructure that crosses a municipal roadway, an easement to the Town to enable construction, reconstruction, required maintenance or emergency access shall be provided for such purpose. Easements to the Town shall also be provided for the purpose of periodic inspection of drainage facilities and stormwater BMPs should such inspections by the Town become necessary. All easements shall be recorded at the County Registry of Deeds.
4. The applicant/developer shall submit to the town as-built drawings within a specified timeframe following approval, not to exceed two years from completion of construction.
5. As required by the EPA MS4 Permit Section 2.3.6.b, final as-built plans shall be submitted within a timeframe specified by the Planning Board not to exceed two years from the completion of construction.

#### **ELEMENT G. Inspection and Maintenance Responsibility**

1. Municipal staff or their designated agent shall be granted site access to complete routine inspections to ensure compliance with the approved stormwater management and sediment and erosion control plans. Such inspections shall be performed at a time agreed upon with the landowner.
  - a. If permission to inspect is denied by the landowner, municipal staff or their designated

agent shall secure an administrative inspection warrant from the district or superior court under RSA 595-B Administrative Inspection Warrants. Expenses associated with inspections shall be the responsibility of the applicant/property owner.

- b. If violations or non-compliance with a condition(s) of approval are found on the site during routine inspections, the municipal staff or their designated agent shall provide a report to the Planning Board documenting these violations or non-compliance including recommend corrective actions. The Planning Board shall notify the property owner in writing of these violations or non-compliance and corrective actions necessary to bring the property into full compliance. The Planning Board, at their discretion, may recommend to the Board of Selectmen to issue a stop work order if corrective actions are not completed within 10 days
  - c. If corrective actions are not completed within a period of 30 days from the Planning Board or Select Board notification, the Planning Board may exercise their jurisdiction under RSA 676:4-a Revocation of Recorded Approval.
2. The applicant shall bear final responsibility for the installation, construction, inspection, and disposition of all stormwater management and erosion control measures required by the Planning Board. Site development shall not begin before the Stormwater Management Plan receives written approval by the Planning Board.
3. The municipality retains the right, though accepts no responsibility, to repair or maintain stormwater infrastructure if: a property is abandoned or becomes vacant; and in the event a property owner refuses to repair infrastructure that is damaged or is not functioning properly.
4. Property owners subject to approval under this regulation shall be responsible for submitting an annual report to the Planning Board by September 1 each year by a qualified engineer that all stormwater management and erosion control measures are functioning per the approved stormwater management plan or a waiver has been granted by the Planning Board. The annual report shall note if any stormwater infrastructure has needed any repairs other than routine maintenance and the results of those repairs. If the stormwater infrastructure is not functioning per the approved stormwater management plan the landowner shall report on the malfunction in their annual report and include detail regarding when the infrastructure shall be repaired and functioning as approved.

If no report is filed by September 1, municipal staff or their designated agent shall have site access to complete routine inspections to ensure compliance with the approved stormwater management and sediment and erosion control plans. Such inspections shall be performed at a time agreed upon with the landowner.

**Appendix1/Table 1. Stormwater Infrastructure Design Criteria**

<b>Design Criteria</b>	<b>Description</b>										
<b>Water Quality Volume (WQV)</b>	$WQV = (P)(R_v)(A)$ P = 1 inch of rainfall R <sub>v</sub> = unitless runoff coefficient, $R_v = 0.05 + 0.9(I)$ I = percent impervious cover draining to the structure converted to decimal form A = total site area draining to the structure										
<b>Water Quality Flow (WQF)</b>	$WQF = (q_u)(WQV)$ WQV = water quality volume calculated as noted above q <sub>u</sub> = unit peak discharge from TR-55 exhibits 4-II and 4-III  Variables needed for exhibits 4-II and 4-III: I <sub>a</sub> = the initial abstraction = 0.2S S = potential maximum retention in inches = $(1000/CN) - 10$ CN = water quality depth curve number $= 1000 / (10 + 5P + 10Q - 10[Q^2 + 1.25(Q)(P)]^{0.5})$ P = 1 inch of rainfall Q = the water quality depth in inches = $WQV/A$ A = total area draining to the design structure										
<b>Groundwater Recharge Volume (GRV)</b>	$GRV = (A_i)(R_d)$ A <sub>i</sub> = the total area of effective impervious surfaces that will exist on the site after development R <sub>d</sub> = the groundwater recharge depth based on the USDA/NRCS hydrologic soil group, as follows: <table style="margin-left: 40px;"> <thead> <tr> <th>Hydrologic Group</th> <th>R<sub>d</sub> (inches)</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>0.40</td> </tr> <tr> <td>B</td> <td>0.25</td> </tr> <tr> <td>C</td> <td>0.10</td> </tr> <tr> <td>D</td> <td>0.00</td> </tr> </tbody> </table>	Hydrologic Group	R <sub>d</sub> (inches)	A	0.40	B	0.25	C	0.10	D	0.00
Hydrologic Group	R <sub>d</sub> (inches)										
A	0.40										
B	0.25										
C	0.10										
D	0.00										
<b>Channel Protection Volume (CPV)</b>	If the 2-year, 24-hour post-development storm volume <u>does not increase</u> due to development then: control the 2-year, 24-hour post-development peak flow rate to the 2-year, 24-hour predevelopment level. If the 2-year, 24-hour post-development storm volume <u>does increase</u> due to development then: control the 2-year, 24-hour post-development peak flow rate to ½ of the 2-year, 24-hour pre-development level or to the 1-year, 24-hour pre-development level.										
<b>Peak Control</b>	Post-development peak discharge rates shall not exceed pre-development peak discharge rates for the 10-year and 50-year, 24-hour storms										
<b>EIC and UDC</b>	%EIC = area of effective impervious cover/total drainage areas within a project area x 100 %UDC = area of undisturbed cover/total drainage area within a project area x 100										

[After: NH DES Stormwater Manual: Volume2 Post-Construction Best Management Practices Selection & Design (December 2008)]

**NON-RESIDENTIAL AND MULTI-FAMILY  
SITE DEVELOPMENT PLAN REGULATIONS**

**SECTIONS SP100 - SP1500**

**SECTION 100 AUTHORITY**

**100:1** Pursuant to the authority vested in the Atkinson Planning Board by the voters of the Town of Atkinson in accordance with the provisions of Chapter 674:43 of the New Hampshire Revised Statutes Annotated, 1983, the Atkinson Planning Board adopts the following rules governing the review of non-residential and multi-family site development plans in the Town of Atkinson, New Hampshire. These rules shall be entitled "Non-Residential and Multi-Family Site Development Plan Regulations, Town of Atkinson, New Hampshire."

**SECTION 200 ORDINANCE AND REGULATION REQUIREMENTS**

**200:1** All developments shall meet the standards and requirements of the town zoning ordinance and subdivision regulations including, but not limited to, parking, off-street loading, landscaping, signs, location of driveways, erosion, screened service areas, and exterior lighting.

**SECTION 300 DUTIES OF THE PLANNING BOARD**

**SECTION 310 GENERAL**

**310:1** (2011)

- a. The Planning Board shall review the plan, or any amendment to it, in the same manner as is prescribed by state law for the review of subdivision plans.
- b. The Planning Board may require a professional engineering review or other type of technical review deemed necessary for preliminary consultation submission and formal application submissions under the Site Development Plan regulations. The cost of such review shall be borne by the applicant.
- c. The Planning Board reserve the right to request establishment at the time of application by the applicant of an escrow account to cover the estimated costs of the 30-day completeness review (per the Federal Communications Commission and Telecommunications Act, as amended) for any application involving establishment of new or expansion of existing wireless communication facilities. Any funds not expended for the purposes of the 30-day completeness review and subsequent professional and/or technical review of such applicants as part of the Site Plan Review process shall be returned to the applicant following final decision o the application by the Planning Board.

**310:2** In considering and approving the site development plan, the Planning Board shall take into consideration the public health, safety and general welfare and the comfort and

convenience of the public in general and the residents of the immediate neighborhood in particular. It shall make any appropriate conditions which:

- a. Guard against
  - 1) Inadequate drainage or conditions conducive to flooding of the property.
  - 2) Inadequate protection for the quality of groundwater.
  - 3) Undesirable and preventable elements of pollution which might prove harmful to persons, structures, or adjacent properties.
  - 4) Inadequate provision for fire safety, prevention, and control.
- b. Provide for
  - 1) Harmonious and aesthetically pleasing development of the municipality and its environs.
  - 2) Open spaces and green spaces of adequate proportions.
  - 3) Proper arrangement and coordination of streets within the site in relation to other existing or planned streets.
  - 4) Suitably located roadways of sufficient width to accommodate existing and prospective traffic and to afford adequate light, air, and access for firefighting apparatus and equipment to buildings.

## **SECTION 320 PARTICULAR**

**320:1** In addition to the general considerations of Section 310:2 above, the Planning Board shall also pay particular regard to:

- a. Maximum safety of traffic access and egress and sufficient areas to ensure off-street parking.
- b. A site layout which includes the location, power, direction and time of any outdoor lighting of the area and which has no adverse effect on any adjoining residence districts by impairing the established character or potential use of properties in such districts.
- c. Reasonable screening in all seasons of the year of all playgrounds, parking, and service areas from the view of adjacent residential properties and streets.
- d. Conformance of the proposed site development plan with such portions of the Master Plan of the town which are applicable.
- e. Installation of public improvements and amenities, at the expense of the applicant, to assist in the establishment of a sound environment. Such improvements may include, but are not limited to, roadways, curbing, paved sidewalks, and street trees or shrubs.

## SECTION 400 DEFINITIONS (IN ALPHABETICAL ORDER) (1998)

### 400:1

- C1** **Continuous Sound** *Sound the intensity of which remains essentially constant over time. (1998)*
- D1** **Driveway** *A driveway is a single access to and from a public way with separate entrance and exit lanes, except in the case of dwellings, in which case a driveway need not have separate entrance unless required as a condition of a special permit.*
- D2** **Daytime** *The time period between the hours of 7 AM and 9 PM of the same day, Monday through Friday and between 9AM and 9PM of the same day on Saturday, Sunday and all local legal holidays. (1998)*
- D3** **dBA (Decibel-A weighted)** *A measure of sound pressure level which takes into account the typical response of the human ear. (1998)*
- E1** **Exterior parking space** *An exterior parking space in an area having a width of not less than nine (9) feet and a length of not less than twenty (20) feet, exclusive of traffic and maneuvering space.*
- G1** **Gross floor area** *Gross floor area is the total floor area designed for occupancy and use including basement and other storage areas provided, however, that stairways, elevator wells, rest rooms and lounge areas, common hallways and building service areas shall not be included in the computation of such floor area.*
- I1** **Impulsive Sound** *Sound of short duration, usually less than one second, with an abrupt onset and rapid decay. Examples of sources of impulsive sound include explosions, discharge of firearms, riveting and hammering. (1998)*
- L1** **Light industry** *The fabrication and/or development of tangible goods by means of processes that are (a) neither obnoxious nor injurious by reason of the production or emission of odor, dust, smoke, refuse matter, fumes, noise vibration, or similar conditions; (b) nor dangerous to the comfort, peace, enjoyment, health, and safety of the community; (c) nor lending to its disturbance or annoyance.*
- L2** **Loading or unloading bay** *A loading or unloading bay is an area of not less than twelve (12) feet in width and sixty-five (65) feet in length, exclusive of traffic lanes and maneuvering space. Loading bays shall be located at the sides or rear of the building with direct access to the building to be served.*
- N1** **Nighttime** *Any time which does not meet the definition of Daytime. (1998)*
- P1** **Periodic Sound** *Sound the intensity of which cycles repeatedly from a low level to a higher level and/or sound possessing a repetitive on and off characteristic. (1998)*

## SECTION 500 GENERAL REGULATIONS

- 510** **Non-residential and multi-family use.** Planning Board approval of Site Development Plans or any amendments to such plans shall be required for all non-residential and

multi-family uses in the Town. Change of use may require a new site plan and Planning Board approval. (See also Section 540:2.)

**520 Uses not permitted.** No use shall be permitted which would be injurious, noxious, offensive, hazardous, or otherwise objectionable to the neighborhood or the Town.

This includes, but is not limited to, the emission of fumes, dust, noise, smoke, vibration, radiation, solid or liquid waste discharges, and long-term storage of hazardous substances.

**530 Adequacy of land.** Land of such character that it cannot be safely used for building purposes because of exceptional danger to health or peril from fire, flood or other menace shall not be platted for residential occupancy, nor for such other uses as may increase danger to health, life or property or aggravate the flood hazard, until appropriate measures have been taken by the owner or his agent to lessen such hazards.

## **SECTION 540 CERTIFICATION**

**540:1 Building permits.** No building permit may be issued for any building within the purview of this regulation until an approved site development plan or amendment of any such plan has been presented to the Building Inspector.

**540:2 Certificates of use and occupancy.**

- a. No certificate of use and occupancy may be issued for any building or use of land within the purview of these regulations unless the Town's appointed engineer has certified that the building is constructed and usable, and that the land is developed and used in conformity with an approved site development plan or an amendment of any such plan.
- b. In the case of developments qualifying for higher density under Section 610 of the Zoning Ordinance, occupancy permits shall be issued at a minimum ratio of one low-moderate dwelling unit to every four market-value dwelling units, so that for every four fair market-value units built, one low moderate unit must be built and such that by the time a project is seventy-five percent (75%) complete, all of the low moderate units must be built. (1997)
- c. In developments where multi-family dwelling unit buildings are to be constructed for the purposes of providing low-moderate housing opportunities under Section 610 of the Zoning Ordinance, construction of said low-moderate dwelling units shall commence prior to or at such time that not more than one-third of the total number of dwelling units within the development have been granted a Certificates of Occupancy. After such time, one low-moderate unit must be granted a Certificate of Occupancy prior to or concurrent with each market value dwelling unit being granted a Certificate of Occupancy until such time as all low-moderate dwelling units shall have been granted Certificates of Occupancy at or before such time that 75-percent of the total number of dwelling units have received Certificates of Occupancy.

All low-moderate income housing can be constructed in the first phase, however, at the applicant's discretion. (1998)

## **SECTION 550 COMPLIANCE**

**550:1** The proposed site plan development shall conform to all standards and requirements of the Town of Atkinson.

**550:2** (2011)

- a. When a proposed site plan is submitted for approval with regard to a new use or to an expansion of an existing use, the owner may submit a proposed site plan and request the Planning Board to waive specific requirements for the plan and supporting data. The Planning Board may agree to such a request provided that the Board has determined that such waiver of any requirements will not affect the purpose and intent of these regulations. This shall not apply to design, construction, health, safety, and flood plain standards.
- b. Any request for waiver to the requirements of these regulations shall be submitted in writing to the Planning Board. The basis for any waiver granted by the Planning Board shall be recorded in the minutes of the Board. The Planning Board may only grant a waiver if the board finds, by majority vote, that:
  - 1) Strict conformity would pose an unnecessary hardship to the applicant and waiver would not be contrary to the spirit and intent of the regulations, or
  - 2) Specific circumstances relative to the site plan or conditions of the land in such subdivision, indicate that the waiver will properly carry out the spirit and intent of the regulations.

## **SECTION 560 BOND/SURETY**

**560:1** Before approval of a site development plan, the Planning Board may require a performance bond, cash, or sureties by the applicant in an amount sufficient to cover the cost of work on that portion of the development which, if not properly completed, will have an adverse effect on adjoining property or a potential for erosion. This bond or sureties shall be approved as to form and surety by the legal Counsel of the Town of Atkinson, NH, and conditioned on the completion of such improvement and/or annual review of the bond's sufficiency.

**560:2** All bonds shall be made out in the name of:

Town of Atkinson: \_\_\_\_\_, Selectmen

If desired, a reference such as "Millpond Road Bond; John Doe, Owner" may be added. Only one signature is required for withdrawal, either that of the Treasurer or one of the Board of Selectmen, preferably the member serving Ex-Officio on the Planning Board. Signature cards should be presented with the bond. A set of withdrawal slips should be available in order to expedite the release of the bond.

## **SECTION 600 REQUIREMENTS FOR SITE DEVELOPMENT PLAN APPROVAL**

### **SECTION 610 OPERATIONAL CONSIDERATIONS**

**610:1** Any application for Non-Residential Site Development Plan approval within the Commercial (C); Commercial-Industrial (C-I); Town Center (TC); or Commercial-Professional (C-P) Districts shall be accompanied by a written statement of Intent accurately describing the nature of the applicant's planned non-residential operation(s). As a minimum, said Statement of Intent shall disclose the applicants intentions with regard to each of the following: (1998)

- a. The general use or uses of the planned development;
- b. The magnitude of each planned use or uses (gross square footage of building area to be assigned to each proposed use and/or estimated number of employees, on-site and transient to be assigned to each specific proposed use);
- c. Intended hours of operation associated with each proposed use;
- d. Type and estimated quantity of goods and services stored and/or provided relative to each proposed use;
- e. Description of activities to be undertaken inside and outside of proposed buildings;
- f. Description and estimated number of vehicles and equipment to be housed on-site (inside & out) during both business and non-business hours;
- g. Identification of shipping/receiving schedule (estimated number of trips per day, together with estimated time of arrival/departures and associated vehicle type); and
- h. Identification of any regulated materials or equipment to be used or stored on-site and means by which applicant intends to fulfill applicable local, state and federal requirements associated with use and storage of the same.

**610:2** Given the specific duties of the Planning Board described in Section 310:2 of these Regulations, or provided for elsewhere in these Regulations and/or within any and all other applicable local, state or federal regulations, ordinances, rules or laws, the Planning Board may, in its prudent and reasonable judgment, require an applicant to

modify his/her Statement of Intent, when and if necessary to protect the public health, safety and general welfare as well as the comfort and convenience of the public in general and/or the residents of an immediate area.(1998)

- 610:3** It is understood that a written Statement of Intent, as submitted by an applicant, or as modified by the Planning Board in its prudent and reasonable judgment for the reasons provided for under Section 605:2 of these Regulations, will become an integral part of any resulting approval granted by the Board. Any subsequent amendments serving to affect or alter said Statement of Intent must receive specific Planning Board approval, in the form of a change or expansion of use, as provided for under NH RSA 674:43. (1998)

## **SECTION 620 POLLUTION AND FLOOD HAZARD CONTROL**

- 620:1** Whenever an earth disturbance significantly alters more than 100,000 square feet of contiguous terrain, the sub divider shall submit to the Planning Board a copy of an Alteration of Land (Site Specific) Permit for such operation officially approved by the New Hampshire Department of Environmental Services. (2011)
- 620:2** Provisions shall be made to assure that the proposal is consistent with the need to protect groundwater recharge areas from pollution and to minimize flood damage, that all public utilities and facilities, such as sewer, gas, electrical, and water systems, are constructed and that adequate drainage is provided so as to reduce exposure to flood hazards.
- 620:3** Storm drainage of the site shall be designed for a 25 year flood and if the existing drainage system to which the site drainage system will be connected is inadequate, provisions shall be made for retention and gradual release of storm water in order to meet the 25 year flood demand.
- 620:4** Design provisions shall also be made to minimize or eliminate infiltration of flood waters into new or replacement water supply systems and/or sanitary sewage systems and discharges from these systems into floodwaters.
- 620:5** On-site waste disposal systems shall be located so as to avoid impairment of them or contamination from them.

## **SECTION 630 SEWAGE SYSTEMS**

- 630:1** Waste disposal systems shall be designed by a licensed sanitary engineer in accordance with state specifications, and copies of all required state and federal permits shall be supplied to the town.

## **SECTION 640 CONSTRUCTION SITE RUNOFF EROSION AND SEDIMENT CONTROL STANDARDS (2020)**

### **640:1 PURPOSE AND STANDARDS (2020)**

- a. The purpose of these standards is to safeguard persons, protect property, prevent damage to the environment and promote the public welfare by guiding, regulating, and

controlling the design, construction, use, and maintenance of any development or other activity that disturbs or breaks the topsoil or results in the movement of earth on land during construction.

- b. An Erosion and Sediment Control Report and plans, adhering to the standards of this regulation, shall be submitted with a Site Plan Review application, if applicable, and shall be prepared and certified by a licensed NH Professional Engineer.
- c. An Erosion and Sediment Control Plan is not required for the following activities:
  - 1) Any emergency activity that is immediately necessary for the protection of life, property, or natural resources.
  - 2) Existing nursery and agricultural operations conducted as a permitted primary use or accessory use.
- d. The Performance Guarantee required in Section 703 shall be sufficient to cover all costs of improvements, landscaping, maintenance of improvements for such period as specified by the Planning Board, and engineering and inspection costs to cover the cost of failure or repair of improvements installed on the site.

#### **640:2 EROSION AND SEDIMENT CONTROL PLAN REQUIREMENTS (2020)**

- a. The Erosion and Sediment Control Plan shall include the following:
  - 1) A natural resources map identifying soils, forest cover, and resources protected under other sections of the Land Development Regulations, Zoning Ordinance or other local regulations.
  - 2) A sequence of construction of the development site, including stripping and clearing; rough grading; construction of utilities, infrastructure, and buildings; and final grading and landscaping. Sequencing shall identify the expected date on which clearing will begin, the estimated duration of exposure of cleared areas, areas of clearing, installation of temporary erosion and sediment control measures, and establishment of permanent vegetation.
  - 3) All erosion and sediment control measures necessary to meet the objectives of this regulation throughout all phases of construction and after completion of development of the site. Depending upon the complexity of the project, the drafting of intermediate plans may be required at the close of each season.
  - 4) Seeding mixtures and rates, types of sod, method of seedbed preparation, expected seeding dates, type and rate of lime and fertilizer application, and kind and quantity of mulching for both temporary and permanent vegetative control measures.
  - 5) Provisions for maintenance of control facilities, including easements and estimates of the cost of maintenance.
- b. Modifications to the Erosion and Sediment Control plan shall be processed and approved or disapproved by the Planning Board by written authorization to the permittee as follows.

- 1) Major amendments of the approved Erosion and Sediment Control plan.
- 2) Field modifications of a minor nature may be approved by the Town Engineer or other municipal staff upon inspection.

### **640:3 BEST PRACTICES FOR SITE PLAN REVIEW APPLICATIONS (2020)**

All Site Plan Review applications must submit the following information and shall comply with the following standards.

1. Apply best management practices that accommodate the increased runoff caused by changed soil and surface conditions during construction, including strong perimeter controls and soil stabilization methods. Sediment in stormwater runoff shall be contained by the use of sediment basins or other acceptable methods until the disturbed area is stabilized. Techniques that divert upland runoff away from disturbed slopes shall be used.
2. Identify, locate, and show elevation, grades and/or contours at intervals of not more than two (2) feet for the existing and proposed drainage ways, drainage easements, drainage structures, and any surface water bodies.
3. Identify and relatively locate and include drawings and specifications for each erosion and sediment control measure and structure proposed during construction, noting those measures that will become permanent structures retained after construction. Erosion and sediment control measures and structures shall be designed in accordance with the New Hampshire Stormwater Manual Volume 3: Erosion and Sediment Controls During Construction (NH Department of Environmental Services, December 2008, as amended) or new standards and guidance as released or adopted by the NH Department of Environmental Services.
4. Include drawings, details and specifications for proposed flood hazard prevention measures and structures and for proposed temporary stormwater management facilities.
5. Ensure that disturbance to or removal of vegetation, grading or other construction will be done in such a way that will minimize soil erosion. Whenever practical, natural vegetation shall be retained, protected and supplemented to function as buffers.
6. Construction sites must be stabilized within five days of clearing or inactivity in construction. Temporary application of seed and/or mulch may be required by the Planning Board to protect exposed critical areas during development. Techniques shall be employed to prevent the blowing of dust or sediment from the site. In areas where final grading has not occurred, temporary stabilization measures should be in place within 7 days for exposed soil areas within 100 feet of a surface water body or wetland and no more than fourteen (14) days for all other areas. Permanent stabilization should be in place no more than 3 days following the completion of final grading of exposed soil areas. At the close of the construction season, the entire site must be stabilized, using a heavy mulch layer, or another method that does not require germination to control erosion.

7. Waste Removal and Disposal.

- a. All waste generated on the site shall be controlled and discarded properly including but not limited to building materials, concrete and concrete washout effluent, chemicals, litter and sanitary wastes.
- b. Waste shall not be discharged to the municipal MS4 system.

**640:4 INSPECTION AND ENFORCEMENT (2020)**

- a. The agent designated by the Planning Board shall make inspections as described below and shall either approve that portion of the work completed or shall notify the applicant/property owner and the Planning Board when and how the construction activity(s) fails to comply with the approved erosion and sediment control plan. All plans bearing the stamp of approval of the designated agent shall be maintained at the site during construction. In order to obtain inspections, the applicant/property owner shall notify the designated agent at least one week before the following required site inspections:
  1. Proposed erosion and sediment control measures are located and staked on the site before the start of construction.
  2. Erosion and sediment control measures are in place and stabilized.
  3. Site clearing and preparation has been completed.
  4. Rough grading has been completed.
  5. Final grading has been completed.
  6. Close of the construction season.
  7. Final landscaping has been completed.
- b. The permittee or his/her agent shall make regular inspections of all control measures in accordance with the inspection schedule outlined on the approved Erosion and Sediment Control Plan(s). The purpose of such inspections will be to determine the overall effectiveness of the control plan and the need for additional control measures. All inspections shall be documented in written form and submitted to the agent designated by the Planning Board at the time interval specified in the approved plan.
- c. The Town or its designated agent shall enter the property of the applicant as deemed necessary to make regular inspections to ensure the validity of the reports filed under Section B.
- d. Stop-Work Order. In the event that any person holding a site development permit pursuant to this ordinance violates the terms of the permit or implements site development in such a manner as to materially adversely affect the health, welfare, or safety of persons residing or working in the neighborhood or development site so as to be materially detrimental to the public welfare or injurious to property or improvements in the neighborhood, the Town may issue a Stop-Work Order.

- e. Violation and Penalties. No person shall construct, enlarge, alter, repair, or maintain any grading, excavation, or fill, or cause the same to be done, contrary to or in violation of any terms of this ordinance. Any person violating any of the provisions of this ordinance may be fined and each day during which any violation of any of the provisions of this ordinance is committed, continued, or permitted, shall constitute a separate offense. Upon finding of such violation, such person, partnership, or corporation shall be levied a fine of not more than \$ 500.00 for each offense. In addition to any other penalty authorized by this section, any person, partnership, or corporation convicted of violating any of the provisions of this ordinance shall be required to bear the expense of such restoration.

#### **640:5 POST CONSTRUCTION STORMWATER MANAGEMENT STANDARDS (2021)**

**See Appendix A - (SP 28)**

#### **SECTION 650 CONSTRUCTION**

- 650:1 Road.** Construction requirements shall be in accordance with Standard Specifications for Road and Bridge Construction as published by the State of New Hampshire Department of Public Works and Highways provided that alternative provision may be considered by the Planning Board if submitted by the developer.
- 650:2 Paving/drainage/sidewalks.** Pavement and drainage facilities, curbs and sidewalks, when required, shall be installed and constructed in accordance with the standard specifications of the Town of Atkinson, NH, and, in all cases, must be constructed under the supervision of the Town's appointed engineer.
- 650:3 Underground utilities.** Underground utilities shall be located outside the paved areas wherever possible.

**SECTION 660 SNOW STORAGE.** Provisions shall be made for snow storage during the winter months.

#### **SECTION 670 OFF-STREET PARKING AND LOADING REQUIREMENTS**

- 670:1** In all districts, there shall be provided at such time as any building or structure is erected, externally enlarged, or increased in capacity, off-street parking spaces and loading areas for vehicles in accordance with the requirements of this section.
- 670:2** All parking and off-street loading spaces required by this section shall be provided on the same lot with the principal use.

- 670:3** Off-street parking existing at the effective date of these regulations in connection with the operation of an existing building or use shall not be reduced to an amount less than hereinafter required for a similar new building or use.
- 670:4** The required off-street parking shall be for occupants, employees, visitors, and patrons and shall be limited in use to motor vehicles and bicycles. The storage of merchandise, motor vehicles for sale or the repair of vehicles is prohibited except in the Commercial-Industrial area.
- 670:5** In addition to all other space requirements, every car, truck, tractor, trailer or other vehicle normally stored at any site shall be provided with off-street parking space in an area reserved for no other use.
- 670:6** Where the computation of the off-street parking or loading bay space requirements results in a fractional number, the fraction shall be counted as the next whole unit.
- 670:7** Where one building is used for more than one use, off-street parking space requirements shall be computed for each use.
- 670:8** **Required parking spaces.** A minimum number of spaces in accordance with the following table:

a) Business and professional offices;	One (1) space for each three hundred (300) banks and financial institutions. .hundred (300) square feet of floor area plus one (1) space for every employee.
b) Barber shops and beauty parlors. .	Two (2) per barber or three (3) per beautician based on the design capacity of the structure or one (1) space for every two hundred (200) square feet of floor area, whichever is greater.
c) Bowling alleys . .	Four (4) per alley.
d) Church, chapel and funeral homes,	One (1) space for every three seats plus one places of assembly or amusement.(1) for every three employees.
e) Dwelling units (1 or 2) . .	Two (2) spaces per dwelling unit plus one (1)for every three employees.
f) Dwelling unit (multi) . .	Two (2) spaces per dwelling unit plus (1) additional space for each bedroom over two (2) per dwelling unit, to a maximum of three (3) spaces per dwelling unit.
g) Garages and gasoline stations	One (1) space for each one thousand (1,000)with repair service square feet used for repairing vehicles plus two (2) spaces for each lubrication pit or service bay.
h) Gasoline service stations	One (1) parking space for each employee plus two (2) for each service bay.
i) Hospitals, nursing homes, convalescent	Two (2) spaces for each bed, plus one (1) home and extended care facilities..space for every employee or staff member.

- j) Hotels and motels Three (3) spaces for each two (2) rental units, plus three (3) spaces for each two hundred (200) square feet of floor area available for meetings or functions and one (1) space for every (4) employees.
- k) Kennels and veterinary hospitals.. One (1) parking space for each employee and employee and one (1) space for every five (5) animals or fraction thereof other-wise maintained or treated simultaneously.
- l) Membership clubs.. One (1) space for every ten (10) members except in the case of golf clubs, the requirements for recreation areas shall govern.
- m) Restaurants, cafeterias, taverns, lounges, and similar uses for serving food and beverages:
- (1) sit-down (food or beverages):  
 One (1) space for every two (2) seats plus beverages consumed inside;  
 (2) seats plus one (1) for every employee building) .every employee.
- (2) Carry-out (no food or beverages):  
 Two (2) spaces for each one hundred (100) consumed on premises) square feet of floor area.
- (3) Combination sit-down and Parking requirements shall be in direct riation to carry-out . .the gross floor area designated for for seating.
- n) Recreation areas. Four spaces for each hole of golf course;  
 one(1) space for every picnic table or outdoor fireplace and for every one hundred (100) square feet of water in a public swimming pool or skating rink.
- o) Retail stores, service Establishments:
- (1) Under three thousand (3,000) One (1) space for each two hundred seventy square feet (270) square feet of gross floor area.
- (2) Over three thousand (3,000) One (1) space for each one hundred eighty square feet . .(180) square feet of gross floor area.
- p) Schools, public, private or parochial, nursery or pre-school, elementary, middle or junior high. One space per teacher and employee normally engaged in or about the building or grounds plus one (1) space for each seventy-five (75) square feet for seating area including aisles, in any auditorium.
- q) Schools, private and parochial, senior high, other One space per teacher and employee normally engaged in or about the building or grounds, plus one (1) space per five

public schools, schools, colleges, or other places of instruction.

students or one (1) space for each seventy-five (75) square feet of seating area, including aisles, in any auditorium, gymnasium or cafeteria intended to be used as an auditorium, whichever is greater.

r) Use permitted or specially permitted in the Industrial districts, not specifically provided for herein above.

One (1) space per employee plus one (1) space for each two thousand (2,000) square feet and one (1) space for each additional ten thousand (10,000) square feet of floor area.

Requirements may be adjusted by the Planning Board as needed for unusual circumstances.

### **Section 680 REQUIRED OFF-STREET LOADING**

**680:1** In all districts, in addition to off-street parking requirements, and on the same premises with every building, structure or part thereof, erected and occupied for manufacturing, storage, warehouse goods, display, a department store, wholesale store, market, hotel, hospital, or other uses similarly involving the receipt or distribution of vehicles, materials or merchandise, there shall be provided and maintained on the lot adequate space for standing, loading and unloading in order to avoid undue interference with public use of the streets or alleys.

**680:2** Off-street loading and unloading space shall be provided as follows:

- a. One (1) off-street loading and unloading bay shall be provided for buildings up to and including twenty thousand (20,000) square feet of floor area, plus one (1) additional off-street loading and unloading bay for each additional twenty thousand (20,000) square feet of floor area (or fraction thereof) up to and including one hundred thousand (100,000) square feet.
- b. There shall be provided an additional off-street loading and unloading bay for each additional forty thousand (40,000) square feet of floor area in excess of one hundred thousand (100,000) square feet.
- c. Where trailer trucks are involved, such loading and unloading bay shall have a fourteen (14) foot height clearance and shall be designated with appropriate means of truck access to a street or alley as well as adequate maneuvering area.
- d. All areas devoted to permanent off-street loading and unloading as required under this section shall be of a sealed surface construction and maintained in such a manner that no dust will result from continuous use.

### **SECTION 690 SCREENING AND BUFFERING**

**690:1** Screening and buffering areas shall be provided as follows:

Screened area: Buffer are	Width	including Screened area
a) here land in the Commercial Industrial or Commercial Professional district abuts a Residential district. .	15 feet	150 feet

- |  |         |          |
|--|---------|----------|
| b) Where commercial/non-residential use abuts a residential district.                      | 15 feet | 100 feet |
| c) Where commercial use in a Planner Nonresidential District abuts a Residential district. | 15 feet | 150 feet |
| d) Where a use on special permit exists in a Residential District.                         | 15 feet |          |
| e) Outdoor storage.  | 15 feet |          |

**690:2** The screened area shall serve as a visual and noise barrier and be densely planted with shrubs or trees which are at least three (3) feet high at the time of planting and are of a type which may be expected to form a year-round dense screen at least five (5) feet high within three (3) years. Screening shall not obstruct the view of oncoming traffic when entering or exiting the property. The plant material shall be maintained in a healthy condition. Required planting shall take place prior to occupancy or, if not possible because of the season of the year, at the next planting season.

Where, because of intense shade or soil conditions, the planting screen cannot be expected to thrive, a visually solid wooden fence or masonry wall may be substituted provided that the remaining land required for screening is added to the buffer strip. Chain link fences are allowed inside the screening. (1990)

**690:3** Tree buffers shall be left undisturbed where possible. Trees removed from a buffer during construction or for other reasons may be required to be replaced with deciduous or evergreen trees of not less than 2 inches in diameter, bh. (1990)

**690:4** The buffer area, exclusive of screen area, may be treed, if deemed necessary by the Planning Board; otherwise, it shall be landscaped or covered with ground cover.

**690:5** Parking, traffic circulation, loading or unloading operations and signs are not permitted within a buffer. Essential services within a buffer will be subject to Planning Board approval. (1990)

## **SECTION 6100 MINIMUM LOT SIZE REQUIREMENTS**

### **6100:1 Determination of required lot size**

- a. Commercial and industrial establishments. The minimum land area required for a proposed use must meet Atkinson zoning requirements as well as state Water Supply and Pollution Control (WSPCC) requirements for the intended use.
- b. All residential development, excluding low-moderate income housing. Refer to Zoning Ordinance provisions and Section 400 of the for the Town of Atkinson, New Hampshire. (1992)

### **6100:2 Slope determination**

- a. The slope assigned by a qualified soil scientist according to standards of the National Cooperative Soil Survey shall determine the slope to be used in the calculation of minimum lot size requirements.

**6100:3** Relationship between state and local regulations. Where both State and local regulations are applicable, the more stringent regulation shall apply. If the local regulation addresses an issue not included in the state regulation, the local regulation shall automatically apply.

## **SECTION 6110 LIMITATIONS**

**6110:1 DELETED 1990.**

**6110:2 Elevation limitations.** No building or structure shall exceed thirty-five (35) feet in height from the lowest ground level. The provisions of this section shall not apply to church spires, chimneys, radio antenna, flag poles, or water tanks.

**6110:3 Structural coverage permitted.** No building or group of buildings shall cover more than 25% of the buildable land area.

## **SECTION 6120 OPEN SPACE**

Where applicable, site developments shall provide for recreational areas, open spaces, and green spaces of adequate proportions, using New Hampshire state standards compiled by the Department of Resources and Economic Development and the Office of State Planning as minimum area guidelines.

## **SECTION 6130 PROTECTION OF NATURAL FEATURES**

Provision may be required for the protection of natural features.

## **SECTION 6140 NECESSARY UTILITIES**

**6140:1 General.** Provisions shall be made for the site to be serviced by necessary utilities which may include water for fire and domestic use, sanitary sewer, electrical and gas.

**6140:2 Outdoor lighting.** Provision shall be made for outdoor lighting.

**Section 6150 SIGNS** (See Zoning - Sign Regulations - Section 470) (1992)

## **SECTION 6160 TRAFFIC**

**6160:1** Access to the site from town and state roads shall ensure safety of vehicles and pedestrians.

**6160:2** Improvement to existing streets shall include signal devices if necessary because of increased traffic generated by the development.

**SECTION 6170 PERFORMANCE STANDARDS FOR NON-RESIDENTIAL USES**

**6170:1** In addition to meeting the provisions of Section 400:2 of the Atkinson Zoning Ordinance, all non-residential uses shall be designed and operated to meet the performance standards set forth herein: (1998)

- a. A noise level which does not exceed 60 decibels.
- b. A smoke level which, at its source, does not exceed No. 2 on the Ringlemann Chart.
- c. Vibration which creates displacement of no more than 0.002 of one inch.

**6170:2** Maximum Permissible Sound Levels (1998)

- a. No sound shall be projected beyond the property line within any zoning district which exceeds the levels set forth in Table I and II or as otherwise provided herein. The maximum permissible sound level allowed in any zoning district shall be the sum of the level specified in Table I plus the correction factor from Table II. Sound projecting from one zoning district into another district shall not exceed the limits of the district into which the sound is projected.

I. TABLE I--Maximum Permissible Sound Levels in dBA

Zoning District	<u>Daytime Level</u>	<u>Nighttime level</u>
All residential	65	55
Commercial	65	60
Commercial-Professional	65	55
Town Center	65	55
Commercial-Industrial	70	65

II. TABLE II--Correction Factors

Character of Sound Correction Factors (dBA)

Impulsive Sound	Minus 5
Periodic Sound	Minus 5

- b. All sound levels set forth herein shall be measured with a sound level meter meeting American National Standards Institute ANSI S1.4-1971, Type 1 or Type
  - 1. The instrument shall be maintained in calibration and good working order. A calibration check shall be made at the time any measurement is taken. The microphone, during measurement, shall be positioned so as not to create any unnatural enhancement or diminution of the measured sound. A windscreen for the microphone shall be used when required. Provision shall be made to discount traffic, aircraft and other background sound when any measurement is taken.

- c. For the measurement of continuous or periodic sound, the slow response setting of the meter shall be employed. For impulsive sound or for rapidly varying sound level, the fast response setting shall be employed.

**6170:3** Exemptions. The following uses and activities shall be exempt from the sound level regulations set for in 685:2: (1998)

- a. The use of snowblowers and other types of private or commercial snow removal operations.
- b. The use of lawnmowers, rototillers and other types of powered equipment when used to maintain the site.
- c. The operation or use of construction vehicles, tools and equipment for the purpose of constructing, altering, repairing, or maintaining facilities or buildings permanently located on the site.
- d. Parades and public gatherings of a temporary duration as permitted by law.
- e. Bells, chimes or carillons when used in conjunction with religious purposes.
- f. The operation or use of agricultural or forestry equipment in conjunction with farming or logging operations.
- g. Sound from safety signals and warning devices such as fire alarms.
- h. Any sound which does not exceed 50 dBA at a distance of twenty-five feet from its source.

**6170:4** No smoke emitted shall, at its source, exceed No. 2 on the Ringlemann Chart. (1998)

**6170:5** No vibration shall create displacement or more than 0.002 inch at or beyond the property line. (1998)

**6170:6** Harmful wastes may not be discharged into the ground, streams, or other bodies of water or local sewer systems. Effluent disposal shall comply with local and state standards. (1998)

#### **SECTION 6180 MINIMUM LANDSCAPING REQUIREMENTS (1998)**

**6180:1** Each application considered for approval under these Regulations must include a landscape design plan.

**6180:2** All landscape plantings required under this Section shall be furnished and installed in accordance with accepted horticultural standards and shall be regularly maintained. All required plantings shall be replaced as necessary in order to maintain compliance with the minimum standards established in this Section.

**6180:3** All areas disturbed by construction shall be covered with a minimum thickness of four-inches of friable loam or mulch or appropriate landscape material and be subsequently

planted with grass seed, sod, or vegetative ground cover or a combination thereof as appropriate.

- 6180:4** A Street Tree Strip, 15-feet in width, running parallel to the boundaries of a parcel fronting on any public or private street, shall be planted with a minimum of one indigenous shade tree such as oak, maple, elm, ash, linden, etc., with a minimum caliper of 2.5 inches and branching height of not less than 7-feet at the time of planting. A minimum of one street tree shall be provided for each 50-feet of roadway frontage and shall be planted no closer than 25-feet on center. The requirements of this Section may be fulfilled by protecting and retaining healthy trees within the Street Tree Strip which fulfill the applicable requirements of this Section.
- 6180:5** In the C, TC & C-P and SCR Districts, a Front Landscape Strip of not less than 15-feet in width shall be planted between the interior edge of the Street Tree Strip and the closest point of a building or impervious surface facing a public or private street. The Front Landscape Strip shall be planted with a minimum of one deciduous, evergreen or ornamental tree for every 30-feet of building or impervious surface facing a public or private street. Trees planted in the Front Landscape Strip shall be a minimum of six feet in height and have a caliper diameter of not less than 2-inches at the time of planting. In no case shall required trees within the Front Landscape Strip be planted closer than 15-feet on center. The requirements of this Section may be fulfilled by protecting and retaining existing healthy trees within the required Front Landscape Strip which fulfill the applicable requirements of this Section.
- 6180:6** A minimum of 15-feet of landscaped area shall be provided between the extreme edges of any proposed pavement or buildings located to the interior of the Front Landscape Strip and the adjoining side or rear property line. Planting requirements within the Side and Rear Landscape Strip shall be identical to those specified in Section 690:5 for the Front Landscape Strip.
- 6180:7** Interior Green Space shall be required within paved or gravel surfaced areas containing 20 or more parking spaces or more than 5,000 square feet of contiguous paved or gravel surfaced area. The total area of required Interior Green Space shall not be less than 5-percent of the total area of contiguous paved and/or gravel surfaced area.

Individual areas of the Interior Green Space set aside in order to fulfill the requirements of the Section shall not be less than 250-square feet in area and shall be planted with a minimum of one specimen tree pre 250 square feet of green space in accordance with the same requirements as those specified in Section 690:5 for the Front Landscape Strip. All interior green space shall be loamed and vegetated in accordance with the requirements of Section 690:3.

## **SECTION 6190 NATIONAL FLOOD INSURANCE PROGRAM (2008)**

For subdivisions and site plans that involve land designated as “Special Flood Hazard Areas” (SFHA) by the National Flood Insurance Program (NFIP):

- 6190:1** The Planning Board shall review the proposed development to assure that all necessary permits have been received from those governmental agencies from which approval is required by federal or state law, including Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. 1334.

**6190:2** The Planning Board shall require that all proposals for development greater than 50 lots or 5 acres, whichever is the lesser, include Base Flood Elevation (BFE) data within such proposals (i.e., floodplain boundary and 100-year flood elevation).

**6190:3** The Planning Board shall require the applicant to submit sufficient evidence (construction drawings, grading and land treatment plans) so as to allow a determination that:

- a. all such proposals are consistent with the need to minimize flood damage;
- b. all public utilities and facilities, such as sewer, gas, electrical and water systems are located and constructed to minimize or eliminate flood damage; and,
- c. adequate drainage is provided so as to reduce exposure to flood hazards.

## **SECTION 700 PROCEDURE FOR SITE DEVELOPMENT PLAN APPROVAL**

### **SECTION 710 APPLICATION FOR APPROVAL**

**710:1** Whenever the development of a site is proposed to be made and before an application for a permit for the erection of a structure thereon shall be made, the owner thereof or his agent shall make application for approval of such site plan development to the Planning Board of the Town of Atkinson, NH. The application shall be considered a completed application at such time as it contains sufficient information to allow the board to proceed with a formal consideration of the proposal. The application shall conform to the specifications contained in these regulations.

### **SECTION 720 PRELIMINARY CONSULTATION**

**720:1** Preliminary consultations and review of a proposal shall be separate and apart from formal consideration by the Board and shall not bind either the applicant or the Board.

Time limits for acting upon a proposal shall not apply until preliminary review is concluded, the application is complete, and the site development plan has been accepted for formal consideration by the Board.

**720:2** A preliminary consultation and review of the basic concept of the site development proposal must be held at a regular meeting of the Board. No formal public notice shall be required. A required preliminary layout, which constitutes part of the completed application, as described in Section SR 800, may be filed by the applicant at this time.

**720:3** A second preliminary consultation and review of the proposal, if required by the Board or sought by the applicant, shall be held only after the Board has notified the applicant and abutters by certified mail at least 10 days prior to the consultation. A notice to the general public shall be given at the same time by posting or by publication, and it shall describe the proposal and identify the applicant and the location. All cost of such notice shall be paid by the applicant in advance of the consultation meeting.

**720:4** Subsequent preliminary consultations may be required by the Board or sought by the applicant in order to achieve a satisfactory preliminary layout and sufficient additional

information to constitute a completed application for site development plan approval. The Board may hear and confer with parties whose interest may be affected by the proposed layout; may require a professional engineering review, the cost of which is to be borne by the applicant; and may require specific changes in the preliminary plan which shall be communicated to the developer in writing. Should the Board disapprove of the preliminary layout in its entirety, it shall state its reasons for such disapproval in writing.

## **SECTION 730 FORMAL CONSIDERATION**

**730:1 Submission.** The developer shall submit a completed application to the Board 15 days prior to a regular Planning Board meeting, at which time the completed application shall be accepted.

**730:2 Notification.**

- a. Of formal submission. The Planning Board shall notify the applicant and abutters by certified mail at least 10 days prior to the date on which the formal submission of the subdivision application will take place. A notice to the general public shall be given at the same time by posting or by publication, and it shall describe the proposal and identify the applicant and the location. All cost of such notice shall be paid by the applicant in advance of the formal submission.
- b. Of public hearing. The Planning Board shall notify the applicant and abutters by certified mail at least 10 days prior to the date on which a public hearing on the site development plan application will take place. A notice to the general public shall be given at the same time by posting and by publication, and it shall describe the proposal and identify the applicant and the location. All cost of such notice shall be paid by the applicant in advance of the formal submission.
- c. Simultaneous notice. If a notice of public hearing is included in the notice of formal submission, additional notice of the public hearing shall not be required.

**730:3 Time limitations**

- a. Upon determination by the board that a submitted application is complete according to the board's regulations, the board shall begin formal consideration and shall act to approve, conditionally approve, or disapprove within 65 days, subject to extension as provided for in paragraph (c) below. (2002)
- b. The applicant shall meet the requirements for filing final plats and data, as outlined in Section SR900, within 60 days of submission of the completed application.
- c. The Board may apply to the selectmen to extend the formal consideration period for up to 90 additional days before acting to approve or disapprove the application.
- d. A site plan that has been granted a conditional approval shall have one (1) year from the date of conditional approval to fulfill the conditions or the approval is revoked and the plan must come back for review. (1997)

**730:4 Offers of cession.**

The subdivider shall tender offers of cession, in a form certified as satisfactory by the corporation counsel, of all land included in streets, highways or parks not specifically reserved by him; but approval of the plat by the Board shall not constitute an acceptance by the Town of the dedication of any street, highway, park or other public space.

**730:5 Approval/disapproval.**

In case of disapproval of any application submitted to the planning board, the ground for such disapproval shall be adequately stated upon the record of the Board.

**SECTION 800 PRELIMINARY LAYOUT**

**810:1** Prior to the formal submission of the site development plan, the owner or his authorized agent shall submit three sets of site plan maps and supporting data to the Planning Board which shall include the following information:

- a. All data required for formal submission of a subdivision proposal as identified in Sections 600 and 700 of the Land Subdivision Control Regulations chapter of the Atkinson Planning and Land Use Regulations book.
- b. The proposed grades, drainage systems, structures and topographic contours at intervals not exceeding 2 feet with spot elevations where grade is less than 5 percent.
- c. The shape, size, height, and location of the proposed structures including expansion of existing buildings.
- d. Proposed streets, driveways, parking spaces, sidewalks, with indication of direction of travel for one-way streets and drives and inside radii of all curves.
- e. The width of streets, driveways, and sidewalks and the total number of parking spaces to be provided.
- f. Loading spaces and facilities associated with the structures on the site.
- g. The size and location of all proposed wells, septic systems and other public and private utilities.
- h. The location, type, and size of all proposed landscaping and screening, presented in the form of a detailed planting plan with annotated planting list. (1998)
- i. Exterior lighting plan and proposed signs to be located on the site.
- j. Plans for snow removal and storage.
- k. A circulation plan of the interior of the lot showing provisions for both auto and pedestrian circulation.

- l. An access plan showing means of access to the site and proposed changes to existing public streets including any traffic control devices necessary in conjunction with the site development plan.
- m. Construction drawings including, but not limited to, pavements, walks, steps, curbing and drainage structures.
- n. A copy of any covenants or deed restrictions that are intended to cover all or part of the tract and will become a part of any subsequent instruments of conveyance.
- o. Any additional information the Planning Board may deem necessary in order to apply the regulations contained herein.
- p. A note on the plan stating the maximum daytime and nighttime continuous, periodic, and impulsive sound levels that apply to the site at applicable lot lines or zoning district boundaries. (1998)
- q. A written Statement of Intent prepared and signed by the applicant, which fully addresses the requirements of Section 605 of these Regulations. (1998)

## **SECTION 900 PLAT AND DATA FOR FINAL APPROVAL**

- 910:1** The final plat shall be drawn in ink on drawing cloth or mylar at a scale of not less than 50 feet to an inch. Where necessary, the plat may be on several sheets accompanied by an index showing the entire site development plan.
- 910:2** For larger site development plans, the final plat may be submitted for approval progressively in contiguous sections satisfactory to the Board. Plat sizes shall conform to the requirements of the Rockingham Registry of Deeds.
- 910:3** The final plat shall show or, when applicable, be accompanied by all data required in Section 810:1 above.
- 910:4** All engineered plans to be stamped by a Certified Engineer. (1997)
- 910:5** Applicants to provide a time-line for the completion of all off-site improvements. (1997)

## **SECTION 1000 FILING OF PLANS**

- 1010:1** The Chairman or Secretary of the Planning Board shall transmit a record of any changes so authorized to the Register of Deeds of Rockingham County.
- 1010:2** All plans submitted for recording in the registry of deeds shall be on suitable reproducible tracing material other than paper with a thickness of not less than .002 of one inch, with all marking on the material to be with India or other permanent ink.
- 1010:3** The size of all plans is limited to any of the following dimensions:
  - a. 8 1/2" x 11"
  - b. 11" x 17"
  - c. 17" x 22"
  - d. 22" x 34"

or such specifications and sizes of prints as may be required by the Register of Deeds in order to insure suitable, permanent records.

- 1010:4** After the certificate or notice has been filed with the Register of Deeds of the county, no plat will be filed or recorded in the offices of said Register of Deeds until it has been approved by the Planning Board, and such approval has been endorsed in writing on the plat in such manner as the Planning Board may designate.
- 1010:5** After such plat is approved and filed, subject, however, to review by court as hereinafter provided, the streets and parks shown on such plat shall be and become a part of the official map of the municipality.
- 1010:6** The filing or recording of a plat of a site development plan without the approval of the Planning Board as required hereby shall be void.

## **SECTION 1100 CHANGES IN APPROVED PLANS**

- 1110.1 Minor changes.** A minor change shall be one which respects the approved plan's basic land allocations in terms of use and intensity, the type and variety of facilities and buildings being approved, and/or the timing for providing these facilities, but shall not include any increase in the overall density of the development. The Board shall give proper notification of the proposed change to the public and to all abutters. If requested by the applicant, abutter, or Board, a public hearing shall be held on the proposed change. The Board shall act to approve or disapprove the change with written notification to the owner of its action.
- 1110.2 Major changes.** Any requested change which the Board determines does not qualify as a minor change shall be required to be submitted as a separate plan in accordance with these regulations and procedures.

## **SECTION 1200 CONCURRENT AND JOINT HEARINGS**

- 1200.1** The Planning Board may hold a hearing on site plan development review in conjunction with a subdivision hearing if both are required for a project.
- 1200.2** When an applicant is seeking approval from an additional land use board which also has jurisdiction over the project, the applicant may request a joint meeting or hearing over which the Planning Board shall preside. However, each land use board (Planning Board, Board of Adjustment, Historic District Commission) shall have discretion as to whether to hold such a meeting or hearing as requested.

## **SECTION 1300 AMENDMENTS**

- 1300.1** These regulations may be amended or rescinded by the Planning Board only following public hearing on the proposed change.
- 1300.2** The Chairman or Secretary of the Planning Board shall transmit copies of any such regulations, revisions or amendments thereto, certified by a majority of the Planning Board members, to the municipal clerk and the New Hampshire Office of State Planning.

**1300.3** Any site development which was given approval prior to the first posting for a site development change hearing shall be exempt from any amendment to site development regulation subsequently adopted.

**1300.4** In the event that any site development approval expires or otherwise becomes void, all site development regulations in effect at the time of resubmission shall be adhered to.

#### **SECTION 1400 POWER TO REVIEW SITE PLANS**

**1400.1** Except as otherwise noted herein, the Atkinson Planning Board shall have final approval and discretionary authority.

#### **SECTION 1500 SEPARABILITY**

**1500.1** If any provision herein shall be held to be invalid for any reason by a Court, such holding shall not invalidate in any manner any other provision contained herein.

## MINIMUM LOT SIZE BY SOIL TYPE

(High Intensity Soil Map Symbols and Standards)

<u>Soil Type</u>	<u>Lot Size</u>

21XCH	100000	253DH	160000	32XBH	100000	366+H	NA	46XCH	195000
21XDH	140000	253EH	NA	32XCH	120000	36XBH	110000		

“NA” means not allowed. “+” means any slope or any number. Minimize lot size interpretation is based on Table 1, page 26 of the Draft Water Quality Management Plan, Southern Rockingham Commission 208 Project and further evaluations.

---

Soil types listed below have one or more limiting characteristics making the soil type “NA” or requiring on-site investigation no matter what other characteristics of the soil may be present. (Effective date: June 1, 1989)

<u>Soil Type</u>	<u>Minimum Lot Size</u>	<u>Soil Type</u>	<u>Minimum Lot Size</u>
5+++H	NA - poorly drained soil	+66+H	NA-very poorly drained soil
6+++H	Fill Material (see Kay to Soil Types)	+75+H	NA- floodplain soil
76+++H	On-site evaluation needed		

## APPENDIX A –

### POST CONSTRUCTION STORMWATER MANAGEMENT STANDARDS FOR SITE DEVELOPMENT PLAN REGULATIONS

#### ELEMENT A: Purpose and Goals

1. Purpose and Goals. The purpose of post construction stormwater management standards is to provide reasonable guidance for the regulation of stormwater runoff to protect local natural resources from degradation and prevent adverse impacts to adjacent and downstream land, property, facilities and infrastructure. These standards regulate discharges from stormwater and runoff from land development projects and other construction activities to control and minimize increases in stormwater runoff rates and volumes, soil erosion, stream channel erosion, and nonpoint source pollution associated with stormwater runoff.

The goal of these standards is to establish minimum stormwater management requirements and controls to protect and safeguard the general health, safety, and welfare of the public in the Town of Atkinson. This regulation seeks to meet that goal through the following objectives:

- f. Minimize increases in stormwater runoff from any development to reduce flooding, siltation and streambank erosion and maintain the integrity of stream channels.
- g. Minimize increases in nonpoint source pollution caused by stormwater runoff from development which would otherwise degrade local water quality.
- h. Minimize the total volume of surface water runoff which flows from any specific site during and following development to not exceed the pre-development hydrologic condition to the maximum extent practicable as allowable by site conditions.
- i. Reduce stormwater runoff rates and volumes, soil erosion and nonpoint source pollution, wherever possible, through stormwater management controls and to ensure that these management controls are properly maintained and pose no threat to public safety or cause excessive municipal expenditures.
- j. Protect the quality of groundwater resources, surface water bodies and wetlands.

#### ELEMENT B: Minimum Thresholds for Applicability

1. *The post-construction stormwater management standards apply to any development or redevelopment project which are subject to Site Plan Review and disturbs more than 5,000 square feet or disturbs more than 2,500 square feet within 100 feet of a surface water body and contiguous wetlands.*
2. *The Planning Board may grant a waiver from these regulations if the amount of the total site impervious cover created or land disturbance does not exceed 5,000 square feet upon a showing by the applicant as to why these regulations should not apply and that the following criteria are met:*
  - *All new runoff generated is directed to a best management practice or a vegetated buffer*

*area with erosion controls.*

- *All new runoff generated is not discharged to steep slopes or untreated to wetlands or surface waters.*
- *All new runoff generated is treated to remove pollutants including sediment and nutrients according to the requirements of Table 1.*

3. *The following activities are considered exempt from these regulations:*

- i. Agricultural and forestry practices located outside wetlands and surface water setbacks and/or buffers.*
- ii. Resurfacing and routine maintenance of roads and parking lots.*
- iii. Exterior and interior alterations and maintenance to existing buildings and structures.*

### **ELEMENT C: Stormwater Management for New Development**

1. All proposed stormwater management practices and treatment systems shall meet the following performance standards.

- a. Stormwater management and erosion and sediment control practices shall be located outside any specified buffer zones unless otherwise approved by the Planning Board. Alternatives to stream and wetland crossings that eliminate or minimize environmental impacts shall be considered whenever possible.
- b. Low Impact Development (LID) site planning and design strategies must be used to the maximum extent practicable (MEP) to reduce stormwater runoff volumes, protect water quality, and maintain predevelopment site hydrology. Low Impact Development (LID) techniques with the goals of protecting water quality, maintaining predevelopment site hydrology. Low Impact Development (LID) techniques that preserve existing vegetation, reduce the development footprint, minimize or disconnect impervious area, and use enhanced stormwater BMP's (such as raingardens, bioretention systems, tree box filters, and similar stormwater management landscaping techniques) shall be incorporated into landscaped areas excluding perimeter landscaped or other buffers when required for the development. Capture and reuse of stormwater is strongly encouraged. The applicant must document in writing why LID strategies are not appropriate when not used to manage stormwater.
- c. All stormwater treatment areas shall be planted with native plantings appropriate for the site conditions: trees, grasses, shrubs and/or other native plants in sufficient numbers and density to prevent soil erosion and to achieve the water quality treatment requirements of this section.
- d. Salt storage areas shall be fully covered with permanent or semi-permanent measures and loading/offloading areas shall be located and designed to not drain directly to receiving waters and maintained with good housekeeping measures in accordance with

NH DES published guidance. Runoff from snow and salt storage areas shall enter treatment areas as specified above before being discharged to receiving waters or allowed to infiltrate into the groundwater. See NHDES published guidance fact sheets on road salt and water quality, and snow disposal at <http://des.nh.gov/organization/commissioner/pip/factsheets/wmb/index.htm>.

- e. Surface runoff shall be directed into appropriate stormwater control measures designed for treatment and/or filtration to the maximum extent practicable and/or captured and reused onsite.
- f. All newly generated stormwater from new development shall be treated on the development site. A development plan shall include provisions to retain natural predevelopment watershed areas on the site by using the natural flow patterns.
- g. Runoff from impervious surfaces shall be treated to achieve at least 80% removal of Total Suspended Solids and at least 50% removal of both total nitrogen and total phosphorus using appropriate treatment measures, as specified in the NH Stormwater Manual. Volumes 1 and 2, December 2008, as amended or other equivalent means. Where practical, the use of natural, vegetated filtration and/or infiltration practices or subsurface gravel wetlands for water quality treatment is preferred given its relatively high nitrogen removal efficiency. All new impervious area draining to surface waters impaired by nitrogen, phosphorus or nutrients shall be treated with stormwater BMP's designed to optimize pollutant removal efficiencies based on design standards and performance data published by the UNH Stormwater Center and/or included in the latest version of the NH Stormwater Manual.
- h. Measures shall be taken to control the post-development peak runoff rate so that it does not exceed pre-development runoff. Drainage analyses shall include calculations comparing pre- and post-development stormwater runoff rates (cubic feet/second) and volumes (cubic feet) for the 1-inch rainstorm and the 2-year, 10-year, 25-year, and 50-year 24-hour storm events. Refer to Section 3.e. below for precipitation data references required for sizing and design of stormwater management practices and infrastructure. Similar measures shall be taken to control the post-development runoff volume to infiltrate the groundwater recharge volume GR<sub>v</sub> according to the following ratios of Hydrologic Soil Group (HSG) type versus infiltration rate multiplier: HSG-A: 0.4; HSG-B: 0.25; HSG-C: 0.1; HSG-D: 0.00. For sites where infiltration is limited or not practicable, the applicant must demonstrate that the project will not create or contribute to water quality impairment.
- i. The design of the stormwater drainage systems shall provide for the disposal of stormwater without flooding or functional impairment to streets, adjacent properties, downstream properties, soils, or vegetation.
- j. The design of the stormwater management systems shall account for upstream and upgradient runoff that flows onto, over, or through the site to be developed or re-developed, and provide for this contribution of runoff.

- k. Whenever practicable, native site vegetation shall be retained, protected, or supplemented. Any stripping of vegetation shall be done in a manner that minimizes soil erosion.

## 2. Submission Requirements for Stormwater Management Report and Plans.

- a. All applications shall include a comprehensive Stormwater Management Plan (SMP). The SMP shall include a narrative description and an Existing Conditions Site Plan showing all pre-development impervious surfaces, buildings and structures; surface water bodies and wetlands; drainage patterns, sub-catchment and watershed boundaries; building setbacks and buffers, locations of various hydrologic group soil types, mature vegetation, land topographic contours with minimum 2-foot intervals and spot grades where necessary for sites that are flat.
- b. The SMP shall include a narrative description and a Proposed Conditions Site Plan showing all post-development proposed impervious surfaces, buildings and structures; temporary and permanent stormwater management elements and best management practices (BMP), including BMP GIS coordinates and GIS files; important hydrologic features created or preserved the site; drainage patterns, sub-catchment and watershed boundaries; building setbacks and buffers; proposed tree clearing and topographic contours with minimum 2-foot intervals. The plans shall provide calculations and identification of the total area of disturbance proposed on the site (and off site if applicable) and total area of new impervious surface created. A summary of the drainage analysis showing a comparison of the estimated peak flow and volumes for various design storms (see Table 1. Stormwater Infrastructure Design Criteria) at each of the outlet locations shall be included.
- c. The SMP shall describe the general approach and strategies implemented, and the facts relied upon, to meet the goals of Element A and Element C.: The SMP shall include design plans and/or graphical sketch(es) of all proposed above ground LID practices.
- d. The SMP shall include calculations of the change in impervious area, pollution loading and removal volumes for each best management practice, and GIS files containing the coordinates of all stormwater infrastructure elements (e.g. catch basins, swales, detention/bioretention areas, piping).
- e. The SMP shall include a description and a proposed Site Plan showing proposed erosion and sediment control measures, limits of disturbance, temporary and permanent soil stabilization measures in accordance with the NHDES Stormwater Manual Volume 3 (most recent version) as well as a construction site inspection plan including phased installation of best management practices and final inspection upon completion of construction.
- f. The SMP shall include a long-term stormwater management BMP inspection and maintenance plan (see Element E) that describes the responsible parties and contact

information for the qualified individuals who will perform future BMP inspections. The inspection frequency, maintenance and reporting protocols shall be included.

- g. The SMP shall describe and identify locations of any proposed deicing chemical and/or snow storage areas. SMP will describe how deicing chemical use will be minimized or used most efficiently.
- h. In urbanized areas that are subject to the EPA MS4 Stormwater Permit and will drain to chloride-impaired waters, any new developments and redevelopment projects shall submit a description of measures that will be used to minimize salt usage, and track and report amounts applied using the UNH Technology Transfer Center online tool (<http://www.roadsalt.unh.edu/Salt/>) in accordance with Appendix H of the NH MS4 Permit.

### 3. General Performance Criteria for Stormwater Management Plans.

- g. All applications shall apply site design practices to reduce the generation of stormwater in the post-developed condition, reduce overall impervious surface coverage, seek opportunities to capture and reuse and minimize and discharge of stormwater to the municipal stormwater management system.
- h. Water Quality Protection.
  - iii. No stormwater runoff generated from new development or redevelopment shall be discharged directly into a jurisdictional wetland or surface water body without water quality treatment that conforms to the requirements of this regulation.
  - iv. All developments shall provide adequate management of stormwater runoff and prevent discharge of stormwater runoff from creating or contributing to water quality impairment.
- i. Onsite groundwater recharge rates shall be maintained by promoting infiltration through use of structural and non-structural methods. The annual recharge from the post development site shall maintain or exceed the annual recharge from pre-development site conditions. Capture and reuse of stormwater runoff is encouraged in instances where groundwater recharge is limited by site conditions. All stormwater management practices shall be designed to convey stormwater to allow for maximum groundwater recharge. This shall include, but not be limited to:
  - vi. Maximizing flow paths from collection points to outflow points.
  - vii. Use of multiple best management practices.
  - viii. Retention of and discharge to fully vegetated areas.
  - ix. Maximizing use of infiltration practices.
  - x. Stormwater System Design Performance Standards.
- j. Stormwater system design, performance standards and protection criteria shall be provided as prescribed in Table 1 below. Calculations shall include sizing of all structures and best management practices, including sizing of emergency overflow structures based on assessment of the 100-year 24-hour frequency storm discharge rate.
- k. The sizing and design of stormwater management practices shall utilize new precipitation data from the Northeast Region Climate Center (NRCC) [or the most recent precipitation](#)

[atlas published by the National Oceanic and Atmospheric Administration \(NOAA\)](http://precip.eas.cornell.edu/) for the sizing and design of all stormwater management practices. See the NRCC website at <http://precip.eas.cornell.edu/>.

- I. All stormwater management practices involving bioretention and vegetative cover as a key functional component must have a landscaping plan detailing both the type and quantities of plants and vegetation to be in used in the practice and how and who will manage and maintain this vegetation. The use of native plantings appropriate for site conditions is strongly encouraged for these types of stormwater treatment areas. The landscaping plan must be prepared by a registered landscape architect, soil conservation district office, or another qualified professional.
4. Spill Prevention, Control and Countermeasure (SPCC) Plan.  
Any existing or otherwise permitted use or activity having regulated substances in amounts greater than five gallons, shall submit to the local official such as Fire Chief, Emergency Response Official a SPCC plan for review and approval. The Plan will include the following elements:
    - i. Disclosure statements describing the types, quantities, and storage locations of all regulated substances that will be part of the proposed use or activity.
    - j. Owner and spill response manager's contact information.
    - k. Location of all surface waters and drainage patterns.
    - l. A narrative describing the spill prevention practices to be employed when normally using regulated substances.
    - m. Containment controls, both structural and non-structural.
    - n. Spill reporting procedures, including a list of municipal personnel or agencies that will be contacted to assist in containing the spill, and the amount of a spill requiring outside assistance and response.
    - o. Name of a contractor available to assist in spill response, contaminant, and cleanup.
    - p. The list of available clean-up equipment with instructions available for use on-site and the names of employees with adequate training to implement containment and clean up response.

#### **ELEMENT D: Stormwater Management for Redevelopment**

1. Redevelopment (as applicable to this stormwater regulation) means:
  - a. Any construction, alteration, or improvement that disturbs existing impervious area (including demolition and removal of road/parking lot materials down to the erodible subbase) or expands existing impervious cover by any amount, where the existing land use is commercial, industrial, institutional, governmental, recreational, or multifamily residential.
  - b. Any redevelopment activity that results in improvements with no increase in impervious area shall be considered redevelopment activity under this regulation if capital cost of improvements is greater than 30% of the appraised property value.

- c. Any new impervious area over portions of a site that are currently pervious.
  - d. The following activities are not considered redevelopment:
    - Interior and exterior building renovation.
    - Resurfacing of an existing paved surface (e.g. parking lot, walkway or roadway).
    - Pavement excavation and patching that is incidental to the primary project purpose, such as replacement of a collapsed storm drain.
    - Landscaping installation and maintenance.
2. Redevelopment applications shall comply with the requirements of Sections C.2 Submission Requirements for Stormwater Management Report and Plans, C.3 General Performance Criteria for Stormwater Management Plans, and C.4 Spill Prevention, Control and Countermeasure (SPCC) Plan.
  3. For sites meeting the definition of a redevelopment project and having less than 60% existing impervious surface coverage, the stormwater management requirements will be the same as other new development projects. The applicant must satisfactorily demonstrate that impervious area is minimized, and LID practices have been implemented on-site to the maximum extent practicable.
  4. For sites meeting the definition of a redevelopment project and having more than 60% existing impervious surface area, stormwater shall be managed for water quality in accordance with one or more of the following techniques, listed in order of preference:
    - a. Implement measures onsite that result in disconnection or treatment of 100% of the additional proposed impervious surface area and at least 30% of the existing impervious area and pavement areas, preferably using filtration and/or infiltration practices.
    - b. If resulting in greater overall water quality improvement on the site, implement LID practices to the maximum extent practicable to provide treatment of runoff generated from at least 60% of the entire developed site area.
  5. Runoff from impervious surfaces shall be treated to achieve at least 80% removal of Total Suspended Solids and at least 50% removal of both total nitrogen and total phosphorus using appropriate treatment measures, as specified in the NH Stormwater Manual. Volumes 1 and 2, December 2008, as amended or other equivalent means. All new impervious area draining to surface waters impaired by nitrogen, phosphorus or nutrients shall be treated with stormwater BMP's designed to optimize pollutant removal efficiencies based on design standards and performance data published by the UNH Stormwater Center and/or included in the latest version of the NH Stormwater Manual.

**ELEMENT E: Stormwater Management Plan and Site Inspections**

1. The Town Engineer or Planning Board designee shall submit inspection reports for stormwater management infrastructure construction according to a construction inspection sequence agreement prepared and endorsed by the applicant. This construction agreement may also include bond/surety release amounts corresponding with completed construction

per the construction sequence agreement.

2. The applicant shall provide that all stormwater management and treatment practices have an enforceable operations and maintenance plan and agreement to ensure the system functions as designed. This agreement will include all maintenance easements required to access and inspect the stormwater treatment practices, and to perform routine maintenance as necessary to ensure proper functioning of the stormwater system. The operations and maintenance plan shall specify the parties responsible for the proper maintenance of all stormwater treatment practices. The operations and maintenance shall be provided to the Planning Board as part of the application prior to issuance of any local permits for land disturbance and construction activities.
3. The property owner shall bear responsibility for the installation, construction, inspection, and maintenance of all stormwater management and erosion control measures required by the provisions of these regulations and as approved by the Planning Board, including emergency repairs completed by the town.

#### **ELEMENT F. Stormwater Management Plan Recordation**

1. Stormwater management and sediment and erosion control plans shall be incorporated as part of any approved site plan. A Notice of Decision acknowledging the Planning Board approval of these plans shall be recorded at the Registry of Deeds. The Notice of Decision shall be referenced to the property deed (title/book/page number) and apply to all persons that may acquire any property subject to the approved stormwater management and sediment control plans. The Notice of Decision shall reference the requirements for maintenance pursuant to the stormwater management and erosion and sediment control plans as approved by the Planning Board.
2. The applicant shall provide legally binding documents (e.g. that run “with the land”) for filing with the registry of deeds which demonstrate that the obligation for maintenance of stormwater best management practices and infrastructure runs with the land and that the Town has legal access to inspect the property to ensure their proper function or maintain onsite stormwater infrastructure when necessary to address emergency situations or conditions.
3. Easements:  
Where a development is traversed by or requires the construction of a privately owned watercourse, drainage way, culvert, bridge or other stormwater infrastructure that crosses a municipal roadway, an easement to the Town to enable construction, reconstruction, required maintenance or emergency access shall be provided for such purpose. Easements to the Town shall also be provided for the purpose of periodic inspection of drainage facilities and stormwater BMPs should such inspections by the Town become necessary. All easements shall be recorded at the County Registry of Deeds.
4. The applicant/developer shall submit to the town as-built drawings within a specified timeframe following approval, not to exceed two years from completion of construction.
5. As required by the EPA MS4 Permit Section 2.3.6.b, final as-built plans shall be submitted within a timeframe specified by the Planning Board not to exceed two years from the completion of construction.

## **ELEMENT G. Inspection and Maintenance Responsibility**

1. Municipal staff or their designated agent shall be granted site access to complete routine inspections to ensure compliance with the approved stormwater management and sediment and erosion control plans. Such inspections shall be performed at a time agreed upon with the landowner.
  - a. If permission to inspect is denied by the landowner, municipal staff or their designated agent shall secure an administrative inspection warrant from the district or superior court under RSA 595-B Administrative Inspection Warrants. Expenses associated with inspections shall be the responsibility of the applicant/property owner.
  - b. If violations or non-compliance with a condition(s) of approval are found on the site during routine inspections, the municipal staff or their designated agent shall provide a report to the Planning Board documenting these violations or non-compliance including recommend corrective actions. The Planning Board shall notify the property owner in writing of these violations or non-compliance and corrective actions necessary to bring the property into full compliance. The Planning Board, at their discretion, may recommend to the Board of Selectmen to issue a stop work order if corrective actions are not completed within 10 days
  - c. If corrective actions are not completed within a period of 30 days from the Planning Board or Select Board notification, the Planning Board may exercise their jurisdiction under RSA 676:4-a Revocation of Recorded Approval.
2. The applicant shall bear final responsibility for the installation, construction, inspection, and disposition of all stormwater management and erosion control measures required by the Planning Board. Site development shall not begin before the Stormwater Management Plan receives written approval by the Planning Board.
3. The municipality retains the right, though accepts no responsibility, to repair or maintain stormwater infrastructure if: a property is abandoned or becomes vacant; and in the event a property owner refuses to repair infrastructure that is damaged or is not functioning properly.
4. Property owners subject to approval under this regulation shall be responsible for submitting an annual report to the Planning Board by September 1 each year by a qualified engineer that all stormwater management and erosion control measures are functioning per the approved stormwater management plan or a waiver has been granted by the Planning Board. The annual report shall note if any stormwater infrastructure has needed any repairs other than routine maintenance and the results of those repairs. If the stormwater infrastructure is not functioning per the approved stormwater management plan the landowner shall report on the malfunction in their annual report and include detail regarding when the infrastructure shall be repaired and functioning as approved.
5. If no report is filed by September 1, municipal staff or their designated agent shall have site access to complete routine inspections to ensure compliance with the approved stormwater management and sediment and erosion control plans. Such inspections shall be performed at a time agreed upon with the landowner.

**Appendix1/Table 1. Stormwater Infrastructure Design Criteria**

<b>Design Criteria</b>	<b>Description</b>										
<b>Water Quality Volume (WQV)</b>	$WQV = (P)(R_v)(A)$ P = 1 inch of rainfall R <sub>v</sub> = unitless runoff coefficient, $R_v = 0.05 + 0.9(I)$ I = percent impervious cover draining to the structure converted to decimal form A = total site area draining to the structure										
<b>Water Quality Flow (WQF)</b>	$WQF = (q_u)(WQV)$ WQV = water quality volume calculated as noted above q <sub>u</sub> = unit peak discharge from TR-55 exhibits 4-II and 4-III  Variables needed for exhibits 4-II and 4-III: I <sub>a</sub> = the initial abstraction = 0.2S S = potential maximum retention in inches = $(1000/CN) - 10$ CN = water quality depth curve number $= 1000 / (10 + 5P + 10Q - 10[Q^2 + 1.25(Q)(P)]^{0.5})$ P = 1 inch of rainfall Q = the water quality depth in inches = $WQV/A$ A = total area draining to the design structure										
<b>Groundwater Recharge Volume (GRV)</b>	$GRV = (A_i)(R_d)$ A <sub>i</sub> = the total area of effective impervious surfaces that will exist on the site after development R <sub>d</sub> = the groundwater recharge depth based on the USDA/NRCS hydrologic soil group, as follows: <table style="margin-left: 40px;"> <thead> <tr> <th>Hydrologic Group</th> <th>R<sub>d</sub> (inches)</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>0.40</td> </tr> <tr> <td>B</td> <td>0.25</td> </tr> <tr> <td>C</td> <td>0.10</td> </tr> <tr> <td>D</td> <td>0.00</td> </tr> </tbody> </table>	Hydrologic Group	R <sub>d</sub> (inches)	A	0.40	B	0.25	C	0.10	D	0.00
Hydrologic Group	R <sub>d</sub> (inches)										
A	0.40										
B	0.25										
C	0.10										
D	0.00										
<b>Channel Protection Volume (CPV)</b>	If the 2-year, 24-hour post-development storm volume <u>does not increase</u> due to development then: control the 2-year, 24-hour post-development peak flow rate to the 2-year, 24-hour predevelopment level. If the 2-year, 24-hour post-development storm volume <u>does increase</u> due to development then: control the 2-year, 24-hour post-development peak flow rate to ½ of the 2-year, 24-hour pre-development level or to the 1-year, 24-hour pre-development level.										
<b>Peak Control</b>	Post-development peak discharge rates shall not exceed pre-development peak discharge rates for the 10-year and 50-year, 24-hour storms										
<b>EIC and UDC</b>	%EIC = area of effective impervious cover/total drainage areas within a project area x 100 %UDC = area of undisturbed cover/total drainage area within a project area x 100										

[After: NH DES Stormwater Manual: Volume2 Post-Construction Best Management Practices Selection & Design (December 2008)]

## ROAD SPECIFICATIONS AND REGULATIONS

### SECTION 400 GENERAL PURPOSE

The purpose of the following specifications is to implement a roadway life of 15 to 20 years with normal maintenance. The life of a road surface is directly related to the adequacy of its drainage system and pavement section. Proper drainage is needed to insure driver safety, prevent erosion, reduce winter maintenance, and prolong pavement life. Proper pavement section must be designed to be compatible with its loading conditions and climatic effects. In New Hampshire, a structurally adequate pavement can undergo severe failure because of insufficient frost protection.

**400:1** As far as practical, all proposed streets shall conform to Atkinson's Master Plan and/or Road Study as may have been adopted in whole or in part by the Planning Board.

**400:2** The Planning Board shall require:

- a. the proper arrangement and coordination of streets in relation to other existing or planned streets;
- b. suitably located streets of sufficient width to accommodate existing and prospective traffic.
- c. adequate light, air, and access for fire-fighting apparatus and equipment to buildings.
- d. coordination of streets so as to compose a convenient system (RSA 674:36).

**400:3** Where applicable, road bonds shall be filed in accordance with Section 380 of the Land Subdivision Control regulations.

### SECTION 410 ROAD DESIGN REQUIREMENTS

**410:1** The developer shall

- a. install street signs which meet the approval of the Planning Board and the Road Agent.
- b. provide street lighting wherever necessary at the discretion of the Planning Board.
- c. provide winter maintenance of roadways under construction and/or unaccepted by the town.

**410:2** No street or highway right-of-way shall be less than 50 feet in width, and may be required to be more if a greater street width is warranted in the opinion of the Planning Board. The apportioning of the street widths among roadway, sidewalks, and possible grass strips shall be subject to the approval of the Planning Board.

**410:3** Dead end or cul-de-sac streets shall be equipped with a turn-around roadway at the closed end with a minimum radius of seventy (70) feet from the center to the outside

edge of the right-of-way, and a minimum outside radius of sixty (60) feet of pavement.  
(1997)

- 410:4** Cul-de-sac turn-arounds located on streets that could be continued shall show provisions for reversion of the excess easement (right-of-way) to adjacent property owners upon extension of the street. Frontage requirements will be based on the reversion.
- 410:5** When land off an existing turn-around is subdivided, the developer shall remove the turn-around and replace it with a normal road design.
- 410:6** The Town may require any new development to share in the costs of any immediately-necessitated road improvements benefitting said development. Improvement of any access street to the subdivision shall be built in accordance with appropriate street standards if access would otherwise be inadequate, and provided the town owns or provides the right of way.
- 410:7** Streets which join or are in alignment with streets of abutting or neighboring properties shall bear the same name. Names of new streets shall not duplicate nor bear phonetic resemblance to the names of existing streets. All street names must be approved by the Planning Board.
- 410:8** The roadway shall be graveled to a minimum width of 30 feet and paved to a minimum width of 24 feet. The outside 3 foot shoulders on each side of the road shall be swaled, bermed, or guard-railed whenever necessary. (See typical pavement section.)
- 410:9** All intersections will be at 90 degrees whenever possible, but not less than 75 degrees, and no more than two accepted right-of-ways shall intersect at any one point.
- 410:10** Shrubs, trees, or other obstructions at street corners shall be subject to regulations which insure proper visibility.
- 410:11** Intersecting property lines at street intersections shall be joined by a curve of at least 25 feet in radius.
- 410:12** Streets shall not be designed in such a manner as to provide frontage to land and create buildable lot(s) in a neighboring municipality in which services to such areas require predominate access via Atkinson town streets or create undesirable traffic patterns.
- 410:13** As far as practical, no street grade shall be less than one percent (1%) nor greater than eight percent (8%).
- 410:14** Less than a three percent (3%) grade shall be required for fifty (50) feet before intersecting another street.
- 410:15** Horizontal curves shall not have a grade greater than six percent (6%).
- 410:16** Where a street intersection occurs, the road design shall be such that water run-off from either street shall not flow onto the other.

- 410:17** Culvert size will be based on the acreage of watershed to be drained. Minimum culvert size shall be twelve (12) inches in diameter and be long enough to preclude blockage. Adequate drainage easements for maintenance shall be designated.
- 410:18** All culverts shall be placed below subgrade, with a minimum of two (2) feet of gravel cover at the highest point and a minimum pitch of 1/4 inch per foot.
- 410:19** Culverts with a diameter of a 4 feet or larger will be considered bridges, and approval by the Planning Board will depend on the individual situation and materials involved.
- 410:20** All drainage facilities and culverts shown on the final subdivision map and profile shall be properly installed to the satisfaction of the Town Engineer.
- 410:21** All drainage pipe shall be reinforced concrete or polypropylene smooth-lined that meets NH standards or an equivalent substitute approved by the Town Engineer. (1997)
- 410:22** Road damage. Any time building takes place on any lot on any town road, the developer and/or landowner shall be responsible for any damage to the road resulting from the development. No occupancy permit will be granted, and a lien may be placed against the property until such time as the road is repaired to the satisfaction of town officials. (RSA 236:11)
- 410:23** Underground utilities are recommended and shall be located outside the paved area wherever possible.

## **SECTION 420 PREPARATION OF ROADS**

- 420:1** All topsoil, stumps, trees, brush, and other yielding materials shall be removed from the limits of the road bed.
- 420:2** The roadbed depth shall be based on the frost susceptibility\* of the subgrade (see typical pavement section), and the high water table\*, from the bottom of the pavement to the high water table shall be 30 inches. Minimum depth shall be 22 inches on non-frost susceptible subgrade. Depth of gravel shall be 18 inches and shall be placed in layers of 6 inches. The last 6 inches of gravel shall be crushed gravel, with no stones larger than two inches.
- 420:3** The roadbed shoulder width shall be based on roadbed depth and drainage requirements (see typical pavement section.)
- 420:4** The subgrade shall be fine graded and compacted to the required grade and crown.\*\*
- 420:5** At every 6 inch increment, the sand and gravel shall be fine graded and compacted to the required grade and crown.\*\*
- 420:6** Compaction shall be at 95% density.\*\*
- 420:7** Soft spots shall not be permitted.\*\*
- 420:8** Crown of 1/4 to 3/8 inch per foot is required for all surfaces including pavement.\*\*

**420:9** Paved surface shall be a minimum of 3 inches of bituminous concrete after compaction, a minimum of 2 inches of binder and a minimum of 1 inch of wearing course. Minimum requirements are: \*\*\*

- a. local roads - 2 inches binder - 1 inch wearing course.
- b. collector roads - 2.5 inches binder - 1.5 inch wearing course.
- c. arterial roads - 2.5 inches binder - 1.5 inch wearing course.
- d. commercial and industrial areas that are proposing roads for town acceptance will be based on proposed use and weight limits.

## **SECTION 430 INSPECTION PROGRAM**

**430:1** Prior to the commencement of road construction or related work, the developer and/or his agent shall contact the Town Engineer and arrange for a pre-construction conference. The agenda for the pre-construction conference shall be prepared by the Town Engineer and shall include items germane to the project such as an overview of inspection requirements, project schedule, coordination of work with utility companies and others, an overview of the final project plans and any related conditions of approval attached thereto, status of performance bonds and other items related to execution of the work and conformance with the requirements and expectations of the Town. (1998)

**430:2** The following inspections shall be required on all new roads during construction or alteration:

- a. the right-of-way after clearing and stumping
- b. all drainage, culverts and underground utilities.\*\*
- c. subgrade\*\*
- d. sand (if necessary) and gravel.\*\*
- e. pavement\_binder
- f. pavement\_wearing before and after application
- g. all other improvements within the right-of-way required by the Planning Board or Board of Selectmen. (1997)
- h. post winter condition of each road still under bond; said inspection may be performed in April by the Town Engineer along with the Town Road Agent. (1996)

---

\* **Certification is to be given by the developer's soil scientist.**

\*\* **Certification by the developer's licensed engineer and/or land surveyor that these items have been done according to approved plans must be available to the town's engineer before inspection with required information for said certification made available for town records as required.**

\*\*\* **See Typical Road Section**

- 430:3** It shall be the responsibility of the developer to have the town's engineer notified of all required inspections at least 48 hours in advance, excluding Saturdays, Sundays, and holidays, and to pay the town engineer for the cost of inspections at his customary rates. Rate schedule will be available at Town Hall.
- 430:4** On all inspections, the developer will make available on site any necessary equipment to verify conformance to the town's regulations.
- 430:5** Unacceptable work, whether the result of poor workmanship, use of defective materials, damage through carelessness, or any other cause, found to exist prior to the final acceptance of the road by the town shall be removed immediately and replaced or corrected in an acceptable manner.
- 430:6** Upon request from the developer, periodic bond reduction may be allowed pursuant to the terms and conditions outlined in the Town's standard Performance Bond Agreement form. (1998)
- 430:7** No street will be accepted until such time as all improvements have been carried out as shown on the final plat or as-built, in accordance with the requirements of these regulations, and subject to any condition established by the Planning Board at the time of final plat approval, and subject to certification by the Town Engineer.

#### **SECTION 440 DRIVEWAYS AND OTHER ACCESSES TO THE PUBLIC WAY/ EXCAVATIONS**

- 440:1** It shall be unlawful to excavate or disturb the shoulders, ditches, embankments or the surface improved for travel of any town highway without written permission from the Selectmen (RSA 236:9). The excavation and restoration within the highway right-of-way shall require that a bond/surety satisfactory to the Selectmen be furnished to the town providing for the satisfactory restoration of the highway (RSA 236:10 and 236:11).
- 440:2** It shall be unlawful to construct, alter in any way that substantially affects the size or grade of any driveway, entrance, exit, or approach within the limits of the right-of-way of any town highway without a written construction permit or driveway permit which will describe the location drainage and traffic control devices and will establish grades that adequately protect and promote highway drainage and permit a safe and controlled approach to the highway in all seasons of the year and will include any other terms and specifications necessary for the safety of the traveling public (RSA 236:13).
- 440:3** Driveways shall be constructed in the following manner:
- The area adjacent to the highway shall be graded so the surface will slope from the edge of the pavement to a line 5 feet distant from and parallel to the pavement, and be a minimum of 3 inches below the edge of the pavement.
- 440:4** Driveway culverts within the right-of-way shall be a minimum of eight (8) inches in diameter, long enough to preclude blockage by erosion, and of a town approved type. The driveway culverts must be installed so as to have a minimum of 18 inches of gravel on top and be at a depth so as not to dam runoff and must be at a minimum pitch of 1/4 inch per foot.

- 440:5** All driveways will be shown on subdivision plans.
- 440:6** In all new subdivisions, all driveways shall be graveled and culverted, if necessary, from the pavement a distance of 8 feet from and parallel to the pavement.
- 440:7** Service roads or private roads serving three or more units will be subject to road specification regulations. If it is to remain private:
- a. the plan will state: "The ways shown on this plan are intended by the subdivider (name) and the Planning Board to remain as private ways. The recording of this plan shall not be construed as an offer of dedication of those ways as public highways under the New Hampshire Law of Dedication and Acceptance."
  - b. the ownership and responsibility of the owners as to maintenance, plowing, repairing and replacement, if necessary, are specifically stated in all ownership documents.
  - c. the owner and/or owners recognize in such documents that they assume all liability for said roads that are normally assumed by the town on roads that have been approved and accepted by the town.
  - d. the owner and/or owners recognize that the roadways shall be open and accessible at all times to emergency, police, and town officials and vehicles, in order to promote and maintain health and safety for all the occupants.

#### **SECTION 450 DESIGN SPECIFICATIONS REFERENCE**

- 450:1** All materials, workmanship, and requirements shall meet standard specifications of the following, if not previously covered within these regulations:
- a. "A Policy on Geometric Design of Highways and Streets 1984", Chapter V, Local Roads and Streets, by the American Association of State Highway and Transportation Officials.
  - b. "Recommended Guidelines for Subdivision Streets" by the Institute of Transportation Engineers.
  - c. The New Hampshire Water Supply and Pollution Control Commission 149:8a Permit Procedure.
  - d. "A Policy on Design of Urban Highways and Arterial Streets" by the American Society of State Highway Officials.
  - e. Latest edition "Standard Specifications for Road and Bridge Construction" of the State of New Hampshire Department of Public Works approved for general application and repetitive use.
  - f. "Highway Design Manual" of the State of New Hampshire, Volumes 1 and 2, including all addenda.

- g. All subdivision and/ or site plans must state clearly on the plans that any proposed roadway or driveway meets the State of NH requirements for proper site distance and that the site distance will be met prior to the construction of any roadway or structure. (1997)

**450:2** All roads will go one winter in binder before the wearing coat is applied, with a maximum of three winters of binder exposure. (2006)

## **SECTION 460 RELATIONSHIP BETWEEN STATE AND LOCAL REGULATIONS**

**460:1** Where both state and local regulations are applicable, the more stringent regulations shall take effect. If the state regulation addresses an issue not included in the local regulations, or if the local regulation addresses an issue not included in the state regulations, that regulation shall automatically apply.

## **SECTION 470 SAVINGS CLAUSE**

**470:1** Where any provision included within these regulations is found to be unenforceable by law, it shall be considered severance from the remainder of the regulations and shall not be construed to invalidate any other provision in these regulations.

## **SECTION 480 EFFECTIVE DATE**

**480:1** These regulations shall take effect upon their passage.

## **SECTION 490 AMENDMENT**

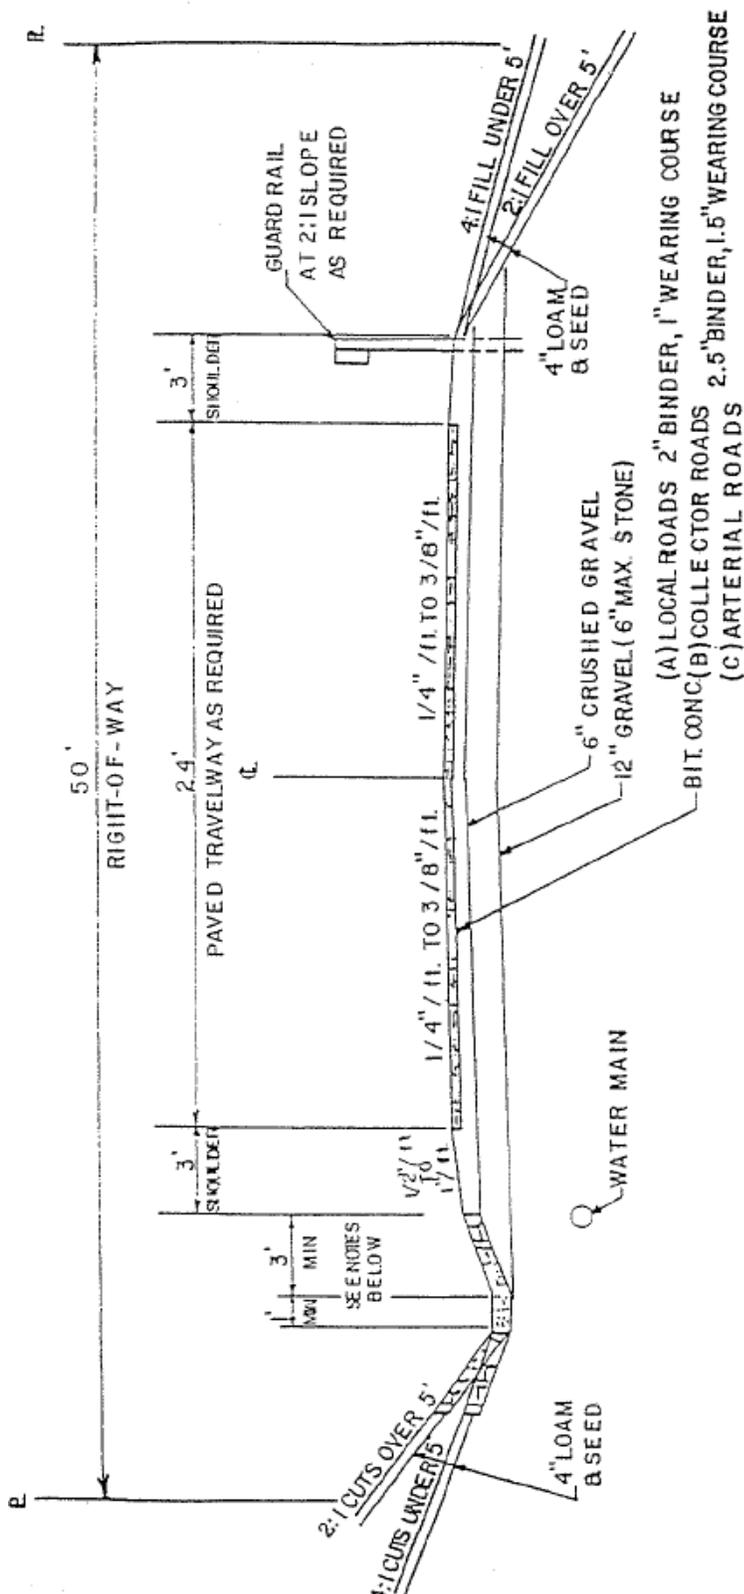

**490:1** These regulations may be amended or rescinded by the Planning Board, but only following a public hearing on the proposed change.

## **SECTION 4100 ENFORCEMENT**

**4100:1** It shall be the duty of the Board of Selectmen, and the Board of Selectmen is hereby given power and authority to enforce the provisions of these regulations. (1990)

TYPICAL ROAD SECTION

(1990)

(A) LOCAL ROADS 2" BINDER, 1" WEARING COURSE  
 (B) COLLECTOR ROADS 2.5" BINDER, 1.5" WEARING COURSE  
 (C) ARTERIAL ROADS

TOWN OF ATKINSON  
 NEW HAMPSHIRE  
 TYPICAL ROAD SECTION  
 MAY 23, 1990  
 NOT TO SCALE

NOTES:

1. WIDTH & DEPTH OF SWALE SHALL DEPEND UPON DRAINAGE DESIGN CALCULATIONS
2. EROSION CONTROL STONE IN SWALE IN ACCORDANCE WITH N.H.D.P.W. & II. DRAINAGE MANUAL, IF REQUIRED
3. ALL MATERIALS & CONSTRUCTION SHALL BE IN ACCORDANCE WITH STANDARD SPECIFICATIONS FOR ROAD & BRIDGE CONSTRUCTION STATE OF NEW HAMPSHIRE DEPT. OF TRANSPORTATION

# BUILDING CODE ORDINANCE

## SECTIONS BC100 - BC1200

### SECTION 100 BUILDING INSPECTOR

#### SECTION 100 APPOINTMENT

**100:1** The Building Inspector shall be appointed annually by the Board of Selectmen. In the event of death, disability, resignation or disqualification of the Building Inspector, the Selectmen shall appoint an Inspector to serve in his place. The Selectmen may, for cause and by majority vote, disqualify the Building Inspector at any time.

#### SECTION 200 DUTIES OF BUILDING INSPECTOR

**200:1** The Building Inspector shall be the administrative officer of this ordinance. He shall:

- a. Receive applications and fees for the erection and/or alteration of buildings and electrical wiring thereof as provided in this ordinance.
- b. Make available applications in duplicate.
- c. Keep complete records of his action on all applications along with duplicates of said application. he Building Inspector shall maintain a current status tabulation of building permits and site plan approvals associated with low-moderate income bedrooms/housing units.
- d. Promptly inspect sites of proposed buildings or buildings to be altered and study proposed uses of said buildings.
- e. Issue or deny residential permits within thirty (30) days of receipt of application, provided, however, that non-residential applications or residential applications encompassing more than 10 dwelling units shall be approved or denied within 60 days.
  - 1) Before issuing permits for any development approved under Section Z610 of the Zoning Ordinance, the Building Inspector shall receive written evidence of approval that housing assistance program funds are being utilized for low-moderate income dwelling units. Such written evidence shall be kept on file.
  - 2) **DELETED 1993.**
- f. Regularly inspect buildings during the process of erection or alterations. In new construction the following four inspections shall be made after the work has been completed:
  - 1) Footings and foundations

- 2) Rough framing, plumbing, electrical wiring, and chimney erection
- 3) Sewage system and waste disposal
- 4) Final inspection
- g. Report any violations of this ordinance immediately to the Board of Selectmen.
- h. Take such action in the enforcement of this ordinance as may be directed by the Selectmen.
- i. Accept and deposit with the Town Treasurer all fees collected by him under this ordinance.
- j. Act in cooperation with fire authorities in any matter in which their duties as prescribed by law may coincide or conflict.

### **SECTION 300 DUTIES OF THE APPLICANT**

- 310** Any person, persons, partnership, or corporation shall obtain a permit before beginning construction, alteration, or repairs, other than ordinary repairs, using application forms furnished by the Building Inspector.
- 310:1 DELETED 1991**
- 310:2** Said application shall be accompanied by a sketch or plan of the proposed building or alteration and by a sketch or plan showing the location of the building's foundation and its relationship in terms of distance to all lot lines. The Building Inspector may require a survey in order to assure compliance with all ordinance, subdivision, site plan, and building code regulations.
- 310:3** Said application shall be accompanied by a signed statement of the intended use of the building upon completion of construction or alteration.
- 320** The applicant shall display prominently at the site of the construction or alteration a card issued by the Building Inspector evidencing his permit.
- 330** The applicant shall make the premises accessible to the Building Inspector at reasonable times for the performance of his duties.
- 340** Any person, persons, partnership or corporation intending to install a heating device, regardless of value, shall first make application for a permit on application obtained from the Fire Inspector.
- 350** Before a building permit can be issued, any person, persons, partnership, or corporation intending to dredge or fill wetland areas on the site of proposed buildings or buildings to be altered shall first receive an official permit of approval from the New Hampshire Wetlands Board and present a copy of same to the Building Inspector.

## **SECTION 400 FEE SCHEDULE FOR BUILDING INSPECTIONS**

- 410** The Board of Selectmen shall set the rates for the inspection of buildings.
- 420** The Building Inspector and Health Officer shall be paid by the Town for issuing or reissuing all permits.
- 430** The Building Inspector, Fire Inspector, and/or Health Officer may obtain expert assistance for any inspection on a commercial and/or industrial building, and fees for this shall be assumed by the builder/ landowner.
- 440** The Building Inspector may require a professional engineering review or other type of technical review as deemed necessary. The cost of such review shall be borne by the applicant. (2012)

## **SECTION 500 CERTIFICATE OF OCCUPANCY**

- 510** The following shall be unlawful until a certificate of occupancy shall have been applied for and issued by the Building Inspector:
  - 510:1** Occupancy and use of a building hereafter erected, structurally altered or moved, or any change in the use of the existing building.
  - 510:2** No certificate of occupancy shall be issued for any special exception use of a building unless use has been authorized by the Board of Adjustment.
  - 510:3** Every certificate of occupancy for which a special exception use has been authorized, or in connection with which a variance has been granted, by the Board of Adjustment shall contain a detailed statement of such special exception use or variance and of any conditions to which the same is subject.
  - 510:4** Application for a certificate of occupancy for a new building or for an existing building which has been altered shall be made on forms provided by the Building Inspector after the erection or alteration of such building or part thereof has been completed in conformity with the provisions of this ordinance or of any duly secured variance. Such certificate shall be issued within 10 days receipt of said application, but only if all requirements of this and all other applicable ordinances or codes are complied with.
  - 510:5** Every certificate of occupancy shall state that the building or proposed use of a building complies with all provisions of law and of this ordinance, of all other applicable codes or ordinances of the Town, and, if applicable, with all provisions of any variance or requirements set forth for the special exception use authorized by the Board of Adjustment.
  - 510:6** Upon written request by the owner and upon payment of such fee as may be prescribed from time to time, the Building Inspector shall, after inspection, issue a Certificate of Occupancy for any building or use thereof existing at the time of adoption of this ordinance, certifying the conformity of such use (including, if applicable, the number of employees) and of any structures or any lot with the provisions of this ordinance.

- 510:7** No certificate of occupancy shall be issued by the Town of Atkinson for any unit in a Conservation Development until a Leadership in Energy and Environmental Design (LEED) Certificate, proof of National Green Building Standards (NGBS) verification, or proof of energy efficiency (if a special use permit allows a different standard) has been filed with the Planning Office. (2013)

## **SECTION 600 STRUCTURAL REQUIREMENTS**

No building shall be erected, altered, rebuilt, remodeled or substantially repaired unless in compliance with the following requirements:

### **SECTION 610 GENERAL PROVISIONS**

- 610:1** All conventionally constructed buildings shall conform to and comply with the New Hampshire State Building Codes. (3/14/2006; 3/11/2008)
- 610:2** **DELETED** (3/11/2008)
- 610:3** **DELETED** (3/11/2008)

### **SECTION 620 FIRE PROTECTION**

- 620:1** All new construction or alterations shall conform to the National Fire Protection Association (NFPA) Codes adopted by the Town by ballot and all associated updates to these codes as approved by the Planning Board at duly noticed Public Hearings. A list of all adopted codes and their updates are available at the Atkinson Town Hall. (1997)
- 620:2** Any building constructed for commercial or public use, or any building to be reconstructed in excess of 50% and intended for any of the said uses, shall provide for non-combustible walls and partitions between its component parts. Any building of wood or other combustible material shall provide, when reconstructed, remodeled or altered, for fire stops in every combustible wall or partition, at every floor, and between floor joints at every partition.
- 620:3** Any building intended or designed for any public use or congregation of people shall be constructed in accordance with the National Fire Protection Association Publication Number 101, entitled Life Safety Code.
- 620:4** No public garage for the storage of five or more motor vehicles, or no building having automobile service or repair enterprises connected therewith, shall be erected, altered, enlarged, unless the building is constructed, either in its entirety or to the extent of the alteration, enlargement, or addition, of material commonly considered slow burning or non-combustible. The use of approved automatic sprinklers may obviate this requirement.
- 620:5** No roof of any building may be covered or recovered in excess of twenty-five percent (25%) unless non-combustible or fire-resistant materials are used.
- 620:6** Heating installations:

- a. Chimneys and fireplaces constructed as parts of a new or existing building or altered within a new or existing building, shall be constructed in accordance with the Atkinson Fire Department Pamphlet Number 100 and its listed references.
- b. Oil burning furnaces shall be installed in accordance with the Atkinson Fire Department Pamphlet Number 100 and its listed references.
- c. Gas burning furnaces shall be installed in accordance with the National Fire Protection Association Publication Number 54 which the Atkinson Fire Department has adopted as its own.
- d. Wood burning stoves shall be installed in accordance with the Atkinson Fire Department Pamphlet Number 100 and its listed references.

**620:7** No wallpaper or other combustible material shall be laid over any thimble hole in any chimney.

**620:8** No smoke pipes shall be installed or erected which pass into or through partitions or walls or combustible material except when guarded by a double collar or metal with air space of at least five inches, or by at least five inches of brick or other non-combustible material.

**620:9 Fire alarms**

- a. Commercial buildings, industrial buildings, commercial/industrial buildings, and buildings used to accommodate public assembly of more than fifty (50) persons shall have fire alarm installations which:
  - 1) Meet the alarm system standards for hard wiring as required in NFPA 13, 72, 75, 101 and 1221.
  - 2) Are connected to a central alarm monitoring service  
with around-the-clock coverage (24 hours/day).

**620.10 Sprinkler systems**

- a. Residential buildings.
  - 1) **DELETED 1994**
- b. Commercial or industrial buildings.
  - 1) All commercial or industrial facilities shall have a sprinkler installation which is in accordance with NFPA 13 standards and which consists of the following:

A dry sprinkler system. "Dry sprinkler system" shall mean a system employing automatic sprinklers attached to a piping system containing air under atmospheric or higher pressures, with loss of pressure from the opening of a sprinkler or detection of a fire condition allowing fire-suppression agents to be injected into the piping system and out the opened sprinkler.

- (a) Exterior connections to the dry sprinkler system which meet the approval of the Atkinson Fire Department for adequacy and accessibility and are equipped to connect with a public water system in the event it becomes available.
  - 2) Storage buildings may or may not be required to have sprinkler system installations. Determination shall be made by the Atkinson Fire Department.
- c. Places of public assembly
  - 1) Sprinklers shall be installed in all buildings used to accommodate public assembly of more than fifty (50) persons. The Atkinson Fire Department shall determine the type of sprinkler system required by taking into account the largest potential number of persons who can safely assemble within the structure at one time and the relationship of that number to NFPA 13 and 13-D standards as applicable.
- d. Occupancy and life-safety classifications
  - 1) Buildings which are classified as occupancy hazards or life safety concerns, as determined by NFPA Codes 101 and 1231, shall have a fully working fire suppression system on site, with extinguishing agent being either chemical compounds, CO<sub>2</sub>, halon, water, or any combination thereof, as required by the Atkinson Fire Department. (1988)

**620:11 Attached private garage**

- a. Private garages attached to any building or portion of a building used for living purposes in Use Groups R-1, R-2, R-3, R-4, or I-1 shall be completely separated from any adjacent interior spaces, including the attic, by walls and/or partitions constructed of not less than one-hour fire resistance rating.
- b. Door protectives shall be installed in all doorways constructed in fire-rated walls/partitions as specified in subparagraph "a" above and leading to any interior space used for living purposes. Door protectives may be made of 1 3/4" (one and 3/4 inch) solid core wood doors or equivalent. If 1 3/4" solid core wood is used, such door shall be solid from top to bottom with no panels cut into the door on either side.  
  
Any other type of fire door must be labeled with the appropriate one-hour fire rating label affixed.
- c. Door protectives installed in remote areas may require self-closing capability if deemed necessary by the Fire Inspector.
- d. Private garages having sprinkler installations conforming to NFPA standards shall be exempt from the requirements of subparagraphs "a" and "b" above. (1989)

## **SECTION 630 ELECTRICAL WIRING**

**630:1 DELETED (3/11/2008)**

## **SECTION 640 FOUNDATIONS**

**640:1 DELETED 1993.**

**640:2 DELETED 2003.**

## **SECTION 650 FLOOR AREA**

**650:1** Every building to be used as a residence shall have a minimum ground floor area of eight hundred (800) square feet outside measurement, and a floor area, exclusive of cellar, of six hundred (600) square feet for each additional story.

## **SECTION 660 EXTERIOR**

**660:1 DELETED 1991.**

## **SECTION 670 PLUMBING**

**670:1** All dwelling and all commercial or public buildings shall be connected to the public sewer system when available. When a public system is not available, a private sewage disposal system is required. The type, size, and construction of all septic tanks and drainage fields shall be approved by the town Health Officer.

**670:2 DELETED 1993.**

**670:3 DELETED 1993.**

**670:4 DELETED 1993.**

## **SECTION 680 SWIMMING POOLS**

**680:1** A permit shall be obtained from the Building Inspector before installation of an inground pool, above-ground pool, or storable pool of 30 or more inches deep.

a. **DELETED 2003.**

b. **DELETED 2003.**

c. **DELETED 2003.**

## **SECTION 700 EXEMPTIONS**

**700:1** The construction of small accessory buildings not used for living purposes, together with minor alterations, repairs and general upkeep of existing buildings shall be exempt from the provisions of this ordinance.

**SECTION 800 AMENDMENT**

**800:1** This ordinance may be amended by a majority vote of any legal town meeting when such amendment is published in the warrant calling for the meeting, except as allowed by RSA 674:52 VI. (1993)

**SECTION 900 ENFORCEMENT**

**900:1** Any person, persons, firm or corporation violating any of the provisions of this ordinance shall be subject to Penalties and Remedies pursuant to RSA 676:17, as amended. (3/10/2009)

**SECTION 1000 EFFECTIVE DATE**

**1000:1** This ordinance shall take effect upon its passage.

**SECTION 1100 SAVING CLAUSE**

**1100:1** If any section, clause, provisions, portion or phrase of this ordinance shall be held to be invalid or unconstitutional by any court of competent authority, such holding shall not affect, impair or invalidate any other section, clause, provision, portion or phrase of this ordinance.

**SECTION 1200 REPEAL OF PRIOR BUILDING CODE ORDINANCE**

**1200:1** Any and all building regulations heretofore enacted by the Town of Atkinson are hereby repealed. (1959)

**SECTION 1300**

Under the provisions of RSA 674:51 & 674:34, the Zoning Board of Appeals shall act as the Atkinson Building Code of Appeals. (2004)

---

# WATER SUPPLY AND SEWAGE DISPOSAL REGULATIONS

## SECTIONS WS100 - WS300

A regulation governing the construction, alteration and maintenance of wells and subsurface wastewater disposal systems pursuant to RSA 147:1

Office of the Selectmen

**SECTION 100 PURPOSE.** The Board of Health of the Town of Atkinson, New Hampshire hereby adopts this regulation in accordance with RSA 147:1 in order to protect the groundwater supplies of the Town from contamination and to provide for the safe disposal of wastewater and other putrescible materials.

**SECTION 200 DEFINITIONS.** As used in this regulation, the following terms (appearing in alphabetical order) shall have the following meaning unless the context clearly indicates otherwise.

- A1 Absorption field.** A system which distributes wastewater by the use of pipes over an area of soil from which the wastewater percolates downward through the soil.
- A2 Aerobic tank.** A tank that provides for the aeration of the wastewater and subsequent settling of solids.
- B1 Bedrock.** The solid rock that underlies soil or is exposed at the surface. It is often referred to locally as ledge.
- C1 Commercial.** As defined by the Town of Atkinson Zoning Ordinance.
- C2 Community water system.** A public water system which serves at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents.
- D1 Domestic wastewater.** Wastewater that originates from residential uses such as toilet, kitchen, and wash water wastes. Commercial and industrial wastewater that has similar characteristics as wastewater from residential uses shall be considered domestic wastewater.
- D2 Dry wells.** (See "Seepage pits".)
- E1 Designer.** Any permitted septic designer from N.H. who, by experience and capability, demonstrates the ability to perform all necessary tests to collect and properly disseminate all technical data and to design acceptable waste disposal systems as required by the provisions of this chapter including all other pertinent state regulations.
- F1 Failure of subsurface wastewater disposal systems.** When a system no longer functions effectively, creating health hazards and/or nuisance conditions, as demonstrated by backed-up toilets, surfacing waste-water, or by substantial pollutant movement away from the system.

- G1 Grey water.** Domestic wastewater that contains wash, laundry, and/or kitchen wastewater, but that does not contain any toilet wastes, i.e., feces or urine.
- H1 Hard pan.** A compact soil layer high in silt and very fine sand and generally low in clay. It is quite dense and has very little pore space. The hardpan retards the downward movement of water and roots. Permeability is moderately slow to slow.
- I1 Inspector.** The individual authorized by the Board of Selectmen to perform all administrative and inspection responsibilities of this chapter.
- I2 Internal elimination system.** Toilets from which no wastewater is discharged to a sewer or subsurface wastewater disposal system. Internal elimination systems include composting or incinerator toilets.
- N1 Non-community water system.** A public water system that is not a community water system.
- P1 Public water system.** A system for the provision to the public of piped water for human consumption, if such system has at least 15 service connections or regularly serves and average of at least 25 individuals daily at least 60 days out of the year. A public water system is either a "community water system" or a "non-community water system."
- R1 Raised absorption system.** An absorption system which must be raised (built upon fill) in order to meet minimum distance requirements to groundwater, ledge, or impervious layers.
- R2 Residential.** As defined by the Town of Atkinson Zoning Ordinance.
- S1 Seepage pits.** Covered underground chambers with open, jointed lining, generally surrounded with crushed stone from which wastewater seeps into the surrounding soil.
- S2 Septic tank.** A container through which wastewater passes before reaching the absorption field, the purpose of which is to remove solids, greases, and scum and allow anaerobic processes to occur so that the waste-water does not clog the absorption field.
- S3 Soil type.** As defined by the National Cooperative Soil Survey.
- S4 Soil type determination.** The soil type as determined by a qualified soil scientist as designated by the Rockingham County Conservation District using the standards of the National Cooperative Soil Survey.
- S5 Subsurface wastewater disposal system.** A system which treats and disposes of wastewater by use of a septic tank, distribution box, and absorption field, excluding the use of seepage pits, dry wells and aerobic tanks.

## **SECTION 300 WASTEWATER DISPOSAL SYSTEMS**

### **SECTION 310 GENERAL REGULATIONS**

- 310:1** No building permit for the construction of any building from which sewage or waste will discharge within the Town of Atkinson, NH shall be issued without prior approval of plans

and specifications by the Town of Atkinson and the New Hampshire Department of Environmental Services. (2012)

- 310:2** No waste disposal system shall be constructed, repaired, or altered within the Town of Atkinson without prior approval of plans and specifications by the Town of Atkinson and the New Hampshire Department of Environmental Services. (2012)
- 310:3** No waste disposal system within the Town of Atkinson shall be replaced within the confines of its original site without prior approval of plans and specifications by the Town of Atkinson.
- 310:4** Responsibility for accuracy of technical data and compliance with design criteria.
- a. The designer shall be responsible for the accuracy of all technical data and compliance with all design criteria; in the event of any question or dispute, the DES shall make the final determination of the accuracy of such data. (2012)
- 310:5** Design construction and capacity requirements for sewerage disposal system.
- a. The system shall be designed, constructed and satisfy all requirements set forth in pertinent State of New Hampshire DES Regulations as they exist, may be established or may be amended. These regulations currently include but may not in the future be limited and referred to as Chapter Env Ws 1000 - Subdivision and Individual Sewage Disposal System Design Rules. (2012)
  - b. The system shall be designed, constructed and satisfy all additional requirements set forth in these Town of Atkinson Section 300 requirements that are more stringent than State regulations.
- 310:6** Additional local design, construction and capacity requirements for sewage disposal systems.
- a. Filter Fabric - An effective barrier of a minimum of 5 oz./square yard of non-woven, polyester filter fabric shall be placed over the filter material to prevent infiltration of the backfill.
  - b. Dry Wells - Dry wells shall be prohibited for use in new or replacement systems for the disposal of domestic or commercial sanitary waste. Laundry washing machines shall be construed as discharging sanitary waste.
  - c. Holding Tanks - Holding Tanks shall be prohibited in all cases of new building construction and expanded use.
    - 1) Holding tanks may be permitted as a replacement system in cases of failure of an original system, but only when no other conventional system can be properly constructed.
    - 2) The minimum size of a holding tank shall be 2500 gallons.
    - 3) A suitable audio/visual alarm system shall be installed. The alarm shall warn the residents when the liquid level in the holding tank reaches 80%

of the tank's capacity. The alarm control panel shall be located within the living quarters of the home which it serves. The panel shall be unobstructed and remain within full view at all times.

- 4) All joints and concrete surfaces shall be properly sealed to maintain a 100% leak proof condition.
  - 5) When installed, but prior to backfilling, the holding tank shall be filled with water twenty-four (24) hours prior to inspection by the Town Health Officer or his delegated representative. The alarm system shall be inspected at this time.
  - 6) Following inspection and approval by the Town, the homeowner must register the system with the Town of Atkinson Health Department.
- d. Percolation Test -
- 1) Percolation tests must be witnessed by an agent of the Town of Atkinson.
  - 2) A minimum notice of (24) hours shall be given prior to the start of work and request for inspections.
- e. Pipe Specifications -
- 1) Pipe used for lines between the septic tank and the absorption field, shall comply with the PVC SDR (standard dimension ratio) #35 or equal. Pipes used under driveways or other areas subject to heavy loads shall be installed to withstand the imposed loads of H20 or equal.
  - 2) Pipe used in the absorption field shall be perforated PVC pipe Schedule #35 or equal. All joints shall be tight and all ends connected.
- f. Public Surface Water Supply -
- 1) The distance from a septic tank to a public surface water supply shall be 75'.
  - 2) The distance from an absorption field or bed to a public water supply shall be (reference Zoning Regulation Sections 410:8 & 420:5).
- g. Seasonal Conversions -
- 1) All seasonal conversions to year-round use will be required to have a septic system design approved by the New Hampshire Department of Environmental Services. There will be no exceptions. (2012)

**310:7 Construction requirements for Wells -**

- a. The well shall be designed, constructed and satisfy all requirements set forth in pertinent State of New Hampshire DES Regulations as they exist, may be established or may be amended in the future. (2012)
- b. These NH DES include but are not limited to: (2012)

- 1) New Hampshire Water Well Board Chapter We100-We-800
- 2) Well Siting Criteria Env-Ws378
- 3) Well Siting Criteria Env-Ws372
- 4) Any other applicable state and/or local requirements.

**310:8 Compliance: Permits; Fees; Inspections**

a. Wells -

- 1) No well or sewage disposal system shall be installed, altered, maintained in the Town of Atkinson unless it is in conformity with these regulations as well as the pertinent regulations of the State of New Hampshire, as may exist, be established or amended.
- 2) A permit for the installation of wells and/or alterations to sewage disposal system must be obtained from the local Health Officer prior to the commencement of any work on a system.

b. Septic Systems - (2012)

- 1) A fee made payable to the Town of Atkinson shall accompany every application for a permit for the installation and/or alteration of a sewage disposal system. The applicant must also submit four sets of plans for the requested system permit (three for Department of Environmental Services and one for the Town of Atkinson). Plans must be submitted for Town of Atkinson review prior to submission to DES.
- 2) All local waivers if necessary, must be obtained prior to submitting the plans to DES for approval.
- 3) The Town will require inspections during the course of work at the following intervals:

c. Bed bottom.

d. Under course filter material.

e. Final inspection and filter fabric in place before cover and grade.

f. Loam & Seed

- 1) Minimum notice of twenty-four (24) hours shall be given prior to the state of work and to request inspections of any listed stages.

g. Wells -

- 1) A permit must be obtained before any drinking well is installed, and must be accompanied by a diagram of the location. Diagram must show existing or proposed subsurface disposal system on that and adjacent lots. A fee shall accompany the application.

- 2) In a new construction, prior to issuance of a Certificate of Occupancy, a certified testing lab shall do a well water analysis in accordance with the Federal Safe Drinking Water Act.
- 3) Wells currently in operation that may required replacement shall be tested according to the above.

**310:9 Responsibilities -**

- a. NH Licensed Designer of Subsurface Disposal Systems -
  - ) responsible for the collection of all necessary technical data relative to any proposed system or alteration,
  - 2) for the design and layout of said systems;
  - 3) for the submitting of all prints and applications as required by the State and Local authorities.
    - (a) obtain copies of applicable regulations from NH DES and remain appraised of regulation changes. (2012)
- b. Property Owner -
  - 1) to provide to the installer all approved plans and specifications necessary for the compliance of State and local requirements.
  - 2) no disposal of system leach fields will be allowed by stockpiling above ground or by the subsurface disposal below the high water table.
- c. Installer – NH Licensed Installer of Subsurface Disposal System -
  - 1) to secure an installation permit; and
  - 2) to construct the system or alter any existing system in accordance with all regulations and laws; and
  - 3) to notify the inspector for all inspections before backfilling.
- d. Agent(s) -
  - 1) to maintain files of all approvals issued by DES; (2012)
  - 2) to issue permits in accordance with the regulations;
  - 3) to perform any inspections as may be deemed necessary in accordance with same;
  - 4) to return, within 10 working days, a copy of the application receipt;
  - 5) to perform any other duties relative to individual waste disposal systems as specified by the Board of Health;

- 6) to provide copies of Section WS100-300 to residents upon request; and
- 7) to provide a reference copy of State regulations in the Building Department. Copies of State Regulations will not be available locally for individual use; must be obtained from NH DES. (2012)

**310:10 Licenses –**

- a. All designers and installers must maintain current State of New Hampshire licensure.

**310:11 Fines and Penalties –**

- a. A penalty of one hundred (\$100) dollars per day shall be imposed on the applicant for failure to comply with these regulations. Each day of continuing failure to comply, after written notice of the violation(s) shall constitute a new offense. Repeated violations of regulations may be cause for the agent(s) to refuse to issue further permits for a period of one (1) year.

Approved and adopted by Board of Health/Selectmen 10/25/9

**SUBDIVISION  
REGULATIONS**

**TOWN of BOW, NEW HAMPSHIRE**

May 20, 2021

## ADOPTION AND REVISIONS

Pursuant to the authority vested in the Bow Planning Board by the voters of the Town of Bow and in accordance with the provisions of Chapter 675, Section 6, (formerly Chapter 36, Sections 19-29), New Hampshire Revised Statutes Annotated, 1955, as amended, the Bow Planning Board adopts the following Regulations governing the subdivision and development of land in the Town of Bow, New Hampshire.

March 8, 1960 Town Meeting authorized the Planning Board to regulate Subdivision of Land per Warrant Article 16.

May 18, 1967 Subdivision Regulations originally adopted by the Planning Board.

## INDEX

Section 1.00 - Authority and Title:

Pursuant to the authority vested in the Bow Planning Board by the voters of the Town of Bow under Revised Statutes Annotated (RSA) 674:35 and in accordance with the provisions of RSA 674:36, as amended, the Bow Planning Board adopts the following Regulations governing the subdivision and development of land in the Town of Bow, New Hampshire, such Regulations to be known as the "Subdivision Regulations of the Town of Bow".

## Section 2.00 - Definitions:

- 2.01 Abutter: Any person whose property is located in New Hampshire and either (a) adjoins or is directly across the street or stream from or (b) is within two hundred (200) feet of the land under consideration by the Board. Professionals whose stamp appears on documents submitted to the Board and holders of conservation easements on abutting properties shall be notified as abutters. For purposes of receiving testimony only, and not for purposes of notification, the terms "abutter" shall include any person who is able to demonstrate that his land will be directly affected by the proposal under consideration. For purposes of receipt of notification by the Board of a hearing, in the case of an abutting property being under a condominium or other collective form of ownership, the term "abutter" means the officers of the collective or association, as defined in RSA 356-B:3, XXIII.
- 2.02 Applicant: Any individual, firm, association, syndicate, co-partnership or corporation, trust or other legal entity commencing proceedings under these Regulations to effect a Subdivision of land or Lot Line Adjustment hereunder for himself or for another.
- 2.03 Application: Any Preliminary or Final Application.
- 2.04 Area of Special Flood Hazard: Any area designated as an Area of Special Flood Hazard on the Town of Bow Flood Insurance Rate Map, as adopted by the Board of Selectmen.
- 2.05 Board: The Planning Board of the Town of Bow, New Hampshire.
- 2.06 Buildable Land: All land except that which is defined or described as Unsuited for Subdivision or Building Purposes in Sections 3.02H or 8.03F of these Regulations.
- 2.07 Checklist: The list of information which must appear on a Plat and materials which must accompany an Application, which list must be completed, initialed and filed by the Applicant at the time of filing an Application.
- 2.08 Comprehensive Plan: The Master Plan for the Town of Bow of 1992, as it may be amended from time to time.
- 2.09 Concept Plat or Plan: A preliminary concept plan of a proposed Subdivision which satisfies the provisions of Section 6.01 of these regulations.
- 2.10 Condominium: The form of ownership of real property, and any interests therein, lawfully submitted to the provisions of RSA 356-B, in which individual owners own or lease separate units but together, or through an owners' association, own the common areas appurtenant to the units.

- 2.11 Drainage Right-of-Way: Land required for the installation of storm water sewers or drainage ditches, or required along a natural stream or watercourse for preserving the channel and providing for the flow of water therein to secure safety from flood damage and to preserve natural amenity.
- 2.12 Engineer: The Board of Selectmen of the Town of Bow or appointed agent.
- 2.13 Final Application: The filing by an Applicant of a Final Application Form and all other documents and information described in Section 4.05A.
- 2.14 Final Application Form: The form provided by the Board to be submitted by an Applicant to request approval of a Final Plat.
- 2.15 Final Plat or Plan: The Final Plat of a Subdivision which is presented to the Planning Board for final approval in accordance with Section 4.05 of these Regulations, which complies with Section 6.04 of these regulations and which, if approved, shall be filed with the Registrar of Deeds of Merrimack County.
- 2.16 High Intensity Soil Survey: A study or survey of the soil types and characteristics of a plot or parcel of land which describes and defines the soil properties and soil types of the parcel in accordance with the Standards for a High Intensity Soil Map which are adopted from time to time by the Society of Soil Scientists of Northern New England or comparable standards of other comparable professional organization.
- 2.17 Lot: The whole area of a single parcel of land, a tract, plot or portion of a subdivision or other parcel of land intended as a unit for the purpose, whether immediate or future, of transfer of ownership or for building development. A lot is an area with ascertainable boundaries in single or joint ownership, undivided by a street, established by deed(s) of record or a segment of land ownership defined by lot boundary lines on an approved subdivision plan.
- 2.18 Non-Residential Development: Any development, use or change in use of land other than single or two-family residential development, whether or not such development includes a Subdivision or Resubdivision of the land.
- 2.19 Official Map: The official Town map adopted in accordance with RSA 674:10 (formerly RSA 36:16-18) as amended. Such a map shall be deemed to be conclusive with respect to the location and width of Streets and the location of public parks shown thereon.
- 2.20 Performance Guarantee: Any security, including performance bonds issued by a State of NH-approved bonding company, escrow agreements, Letters of Credit, and other similar collateral or surety agreements, which may be accepted by the Town in lieu of a requirement that a Subdivider complete certain improvements before the Board or other Town body approves a Plat.

- 2.21 Planned Unit Development and Cluster Development: A Subdivision which is planned and developed as a unified whole according to comprehensive and detailed plans, including plans as to the location of Streets, utilities, public and common open spaces, common facilities, lots or building sites, and according to comprehensive design principles for all buildings and improvements intended to be located, constructed and used in the Subdivision. Development may occur in a single phase or a programmed series of phases. All of the Subdivision including common facilities shall be managed for the common benefit of the residents of the development.
- 2.22 Plat or Plan: A map or plan of a Subdivision.
- 2.23 Preliminary Application: The filing by an Applicant of a Preliminary Application Form and all other documents and information described in Section 4.03B of these Regulations.
- 2.24 Preliminary Application Form: The form provided by the Board to be submitted by an Applicant to request consideration of a Preliminary Plat.
- 2.25 Preliminary Plat or Plan: A Plat of a Subdivision complying with the provisions of Sections 6.03 of these Regulations.
- 2.26 Request for Preliminary Conceptual Consultation: A Subdivider's request for non-binding discussions with the Board filed pursuant to Section 4.01 of these Regulations.
- 2.27 Resubdivision: A change in a map of an approved or recorded Subdivision plat if such change affects any street layout on such map or area reserved thereon for public use, or any lot line; or if it affects any map or plan legally recorded prior to the adoption of any regulations controlling Subdivisions.
- 2.28 Site Plan Review: The review by this Board of an Applicant's plans for Non-residential Development pursuant to the Site Plan Review Regulations.
- 2.29 Site Plan Review Regulations: The Site Review Regulations for Bow, New Hampshire.
- 2.30 Street: Any street, avenue, boulevard, road, lane, alley, viaduct, highway, freeway and other public roadway. For the purposes of these Regulations "streets" shall be further divided into the following classifications:
- 2.30.01 Arterial Street (Class A): An inter-community thoroughfare designed primarily for high volume traffic movement throughout the community and beyond.
- 2.30.02 Collector Street (Class B): A street providing a lower level of traffic service than an arterial street and which is designed to provide

access between and among areas of the community.

2.30.03 Local Street (Class C): A residential street having the primary function of providing direct access to adjoining properties; such street not being designed to provide for traffic service between and among areas of the community. Class C streets shall not be built in areas with the potential of serving more than fifty (50) units or of serving any commercial facilities.

2.30.04 Private Street: A Street open to the public that is maintained by a private entity.

2.31 Subdivider: Any Applicant who has or who intends to request the Board to approve a Subdivision or Lot Line Adjustment.

2.32 Subdivision:

2.32.01 "Subdivision" means the division of the lot, tract, or parcel of land into two (2) or more lots, plats, sites, or other divisions of land for the purpose, whether immediate or future, of sale, rent, lease, condominium conveyance, conversion to condominium form of ownership, or building development. It includes Resubdivision and, when appropriate to the context, relates to the process of subdividing or to the land or territory subdivided.

2.32.02 The division of a parcel of land held in common and subsequently divided into parts among the several owners shall be deemed a subdivision under this title.

2.32.03 The grant of an easement in gross to a public utility for the purpose of placing and maintaining overhead and underground facilities necessary for its transmission or distribution network such as poles, wires, cable, conduit, manholes, repeaters and supporting apparatus, including any unmanned structure which is less than two hundred (200) square feet, shall not be deemed to create any new division of land for any other purpose.

2.32.04 Lot Line Adjustment: A minor adjustment of the location of the boundary between two or more Lots which results in no new Lots, which involves no construction of new Streets or other public improvements, and which is not a Resubdivision.

2.32.05 Major Subdivision: Any Subdivision not classified as a Minor Subdivision.

2.32.06 Minor Subdivision: Any Subdivision which creates three (3) or fewer lots or condominium units with no potential for future

subdivision, which would result in an aggregate number of greater than three (3) lots, which does not require the construction of any new Street or the extension of municipal facilities, and which is not in conflict with any duly accepted or approved Street, plan or map. For the purposes of determining the applicable requirements of these Regulations, a Lot Line Adjustment shall be deemed to be a Minor Subdivision.

- 2.33 Substantially Complete: The Select Board has the authority of RSA 676:12 V to determine the point at which a road has been constructed to a standard of Substantially Complete such that buildings, which depend on such new road for frontage or access, may be used or occupied.
- 2.34 Turnaround - Permanent: The permanent termination of a Street that will not, or cannot, be extended. This classification shall be made by the Planning Board after initial review and consultation.
- 2.35 Turnaround - Temporary: The area constructed at the termination point of any street which, in the foreseeable future, will be extended, either further onto the developer/owner's holdings or onto abutting properties. This classification shall be made by the Planning Board after initial review and consultation.

## Section 3.00 - General Requirements:

- 3.01 Subdivider's Responsibility: It is the responsibility of each Subdivider or Applicant to read and follow these Regulations. If a Subdivider or Applicant does not fully understand the Regulations, it is his or her responsibility to seek the advice and counsel of Town officials, agents, or other qualified persons.
- 3.02 All Subdivisions: This Section sets forth certain general requirements that apply to all Subdivisions in the Town of Bow.
- A. State Grid Coordinates: All surveys, control and boundary information shall be tied into and refer to the State Grid Coordinate System.
  - B. U.S.G.S. Data: All contours, profiles and other elevations shall refer to current U.S.G.S. Data.
  - C. Buffer Strip: All Subdivisions shall provide for a "Green Strip" or "Buffer Strip" along all existing or new Streets, Zone boundaries, and abutting, established neighborhoods. This "strip" shall be equivalent to the building setback distance in width, or up to 50 feet wide as directed by the Board, and shall extend along the entire frontage of such Streets or Zone boundaries. Construction shall be prohibited in this "strip" and no existing trees of six inch (6") diameter or larger within the strip shall be disturbed. The Planning Board, in cases of fields or similar natural features may require the planting of adequate trees to provide for proper screening. The only exception to this Section shall be for the installation of proper driveways.
  - D. Substandard Streets: Where a Subdivision borders an existing Street that is below the standards set forth herein, the Applicant shall set aside and show areas for widening or realigning such Street to the extent necessitated by the Application. Any land set aside for this purpose shall be deeded to the Town and shall not be counted for lot size, setbacks, or frontage. Said areas shall be marked "Road Right-of-Way" on the Final Plat.
  - E. Lot Boundaries: Prior to the issuance of any permits, on any new lots created by a Subdivision, all lot corners shall be permanently marked as provided in Section 7.04 of these Regulations. Also, all side lot lines shall be adequately flagged so as to allow proper orientation of improvements and the side lines shall be cleared to a depth sufficient to allow verification of the location of all improvements, i.e. house, well, septic system, driveway, etc.
  - F. State and Federal Approvals: Copies of all Applications to the State of New Hampshire for approval of on-site septic systems, alteration of terrain permits, dredge and fill permits, and driveway permits, and copies of

Applications to federal agencies for Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 USC 1334 or for any other permit or approval required by the State of New Hampshire or federal agency for the Subdivision must be filed with the Board prior to approval of the Preliminary Plat. Approval of any Final Application shall be conditioned upon filing with the Board copies of permits for all such state and federal approvals.

- G. Conveyances to Town: Before recordation of a Final Plan of a Subdivision requiring new road construction or the extension of municipal services, the owner shall transfer to the Town of Bow by Warranty Deed, all lands not platted for residential use and common area green spaces and recreational areas, or if commercial/industrial, for that use. Open spaces of adequate proportions and suitably located streets may be required to accommodate existing and prospective traffic and to afford adequate light, air, and access of fire-fighting apparatus to buildings and equipment and be coordinated to pose a convenient system. The lands described above shall include but not be limited to, the following categories:
- Public parks, recreation areas, recreation easements, open space, road rights-of-way, future extension requirements for roads, strips of land reserved for access to abutters and/or future streets, all other rights-of-way or dedicated lands.
- H. Unsuitable Land: Land of such character that it cannot be safely used for building purposes because of danger to health or peril from fire, flood or other hazard shall not be platted for residential occupancy, nor for other use which would tend to increase the danger to health, life or property or aggravate the flood hazard. Land subject to periodic flooding, poor drainage or other hazardous conditions, shall not be subdivided. Land with unsuitable soil or inadequate capacity for individual sanitary sewerage disposal systems shall not be subdivided unless connected to a common sewer system. No land described above and no land designated as Area of Special Flood Hazard or shown to be bog, marsh, swamp area, area of high water table, or designated as wetlands as set forth in the Town of Bow Zoning Ordinance Article 10.01, or any similar situation, or area necessary for the protection of aquifers which may serve as future sources of drinking water for the Town, or with slopes in excess of thirty-three percent (33%), or ledge which is exposed or lying within four (4) feet of the soil surface, or which is subject to an easement or a right-of-way in favor of the Town, County, State, Federal Government, or any third party shall be counted toward the required minimum lot size, but shall be allowed to be added to lots if the public welfare and safety is protected. Any land covered by any soils listed by the "Merrimack and Belknap Counties Soils Survey", USDA Natural Resources Conservation Service as poorly drained or very poorly drained, shall likewise not be counted towards the minimum lot sizes. In the event that a Subdivision contains any land, soils or natural features described in this Subsection, the

Applicant shall, at the discretion of the Board, submit as part of his Application the report and associated plan of the subdivision of a certified soil scientist as defined in RSA 310-A:76 who has performed a High Intensity Soil Survey of the Subdivision.

- I. Ledge: All areas of exposed ledge shall be identified and plotted on any Plat submitted to the Board.
  
- J. Protection of Natural Features: Due regard shall be shown for all natural features, such as trees, water courses, scenic points, rare plant or animal species, historic spots and similar community assets, which if preserved, will add attractiveness and value to the Subdivision or preserve the natural resources of the Town. Where appropriate, the Board may require the Applicant to dedicate lands or grant conservation easements to the Town to protect such resources in a manner consistent with Section 3.03C of these Regulations.
  
- K. Driveway Access: The provisions of RSA 236:13 and 14 "Driveways and other Accesses to the Public Way" are adopted by reference into these Regulations and the provisions and conditions thereof are extended to include Town Classified Roads of Classes 4 and 5. It shall be the responsibility of the property owner to maintain all portions of driveways and associated drainage facilities located within public right-of-way areas.
  
- L. Scattered or Premature Subdivisions: The Board may disapprove any plat (a) where it finds that it would result in the scattered or premature subdivision of land such as would endanger or injure health, safety or prosperity by reason of lack of water supply, drainage, transportation or other public services or facilities, or necessitate an excessive expenditure of public funds for the supply of such services or facilities, and in this connection, may take into consideration off-site factors affecting the provision of public services, including the adequacy of existing roads and streets; or (b) where the Board finds that the proposed Subdivision would be contrary to the harmonious, coordinated development and growth of the Town as provided in the Comprehensive Plan.
  
- M. Disturbing Environment: No person who is required to submit an Application for approval of a Subdivision pursuant to these Regulations shall commence the construction of roads within the land proposed to be subdivided or clear the land of natural vegetation or place any artificial fill thereon or do any other act or acts which will alter the natural state of the land or environment, unless and until the Final Plat relating thereto has been submitted and approved in accordance with the requirements of these Regulations. Furthermore, no such construction shall commence prior to the conclusion of a pre-construction conference and issuance of written authorization in accordance with Section 9.00 of these regulations. Nothing in this paragraph shall be construed to prevent such preliminary ground surveys, marking by stakes, engineering studies, inspections, and

testing (including test borings and test pits) as may be necessary to evaluate the suitability of the land for subdivision and to assemble the information required to be shown on a Preliminary Plat, provided, however, that such preliminary surveys, staking, studies, inspection and testing shall be accomplished with the minimum disturbance or alteration of the natural state of the land environment.

N. Town Utilities:

1. Town Sewer: If any portion of a Subdivision fronts on an existing street served or reasonably expected to be served by Town sewer; or fronts on a new street leading directly from a street served or reasonably expected to be served by Town sewer; or fronts an existing street and lies within the lesser of one hundred (100) feet per lot or one thousand (1000) feet of a street served or reasonably expected to be served by Town sewer; the Plat shall show appropriate extensions to the existing sewer lines and appropriate sewer connections from all improvements to the new or existing sewer lines. The use of on-site sewage disposal systems shall not be permitted in such a Subdivision after such sewer service becomes available.
2. Municipal Water System: If any portion of a Subdivision includes frontage on an existing street in which is located a Municipal Water main in said frontage and Municipal Water service is available, the Plat shall show appropriate extensions to each lot in the Subdivision from the existing water main and provide for appropriate water connections from all improvements on the lots to the water main. If a water main is constructed to a point where the main abuts any of the lots within the Subdivision, the lots within the Subdivision may be charged a proportionate share of the costs to extend the main to serve the lots within the Subdivision. The Subdivision plat shall bear a note to memorialize the potential requirement for lots to bear a proportionate share. The use of wells for domestic water supply, except for irrigation, shall not be permitted in such a Subdivision after such Municipal water service becomes available.

- O. Utilities: All utility facilities, including but not limited to gas, electric power, telephone, and CATV cables, shall be located underground at the expense of the Applicant. Except for major transmission lines not intended to serve individual properties and except for existing utility lines along existing Town streets, all other above-ground utility lines on land to be subdivided must be removed and installed underground. Utilities shall be located within street rights-of-way in accordance with all applicable State and Local Regulations and utility company rules and regulations. Utilities shall not be located beneath the paved surface of any street

except where necessary at intersections and for service connections.

- P. Access: Any road serving more than twelve (12) lots shall have an approved secondary means of egress. The secondary egress may, at the discretion of the Board, be parallel to the primary access, separated by a continuous island with a minimum width of 25 feet, to accommodate safety vehicles.
- Q. Fire Suppression Water Supply: A Subdivision that will result in twelve (12) or more lots that are not served by municipal water supply shall install a 30,000 gallon cistern. The design and location shall be subject to approval by the Planning Board. Other means of providing water supply may be accepted by the Board after consultation with the Fire Chief. Per RSA 674:51, V and 674:36, IV, both as from time to time amended, the Applicant may offer to construct, and the Planning Board may accept, residential sprinkler systems in lieu of a Fire Suppression Water Supply. The offer and acceptance shall be memorialized by a note on the recorded final plat.
- R. Condominiums: In addition to the information otherwise required to be filed pursuant to these Regulations, an Applicant who is seeking approval of a Condominium shall also file at the time of an Application copies of:
1. Condominium Declaration
  2. Condominium Bylaws
  3. Condominium Site Plan
  4. Condominium Floor Plan
  5. Where applicable, evidence of filing of Application for Registration of the condominium with the New Hampshire Attorney General.
- S. Review by Other Town Officials: Before approval of a Preliminary Plat is given, the Planning Board shall solicit written statements from the following Town Officials regarding the proposed application.
1. The Road Agent and Engineer as to the design of the street system, location of easements, and design of the water, sewer, and drainage systems, including appurtenances.
  2. The Police Chief, or representative, as to vehicular and pedestrian traffic safety and access for emergency vehicles.
  3. The Fire Chief, or representative, as to the adequacy of fire protection and access for emergency vehicles.

4. The Recreation Commission, or its Director, and the Conservation Commission as to the suitability and location of any lands proposed to be dedicated for Town open space, park or playground or other recreational purposes.
5. The Town Manager as to the design of extensions to water and/or sewer lines and capacity of existing water and/or sewer systems to service the new demand.

Town Officials may opt to attend the regular Planning Board meeting to express their concerns regarding the Preliminary Plat.

- T. Compliance with Regulations: All Applications shall comply with the Zoning Ordinance and all other ordinances and regulations of the Town of Bow.
- U. Manufactured Housing Subdivisions: RSA 205-D Manufactured Housing Installation Standards and amendments thereto is adopted herein by reference.

3.03 Major Subdivisions: The following general requirements apply only to Major Subdivisions:

- A. Erosion Plan: All Applications shall include a "Soils Erosion and Sediment Control Plan", conforming to the recommendations and specifications of the NHDES NH Stormwater Manual, December 2008 or later update. Said plan shall address slopes, embankments, ditches, drainage ways, and the effect of the Subdivision on water bodies and all disturbed areas. These plans shall be stamped by a New Hampshire Registered Professional Engineer.
- B. Drainage/Grading Plan: All Applications shall include a Drainage and Grading Plan showing the entire area which is directly involved. The Plan shall indicate existing grades for the entire tract and proposed grading for all areas of proposed construction activity. The Plan shall show all existing and proposed drainage facilities, including but not limited to catch basins, all storm water culverts, headwalls, detention/retention basins, drainage swales, rip-rap areas, dams and weirs, groundwater recharge structures, and storm water flow dissipaters. The plan shall show all contributing drainage and sub-catchment areas and existing and proposed storm water flow calculations. All drainage plans for the Subdivision shall be based on hydrological calculations from said Drainage/Grading Plans. The hydrological calculations shall analyze 10, 25, and 50 year storm events. These Plans and accompanying calculations shall be prepared by and bear the stamp and signature of a New Hampshire Registered Professional Engineer. The developer shall provide appropriate detention

and groundwater recharge facilities to assure that existing flow quantities or velocities will not be exceeded and that existing groundwater recharge will be maintained. A waiver of these regulations is required if the storm water drainage system creates any additional storm water flow quantities or velocities over other properties. Such waiver will be considered only where the developer has obtained easements therefore from all owners of said downstream properties.

C Parks and Recreation: Pursuant to RSA 674:36 II (d), (f), and (g), the Board may require the Applicant to dedicate land in a Subdivision to the Town for playgrounds, park trails, open space or recreation uses. The amount of land dedicated for such purposes shall equal up to ten percent (10%) of the gross land area of a Major Subdivision, and all of such dedicated land shall be Buildable Land in a contiguous parcel acceptable to the Board.

1. Subject to the approval of the Board, an Applicant may satisfy the parks and recreation dedication requirement in any one of the following manners:
  - a. Dedication to the Town of an area of Buildable Land equivalent to ten percent (10%), or such other percentage as the Board may require, of the gross area of land to be subdivided as described above. The Plat shall clearly show the area of land to be dedicated and the parcel(s) shall be clearly labeled "Town Recreation Land"; or
  - b. The donation of the cash equivalent of the value of a parcel of Buildable Land of a size equal to ten percent (10%), or such other percentage as the Board may require, of the gross area of the land to be subdivided. The value of the land shall be determined in its undeveloped state and shall be determined based upon a valid appraisal of the land. The appraisal shall be done by a qualified person, shall include at least three (3) comparable sales, and shall be subject to the review and approval of the Board. The Board may hire its own appraiser, at the Subdivider's expense, to confirm the value of the property; or
  - c. A combination of land dedication and cash donation; or
  - d. A combination of land dedication and park development; or
  - e. Other methods which meet the intent of this Section and which are in the public interest in regard to the specific conditions of the area of Town and the land to be subdivided.

2. Cash donations shall be placed in a Town fund dedicated to acquiring or developing park or recreation facilities. No portion of the funds are to be used for maintenance or operations.
- D. Phasing Plan Required: A written phasing plan shall accompany all Applications for Major Subdivisions. The plan shall specify the development time table for each phase of the Subdivision. The plan shall include approximate dates for road and other public improvement construction, for lot sales/development commencement, and for building occupancy. In cases where specific impacts have been identified, the Board may require that the development of a Subdivision proceed at a rate which will allow the Applicant and the Town a reasonable length of time in which to plan and prepare for impacts and to take steps to mitigate adverse impacts.
  - E. Private Streets: Where access is to be provided to multiple parcels or sites via a Private Street, a statement shall be added to the recorded plan and included in each deed requiring each parcel, unit, or site owner to be responsible for a proportionate share of the total cost to upgrade the Private Street(s) to Town road standards in the event the Town, in accordance with RSA 231:28-33, chooses to conditionally lay out the Private Street as a Town road. The statement shall include each parcel, unit, or site owner's acknowledgment that the development has been approved conditioned upon the cost of any betterment being unconditionally borne solely by the owners of the land abutting or being served by the betterments. The total cost of the betterment shall include, but is not limited to, construction, engineering, right of way and drainage easements, and relocation of underground utilities.
  - F. Restoration Plan and Performance Security Required: A restoration plan shall accompany all Applications for Major Subdivisions that require an Alteration of Terrain Permit or propose a new street. The purpose of the plan and security is to ensure that disturbed areas are permanently stabilized if construction ceases for more than one year, if erosion and sedimentation controls during construction are not maintained in accordance with the approved plan, if the developer disturbs an area outside the area or phase approved, or if the Town determines that the site has been abandoned. The plan shall specify the methods and standards proposed to permanently reclaim disturbed areas. The plan shall be accompanied by an independent cost estimate to implement the restoration plan. The cost estimate shall be subject to approval by the Board. An approved performance security sufficient to implement the restoration plan shall be submitted prior to altering the natural state of the land (see 3.02 M).

3.04 Special Requirements: The following general requirements apply to certain large

scale developments or developments which may have a significant impact on the Town, its services or facilities, as specifically provided herein. The cost of these assessments and studies will be borne by the Applicant.

A. Traffic Impact Assessment (TIA):

1. Where a Subdivision will result in the generation of an average of two hundred (200) weekday vehicle trip ends (according to Trip Generation, An Informational Report, Institute of Transportation Engineers), the Applicant must submit a TIA to the Board with its Preliminary Application. The TIA shall include, but not be limited to, information with respect to:
  - a. estimated vehicular trips per day,
  - b. an analysis of approaches,
  - c. an analysis of the circulation and channelization patterns,
  - d. a description and analysis of the location and type of existing and proposed traffic control devices,
  - e. pedestrian traffic and systems,
  - f. an analysis of signal warrants,
  - g. a description of the condition and capacity of the road network,
  - h. other analysis of specific impacts as identified by the Planning Board.
2. A "trip end" is defined as a vehicle movement either entering or leaving the site.
3. Examples of developments which would generate two hundred (200) weekday vehicle trip ends include (from Trip Generation, approximate values):
  - a. 20 detached single family units,
  - b. 40 manufactured housing units or condominium units,
  - c. 20 motel units,
  - d. 17,000 gross square feet general office building,

- e. 1,700 gross square feet shopping center,
  - f. 1,200 gross square feet high turnover sit down restaurant,
  - g. 8,400 gross square feet medical office building or clinic,
  - h. 4,000 gross square feet hardware/paint store,
  - i. Gasoline/service station,
  - j. 1,200 gross square feet bank.
- B. Fiscal Impact Analysis (FIA): Where a Subdivision would contain 30 or more dwelling units, or where the Planning Board finds that a commercial or industrial Subdivision may have an adverse fiscal impact upon the Town, the Applicant must submit an analysis of the projected tax and fee income to the Town and the projected operating, maintenance and capital costs of the Town with the Preliminary Application. The analysis must contain a summary of the services applicable to the Subdivision and of the capital facilities used to deliver the services.
- C. School Impact Analysis (SIA): Where a Subdivision would generate a school age population equal to one classroom according to current U.S. Census data from Merrimack County, the Applicant must submit an analysis of the impact of the Subdivision on the school system with the Preliminary Application.
- D. Environmental Assessment (EA): The Applicant of each development containing ten (10) or more lots or twenty (20) or more acres shall submit a report from the New Hampshire Natural Heritage Inventory (NH Department of Resources and Economic Development) which identifies rare plant and animal species and exemplary natural communities in or near the proposed Subdivision with the Preliminary Application. If any of the species or communities are identified within or adjacent to the Subdivision, an EA addressing the impacts on the species and communities shall be submitted with the Preliminary Application.
- E. Community Services Impact Assessment (CSIA): Where a Subdivision contains one hundred (100) lots, one hundred (100) residential units, one hundred (100) gross acres, eight thousand five hundred (8,500) gross square feet of office or commercial space, or seventeen (17) gross acres of industrial land the applicant shall submit an assessment of the demands that the development will place on existing or proposed community services including, but not limited to, police, fire, emergency, water, sewer, solid waste, roads, recreation, and Town offices with the Preliminary Application.

F. Other Considerations: The requirements contained in this Section 3.03 are based on thresholds at which the expected impacts will be measurable and at which point mitigation measures by the Applicant may be required by the Board. Nothing contained in this Section shall be construed to prevent the Planning Board from requiring other special investigations, at the applicant's expense or from requiring the above identified investigations at lower thresholds where, in the opinion of the Board, circumstances related to the development or the area warrant such special studies. An Applicant may not evade the application of the provisions of this Section 3.04 through phased or scattered development of a parcel. The Board may, in its discretion, consider the effects of both prior and potential development of the land owned by the Applicant or other prior or future owners of the Subdivision and require compliance with the terms of this Section.

3.05 Fees for Offsite Improvements: As a condition of the Final Approval of an Application the Board may require the Subdivider to pay a proportionate share of the costs of offsite improvements which are necessitated in whole or in part by the Subdivision.

3.06 Open Space - Residential Development: All residential Subdivisions resulting in ten (10) or more lots or including thirty (30) or more acres shall comply with the provisions of section 7.02 Open Space - Residential Development of the Zoning Ordinance of the Town of Bow, and amendments thereto.

A. To comply with section 7.02 B 2 of the Zoning Ordinance, the Subdivider shall submit a Yield Plan in conformance with Section 6.05 of the Subdivision Regulations.

## Section 4.00 - Procedure:

### 4.01 Preliminary Conceptual Consultation:

- A. Prior to submission of an Application for Board approval, the Applicant may discuss the proposal with the Board's Agent, and may make an appointment to discuss the proposal at a regularly scheduled Board meeting by notifying the Board's Agent three (3) weeks prior to the meeting. At least one week prior to the regularly scheduled meeting, the applicant shall provide the materials required in 6.01. Prior to submission of a Subdivision Application resulting in ten (10) or more lots or including thirty (30) or more acres, the Applicant shall submit a Concept Plan and make an appointment to discuss the proposal.
- B. At the meeting, the Applicant may address the Board concerning the proposal but must limit the presentation to the intent, location of the proposal, and the materials identified in 6.01 without going beyond a general description of the basic concept.
- C. The Board may briefly outline the steps that an Applicant may take to obtain Board approval. It may discuss the content of the Master Plan of the Town and its relation to the potential Applicant's proposal. The Board may also cite specific Sections of these Regulations or the Zoning Ordinance. The proposal may be discussed in conceptual form only and in general terms, such as the desirability of types of development and proposals under the Master Plan. The Board may make suggestions which might be of assistance in resolving problems with meeting requirements during formal consideration.
- D. A proposal shall neither be accepted as an Application nor be approved or disapproved by the Board under this procedure.
- E. No comments made during this consultation shall bind either the Applicant or the Board.
- F. Statements made by Board members shall not be the basis for disqualifying said members or invalidating any action eventually taken on the Application.
- G. The time limits for Board actions under RSA 676:4, I(c) and Section 4.03I and 4.05D of these Regulations shall not apply to Preliminary Conceptual Consultation.
- H. The Board recommends that the applicant contact abutters to discuss the project. The applicant may notify abutters of the Conceptual Consultation or request that the Board agent notify abutters at the applicant's expense.

4.02 Preliminary Design Review Procedure - deleted 7/5/1990.

4.03 Preliminary Application:

- A. Board Agent: The Board shall designate an agent to receive all Applications.
1. The agent shall publish a schedule for conferences at which initial filings may be submitted. The schedule shall establish deadlines for making appointments for conferences. The schedule and deadlines shall be approved by the Planning Board.
  2. The Applicant shall contact the agent to schedule an appointment to make an Initial Filing.
  3. The Planning Board shall establish a fee for the appointment. The fee shall be due when the appointment is made.
- B. Submission of Initial Filing:
1. At the Initial Filing conference, the Applicant shall present three copies of the complete application package to the agent. During the conference the Applicant shall demonstrate that all required items are included.
    - a. if all required items are included, the Applicant shall submit the materials under C. Initial Filing;
    - b. if required items are missing, the Applicant shall repeat the steps as outlined in 4.03 A 2 & 3 above.
- C. Initial Filing:
1. The Applicant shall file with the designated agent:
    - a. three (3) copies of a completed Preliminary Application Form;
    - b. three (3) copies of a Preliminary Application Checklist;
    - c. seven (7) copies of a Preliminary Plan which complies with Section 6.03 of these Regulations;
    - d. Sufficient legible copies of the Preliminary Plan, reduced in size to no more than 11 x 17 inches, to provide 30 copies to the Board and one (1) copy to each Abutter and to each Town official referred to in Section 3.02S of these

Regulations;

- e. the appropriate filing fee based upon the fee schedule as may be set by the Board from time to time; and
  - f. if the Applicant signs the form rather than the owner, certification that the Applicant is agent for the owner.
2. Completed Preliminary Applications must include all of the items listed in subsection 4.03C1 and must be filed with the designated agent no later than the fourth Thursday prior to a regular meeting of the Board in order to be considered by the Board at such meeting. If any of the items listed in subsection 4.03C1 are missing or incomplete as of the filing deadline, the Application shall not be placed on the agenda for the next Planning Board meeting. A work session at which no vote may be taken is not a regularly scheduled meeting of the Board.

D. Notice to Abutters and the Public of Submission of a Preliminary Application:

The Board shall notify all listed Abutters and the Applicant of its intent to consider a Preliminary Application by certified mail mailed not less than ten (10) days prior to the date for official submission to the Board of a completed Preliminary Application. Such notice shall contain a general description (supplied by the Applicant) of the proposal and shall identify the Applicant and the location of the proposal and a reduced size copy of the Preliminary Plan. The Board shall also post such notice in two (2) public places in the Town and publish the notice in a local newspaper within 14 days of the date of the meeting date.

E. Action on Preliminary Application:

- 1. The official submission date of the Application shall be the date of the first regular meeting at which the Application is considered. At that meeting, the Board will consider whether the Application includes the information required by Sections 3.00 and 4.00 of these Regulations.
- 2. A Preliminary Application which is not complete will be rejected by the Board. If the Board votes to reject an Application, it shall provide the Applicant with written notice of its decision which shall describe the reasons for the rejection.

Yield Plan Acceptance. An applicant for Open Space Residential Development may request that the Planning Board

accept a Yield Plan in conformance with Section 6.05 that does not include the information required by Sections 3.00 and 4.00. If accepted by the Board, the Board shall begin consideration of the Yield Plan within thirty (30) days and shall take final action within sixty-five (65) days in accordance with Section 4.03.

3. If a Preliminary Application is accepted by the Board, the Board shall begin formal consideration of the proposal within thirty (30) days thereafter. The Applicant may waive this and all other time periods and consent to such extensions as may be mutually agreeable.

F. Resubmissions: After the application has been accepted by the Planning Board under 4.03 E, the applicant may submit revised materials to comply with Town Regulations, Ordinances, or design review comments. To be considered at a meeting of the Planning Board, such materials shall have been submitted to the agent a minimum of seven (7) calendar days prior to the meeting.

G. Requirement for Public Hearing:

1. Once a Preliminary Application has been accepted as complete by the Board, and except as described in Section 4.04, no Preliminary Application may be denied or approved without a public hearing.
2. Notice of any public hearing on an Application shall be given in accordance with Section 4.03D. If notice of the hearing was included in any prior notice, it need not be repeated. If a hearing is adjourned, no written notice of the continuation date will be given if the date, time and place of the continuation was made known at the prior hearing.
3. Hearings shall be conducted in accordance with the Rules of Procedure adopted by the Board.

H. Board Consultation with Specialists:

Throughout the process of Board consideration of an Application, the Board may consult with engineers, architects, soil scientists, attorneys, planners or others, at the expense of the Applicant.

I. Consent to On-Site Board Inspection:

1. By filing an Application, the Applicant consents to the inspection of the property by Board members and Board agents at reasonable times and in a reasonable manner. The consent includes attendance by Abutters, as defined in 2.01, and other interested

parties at a posted on-site visit.

2. Prior to the Board's approval of a Preliminary Application, at least three (3) members of the Board shall schedule and conduct an on-site inspection of the property. All lot corners on existing streets, the centerlines of all new streets, wetlands, and the perimeter of the Subdivision shall be staked or flagged prior to such inspection.
3. The on-site visit and final action on the Preliminary Application may be postponed until no later than May 1st following the acceptance of the Application if, in the opinion of the Board, winter conditions prohibit making a proper inspection and evaluation of the site.
4. An on-site visit is considered a meeting of the Planning Board. As such, minutes and attendance shall be taken and attendees have the same rights to hear and record the meeting as a meeting of the Board. Where an applicant states in writing that security issues as envisioned in RSA 91-A:3, II,(i) are present at the site and requests prior to scheduling of an on-site visit that on-site attendees not take photographs or use video recorders, the Board may prohibit such use.

J. Final Action on Preliminary Application:

1. Subject to the provisions of Section 4.03G, the Board shall approve or deny a Preliminary Application within sixty-five (65) days of its submission and acceptance by the Board. The Applicant may waive this time period and consent to such extensions as may be mutually agreeable.
2. If the Board denies a Preliminary Application, it shall provide the Applicant with written notice of its decision which shall describe the reasons for the denial.
3. If the Board approves a Preliminary Application, it shall notify the Applicant of the approval and any conditions of such approval, if the Applicant was not present at the meeting at which such approval was granted.
4. Upon approval of its Preliminary Application, an Applicant is authorized to file a Final Application with the agent of the Board. The Board's approval of any Preliminary Application shall lapse sixty (60) days after the date upon which such approval was given unless the Applicant shall have filed a completed Final Application with the agent of the Board.

#### 4.04 Expedited Review:

- A. At the Board's discretion, any Application for: (a) minor Lot Line Adjustments, boundary agreements, or proposals which do not create buildable lot(s), or (b) a Minor Subdivision which creates no more than three (3) lots for building development purposes may be accepted and approved by the Board at one meeting subject to the notice and public hearing requirements described in these Regulations and subject to the Applicant's full compliance with these Regulations.
- B. At the time of the filing of such an Application, the Applicant shall specifically state whether the proposal qualifies for expedited review and shall file both Preliminary and Final Application Forms, Checklists and Plans.
- C. The Board shall provide notice to all parties as provided in Section 4.03D of these Regulations of its intent both to consider the submission and the approval of the Application under these Expedited Review Procedures, and to hold a public hearing on the Application.
- D. The Board shall hold a hearing, with notice as provided in Section 4.03G of these Regulations, prior to approval or disapproval of the Application.
- E. No public hearing shall be necessary prior to the Board's action to disapprove an Application based upon the failure of the Applicant to supply information required by the Regulations, including Abutters' identification, the failure to meet reasonable deadlines established by the Board, or the failure to pay costs of notice or other fees required by the Board. Per RSA 676:4, I (b), as from time to time amended, the Application shall not be disapproved due to failure to provide final approvals of State agencies as required in 6.04 F & G.

#### 4.05 Final Application:

- A. Filing:
  - 1. The Applicant shall file with the designated agent:
    - a. three (3) copies of the Final Application Form;
    - b. three (3) copies of a Final Application Checklist;
    - c. five (5) copies of a Final Plan which complies with Section 6.04 of these Regulations;
    - d. Sufficient legible copies of the Final Plan, reduced in size to no more than 11 x 17 inches, to provide twelve (12) copies

to the Board and one (1) copy to each Abutter and to each Town official referred to in Section 3.02S of these Regulations.

- e. three (3) copies of any construction plans; and
  - f. the appropriate filing fee based upon the fee schedule as may be set by the Board from time to time and any required escrow deposits for review and inspection fees.
2. Completed Final Applications must be filed with the designated agent at least twenty-one (21) days prior to the next regular meeting of the Board after receipt of Approval of a Preliminary Application in order to be considered by the Board at such meeting. A work session at which no vote may be taken is not a regularly scheduled meeting of the Board.

B. Notice to Abutters and Public:

Notice of any public hearing on a Final Application shall be given as provided in Sections 4.03D of these Regulations.

C. Public Hearings:

No Final Application shall be approved or denied without a public hearing as provided in Section 4.03G of these Regulations.

D. Action on Final Application:

1. Subject to the provisions of Section 4.03G, the Board shall act to approve, conditionally approve, or disapprove any Final Application which has been timely filed and complies with these Regulations and with the approval of the Preliminary Plat within sixty-five (65) days after the Board voted to accept the Preliminary Application. The Applicant may waive this time period and consent to such extensions as may be mutually agreeable.
2. The Board may apply to the Board of Selectmen for an extension, not to exceed an additional ninety (90) days, to act on the Final Application. The Applicant may also waive this time period and consent to such extensions as may be mutually agreeable.
3. The Board may grant conditional approval of an Application, which shall become a final approval without further public hearing, upon certification to the Board by its designee or based upon evidence submitted by the Applicant of satisfactory compliance with the conditions imposed. Final approval may occur in this manner only

when the conditions are:

- a. minor plan changes whether or not imposed by the Board as a result of a public hearing, compliance with which is administrative and which does not involve discretionary judgment; or
  - b. conditions which are in themselves administrative and which involve no discretionary judgment on the part of the Board; or
  - c. conditions with regard to the Applicant's possession of permits and approvals granted by other boards or agencies. All other conditions shall require a hearing after notice in accordance with Sections 4.03D and 4.03G.
4. If the Board rejects a Final Application, it shall provide the Applicant with written notice of its decision which shall describe the reasons for the rejection.
  5. Upon approval, the Chairman shall sign and date the Final Plat as approved. Approved plats and any documents affecting covenants, deed restrictions, etc., with the exception of road and other construction plans, shall be recorded with the Merrimack County Registry of Deeds. "As-built" plans for roads and all other public improvements shall be filed with the Planning Board after approval of the Engineer and acceptance by the Planning Board. All conditions of approval as imposed by the Planning Board shall appear on the face of the final plat to be recorded. Two recordable mylars of the final plat with original signatures and seals shall be submitted to the Planning Board agent for execution by the Planning Board and Building Inspector. Recording of the plats and associated documents shall be the applicant's responsibility. A digital copy compatible with the Town Tax Map and three paper copies of the recorded plat and one copy of associated documents certified by the Merrimack County Registrar of Deeds shall be submitted to the Town prior to issuance of building permits or start of any construction activity, including but not limited to site clearing and grading activities, and within ten (10) days following the recording of the plat.
  6. The Board's approval of a Final Application shall lapse if all conditions of Final Approval have not been met within ninety (90) days of the date of the Final Approval. Upon request, and where it can be shown to the satisfaction of the Board that the applicant has diligently pursued other required permits, the approval may be extended for an additional ninety (90) days to a total of 180 days

from the date of Final Approval. Where the applicant demonstrates to the satisfaction of the Board that a hardship exists and that conditions beyond the control of the applicant have caused the delay, an applicant may request and the Planning Board may grant additional reasonable extension of this time period up to a maximum total of one year from the date of Final Approval.

#### 4.06 Expenses and Fees:

All expenses incurred by the Town of Bow in processing an Application for Board action shall be borne by the Applicant. The cost of recording the Final Plat with the Registry of Deeds, cost of any required publication, cost of posting notices, cost of mailing notices of hearing, the reasonable anticipated cost of the consultation by the Board with any expert or specialist, and the reasonable anticipated costs to the Town for the services of the Board's designated agent, its attorney and its engineer, all must be paid by the Applicant at the time of filing an Application with the designated agent of the Board. All additional costs incurred during review of the Application shall be paid prior to Final Approval. Failure to pay these costs as specified will be valid grounds for refusal to accept the Application as complete, or for disapproval of the Application.

#### 4.07 Modification of Approvals

- A. Minor design modifications and minor modifications of approved subdivisions may be approved by the Planning Board upon recommendation of the Road Agent/Town Engineer, Building Inspector, and Town Planner at a public meeting without specific notification of abutters provided that all of the following conditions are met:
1. The modification is the result of circumstances relating to the property that were not anticipated at the time of approval.
  2. The modification is minor, insubstantial, and will not in any way adversely affect abutters, future occupants, owners, or the public.
  3. In all other cases, modifications shall be approved only pursuant to the provisions of Section 4.03F of these regulations.
    - a. When the Board has determined that a requested modification shall require a public hearing in accordance with Section 4.03F, the Applicant shall be responsible for all expenses and fees as set forth in Section 4.06 of these regulations.

Section 5.00 - Non-Residential Development:

Refer to Site Plan Regulations, Town of Bow.

## Section 6.00 - Plat Details:

Plans, reports, documents, and other materials submitted to the Planning Board to fulfill the requirements of the Subdivision Regulations shall be free of any restrictions on reproduction. Proximate to any copyright symbols, reservations of rights, or statements of ownership, shall be an affirmative statement which expressly agrees to reproduction.

6.01 Preliminary Conceptual Consultation: The Applicant shall prepare a Concept Plan of the site and surrounding properties in sufficient detail to allow the Planning Board to discuss the proposal. The Concept Plan should be drawn on a USGS, other topographical map or aerial photograph at a scale of one inch equals five hundred feet (1" = 500') or larger, and should show approximate tract boundary lines and tax map, block, and parcel numbers for the proposed area of development, all contiguous holdings of the Applicant, and the names and addresses of the owners of all contiguous abutting properties. All existing Streets, sewer and water lines, and other rights-of-way or easements should be shown as appropriate. One week prior to the meeting at which the concept plan is to be discussed, the applicant shall submit a summary of the project; a list of waivers, variances, and special exceptions required; the specific questions to be posed to the Board; and, if the applicant is not the owner, written permission from the owner to proceed.

6.02 Preliminary Design Plat Details - deleted July 5, 1990.

6.03 Preliminary Plat:

The Preliminary Plat shall be prepared to a scale of not less than one inch equals one hundred feet (1" = 100') or at greater detail as directed by the Board to indicate clearly the existing and proposed features of the site. Said plat shall be prepared on twenty-two by thirty-four inches (22" X 34") standard sheets measured from cutting edges. If one sheet is not of sufficient size to contain the entire area for the site and environs, the plat shall be divided into sections to be shown on separate sheets of equal size with reference on each sheet to the adjoining sheets. The Preliminary Plat shall show or be accompanied by the following:

- A. Date of survey, name and legal description of Subdivision, locus map superimposed on the Town Tax map (scale of 1"=1,000') showing the relation of the proposed Subdivision to existing streets, and surrounding property within one thousand feet (1000'), name of owner of record and Subdivider, north arrow showing grid north and magnetic north as of the date of the survey, and graphic scale.
- B. At least two (2) ties to New Hampshire State Grid Coordinate System shall be established on each section or submission of a subdivision. The bench marks shall be tied to previously established bench marks on previously submitted plats. Said bench marks to be plainly marked in the field and

stationed on the final plat with its elevation.

- C. Tract boundary lines, right-of-way lines of streets, street names, easements and other rights-of-way, park areas, or land to be reserved or dedicated to public use. All lot lines with accurate dimensions, bearing or reflection angles and radii, arc, and central angles of all curves. All bearings shall be based on the State Grid Coordinate System.
- D. Water courses and Area of Special Flood Hazard locations with base flood elevations that may exist within five hundred feet (500') of the Subdivision boundaries. For Subdivisions that involve land designated as Special Flood Hazard Areas, the applicant shall submit sufficient evidence (construction drawings, grading, and land treatment plans) to allow the Planning Board to determine that the proposal is consistent with the need to minimize flood damage; that all public utilities and facilities, such as sewer, gas, electrical, and water systems are located and constructed to minimize or eliminate flood damage; and that adequate drainage is provided so as to reduce exposure to flood hazards.
- E. Plans shall reflect all land within one thousand feet (1000') of any portion of the Subdivision in which the owner/Subdivider or any person or entity which has an interest in the owner/Subdivider has interest. If the plans include only a portion of the entire holdings, any possible future plans, in the form of a sketch, for these remaining holdings, shall be shown. Said plan to include possible road layout, lots, service, etc.
- F. The purpose of any easement or land reserved, or dedicated to public use shall be designated, and the proposed use of sites other than residential shall be noted.
- G. The tax block parcel number and names and addresses of owners of property abutting the tract to be divided. Proposed lots shall be numbered consecutively as instructed by the Town.
- H. Name and address of engineer or surveyor.
- I. Certification and seal of engineer or surveyor as to accuracy of the plat details.
- J. Where an Applicant proposes a temporary turnaround, sufficient documentation must be submitted to demonstrate that the road terminus is suitably located to facilitate the future extension of the road into adjoining properties.
- K. Where an Applicant proposes to extend a street which currently ends in a T-type turnaround, a plan for restoring the "ears" of the turnaround to a "natural" condition and continuing surface drainage through must be

submitted. The "ears" may be left where the abutting property owners specifically request such treatment and where surface drainage is appropriately accommodated.

- L. Existing and proposed ground elevation contours based on USGS topographic data and tied to a Town of Bow, State of New Hampshire, or United States government benchmark as follows:
- slopes 0% to 2% - two-foot (2') contour interval plus spot-elevations
  - slopes 2% to 5% - two-foot (2') contour intervals
  - slopes greater than 5% - five-foot (5') contour intervals
- M. Existing soils delineation based on the "Merrimack and Belknap Counties Soils Survey" (Soils Maps, Version 4, 2007 or later edition) USDA Natural Resources Conservation Service available at Web Soil Survey and a legend which explains the map symbols, describes the NRCS soils groups with drainage class, and describes the properties of the soils regarding septic leach fields, basement/foundations, building construction, and road construction.

Soil types will typically range as follows:

- Group 1 - well-drained to excessively well-drained with rapid permeability
- Group 2 - well-drained with moderate permeability
- Group 3 - moderately well-drained and well-drained with hardpan
- Group 4 - somewhat poorly drained; bedrock relatively close to the surface
- Group 5 - poorly drained
- Group 6 - floodplain or very poorly drained

Examples of soil types which fall within these categories are:

Group 1

Colton (CoA, CoB, CoC, CtE)  
Gloucester (GcB, GcC, GcD, GrB, GrC, GrD, GrE, GsD, GsE)  
Hermon (HmB, HmC, HmD, HnB, HnC, HnD, HoD, HoE)  
Hickley (HrE, HsA, HsB, HsC)  
Merrimac (MmA, MmB, MmC)  
Windsor (WdA, WdB, WdC, WdE)

Group 2

Agawam (Afa, Afb)

Group 3

Acton (AcB, AdB, AdC)  
Belgrade (PcB)

Duane (DuB)  
Ninigret (NnA)  
Paxton (PaB, PaC, PaD, PnB, PnC, PnD, PnE)  
Sudbury (SuA, SuB)  
Woodbridge (WoB, WoC, WvB, WvC)

Group 4

Canaan (CaC, Cad)  
Shapleigh (SgB, SgC, ShC, ShD, SoD, SoE)

Group 5

Au Gres (Aga, AgB, Aub)  
Ridgebury (Rba, RbB, RdA, RdB)

Group 6

Limerick (Lm)  
Ondawa (Of, Oh)  
Pondunk (Po)  
Rumney (Ru)  
Scarboro (Sc)  
Suncook (Sy)  
Muck and Peat (Mp)

- N. All areas of wetlands and associated buffer areas as defined in the Town of Bow Zoning Ordinance Section 10.01.B.2 with certification of Wetland Scientist. Wetlands and buffers shall be delineated and stamped and sealed by a Certified Wetland Scientist on the Plat. Such delineation shall have been conducted per professional standards no earlier than six (6) years prior to the date of submission of the Preliminary Plat application package to the Planning Board. Very poorly drained soils, bogs, vernal pools, streams, and the high water mark of water bodies shall be labeled.
- O. A layout indicating how the site will be served by electric, telephone, and any other public utility must be provided. If the utility company(s) require an easement to provide service, no final approval shall be granted by the Board until such easements are secured. If no easements are required, a letter of intent to provide service from the utility company(s) must accompany the application.
- P. Locations of all existing and proposed sanitary sewer systems, water mains, and all storm water management facilities, including but not limited to catch basins, culverts, drainage swales, rip-rap areas, detention/retention areas, and dams and weirs. Drainage/grading plans shall be prepared by and bear the stamp and signature of a New Hampshire Registered Professional Engineer.
- Q. When individual sewage disposal systems are proposed, the plans for

such systems must be approved by the appropriate Local or State agency. When a public sewage disposal system is not available, the Subdivider shall have percolation tests made and submit the results with the preliminary plat. Before the preliminary application is approved the location of the septic system as proposed or, if applicable, as approved by the NHDES Subsurface Systems Bureau shall be depicted on each lot.

- R. A statement that the proposed street center lines, lot locations, and required buffers have been adequately flagged on the ground at the site to allow on-site evaluation of the proposed Subdivision by the Board, Engineer, and Town Staff.
- S. Certification that the Applicant is agent for the owner or is the owner of the land, or that the owner has given consent under an option agreement.
- T. Data Listing: The following listed data shall be included on the preliminary plat prior to approval by the Bow Planning Board:
1. Area of Land subdivided \_\_\_\_\_ acres.
  2. Number of building lots \_\_\_\_\_.
  3. Length of streets \_\_\_\_\_ feet.
  4. Area of open space/conservation strips \_\_\_\_\_ acres.
  5. List of abutters with addresses.
- U. Construction Sequencing Plan. A plan outlining the construction process for all required improvements required for the Subdivision. The plan shall include:
1. the location of the construction entrance and site for mobilization.
  2. traffic control and traffic impacts for the construction entrance.
  3. the sequence for commencement of clearing, grubbing, and grading and the initial installation of sedimentation / erosion control facilities.
  4. the program for maintenance of sedimentation / erosion control measures.
  5. truck routes through town to the site.
  6. estimates of earthen materials to be removed from the site or to be brought to the site.
  7. location of stockpiles of earthen materials.
  8. timing of removal of existing traffic control devices.
  9. identification of areas likely to require blasting for construction of required improvements and duration of blasting activities.
  10. description of noise generating activities (see Noise Control Bylaw).
  11. areas for parking and access for construction workers.
  12. provisions for re-fueling and servicing construction equipment, including fuel storage, secondary containment, spill clean up, and proposed management procedures.
  13. detailed cost estimate for restoration of the site (re-

establishment of stable grades, erosion / sedimentation control facilities, drainage facilities, construction of 4-inch-thick layer of loam, and establishment of grass.

- V. Provisions and performance guarantees for the long term maintenance of private streets and quasi-public improvements including utilities, health and sanitation facilities, water supply, cisterns and hydrants, amenities, and other customary shared facilities, including proposed management procedures and contractual arrangements.
- W. Operational Brief for Major Subdivisions. A written description of the development to include: natural features of the site and identification of those to be preserved; market orientation of the project and how the site features will be used in marketing; special design considerations or theme; access routes to the site; neighborhood and abutting sites and uses and proposed relationship to surrounding properties; known historical features of site; and NHDES / USEPA environmental status including known releases of regulated substances, hazardous waste sites, and storage tanks for regulated materials on site and surrounding properties.
- X. Restoration Plan, Independent Cost Estimate, and Proposed Security. To comply with 3.03 F, a restoration plan that specifies the methods and standards proposed to permanently reclaim disturbed areas, an independent cost estimate to implement the restoration plan, and performance security sufficient to implement the restoration plan shall accompany all Applications for Major Subdivisions that require an Alteration of Terrain Permit or propose a new street.
- Y. Other information required by the Planning Board.

#### 6.04 Final Plat:

In addition to all items listed in Section 6.03, the Final Plat shall be accompanied by the following:

- A. Locus Map at a scale of one inch equals one thousand feet (1"=1,000') and suitable for use in updating the Town Tax Map showing all proposed lots and streets and all existing lots and streets within one thousand feet (1,000') of the proposed subdivision.
- B. When any officer or body of the Municipality, State or County is required to approve a plat, approval shall be certified on the plat in an appropriate space provided therefore.
- C. Existing and proposed ground elevation contours based on accurate field survey as follows: (Contours shall be accurate within one half a contour interval.)

- slopes 0% to 2% - two-foot (2') contour interval plus spot-elevations
  - slopes 2% to 5% - two-foot (2') contour intervals
  - slopes greater than 5% - five-foot (5') contour intervals
- D. Cross-sections and profiles of streets, including proposed locations for underground utilities (cross-sections at fifty (50) feet intervals plotted at one inch equals ten feet (1"=10') horizontal and vertical). Cross sections shall be provided at stream crossings, showing proposed drainage and channel treatments. Profiles shall be shown for all proposed driveways where slopes exceed eight percent (8%) unless the drive is shown on the cross sections. Profiles plotted with the same horizontal scale as the plans and a horizontal to vertical scale ratio of five to one (5:1) respectively. All data based on a field survey. These plans shall bear the seal and certification of a Registered New Hampshire Professional Engineer.
- E. Profiles of sewers, storm drains, culverts, catch basins, headwalls, and all other drainage facilities, as well as sanitary sewers, water, gas and underground electric layouts showing feasible connections to existing or proposed utility systems shall be required to accompany the final plat. These plans shall bear the seal and certification of a Registered New Hampshire Professional Engineer.
- F. Certification of approval of the subdivision by the NH Department of Environmental Services, Subsurface Systems Bureau, or appropriate successor agency, accompanied by a duplicate copy of all data submitted to them and any stipulations related to the approval.
- G. Final State of New Hampshire approvals when appropriate from the Department of Transportation (RSA 236:13), the NHDES Wetlands Bureau (RSA 482-A and RSA 483-B), and the NHDES Alteration of Terrain Bureau (RSA 485-A:17) shall be filed before Final Approval is granted.
- H. A lot area table which depicts for each lot the total area, buildable area, and the areas of wetlands, third party easements, and slopes greater than 33%.
- I. Certifications:
- The following listed certifications shall be affixed to the final plan together with the appropriate signatures and seals (when available) prior to the approval by the Planning Board.
1. It is hereby certified that the lands subdivided on this map are owned by title of record and that consent to the approval of said

map is given.

\_\_\_\_\_  
(date)                      (corporate or individual name)

2. I hereby certify that this map and survey has been made under my supervision. The date of the survey was:

\_\_\_\_\_  
(date)                      (Land Surveyor)

3. I have carefully examined this map and find it conforms with the laws and requirements applicable thereto.

\_\_\_\_\_  
(date)                      (Building Inspector)

4. This map is hereby approved by the Bow Planning Board at an official meeting held on \_\_\_\_\_ and shall be filed on or before \_\_\_\_\_ with the Merrimack County Registry of Deeds.

\_\_\_\_\_  
(date)                      (Chair of the Bow Planning Board)

- J. All required variances and special exceptions granted by the Zoning Board of Adjustment and all waivers granted under Section 11.00 shall be noted on the Final Plat.
- K. The recorded Final Plat shall contain an approval note "All New Development on lots in the Subdivision shall be subject to the impact fees in effect at the time of building permit."
- L. Other information required by the Planning Board.
- M. The Final Plat once approved shall be drawn on mylar or equivalent material at a scale of not less than one inch equals one hundred feet (1"=100') or at greater detail as directed by the Board to indicate clearly existing and proposed features of the site. Said plat shall be prepared in compliance with all applicable statutory requirements and shall be prepared on twenty-two by thirty-four inches (22" X 34") standard sheets measured from cutting edges. If one sheet is not of sufficient size to contain the entire area of the site and environs, the plat shall be divided into sections to be shown on separate sheets of equal size with reference on each sheet to the adjoining sheets. All dimensions shall be shown to hundredths of a foot and bearing to at least the nearest thirty (30) seconds. The error of closure shall not be more than one to ten thousand

(1:10,000).

Required information that cannot be recorded per RSA 478:1-a (refer to sections 6.03 E., J., K., L., M., O., P., R., and U., and 6.04 C., D., and E.) shall be shown on separate sheets. The recorded sheets shall contain a note that "This plan represents sheets \_\_\_ of \_\_\_ . The non-recorded sheets are on file with the Town of Bow."

#### 6.05 Yield Plan:

The Yield Plan shall be a realistic, reasonable, regular and ordinary layout reflecting a development pattern that could be expected to be implemented, taking into account the presence of wetlands and buffers, floodplains, steep slopes, existing easements and encumbrances, and suitability of soils for on-site sewage disposal. The plan shall depict lots that conform to dimensional standards of the Zoning Ordinance, roads, and other pertinent features of the site. The plan shall be prepared to a scale of not less than one inch equals two hundred feet (1" = 200') or at greater detail as directed by the Board to indicate clearly the existing and proposed features of the site. The Yield Plan shall show or be accompanied by the following:

- A. Date of survey, name and legal description of Subdivision, locus map superimposed on the Town Tax map (scale of 1"=1,000') showing the relation of the proposed Subdivision to existing streets, and surrounding property within one thousand feet (1000'), name of owner of record and Subdivider, north arrow showing grid north and magnetic north as of the date of the survey, and graphic scale.
- B. Tract boundary lines, right-of-way lines of streets, existing easements and other rights-of-way, and land to be reserved for open space. All lot lines and right-of-way lines of streets shall be shown with accurate dimensions.
  - 1. Lots shall show gross and net buildable area and depict a 100 feet radius on the front to confirm required lot width.
  - 2. Within proposed street rights-of-way, areas of slopes in excess of 10% shall be identified.
- C. Water courses and flood zone locations within the Subdivision boundaries.
- D. All land within one thousand feet (1000') of any portion of the Subdivision in which the owner/Subdivider or any person or entity which has an interest in the owner/Subdivider has an interest. If the plans include only a portion of the entire holdings, the Planning Board may require a sketch for these remaining holdings showing possible road layout.
- E. The tax block parcel number and names and addresses of owners of

property abutting the tract to be divided.

- F. Name and address of engineer or surveyor, and certification and seal of engineer or surveyor as to accuracy of the plan details.
- G. Existing and proposed ground elevation contours for areas containing roads and the front 200' of proposed lots. The contours shall be based on USGS topographic data and tied to a Town of Bow, State of New Hampshire, or United States government benchmark with a maximum of five foot (5') contour intervals.
- H. Existing soils delineation based on the "Merrimack and Belknap Counties Soils Survey" (Soils Maps, Version 4, 2007 or later edition) USDA Natural Resources Conservation Service available at Web Soil Survey and a legend which explains the map symbols, describes the Water Division soils groups, and describes the properties of the soils regarding septic leach fields.
- I. All areas of wetlands, surface waters, and associated buffer areas as defined in the Town of Bow Zoning Ordinance Section 10.01 B. 2. with certification of Wetland Scientist for areas containing roads and the front 200 feet of proposed lots. Very poorly drained soils, bogs, vernal pools, streams, and the high water mark of water bodies shall be labeled.
  - 1. All wetland crossings required for roads shall be identified with approximate square footage of impact to wetlands and buffers.
- J. Locations of all existing and proposed sanitary sewer systems and water mains.
- K. A statement that approximate proposed street center lines and lot locations have been adequately flagged on the ground at the site to allow on-site evaluation of the plan.
- L. Certification that the Applicant is the agent for the owner or is the owner of the land, or that the owner has given consent under an option agreement.
- M. Data Listing: The following listed data shall be included on the Yield Plan:
  - 1. Area of Land subdivided \_\_\_\_\_ acres.
  - 2. Number of building lots \_\_\_\_\_.
  - 3. Length of streets \_\_\_\_\_ feet.
  - 4. List of abutters with addresses.
- N. Other information required by the Planning Board.

6.06 Record Drawings (As-Builts):

To document the horizontal and vertical location of constructed roads, drainage and stormwater control facilities, fire suppression water supply, public and private utilities, other structures within road rights of way, and other required public improvements, the Subdivider shall submit record drawings in paper and electronic form in compliance with the Record Drawing (As-Built) Plan Requirements checklist in APPENDIX C.

## Section 7.00 - Required Improvements:

Unless superseded or otherwise specified herein, all materials and construction methods used for Streets and Drainage shall meet NH Department of Transportation *STANDARD SPECIFICATIONS for ROAD AND BRIDGE CONSTRUCTION*.

### 7.01 Public and Private Streets:

- A. Subgrades: All topsoil, stumps, brush, roots, boulders, and like materials shall be stripped or removed from the proposed subgrade area. The subgrade shall be excavated to a depth not less than twelve inches (12") below the bottom of the bank run gravel grade or to such limits as the Engineer may direct and backfilled with compacted sand meeting the requirements of NHDOT Standard Specification 304.1. A geotextile fabric meeting NHDOT specifications for Geotextiles, installed in accordance with the manufacturer's specification over compacted fill, all as approved by the Engineer, may be substituted for the 12 inch compacted sand layer. Where a geotextile fabric is substituted for the 12 inch compacted sand layer, the bank run gravel layer shall be a minimum of eighteen inches (18") deep. Ledge shall also be removed to a depth of two feet (2') below the bank run gravel grade of the roadway. Test pits will be performed at the direction of the Engineer to determine if ledge exists within two feet (2') of the subgrade. The subgrade shall be shaped and compacted evenly as shown on the profile and cross sections (see typical). All soft and spongy places and other soils not suitable for roadways shall be excavated to a minimum depth of two feet (2') below the bank run gravel grade of the roadway or as directed by the Engineer as shall be necessary to stabilize the foundation of the road and refilled solidly with sub-base material as directed by the Engineer. Compaction is to be obtained by use of approved rollers and equipment, to at least ninety-five percent (95%) of the Standard Proctor Density (ASTM-698). Said density to be checked by an approved Testing Service, and the results of all tests are to be provided to the Town for incorporation into the proper records. Compaction tests shall not exceed twelve inches (12") in depth. All costs incurred for the conduction of such tests shall be the responsibility of the Developer/ Contractor.
- B. That before any clearing has started on the right- of-way, the centerline of the new road shall be staked and side-staked at fifty (50) foot intervals. Sidestakes to be set back off the right-of-way at right angles from the centerline so as to be out of the construction area and with stationing and distances to the centerline of the road.
- C. Limits of clearing shall be marked by stakes or flagging. Distance from the centerline to be obtained from the cross-section.
- D. After clearing is done and before excavation is started, elevations shall be

taken on the tops of sidestakes. Cuts and fills shall be marked on sidestakes.

- E. Embankments: Embankments shall be formed of suitable material placed in successive layers of not more than twelve (12) inches in depth for the full width of the roadway cross-section and shall be compacted uniformly and sufficiently to prevent settlement. Stumps, trees, rubbish, and other unsuitable materials of substance shall not be placed in the fill. The fill shall be allowed to thoroughly settle before applying gravel. Compaction is to be obtained by use of approved rollers and equipment, to at least ninety-five percent (95%) of the Standard Proctor Density (ASTM-698). Said density to be checked by an approved Testing Service, and the results of all tests are to be provided to the Town for incorporation into the proper records. Compaction tests shall not exceed twelve inches (12") in depth. All costs incurred for the conduction of such tests shall be the responsibility of the Developer/Contractor.  
All fill material necessary to achieve subgrade elevation shall consist of stone and sand reasonably free from loam, silt, clay, and organic material and shall meet the requirement of the following table:

Sieve Size	Percent Passing by Weight
6 inch (6")	100
No. 4	20 - 100
No. 200	0 - 12

- F. Base Course: The base course shall not be laid until the subgrade has been inspected by the Engineer. The base course shall conform to the typical sections. The 12" - 18" Bank Run Layer shall meet the requirements for NHDOT Standard Specification 304.2 and the 6" Crushed Gravel layer shall meet the requirements for Specification 304.3. Where ledge is blasted on site and crushed to meet the requirements for Specification 304.4 for Crushed Stone, the Engineer may permit it to be substituted for both the bank run and crushed gravel layers. Base course shall be laid in layers not to exceed six (6) inches. Compaction is to be obtained by use of approved rollers and equipment, to at least ninety-five percent (95%) of the Standard Proctor Density (ASTM-698). Said density to be checked by an approved Testing Service, and the results of all tests are to be approved by the Town for incorporation into the proper records. All costs incurred for the conduction of such tests, shall be the responsibility of the Developer/Contractor.
- G. Hot Bituminous Concrete Pavement: Four inch (4") minimum NH Standards for road and bridge construction. Prior to pavement construction, all sideslopes, ditches, treatment swales, and detention areas shall be final graded, loamed, and seeded.

1) Base Course = 2.5 inch (after compaction) Type "B"

2) Wearing Course = 1.5 inch (after compaction) Type "E"

- H. Shoulders: Shoulders shall be constructed in the same manner as described above as noted on the typical cross-sections or as directed by the Engineer.
- I. Roadway Width: Centerlines of roadways shall coincide with centerlines of street rights-of-way and shall have the dimensions shown on the typicals.
- J. Immediate Installation of Street Name Signs: Once construction of a new street has commenced, a street name sign in compliance with Section 8.011, shall be installed to facilitate the response of emergency vehicles.
- K. Driveways: During construction of Streets, paved driveways to individual lots shall be constructed from the edge of pavement of the street to the private property line or to the limit of grading, whichever is greater.

#### 7.02 Drainage:

- A. Underdrains: Underdrains shall be installed where the character and composition of the soil in the roadbed and other areas of the subdivision render such installation necessary in the opinion of the Engineer. The location of the underdrain shall be four (4) feet beyond the traveled way and at a depth of two feet below subgrade, three feet in guard rail sections. A minimum 2 inch sand cushion in earth excavation and a 6 inch sand cushion in rock excavation shall be placed in the bottom of the trench for its full width and length to the grade of the bottom of the underdrain pipe. These underdrains shall consist of perforated metal pipe or perforated fiber pipe of a minimum six (6) inches in diameter and laid in the bottom of a trench at such depth and width as may be necessary. The trench backfill shall consist of a mixture of stones or rock fragments and particles with 95 to 100 percent passing the 3 inch sieve and 25 to 70 per cent passing the No. 4 sieve.
- B. Storm drains, culverts, catch basins: Storm drains, culverts and related installations, including catch basins and drop inlets, shall be installed within or without the Subdivision as necessary to permit unimpeded flow of all natural water courses, to insure adequate drainage of all low points along streets, and to intercept storm water run-off along streets at intervals reasonable related to the extent and grade of area drained. (Where required, catch basins may be on both sides of the roadway on continuous grade at intervals of approximately three hundred (300) feet.) Drainage improvements shall meet the specification of AASHTO (American Association of State Highway Transportation Officials) in regard to material and strength requirements. Catch basins and drop inlets shall be equal to New Hampshire Standard Type E or acceptable to the Engineer.

Storm sewer pipes and culverts shall be reinforced concrete, corrugated aluminum, corrugated steel, or equivalent and shall have a minimum two (2) foot cover over all pipes. Pipes constructed under the traveled way shall have a minimum cover of 4 feet, unless otherwise authorized. Headwalls where required shall be either of concrete or rubble masonry.

- C. Erosion protection ditches: Class C stone shall be provided in ditches where soil or velocity conditions warrant protection from erosion as determined by the Engineer.

#### 7.03 Topsoil Protection:

Topsoil moved during the course of construction shall be redistributed to provide at least four (4) inches of cover to all areas of the Subdivision and shall be stabilized by seeding and mulching or planting. No topsoil shall be removed from the Subdivision site.

#### 7.04 Monuments:

- A. All lot lines, beginning and end of curves, and points of a curve change shall be identified in the field by monuments in conformance with NH Land Surveyors Association Ethics and Standards for acceptable monuments (6.2 and 6.2a for materials), August 1989. Principal corners that monument the furthest extent of each lot shall be of stone or concrete, 4 inch X 4 inch X 35 inch long. Concrete bounds are to be reinforced with two reinforcing bars of a minimum diameter of ½ inch. The final plat shall identify each monument found or set and shall describe the monument.

A change in bearing along a property line or an accumulated change of bearing of five (5) degrees or greater shall indicate separate lot lines and shall be monumented. Where such lines are marked in the field with stone walls, the stone wall may be used for monumentation, except on principal corners.

- B. All monuments shall be set under the direct supervision of a licensed land surveyor. All monuments shall be flush with finished grade. No monument shall be set until all construction which would disturb or destroy the monument is completed. The maximum distance between monuments shall be 500 feet.
- C. All monuments shall be set and their installation certified by a licensed land surveyor prior to recording the final plat unless installation of the monuments is assured by a performance guarantee in conformance with Section 9.02.

#### 7.05 Water and Sewer Facilities

- A. Common systems: Such systems proposed by a Subdivider shall be of sufficient capacity to serve the Subdivision and shall be designed and constructed for incorporation into the future town or precinct systems. All such facilities shall meet the requirements of and be approved by, the NHDES Drinking Water and Groundwater Bureau, local and county health and public works agencies, and/or other public body having jurisdiction, and shall be accepted by the Engineer.
1. Site plans to include:
    - a. Five (5) foot contour intervals.
    - b. Well site with two hundred (200) foot protective radius. No subsurface disposal system permitted in this area.
    - c. All lots numbered.
    - d. Distribution system with water line sizes, pipe material, buried depth of piping, all valving and hydrant locations.
    - e. Indicate type of establishment; manufactured housing park, apartment buildings, etc.
  2. Complete quality analysis for the well water as conducted by the NHDES Laboratory Services Bureau or other certified laboratory within the past six (6) months.
  3. Continuous forty-eight (48) hour yield test log of the well showing water level and rate of pumping at one hour intervals.
  4. Schematic drawing of pumphouse piping.
  5. Detailed elevation of pumphouse facilities.
  6. Detailed elevations of well design.
  7. Storage facilities to be provided.
  8. Characteristic curve for all pumps-well and booster.
  9. The proposed water systems must meet all the requirements of the NHDES Drinking Water and Groundwater Bureau at the date plans are presented to and accepted by the Town of Bow Planning Board.
  10. Show that new and replacement water and sewer systems including on site and common systems be located, designed and

constructed to minimize infiltration and avoid impairment when locations fall within five hundred (500) feet of a Flood Zone.

B. Individual Service: Individual wells and subsurface disposal facilities shall in all respects comply with all applicable local and/or state requirements including those of the NHDES Subsurface Systems Bureau. In areas not currently served by common sewer systems, it shall be the responsibility of the Subdivider to provide adequate information to the installation and operation of an individual sewerage disposal system (septic tank and drain field). The Subdivider shall be required to provide the necessary equipment and labor for the making of these tests, required by local, county, and/or state authorities having jurisdiction.

1. Show that new and replacement water and sewer systems including on site and common systems be located, designed and constructed to minimize infiltration and avoid impairment when locations fall within five hundred (500) feet of a Flood Zone.

7.06 Winter Conditions: All ditches, slopes, drainage ways, and other disturbed areas shall be loamed and seeded within two weeks of final grading. Seeding done after October 1st shall consist of fast germinating grasses and shall be considered temporary. Areas shall be regraded and reseeded as necessary into the following growing season. Final approval of grading and seeding shall not be granted before the following June 15th.

Erosion and sedimentation control measures and facilities shall be in place and maintained through winter until final grading and seeding is completed and approved. In addition the Developer/Contractor shall file an inspection and maintenance plan. The plan shall set forth the names, addresses, and telephone numbers (including night and weekend telephone numbers) of all responsible parties. The plan shall provide for monthly reports of periodic inspections and inspections immediately following substantial rainfalls and snow melt conditions, as well as maintenance and corrective measures required. The reports shall be filed over the signature of the engineer/surveyor who designed the improvement or other similarly qualified individual.

7.07 Time Limit to Complete: At the time of the Board's approval of a Final Plat, the Board may specify a time limit, not to exceed three (3) years, within which all required improvements caused in the course of the work performed in the development of the Subdivision shall be completed. In the event no time limit is specified by the Board, all such improvements and repairs shall be completed within (3) years of the date of such Final Approval. This time limit may be extended by mutual agreement of the Subdivider and the Planning Board.

Section 8.00 - Design Standards:

The Subdivision plat shall conform to the design standards set forth herein to encourage good development patterns within the Town. Whether either or both an official map or comprehensive plan has or have been adopted, the Subdivision shall conform thereto with respect to streets, public open spaces and drainage ways.

8.01 Streets:

- A. General Design: All streets in the Subdivision, with the exception of a permanent turnaround (see 8.01G2), shall be designed to provide safe vehicular travel at a design speed of 30 MPH. Due consideration shall be also given to the attractiveness of the street layout in order to obtain an optimum livability and amenity of the Subdivision. Where safe vehicular travel and optimum livability and amenity can be demonstrated, alternative designs that incorporate accepted *traffic calming* techniques may be approved by the Planning Board. All Public and Private Streets shall comply with State Fire Code standards (NFPA 1141, Chapter 5 Means of Access) for Fire Department Access Roads. Provisions shall be made for the future extension of streets to adjoining unsubdivided property. Subdivisions that adjoin or include existing streets that do not conform to the width shown on the comprehensive plan or official maps or the street width requirements of these Regulations shall dedicate the differential width along either or both sides of said existing streets in accordance with Section 3.02D. If the Subdivision is along one side only, one-half (1/2) of the differential width shall be dedicated. Setbacks shall be measured from the new or future right-of-way line.
- B. Naming: No street shall have a name which duplicates or which is substantially similar to the name of an existing street. The continuation of an existing street, however, shall have the same name. Proposed street names shall be submitted to the Board of Selectmen for review and approval. Submittals shall be on the form and in the manner prescribed by the Selectmen.
- C. Cross-Section: Street right-of-way width shall be as follows:

	<u>Minimum (ft)</u>
Arterial (Class A)	80
Collector (Class B)	70
Local (Class C)	60
Industrial (Class C)	70

Right-of-way widths and other applicable cross- sectional standards are shown in Appendix B.

- D. Alignment: The minimum sight distance at intersecting roadways shall be 400 feet or farther as a result of an AASHTO analysis. Street jogs at intersections with centerline offsets of less than one hundred twenty-five (125) feet shall be avoided. The minimum centerline radii of curved streets shall be as follows:

Arterial (Class A)	500 feet
Collector (Class B)	300 feet
Local (Class C)	275 feet
Industrial (Class C)	300 feet

All reversed curves on Class A and B streets shall be separated by a tangent at least one hundred (100) feet long. When required, the roadway shall be superelevated at a maximum rate of 6%. Streets shall be laid out so as to intersect as nearly as possible at right angles. No street shall intersect any other street at less than seventy-five (75) degrees.

- E. Design of intersections: Intersecting roadway pavements shall have a paved transitional area at all corners to accommodate turning movements according to the following radii:

<u>From: To:</u>	<u>Class A</u>	<u>Class B</u>	<u>Class C</u>
Class A	50	50	30
Class B	50	30	30
Class C	30	30	30

For all intersections in commercial and industrial areas, this paved area shall have a minimum radius of fifty (50) feet.

New streets shall be located such that minimum K values as shown in subsection F below are maintained on existing and new streets through the intersection.

- F. Grade: The centerline grade for any street shall not be less than five-tenths percent (.5%). Maximum allowable centerline grades shall be as follows:

Arterial (Class A)	6%
Collector (Class B)	8%
Local (Class C) Residential	10%

All changes in grade exceeding five-tenths percent (.5%) shall be connected by vertical curves of sufficient length to afford adequate sight distances, in the opinion of the Board. The minimum K value for sag vertical curves shall be 40, and for crest vertical curves, 30, unless otherwise required.

G. Deadend Streets: Deadend streets shall be provided with an approved type turnaround, as determined by the Planning Board to be a "Temporary" or "Permanent" need. Design for the turnarounds shall be as follows:

1. Temporary turnaround: The right-of-way width, per classification of the roadway, shall be maintained to the end of the improvements and further, to the property line, if so ordered by the Board. An "L" type turnaround shall be constructed at the end of the road. Said "L" to have the dimensions shown on the typical.

The "ear" or "extension" that forms the "L" shall be deeded to the Town of Bow in the form of an Easement. Driveways shall not be located off of any portion of the "L".

The Easement shall stipulate that the Town has sole rights to use and maintain the area until such time as the Easement shall expire and the portion of the "L" which is no longer needed, expires. The portion of the "L" no longer needed shall revert to owners of the abutting lots. For the purposes of frontage requirements only, that portion of a lot that would front on an extension of a street when the "L" is discontinued, or the width of the right-of-way for the "L", shall be counted and not the lines around the "L". This type of turnaround shall be used only when the possibility of extension is evident. This type of turnaround shall not be considered as a permanent turnaround.

Where a Subdivider proposes to extend a street which currently ends in an "L" type turnaround or other temporary deadend, it is the Subdivider's responsibility to restore the temporary turnaround to through street standards. This includes, but is not limited to removing the "ears" or other maneuvering facilities where abutters desire and installing a suitable drainage system.

2. Permanent turnaround: All streets that shall permanently terminate, as shown on plans, shall have a turnaround constructed to the following minimum specifications: The right-of-way shall be flared so as to form a circular, or partially circular section or roadway for the ease of maintenance and travel. The radius of the centerline of the pavement around the turnaround shall be a minimum of seventy-five (75) feet. Shapes such as a "tear drop" or a "P" are preferred over the "lolly-pop" shape. Pavement widths shall be the same as for the road servicing the development as will all other improvements within the turnaround area. The Deed to the Town for the roadway shall include ALL lands within the outermost dimensions of the turnaround area. All drainage, signs, and other improvements within the area of the turnaround shall be as per guidelines contained within these Regulations for "Required

Improvements". (SEE TYPICALS IN REAR OF THESE REGULATIONS).

Where a Subdivider proposes to extend a street which currently ends in a permanent turnaround, it is the Subdivider's responsibility to restore the turnaround to through street standards. This may include, at the discretion of the Board, removing the paved surface, restoring to a natural state the previously paved area, providing proper access to abutting lots, necessary title and deed work required by the proposal, and other work required to create a through street to Town of Bow standards.

3. General: (1) Delineator posts or reflectors of a design approved by the Town Engineer, shall be furnished, located and installed as a part of the required improvements for all roadways and turnarounds; (2) the roadways constructed within the turnaround areas, shall conform exactly with the design criteria contained in these Regulations.
  
- H. Street Lights: Street lights of a type or style acceptable to the Board, the Director of Public Works, and the Police Chief, and compliant with RSA 9-D:2, III shall be provided at intersections and other locations as the Board may reasonably require, after consultation with the Director of Public Works and Police Chief. Street lights shall be required where needed for public safety based on traffic volumes and to achieve adequate intersection recognition. At all new intersections, conduits for underground electric power shall be installed to power future street lights.
  
- I. Street Signs: Street signs of a type of style acceptable to the Board, the Road Agent and the Police Chief shall be provided at all intersections.
  
- J. Mail Boxes: No portion of any mail box or mail delivery receptacle shall be installed closer than twelve (12) inches to the edge of pavement or curbing of any street.
  
- K. Driveways: Driveways shall be designed and constructed with grades which do not exceed 10% and to include a turnaround. Driveways in excess of 500 feet in length shall be designed and constructed so as to provide access for a SU (single unit) vehicle.
  
- L. Traffic Control: Traffic control signs, pavement marking, and other devices shall be installed in accordance with the Manual on Uniform Traffic Control Devices unless otherwise stipulated by the Planning Board or Engineer.

#### 8.02 Blocks:

Blocks generally shall not be less than five hundred (500) feet, nor shall the

length exceed one thousand two hundred (1200) feet. In blocks over one thousand (1000) feet long, pedestrian crosswalks may be required in locations deemed necessary by the Planning Board.

#### 8.03 Lots:

- A. Lot dimensions and area shall not be less than the requirements of the Zoning Ordinance, or as required by soil or topography conditions.
- B. Insofar as is practical, side lot lines should be at right angles to straight streets, and radial to curved streets.
- C. Where extra width has been dedicated for widening of existing streets, lots shall begin at such extra width line, and all setbacks shall be measured from such line.
- D. Where there is a question as to the suitability of a lot or lots for its or their intended use due to shape or the presence of such factors as rock formations, steep slopes, unusual surface configurations, tendency to periodic flooding, poor drainage, unsuitable soil or soils, and inadequate capacity for sanitary sewer disposal, the Planning Board may withhold approval of such lot or lots.
- E. Lots shall be graded in such a manner so as to prevent the collection of water at low points thereon.
- F. Any land designated as Area of Special Flood Hazard or shown to be bog, marsh, swamp area, area of high water table or any similar situation, shall not be counted toward the required minimum lot size, but shall be allowed to be added to lots if the Public Welfare and safety is protected. Any soils considered by the USDA Natural Resources Conservation Service as being poorly drained or very poorly drained, in addition to the above conditions, shall not be counted towards the minimum lot sizes.

#### 8.04 Easements:

- A. Easements for utilities across lots or centered on rear or side lot lines shall be provided where necessary and shall be at least twenty (20) feet wide.
- B. Where a Subdivision is traversed by a water course, drainage way, channel or stream, the Board may require that there be provided a storm water easement or drainage right-of-way of adequate width to conform substantially to the lines of such water courses, drainage way, channel or stream, and provide for construction and permanent maintenance of associated storm water control facilities such as rip-rap, flow dissipaters, headwalls and catch basins. Required flowage easements, within the subdivision, shall be extended until a drop of 4 feet in elevation from the

drainage structure's outlet is obtained.

8.05 Utilities:

All underground utilities shall be placed immediately after preparation of the roadway to subgrade, but prior to placement of and beneath select roadway materials in conduit in streets under construction. The conduit shall extend a minimum of three feet (3') beyond paved areas and shall be placed a minimum of 12 inches below subgrade, unless otherwise specified.

Crossings shall be perpendicular to the roadway whenever possible.

Excepting water and sewer facilities, underground utilities running parallel to the traveled way, shall be located a minimum of three feet (3') outside paved areas with a minimum of two feet (2') of cover and in the manner prescribed by the utility company providing service.

When underground utilities are encountered, the contractor shall notify the appropriate agency to assure proper construction procedure in that area. Any damage to a utility is to be reported to and repaired by that utility prior to backfilling.

A. Water and Sewer:

The Engineer shall oversee all work related to required water and sewer facilities.

1. All water and sewer facilities shall be designed by a registered professional engineer
2. Sanitary sewer mains shall have a minimum of six feet (6') of cover under street surfaces.
3. Water mains shall have a minimum of five and one half feet (5 ½') of cover under street surfaces.

B. Electric Power:

1. At crossings, underground electric conductors must be contained within rigid conduits (4 inch minimum diameter Schedule 80 PVC or rigid steel conduit).
2. Underground electric conductors shall have a minimum of 40 inches of cover.
3. Electrical site work shall be performed by Licensed Electrical Contractors, not general contractors.

C. Warning Tape:

An appropriately labeled warning tape shall be laid approximately 12 inches above all underground utilities within the street right of way.

8.06 Storm Drainage:

A. General Design: Unless superceded or otherwise specified herein, all drainage design shall meet the standards for “Minor State Aid Highways and Betterments” contained in the NH Department of Transportation *Manual on DRAINAGE DESIGN FOR HIGHWAYS*.

B. General Applicability: These design standards shall apply to drainage facilities referred to in sections 3.03 B Drainage/Grading Plan and 7.02 Drainage.

C. Specific Design Standards: Drainage Structures shall be designed to accommodate storms of the following frequency:

Bridges	50 years
Culverts	25 years
Storm Drains for depressed sections	25 years
Storm Drains	10 years
Detention Ponds / Structures	10 years
Curbed Roadway & Roadside Ditches	10 years

Based on the Drainage Calculations required in section 3.03 B, the design engineer shall address potential adverse impacts to downstream improvements, property, and receiving waters.

Section 9.00 -Inspections and Performance Guarantee:

9.01 Performance and Inspection of Work:

- A. All work necessary for the construction of required improvements and the repair of damage to existing public improvements shall conform to the requirements of these Regulations. Such work shall be performed in a good and workmanlike manner, and shall be free from faults and defects. All materials incorporated in such construction shall conform to the requirements of the current State of New Hampshire's Standard Specifications for Road and Bridge Construction. Any work or materials not conforming to the foregoing standards may be considered defective and rejected by the Engineer. All work and materials rejected by the Engineer as defective shall be removed and corrected by the Subdivider. All work shall be completed within the time limits, if any, specified by the Planning Board, but in the absence of such specified limits and in all events no later than three (3) years from the date of the approval of the Final Plat, unless the time limit is extended by mutual agreement of the Planning Board and the Subdivider.
  
- B. The Engineer will be the Town's representative during the construction of required improvements. He shall at all times have access to the site when the work is in preparation and progress. He will make periodic visits to the site to familiarize himself generally with the progress and quality of the work and to determine in general if the work is proceeding in accordance with the requirements of these Regulations. The Subdivider shall provide the Engineer in advance with a schedule of work to be performed outside of the Engineer's normal office hours and give the Engineer timely notice of the completion of each major stage in the construction of any required improvement so that the Engineer may inspect the work so completed prior to the covering thereof, and the Engineer shall make all such inspections with reasonable promptness so as to cause no delay in the work. In particular, the Subdivider shall in the case for streets, give timely notice to the Engineer of the completion of subgrades, drainage base course, and base and final surfacing. The Subdivider shall provide to the Engineer, the name and telephone number of the individual(s) responsible for the construction, so that he/she may be contacted for any emergency, night, or weekend maintenance problems.
  
- C. The Subdivider shall give the Engineer notice when any required improvements is completed and ready for final inspection. The Engineer will promptly make such inspection and, when he finds that the particular improvement has been fully completed in accordance with the requirements of these Regulations, he shall approve the same in writing. Such approval, in the case of a street, shall not constitute the legal acceptance of the street by the Town nor shall it modify in any way the requirements of law for the acceptance of streets by the Town.

- D. The Subdivider shall promptly remedy any defects in any required improvement due to faulty workmanship or materials which appear within a period of one (1) year after approval thereof by the Engineer.
- E. Notwithstanding the on-site observations and inspections and any approvals of required improvements issued by the Engineer, the Subdivider shall be and remain fully responsible for the performance of the construction work in accordance with the requirements of these Regulations and the Engineer shall have no responsibility for the failure of the Subdivider to carry out the work as required herein.
- F. The Subdivider shall upon demand, promptly reimburse the Town for the expense of all inspection work performed by the Engineer pursuant to the provisions of subparagraphs B and C of this Paragraph 1, Section 9.00. In the case of a Major Subdivision, the Subdivider shall file with the Town a cash deposit of such amount as the Engineer may reasonably require as security for such reimbursement, and if the Subdivider fails to make reimbursement as and when required hereunder the Town may appropriate such cash deposit as necessary to affect reimbursement.

#### 9.02 Performance Guarantee

- A. Posting of Performance Guarantee: No subdivision plat shall be recorded prior to the applicant providing an acceptable performance guarantee for all public and/or common private improvements, together with deeds for any public rights-of-way or easements, or any other legal document required.
- B. Amount: The amount of the performance guarantee shall be approved by the Town Engineer as sufficient to secure to the Town the satisfactory construction and installation of the required public and private improvements, including contingency and inflation factors. A licensed professional engineer shall submit a construction cost estimate acceptable to the Town Engineer which includes breakdowns by quantity of material and unit costs, along with contingencies, prior to the presentation of any performance guarantee.
- C. Form: The following types of guarantees are acceptable to ensure the completion of the required improvements:
  - 1. A non-lapsing or self-calling letter of credit drawn on a bank authorized to do business in New Hampshire and filed with the Town.
  - 2. A non-lapsing or self-calling surety bond issued by a surety company authorized to do business in New Hampshire and filed with the Town.
  - 3. Cash or certified check to be deposited with the Town under an escrow agreement.
- D. Legal Provisions: All performance guarantees shall comply with statutory requirements and shall be satisfactory to Town Counsel as to form, sufficiency,

and manner of execution as set forth in these regulations.

E. Duration: Construction of the required improvements shall be completed within two years of final approval. If construction is not completed during this time period, the Planning Board may grant an extension of up to one additional year.

F. Reduction: A reduction of a performance guarantee may be authorized by the Town Engineer upon completion of a significant portion of the subdivision, but in no case shall the amount be reduced below 25 % of the principal amount until all improvements have been completed.

G. Release: The performance guarantee shall not be released until the Town Engineer certifies that all improvements have been satisfactorily completed with the exception of the final coat of pavement, an acceptable as-built plan has been submitted, and a maintenance guarantee has been provided pursuant to Section 9.03.

### 9.03 Maintenance Guarantee

A. Posting of Maintenance Guarantee: The applicant shall be required to file a maintenance guarantee with the Town at the time of release of the performance guarantee. The maintenance guarantee shall be in an amount considered adequate by the Town Engineer to cover the final coat of pavement and against any latent defects and shall not exceed 25 % of the total construction cost of the project.

B. Form: The following types of guarantees are acceptable to ensure maintenance of the required improvements and against latent defects:

1. A non-lapsing or self-calling letter of credit drawn on a bank authorized to do business in New Hampshire and filed with the Town.
2. A non-lapsing or self-calling surety bond issued by a surety company authorized to do business in New Hampshire and filed with the Town.
3. Cash or certified check to be deposited with the Town under an escrow agreement.

C. Duration: The maintenance guarantee shall be kept in place for a minimum of two years after the Town Engineer certified that the improvements were completed. The final wearing course shall not be placed until authorized by the Town Engineer.

D. Snow Removal: The applicant shall be required to maintain all required public improvements in the subdivision until they are officially accepted by the Town. However, commencing at the time of issuance of the first certificate of occupancy for a structure accessed by any street, snow removal operations may be undertaken by the Department of Public Works (DPW) provided that 1) the

owner of the subdivision provides DPW with a signed written statement acknowledging the Town shall not be liable for any damage caused to private property as a result of snow removal operations; and 2) the Town's assumption of snow removal responsibilities in no way constitutes any form of acceptance by the Town of said street(s) as public highways. DPW may elect to require the owner of said subdivision street(s) to reimburse the Town for the costs associated with snow removal until such time as said street(s) are formally accepted by the Town.

E. Release: The maintenance guarantee shall not be released until the Town Engineer certifies that the maintenance period has been satisfactorily completed, the final coat of pavement has been installed, and the street has officially been accepted by the Town.

#### 9.04 Street Opening and Acceptance

A. Building Permits: No building permits shall be issued for lots within the subdivision until the road subgrade and base course of pavement have been completed and inspected by the Town Engineer and the roadway is in passable condition for emergency vehicles.

B. Certificates of Occupancy: No certificates of occupancy shall be issued for lots within the subdivision until the performance guarantee has been released pursuant to Section 9.02(G).

C. Acceptance: Upon petition and final inspection by the Town Engineer, the Board of Selectmen shall hold a hearing in accordance with RSA 674-40-a to consider formal street acceptance.

### Section 10.00 - Compliance with Regulations - Penalties:

No subdivision of land shall be made, and no land in any Subdivision shall be transferred, sold or offered for sale until a Final Plat, prepared in accordance with the requirements of these Regulations, has been approved by the Planning Board. As provided in RSA 676:16 (formerly RSA 36:27), any owner, or agent of the owner, of any land located within a Subdivision, who transfers or sells any land before a plan of the said Subdivision has been approved by the Planning Board and recorded or filed in the office of the Merrimack County Registry of Deeds, shall forfeit and pay a civil penalty of One Thousand Dollars (\$1,000) for each lot or parcel so transferred or sold; and the description of metes and bounds in the instrument of transfer or other documents used in the process of selling or transferring shall not exempt the transaction from such penalties. The Town of Bow may enjoin a transfer or sale which violates the provisions of this Section and may recover the penalty imposed by a civil action. In any such action, the prevailing party may recover reasonable court costs and attorney's fees as the same may be ordered by the court. The Town of Bow may invoke the authority of any applicable statute to obtain compliance with these regulations, including, but not limited to the provisions of RSA 676:15 Injunctive Relief or 676:17 Fines and Penalties; Second Offense.

### Section 11.00 - Waivers:

The proposed Subdivision shall conform to the Zoning Ordinance of the Town of Bow. Where (a) strict conformity to these Subdivision Regulations would cause undue hardship to the owner of the land or where (b) specific circumstances relative to the subdivision, or conditions of the land in such subdivision, indicate that the waiver will properly carry out the spirit and intent of the regulations, a Subdivision plan substantially in conformity with these Regulations may be approved by the Board, provided that the spirit of these Regulations and public convenience and welfare will not be adversely affected.

Requests for waivers shall be submitted in writing and shall include the basis for granting the waiver. The Board may accept an oral request for waiver at the public hearing for a subdivision application. The basis for any waiver granted by the Board shall be recorded in the minutes of the board.

Section 12.00 - Amendments:

These Regulations may be amended or rescinded by the Planning Board but only following public hearing on the proposed changes. The Chair or Secretary of the Planning Board shall transmit a record of any changes so authorized to the Merrimack County Registry of Deeds.

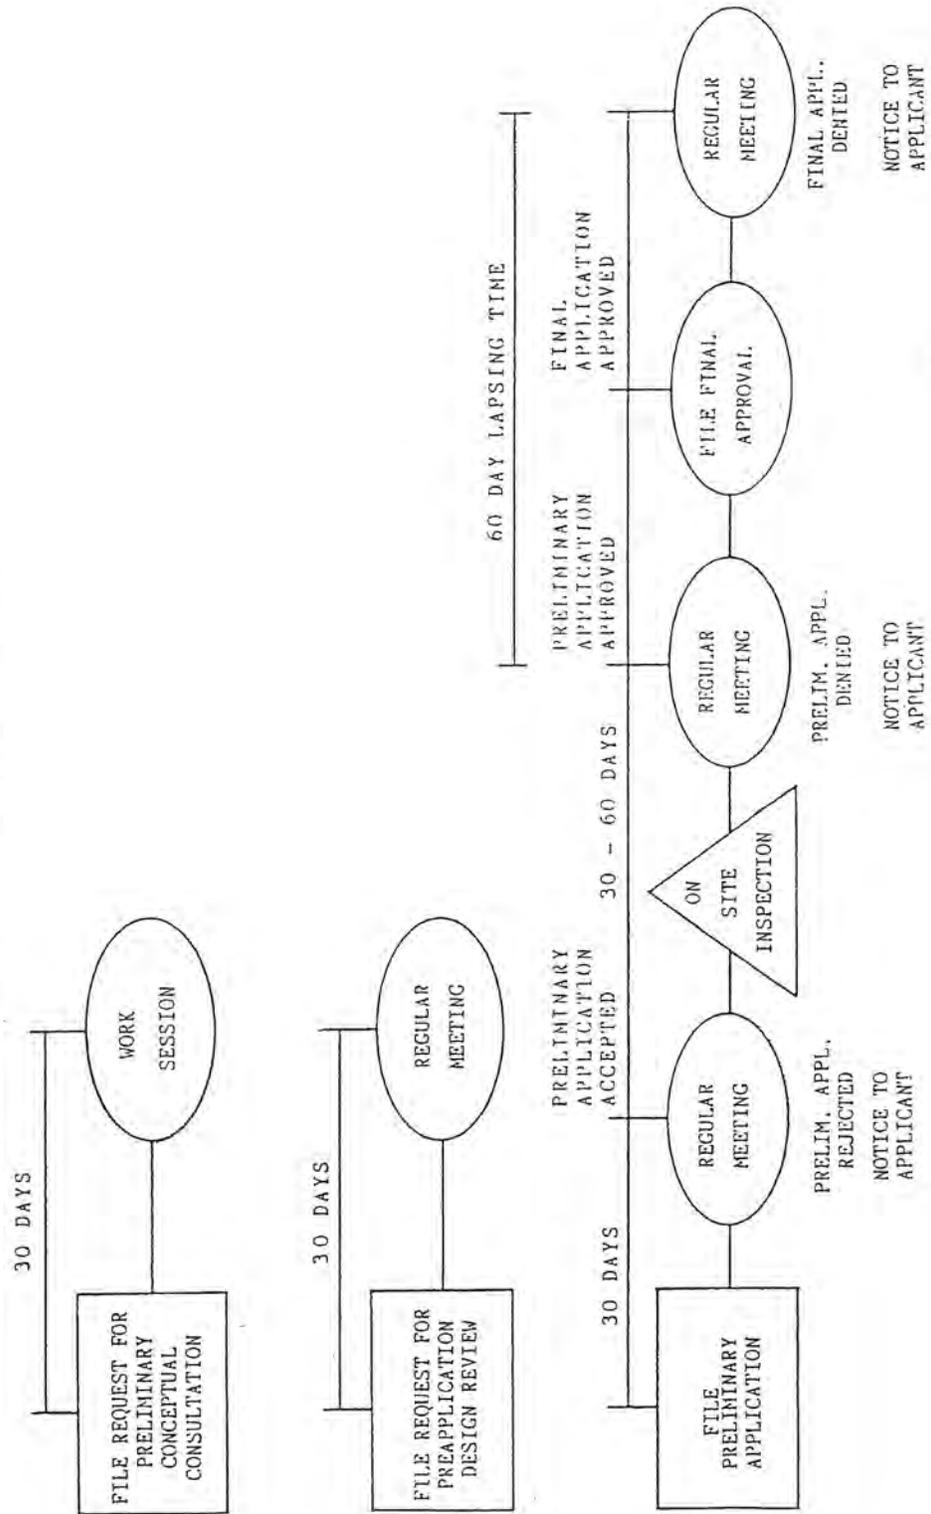

### Section 13.00 - Appeals:

Pursuant to RSA 677:15, any persons aggrieved by any decision of the Planning Board concerning a Plat or Subdivision may present to the superior court a petition, duly verified, setting forth that such decision is illegal or unreasonable in whole or in part, specifying the grounds upon which the same is claimed to be illegal or unreasonable. Such petition shall be presented to the court within thirty (30) days after the date upon which the Planning Board voted to approve or disapprove the Subdivision. In accordance with RSA 677:15, I-a, if any of the matters to be appealed are appealable to the Zoning Board of Adjustment under RSA 676:5, III, such matters shall be appealed to the Zoning Board of Adjustment before any appeal is taken to the superior court.

Section 14.00 - Appendices

APPENDIX A

PROCEDURES FLOW CHART

## APPENDIX B

### Typical Sections for Roads

General Notes

Arterial (Class A) Street

Collector (Class B) Street

Local Industrial (Class C) Street

Local (Class C) Street - Through "fill" area

Local (Class C) Street - Through "cut" area

Typical Temporary Turnaround

Typical Permanent Turnaround - "tear drop" design

Typical Permanent Turnaround - "lolly pop" design

Typical Permanent Turnaround - reversed "P" design

## APPENDIX B; TYPICAL SECTIONS FOR ROADS

### GENERAL NOTES

#### A. Surface Treatment

Hot bituminous concrete pavement - 4 inches minimum  
NH Standards for Road and Bridge Construction

- 1) Base Course – 2.5 inches (after compaction) Type "B"
- 2) Wearing Course – 1.5 inches (after compaction) Type "E"
- 3) Paved Shoulders on Arterial, Collector, and Industrial Streets:  
Base Course – 2.5 inches (after compaction) Type "B"  
Wearing Course - 1 inch (after compaction) Type "E"

#### B. In Fill Areas

Original ground to be "stripped and grubbed" and properly shaped

All non-acceptable materials ie. stumps, branches, leaves, roots, muck, clay, etc., shall be removed prior to placing fill or structural section (gravel) layers

A minimum of twelve inches (12") below the bottom of the bank run gravel grade shall be compacted sand meeting the requirements of the a NHDOT Standard Specification 304.1. A geotextile fabric may be substituted for the 12 inch sand layer in accordance with section 7.01 A.

Slopes steeper than 3:1 shall be stabilized by a method approved by the Town's Engineer.

#### In "Cut" Areas

Subgrade to be shaped and graded prior to the placing of gravel

A minimum of twelve inches (12") below the bottom of the bank run gravel grade shall be compacted sand meeting the requirements of the a NHDOT Standard Specification 304.1. A geotextile fabric may be substituted for the 12 inch sand layer in accordance with section 7.01 A.

Slopes steeper than 3:1 shall be stabilized by a method approved by the Town's Engineer.

- #### C.
- 1) Superelevate roadways on curves, as directed. Maximum superelevation rate shall be 6%.
  - 2) Ditches or gutters shall be paved where required
  - 3) All drainage pipes to have minimum 2 feet of cover. Pipes constructed

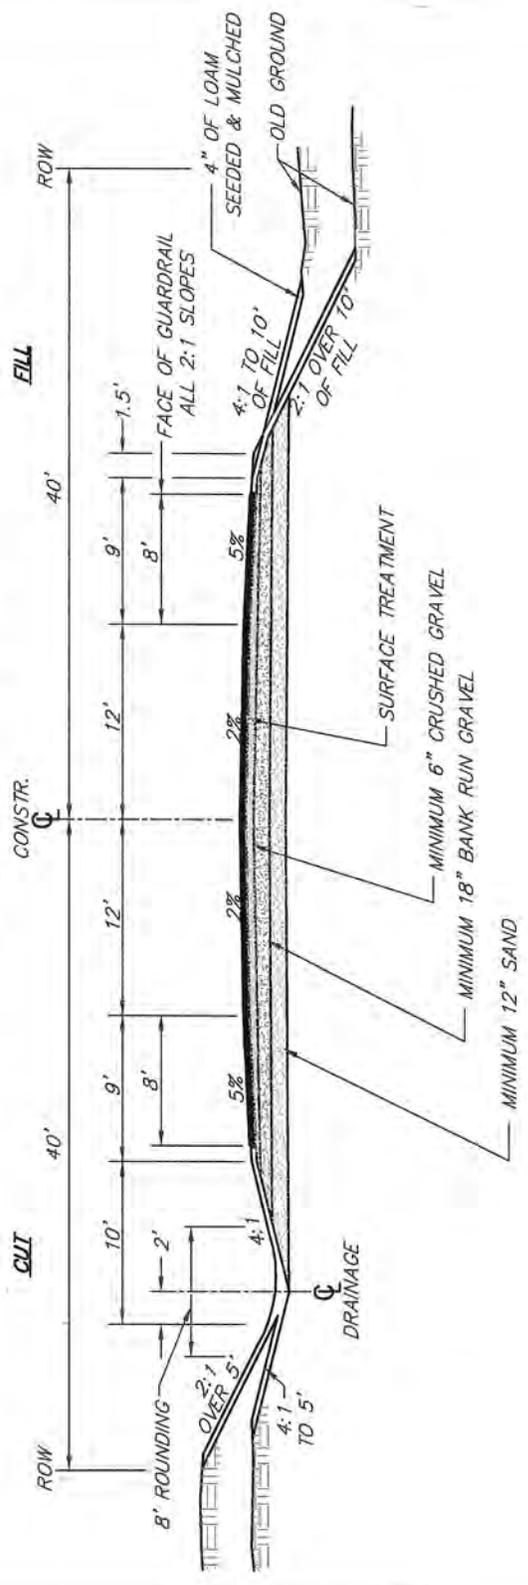

under the traveled way shall have a minimum cover of 4 feet, unless otherwise authorized.

- 4) All drainage to be constructed as shown on plans or as directed by the Engineer

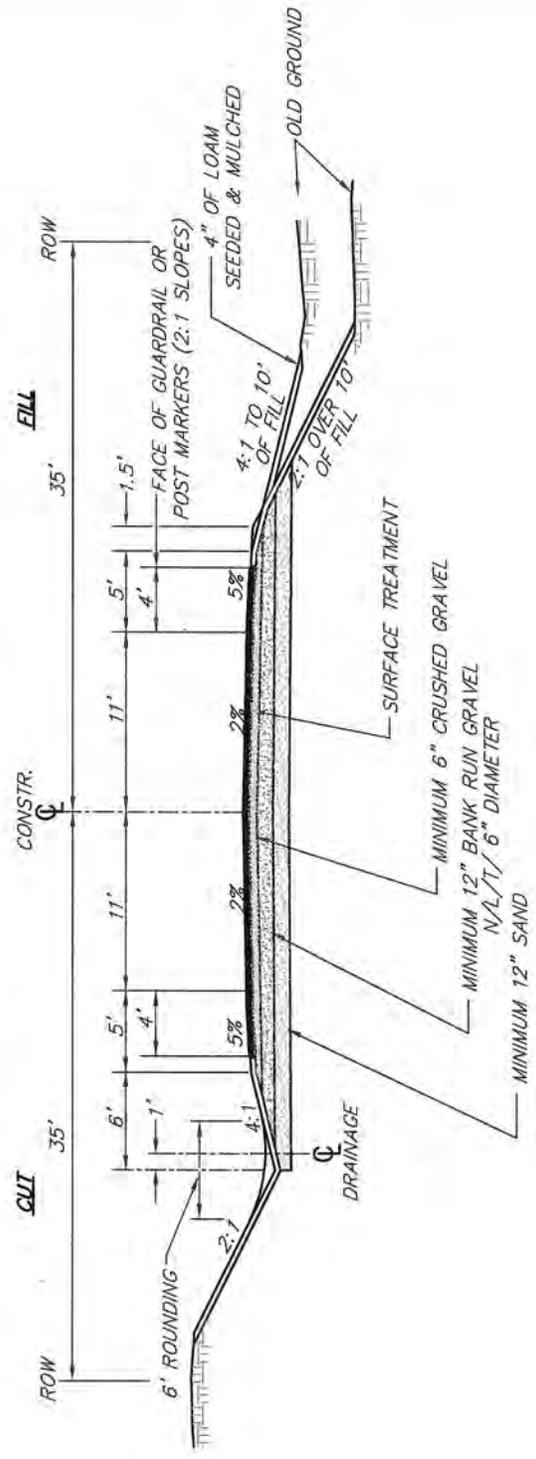

D. Where required by the Town Engineer or Road Agent, the ditches shall be lined in the following manners:

- 1) "Hot top" at a depth of 2 inches after compaction (minimum)
- 2) Stones - NH Standard Class "C" placed so that the pattern is "stone to stone" in a neat and controlled manner

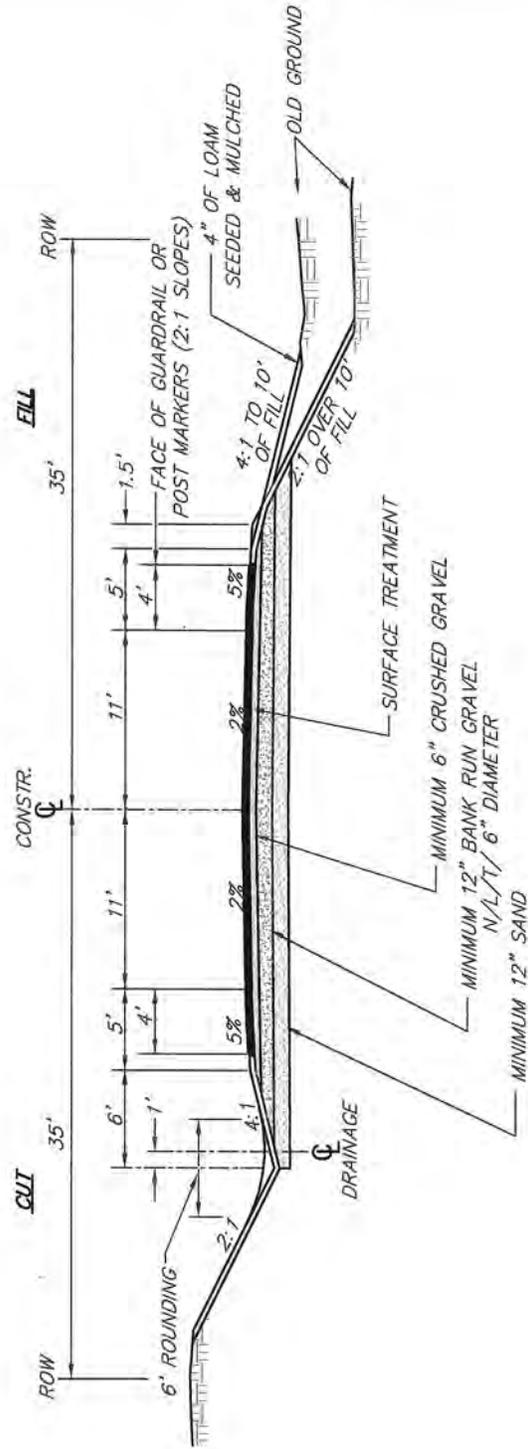

# TYPICAL SECTION OF IMPROVEMENT ARTERIAL (CLASS A) STREET

# TYPICAL SECTION OF IMPROVEMENT COLLECTOR (CLASS B) STREET

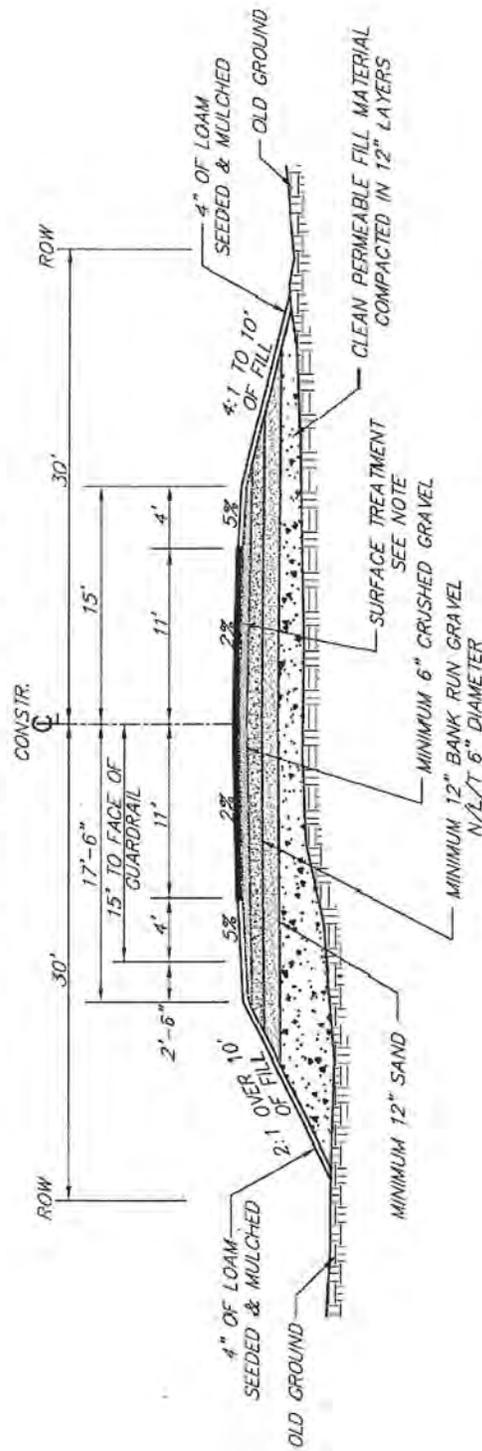

# TYPICAL SECTION OF IMPROVEMENT INDUSTRIAL (CLASS C) STREET\*

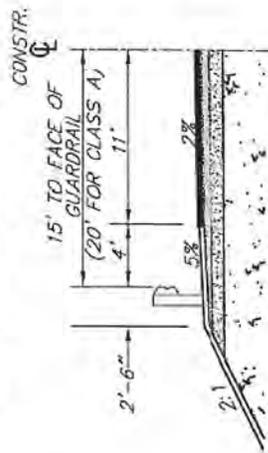

•EXISTING AND NEW STREETS IN THE I-1, I-2 AND BD DISTRICTS

# TYPICAL SECTION OF IMPROVEMENT LOCAL (CLASS C) ROAD THROUGH "FILL" AREA

## GUARDRAIL TYPICAL

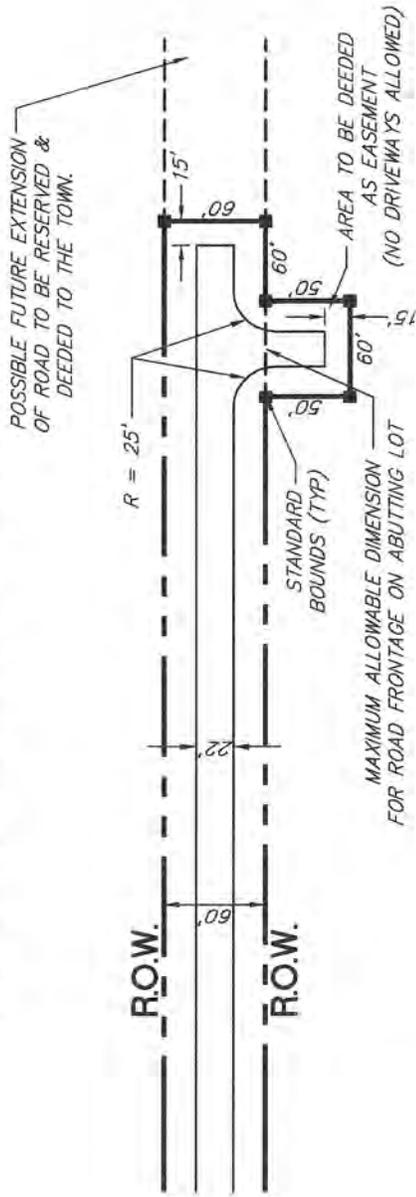

## SECTION NOTES

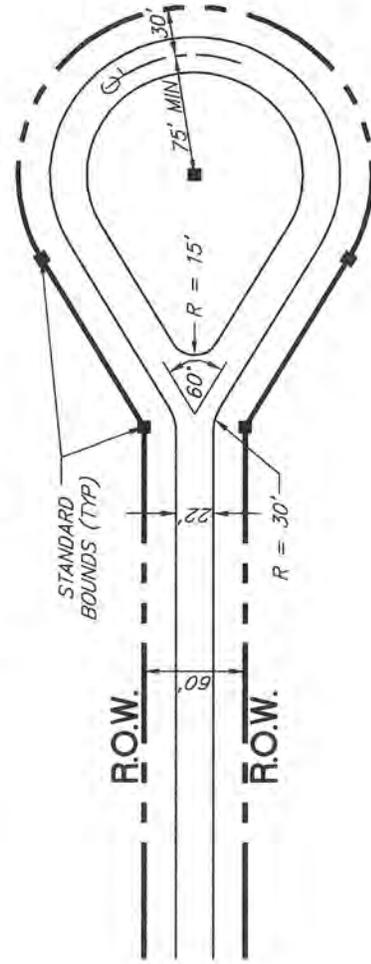

- A. SURFACE TREATMENT - HOT BITUMINOUS CONC. PAVEMENT 4" MIN. N.H. STANDARDS FOR ROAD & BRIDGE CONST.
  1. BASE COURSE-2.5" (AFTER COMPACTION) TYPE "B"
  2. WEARING COURSE-1.5" (AFTER COMPACTION) TYPE "E"
- B. IN FILL AREAS:
  - ORIGINAL GROUND TO BE "STRIPPED & GRUBBED" AND PROPERLY SHAPED. NON-ACCEPTABLE MATERIALS, i.e. STUMPS, BRANCHES, LEAVES, ROOTS, MUCK, CLAY, ETC. SHALL BE REMOVED PRIOR TO PLACING FILL.
- C. IN CUT AREAS:
  - SUB-GRADE SHALL BE SHAPED & GRADED PRIOR TO THE PLACING OF GRAVEL.

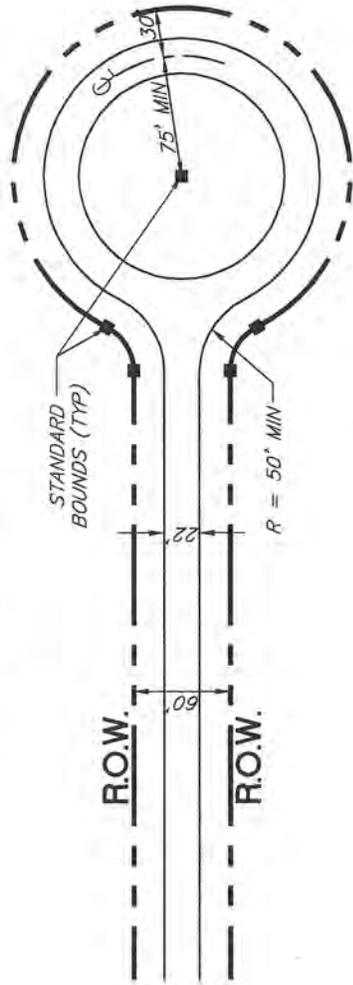

## TYPICAL TEMPORARY TURNAROUND

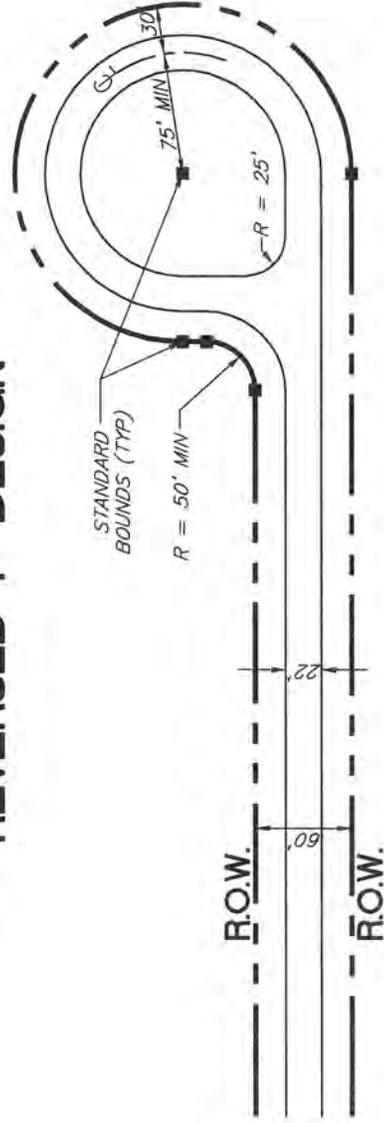

## TYPICAL PERMANENT TURNAROUND "TEAR DROP" DESIGN

**TYPICAL PERMANENT TURNAROUND  
"LOLLY-POP" DESIGN**

**TYPICAL PERMANENT TURNAROUND  
REVERSED "P" DESIGN**

## APPENDIX C; RECORD DRAWING (AS-BUILT) PLAN REQUIREMENTS

Record Drawings (As-Built Plans) shall meet the following requirements:

1. Sheet size shall be 22 inches x 34 inches.
2. Plan scale shall not exceed 1 inch = 50 feet. Profile horizontal scale shall match plan scale with a horizontal to vertical scale ratio of 5:1.
3. Proposed elevations for road centerline at fifty foot stations shall be shown on the profile. As-built elevations shall appear in parentheses next to the proposed elevations. As-built vertical curve information shall appear on the profile.
4. Horizontal alignment of the street centerline with tie in to intersecting streets, edges of pavement, width of shoulders, sidewalks, shoulder breaks, centerline of ditches and bottom and top of slopes (all with spot elevations), shall be shown on the plan.
5. The location of the right of way and all monuments delineating the right of way shall be shown on the plan. The location of all utility, slope, drainage and sight distance easements shall appear on the plan.
6. The location of fire cisterns including exposed fill and vent pipes, bollards and turnout areas shall appear on the plan.
7. All storm and sanitary sewer structures and piping shall appear on the plan and profile. As-built elevations shall appear in parentheses next to the proposed elevations for pipe inverts, structure rims and pipe outlets at headwalls and ditch lines. Indicate size and type of material for all piping and structures.
8. The location of water mains, water services, bends, valves, hydrants, and blow offs.
9. The location of all water and sewer service laterals shall be shown to the limit of the street right of way. Indicate the size and type of material.
10. The location of surface runoff retention/detention ponds, water quality swales, water quality facilities, erosion stone, etc. shall be shown on the plan. Elevation information in the form of spot elevations and/or contours indicating the as-built grading shall appear on the plan.
11. A statement that sight distance requirements at all affected intersections have been determined post construction, meet the Town requirements for sight distance and have been observed in the field by a Town representative or the Town's Consulting Engineer.
12. Location of all visible roadway components including but not limited to utility poles, guardrail, curbing, drive aprons and drive culverts, lighting and landscaping.
13. Location of all private utilities such as gas, electric, telephone and cable conduit, transformer pads, junction boxes and services stubs.
14. Plans shall be submitted in electronic form tied to state plane coordinates. A minimum of two points with state plane coordinates, located within the project, shall be shown on the plan.
15. Plans shall be sealed and signed by a professional surveyor licensed by the State of NH.

# TOWN OF FARMINGTON SUBDIVISION REGULATIONS

## SECTION 1. AUTHORITY

Pursuant to the authority vested in the Farmington Planning Board by the voters of the Town of Farmington on November 19, 1975 and in accordance with the provisions of RSA 674:35 of the New Hampshire Revised Statutes Annotated, and as amended, the Farmington Planning Board adopts the following regulations governing the subdivision of land in the Town of Farmington, New Hampshire, hereinafter known as Farmington Subdivision Regulations.

## SECTION 2. PURPOSE AND APPLICABILITY

The purpose of these regulations is to provide for:

- the orderly present and future development of the Town by promoting the public health, safety, convenience and welfare of its residents;
- the harmonious development of the Town of Farmington, including its natural and manmade environments;
- open spaces of adequate proportions; and
- the proper arrangement and coordination of streets within subdivisions in relation to other existing or planned streets or with other features of the town so as to impose a convenient system.

These regulations apply to Planning Board review and approval or disapproval of all subdivisions as defined by RSA 672:14 and minor lot line adjustments or boundary agreements. They do not apply to voluntary mergers as defined by RSA 674:39-a.

## SECTION 3. CONFLICTING PROVISIONS AND VALIDITY

Whenever the regulations made under the authority hereof differ from those prescribed by any statute, ordinance, or other regulations, that provision which imposes the greater restriction or the highest standard shall govern.

If any section, clause, provision, portion or phrase of these regulations shall be held to be invalid or unconstitutional by any court of competent authority, such holding shall not affect, impair or invalidate any other section, clause, provision, portion or phrase of these regulations.

## SECTION 4. DEFINITIONS

**Abutter:** Means: (1) any person whose property is located in New Hampshire and adjoins or is directly across the street or stream from the land under consideration by the local land

use board; and (2) affected municipalities and the regional planning commission(s) in the event of developments having regional impact. For purposes of receiving testimony only, and not for purpose of notification, the term "abutter" shall include any person who is able to demonstrate that his land will be directly affected by the proposal under consideration. For purposes of receipt of notification by a municipality of a local land use board hearing, in the case of an abutting property being under a condominium or other collective form of ownership, the term abutter means the officers of the collective or association, as defined in RSA 356-B: 3, XXIII.

**Applicant:** Means the owner of record of the land to be subdivided, or his/her designated agent.

**Application, Complete:** Means a final plat and all accompanying materials and fees as required by these regulations.

**Approval:** Means recognition by the Planning Board, certified by written endorsement on the plat, that the plat meets the requirements of these Regulations and in the judgment of the Board satisfies all criteria of good planning and design.

**Approval, Conditional:** Means recognition by the Planning Board, certified by written endorsement on the plat, that the plat is neither finally approved nor ready for filing with the Registry of Deeds until such time as certain conditions, set forth by the Board, are met. This is not to be confused with a plat that has been approved *subject to certain conditions* that would be met as part of the implementation of the plan.

**As-Built Plans:** Revised set of plans submitted by an Applicant upon completion of the project. The as-built plans shall reflect all changes made in the field during the construction process, and show the exact dimensions, geometry, and location of all elements of the work completed under the approved plan. As as-built plan may also be called a record drawing. A digital copy of the as-built plans must also be submitted.

**Board:** Means the Planning Board of the Town of Farmington.

**Buildable Area:** That portion of a parcel upon which a structure may be erected. The following are not to be included in the buildable area: steep slopes; wetland soils; rock outcrops; floodplains; proposed or existing rights of way and utility easements; and state and local required setbacks.

**Development:** Means any construction or grading activities on real estate other than agricultural and silvicultural (tree care and harvesting) practices.

**Easement:** Means the authorization by a property owner for the use by another, and for a specific purpose, of any designated part of his/her property.

**Frontage:** Means that side of a lot abutting a street or body of water and ordinarily regarded as the front of the lot.

**Lot:** Means a parcel of land capable of being occupied that is of sufficient size to meet the minimum requirements for use, building coverage, and area.

**Lot of Record:** Means a parcel, the plat or description of which has been recorded at the county register of deeds.

**Lot Line or Boundary Adjustment:** Means adjustments to the boundary between adjoining properties, where no new lots are created.

**Plat:** Means the map, drawing or chart on which the plan of subdivision is presented to the Board for approval, and which, if approved, will be submitted to the County Register of Deeds for recording.

**Public Hearing:** Means a meeting, notice of which must be given per RSA 675:7 and 676:4,I (d), at which the public is allowed to offer testimony.

**Public Meeting:** Means the regular business meeting of the Planning Board as required per RSA 673:10. Notice must be posted at least 24 hours in advance and the meeting must be open to the public, although participation by the public is at the discretion of the Board.

**Right-of-Way:** Means a strip of land for which legal right of passage has been granted by the landowner or utility company to provide access to a lot which lacks adequate frontage.

**Setback:** The horizontal distance between a Structure and the Lot boundaries, measured at right angles or radial to the Lot boundary.

**Sewage Disposal System (Individual):** Means any on-site sewage disposal or treatment system that receives either sewage or other wastes, or both. For the purposes of this regulation, this means all components of the system, including the leach field.

**Steep Slope:** For the purpose of calculating buildable area, steep slopes are those in excess of 25%.

**Street:** Means a publicly approved road, Class V or better, maintained for vehicular travel, or a road that appears on a subdivision plat approved by the Planning Board.

**Street Frontage:** The horizontal distance between side lot lines measured along the street line. When a lot is bounded by more than one street, only one shall be designated by the Planning Board as the frontage street. That street must provide sufficient frontage as required by the Zoning Ordinance.

**Subdivision:** Means the division of a lot, tract, or parcel of land into two (2) or more lots, plats, sites, or other divisions of land for the purpose, whether immediate or future, of sale, rent, lease, condominium conveyance or building development. The division of a parcel of land held in common and subsequently divided into parts among several owners shall be

deemed a subdivision.

**Subdivision, Major:** Means a subdivision of five (5) or more lots, or one which involves the creation of new streets and/or utilities, regardless of the number of lots.

**Subdivision, Minor:** Means a subdivision of land into not more than four (4) lots for building development purposes, with no potential for resubdivision, and requiring no roads, utilities or other municipal improvements.

**Wetlands:** Means an area that is inundated or saturated by surface water or ground water at a frequency and duration sufficient to support, and that under normal conditions does support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands include swamps, marshes, bogs and similar areas.

## SECTION 5. GENERAL REQUIREMENTS FOR SUBDIVISION OF LAND

- A. **Character of Land for Subdivision:** Land of such character that it cannot, in the judgment of the Board, be safely used for building development purposes because of exceptional danger to health or peril from fire, flood, poor drainage, excessive slope, or other hazardous conditions, shall not be platted for residential, commercial, or industrial subdivision, nor for such other uses as may increase danger to life or property, or aggravate the flood hazard.
- B. **Premature Subdivision:** The Board may provide against such scattered or premature subdivision of land as would involve danger or injury to health, safety, or prosperity by reason of the lack of water supply, sewage disposal, drainage, transportation, schools, fire protection, or other public services which necessitate the excessive expenditure of public funds for the supply of such services.
- C. **Preservation of Existing Features:** Wherever feasible, suitable steps shall be taken to preserve and protect significant existing features such as trees, scenic points, stone walls, rock outcroppings, water bodies, and historic landmarks. Where possible, the boundary line(s) should follow stone walls.
- D. **Open Space:** In the case of major subdivisions, the Planning Board may require that suitable areas of open land of reasonable size for the nature of the subdivision submitted be set aside as parks or for other recreational purposes.
- E. **Compliance With Regulations:** No subdivision of land shall be made, and no land in any subdivision shall be sold or offered for sale or lease, and no street or utility construction shall be started until a final plat, prepared in accordance with the requirements of these regulations, has been approved by the Board, and other required permits have been issued.

## **SECTION 6. SUBDIVISION DESIGN STANDARDS**

### **A. General Standards**

In review of any subdivision plans conducted under these regulations, the Planning Board will require that adequate provisions be made by the owner or his agent for:

1. The safe and attractive development of the tract and to guard against such conditions as would involve danger or injury to health, safety, and the diminution in value of surrounding properties;
2. Traffic circulation and access including adequacy of entrances and exits, traffic flow, sight distances, access to state highways, turning lanes, and traffic signalization;
3. Pedestrian and bicycle safety and access;
4. Off-street parking;
5. Stormwater drainage and ground water recharge;
6. Water supply, wastewater and septage disposal, and solid waste disposal;
7. Adequate fire safety, prevention, and control;
8. The harmonious and aesthetically pleasing development of the municipality, including its natural and man-made environments;
9. Suitably located and coordinated travel ways of sufficient width to accommodate existing and prospective traffic and to afford adequate light, air, and access to buildings for fire fighting apparatus and other emergency equipment;
10. Conformance with all existing regulations and ordinances;
11. Demonstration that the proposal is generally consistent with the Town's Master Plan;
12. Adequate green areas, open space, conservation easements, slope and drainage easements as may be necessary/applicable;
13. Facilities to meet the recreational needs of the residents in the subdivision.
14. Sidewalks, when required, shall be installed and constructed in accordance with the specifications of the Town of Farmington.

**B. Lots**

1. The layout of lots shall be in conformance with the following conditions:
  - a. Lot dimensions and area shall not be less than the requirements of the Zoning Ordinance.
  - b. Lots shall front on an existing or proposed Class V road or better.
  - c. No driveway may be laid out such that its curb cut will be closer than one hundred (100) feet to an intersection.
  - d. Sidelines of lots shall generally be perpendicular to straight streets and radial to curved streets.
  - e. Lots shall be laid out and graded to eliminate flood or stagnant water pools. No water shall be permitted to run across a street on the surface, but shall be directed into catch basins, drainage swales and/or pipes underground in a pipe of not less than 12 inches in diameter.
  - f. Lots shall generally be configured as rectangular or square. Odd-shaped lots or other contorted configurations, including those in which narrow strips are joined to other parcels in order to meet minimum Building Area requirements, are prohibited.
    - i. In zoning districts requiring a minimum buildable area of 40,000 sq. ft, each lot shall be configured such that a rectangle with minimum dimensions of approximately 350 feet by 115 feet (not to exceed a 3:1 ratio) of Buildable Area, a square of 200 feet by 200 feet of Buildable Area, or a circle with a minimum diameter of 225 feet of Buildable Area can be contained within it.
    - ii. In zoning districts requiring a minimum buildable area of 30,000 sq. ft, each lot shall be configured such that a rectangle with minimum dimensions of approximately 300 feet by 100 feet (not to exceed a 3:1 ratio) of Buildable Area, a square of 175 feet by 175 feet of Buildable Area, or a circle with a minimum diameter of 195 feet of Buildable Area can be contained within it.
  - g. The lot length-to-width ratio should generally not exceed four-to-one (4:1).
  - h. Double frontage lots shall be avoided wherever possible. If allowed, the driveway access for said lot shall be from the street with the lowest traffic volume.
  - i. Corner lots may require extra width sufficient to permit the appropriate setback on each street. Driveway access to such lots shall be from the street with the lowest traffic volume.
  - j. Wherever feasible, suitable steps shall be taken to preserve and protect significant existing features such as trees, scenic points, stone walls, rock outcroppings, water bodies, and historic landmarks. Where possible, the boundary line(s) should follow stonewalls or natural features such as surface waters.
  - k. Lots shall be configured so that all required setbacks for wells and septic are contained within the lot serviced by the well and septic.

2. Areas set aside for parks and playgrounds to be dedicated or reserved for the common use of all property owners shall be of reasonable size and character for neighborhood playgrounds or other recreational uses.
3. Clustered subdivisions shall comply with all requirements of Section 3.17 of the Town of Farmington Zoning Ordinance.
4. Condominiums.
  - a. Condominiums will require both subdivision and site plan approval. Each is considered a separate application, though the Applicant may request that the applications are reviewed simultaneously by the Planning Board.
  - b. The common areas shall be designed as an integral part of the development and used for recreation, conservation or park purposes and be accessible to the owners and occupants of the condominium. The common areas shall be so defined on the subdivision and site plans and shall be made subject to a deed restriction, which shall thereafter prohibit further subdivision of open space or the use of the open space for purposes other than originally designated.
  - c. The total number of dwelling units shall not exceed the overall density that would be permitted in a conventional subdivision layout or clustered subdivision layout, with all requirements of the Town of Farmington Zoning Ordinance and Subdivision Regulations being satisfied.

**C. Reserve Strips**

Reserve strips of land that show an intent on the part of the Applicant to control access to land dedicated or to be dedicated to public use (such as a road) shall not be permitted.

**D. Fire Protection**

The Fire Chief shall review all subdivision applications to determine whether or not water supply should be addressed for that particular proposal: If the Fire Chief determines that a water supply for fire protection purposes is necessary, the requirements below and in Appendix B shall apply.

1. The Fire Chief shall complete an inspection of the proposed site to evaluate the availability of existing water supply in the area.
2. The Fire Chief shall implement all applicable provisions of the National Fire Prevention Association's Standard on Water Supplies for Suburban and Rural Fire Fighting.
3. The Fire Chief shall determine the type, location and spacing of any water supply (such as fire ponds, cisterns, etc.)

4. Following the inspection and evaluation, the Fire Chief will submit his findings in writing to the Planning Board.
5. All proposed developments, whether including the provision of hydrants or other water supply facilities, shall be accessible to firefighting and other emergency equipment.

**E. Septic Systems and Water Supply**

1. In areas not currently served by public sewer systems, it shall be the responsibility of the Applicant to prove that the area of each lot is adequate to permit the installation and operation of an individual septic system.
2. On new lots of less than five (5) acres, not less than two (2) test pits and at least one (1) percolation test shall be required within the 4,000 square-foot area designated for a leach field. The Applicant shall be required to provide the necessary equipment and labor for the making of these tests.
3. When subdividing parcels with existing dwellings, the Applicant must demonstrate to the satisfaction of the board that the existing septic system is in good working order.
4. All new wells shall have a radius of seventy-five (75) feet, said radius to be located entirely on the lot serviced by the well.

**F. Stormwater Management and Erosion Control**

1. The Applicant shall submit stormwater management and erosion control plan when one or more of the following conditions are proposed:
  - a. A cumulative disturbed area exceeding 20,000 square feet.
  - b. Construction of a street or road.
  - c. A subdivision involving three or more dwelling units.
  - d. The disturbance of critical areas, such as steep slopes, wetlands, floodplains.
2. Standard agricultural and silvicultural practices are exempt from this regulation.
3. All stormwater management and erosion control measures in the plan shall adhere to the “Erosion and Sediment Control Design Handbook for Developing Areas of New Hampshire”, published by the Rockingham County Conservation District, and the “Model Stormwater Management and Erosion Control Regulation”, by the NH Association of Conservation Districts, Water Quality Committee.

4. The Applicant shall bear final responsibility for the installation, construction, and disposition of all stormwater and erosion control measures required by the Board. Site development shall not begin before the plan is approved.

**G. Surveys**

All surveys shall be prepared according to the minimum standards for instrument surveys adopted by the NH Land Surveyors Association for Standard Property Surveys. The maximum error of closure shall be 1:10,000 and certified by a NH-licensed engineer or surveyor.

In the case of applications that involve large acreages from which one building lot is being subdivided, the Board may, upon written request, waive the requirement for a complete boundary survey, when it is apparent that the remaining lot can meet existing frontage requirements and is suitable for building.

**H. Monumentation**

1. Monuments constructed of concrete or stone at least 4 inches square on the top and at least 30 inches long shall be set at all right-of-way control corners. Concrete or granite bounds shall be set at all points of curvature and all points of tangent for surveying purposes.
2. Monuments shall be tied in to a public street intersection, a U.S.G.S. benchmark, or other recognized existing monument.
3. Pipes, iron rod with surveyors cap, or other acceptable monumentation shall be set at all lot corners.
4. If the subdivision involves the construction of a roadway, all monumentation shall be in place before 50% of the surety held for the construction is released. If no road construction is involved, all monumentation must be in place prior to the signing of the plat by the Board Chairman.
5. All monumentation shall be set on the plat and in the field prior to recording the plat at the Strafford County Registry of Deeds.

**SECTION 7. SUBDIVISION REVIEW PROCEDURES**

**A. General Information**

1. Application shall be made using appropriate forms provided by the Planning Board and shall conform to the application procedures and any other applicable regulations adopted by the Town.

2. Changes in lot line locations require subdivision application or a Boundary Line Adjustment application, and approval in the same manner as ordinary subdivision as defined in these regulations.
3. The Board may make a visual on-site inspection of the land at any stage of the proposal. Inspection is to be at such time when the site is free of snow cover, unless the Board is otherwise satisfied that such inspection is not required.
4. Approval of the plan by the Planning Board shall not constitute an acceptance by the Town of the dedication of any proposed street, highway, park or other public open space.
5. The Planning Board may approve the plan with such conditions as may be necessary to insure proper completion of the required improvements.
6. All subdivision applications shall be reviewed by the Technical Review Committee (TRC).

The purpose of the TRC meeting is to allow department heads to review an application in order to identify issues of concern related to the department's function area. Following this review, the TRC will provide comments and recommendations to the Planning Board.

**B. Preliminary Conceptual Consultation**

1. The Applicant may request a meeting with the Board to discuss a proposal in conceptual form and in general terms. Although this phase is strictly optional, the Board strongly suggests that the Applicant avail him/herself of the opportunity to resolve any issues at this early stage that might become a problem later on. Such pre-application consultation shall be informal and directed toward:
  - a. Reviewing the basic concepts of the proposal.
  - b. Reviewing the proposal with regard to the master plan and zoning ordinance.
  - c. Explaining the state and local regulations that may apply to the proposal.
  - d. Determination of the proposal as a major or minor subdivision, and of the submission items that would be required.
2. Preliminary conceptual consultation shall not bind the Applicant nor the Board. Such discussion may occur without formal public notice, but must occur only at a posted meeting of the Board.
3. An Applicant wishing to engage in a Preliminary Conceptual Discussion shall submit a written request to be placed on the next available Planning Board agenda to the Chairman of the Planning Board. The written request must be received at least two (2) weeks prior to the date of the preferred meeting of the Board.

4. The written request shall include the following:
  - a. Name and address of the Applicant;
  - b. Name and address of the property owner, if different;
  - c. Tax map and lot number, and address of the subject parcel;
  - d. Size of the subject parcel; and
  - e. A brief description of the proposal.
5. The Applicant may prepare a simple sketch of the proposed subdivision to facilitate the discussion. The sketch may not include any technical information such as survey or engineering data, soils or wetlands delineations. Approximate location of any special features, such as wetlands, floodplain, stonewalls, cemeteries, may be included on the simple sketch.

**C. Design Review Phase**

- 1) Prior to submission of an application for Board action, an Applicant may request to meet with the Board or its designee for non-binding discussions beyond the conceptual and general stage, involving more specific design and engineering details of the potential application.
- 2) The design review phase may proceed only after proper notification, as set forth in Paragraph J of this Section.
- 3) Statements made by Board members shall not be the basis for disqualifying said members or invalidating any action eventually taken on the application.
- 4) An Applicant wishing to engage in a Design Review shall submit a written request to be placed on the next available Planning Board agenda to the Chairman of the Planning Board. The written request must be received on or before the submission deadline published by the Planning Board for the preferred meeting of the Board.
- 5) In addition to the information required in Paragraph B) 4) of this Section, the Applicant for a Design Review shall also provide the following with the written request:
  - a) Names and mailings addresses of the Applicants;
  - b) Names and mailing addresses of the owner(s) of record, if different than the Applicant;
  - c) Names and mailing addresses of all abutters as defined in Section 4, Paragraph A of these regulations;
  - d) Names and mailing address of holders of conservation, preservation or agricultural preservation restrictions, and every engineer, architect, land surveyor or soil scientist whose professional seal appears on any plat;

- e) Two sets of mailing labels for each person identified in a) through d), above; and
  - f) A rough sketch of the site which shows the following:
    - i) Approximate location of proposed lot lines.
    - ii) Approximate lot measurements, and area of new lots.
    - iii) Street(s) on which lots have frontage, including proposed streets;
    - iv) Special features, including approximate location of wetlands, flood hazard areas, etc., where applicable.
- 6) An Applicant shall pay the public notice fees and the abutter notification fees as indicated in the fee schedule adopted by the Planning Board and in effect when the application is submitted.
- 7) An Applicant shall meet with the Technical Review Committee (TRC) at least two (2) weeks prior to the Planning Board meeting. The Applicant may request to meet with the TRC at any time during the design process to obtain guidance on technical issues related to the proposal.

**D. Submission of Completed Application**

- 1) A completed application shall be submitted to the Planning Department on or before the submission deadline published by the Planning Board. A completed application shall consist of all data required in Section 8, Subdivision Requirements, of these regulations.
- 2) At the next scheduled meeting, the Board will determine whether the application is complete. If the application is incomplete, the Board shall notify the Applicant of the deficiencies in the application in accordance with RSA 676:3 and shall advise the Applicant of a date certain to provide the necessary information. Failure of the Applicant to provide the required information by said date will result in a finding the application is incomplete. Upon that finding, the Applicant will need to resubmit the application under a new notification procedure.
- 3) Acceptance of an application as complete shall only occur at a meeting of the Planning Board after due notification has been given according to Paragraph J of this Section. Acceptance will be by affirmative vote of a majority of the Board members present.
- 4) Once an application has been accepted as complete by the Board, the 65-day review period begins.

**E. Board Action on Completed Application**

- 1) The Board shall begin consideration of the Completed Application upon acceptance. The Board shall act to approve, conditionally approve, or disapprove the Completed Application within 65 days of acceptance.
- 2) An Applicant may waive the requirement for Board action within the time periods specified in these regulations and consent to such extension as may be mutually agreeable.
- 3) The Board may apply to the Selectmen for an extension not to exceed an additional 90 days before acting to approve, conditionally approve or disapprove an application.
- 4) Approval of the application shall be certified by written endorsement on the Plat and signed and dated by the Chairman of the Board. If any application is disapproved, the grounds for such disapproval shall be adequately stated in the records of the Planning Board and in written notice given to the Applicant within five (5) business days of the decision.
- 5) An approved plan shall be recorded by the Planning Board with the Strafford County Register of Deeds upon satisfaction of conditions of approval, subject to the requirements of Paragraph G of this section.

**F. Failure of the Planning Board to Act**

- 1) In the event that the Planning Board does not act on an accepted application within the prescribed time period, the Applicant may petition the Selectmen to issue an order directing the Planning Board to act within 30 days.
- 2) If the Planning Board fails to act within 40 days of receiving this directive from the Selectmen, the Selectmen must approve the application unless they find in writing that the plan does not comply with a local regulation. In the event the Selectmen fail to act, the Applicant may petition superior court to approve the plan.

**G. Conditional Approval**

The Board may grant conditional approval of an application, but the plat will not be signed or recorded until all of the conditions of approval have been met. A further public hearing is not required when such conditions:

- 1) are administrative in nature;
- 2) involve no discretionary judgment on the part of the Board;

- 3) Involve the Applicant's possession of permits and approvals granted by other boards or agencies, such as the Department of Transportation, the Wetlands Board, or Water Supply and Pollution Control Division; however, any subsequent change to the plan required by such approvals would constitute grounds for a new application process.

If the Applicant has not complied with the conditions of approval within one (1) year from the date of approval, the approval is considered null and void and the Applicant must submit a new subdivision application.

#### **H. Expedited Review**

- 1) The Planning Board may allow for an expedited review of applications for lot line adjustments or minor subdivisions as defined by these regulations.
- 2) The application may be submitted, accepted as complete and voted on at the same meeting, provided the public notice so indicates.

#### **I. Public Hearing**

Prior to the approval of an application, a public hearing shall be held.

#### **J. Notification**

- 1) Notice of a Design Review, submission of an application, or a Public Hearing shall be given by the Board to the abutters, the Applicant, holders of conservation, preservation or agricultural preservation restrictions or easements, and every engineer, architect, land surveyor or soil scientist whose professional seal appears on any plat.
- 2) Notice shall be by certified mail, mailed at least ten (10) days prior to the submission. The public will be given notice at the same time, by posting at the Municipal Office Building, Old Town Hall, publication in Foster's Daily Democrat, and on the Town's website at [www.farmington.nh.us](http://www.farmington.nh.us).
- 3) The notice shall give the date, time, and place of the Planning Board meeting at which the application will be formally submitted to the Board, shall include a general description of the proposal which is to be considered, and shall identify the Applicant and the location of the proposal.
- 4) If the notice for the public hearing was included in the notice of submission or any prior notice, additional notice of the public hearing is not required. Additional notice is not required of an adjourned session of a hearing provided that the date, time, and place of the adjourned session were made known at the prior meeting.

**K. Fees**

- 1) The Applicant shall be responsible for all fees incurred by the processing of applications including, but not limited to, application fees, public notice fees and abutter notifications fees. Failure to pay such costs shall constitute valid grounds for the Board to not accept the application as complete.
- 2) It shall be the responsibility of the Applicant to pay all reasonable fees for special investigative studies, environmental assessments, legal review of documents, administrative expenses and other matters which may be required to make an informed decision on a particular application.

**L. Site Inspections**

- 1) Whenever the Board deems it necessary for the consideration of an application to visit the site, the Board shall arrange a time that is reasonable for the Applicant. Such inspection may be required at any stage of the proposal. Inspection is to be at such time when the site is free of snow cover, unless the Board is otherwise satisfied that such inspection is not required.
- 2) Such a site inspection shall be posted as a meeting of the Board pursuant to the Right-to-Know provisions of RSA 91-A. If there is a quorum present at the site inspection, minutes shall be kept.
- 3) All applications are conditioned upon the owner allowing access to the property, to the extent reasonable and necessary to properly review the application. Denial of access automatically terminates any further consideration of the proposal.

**M. Concurrent and Joint Hearings**

The Applicant or the Planning Board may request a joint hearing with one or more land use boards in conjunction with a subdivision hearing if approval from all boards is required for the same project, subject to the requirements of RSA 676:2.

**N. Termination of Final Approval**

From the date the subdivision is approved, the approval will be good for one (1) year without substantial work being done (see Section 7(P)). A six (6) month extension may be granted upon written request.

**O. Termination of Conditional Approval**

Conditional approvals granted by this Board will expire in one (1) year days if conditions have not been met. A written request for an extension of ninety (90) days may be submitted which will be reviewed at a regularly scheduled Planning Board Meeting.

**P. Approved Subdivision Exemption; Active and Substantial Development**

Approved subdivision plans shall be exempt from future changes in regulations and ordinances in accordance with NH RSA 674:39 as follows:

- 1) A subdivision plan that is approved by the Planning Board shall be exempt from all subsequent changes in subdivision plan review regulations, impact fee ordinances and zoning ordinances adopted by the Town of Farmington, except those which expressly protect public health standards, such as water quality and sewage treatment requirements, for a period of five (5) years after the date of certification of the subdivision plan by the Planning Board, provided that:
  - a) Active and substantial development or building has begun on the site by the owner or the owner's successor in interest in accordance with the approved plans within twenty-four (24) months after the date of approval, or in accordance with the terms of the approval;
  - b) If a bond or other security to cover the costs of roads, drains, or sewers is required in connection with such approval, the bond or other security is posted with the Town at the time of commencement of such development;
  - c) The development remains in full compliance with the public health regulations and ordinances of the Town of Farmington; and
  - d) The subdivision plan conforms to the subdivision plan review regulations and zoning ordinances then in effect at the site of the approval of the plan.
  
- 2) For the purposes of these regulations, 'active and substantial development or building' shall be deemed to have occurred when at least twenty five percent (25%) of the total infrastructure improvements to the site, as indicated in the approved subdivision plan, have been made, unless otherwise specified by the Planning Board when approving an application.<sup>1</sup> Infrastructure improvements include:
  - a) Construction of and/or installation of basic infrastructure to support the development (including all of the following: foundation walls and footings of proposed buildings; roadways, access ways, parking lots, etc., to a minimum of gravel base; and utilities placed in underground conduit ready for connection to proposed buildings/structures) in accordance with the approved plans;
  - b) Completion of drainage improvements to service the development (including all of the following: detention/retention basins, treatment swales, pipes, underdrain, catch basins, etc.) in accordance with the approved plans; and

---

<sup>1</sup> The Planning Board may determine what constitutes active and substantial development on a project by project basis.

- c) All erosion control measures (as specified on the approved plans) must be in place and maintained on the site.

Movement of earth, excavation, or logging of a site without 25% total completion of items (2)(a) through (2)(c) shall not be considered active and substantial development

Items (2)(a) through (2)(c) shall be reviewed and inspected by the Code Enforcement Officer or designated agent.

- 3) If active and substantial development or building is not accomplished by the end of the twenty-four (24) month period, the subdivision plan will not be subject to the five (5) year exemption per RSA 674:39, as amended. Applicants may request a twelve (12) month extension prior to the expiration of the approval. Such extension shall be granted at the discretion of the Planning Board on a case-by-case basis and is not guaranteed.
- 4) Once substantial completion of the improvements as shown on the plan has occurred in compliance with the approved plans, or by the terms of the approval or unless otherwise stipulated by the Planning Board, the rights of the owner or the owner's successor in interest shall vest and no subsequent changes in subdivision plan review regulations or zoning ordinances shall operate to affect such improvements.
  - a) "Substantial completion of the improvements as shown on the plan" for the development or approved phase shall be deemed to have occurred when a Certificate of Occupancy for all buildings shown on the approved subdivision plan has been issued by the Town, and all other on-site or off-site improvements have been determined by the Town of Farmington or its agent to be in compliance with the approved subdivision plan or satisfactory financial guarantees remain on deposit with the town to insure completion of such improvements.

## **SECTION 8. SUBMISSION REQUIREMENTS**

A completed application shall consist of the following items unless written request for waiver(s) is granted by the Board:

An original and fifteen (15) copies of the completed application form, accompanied by:

- A. Name(s) and address(es) of Applicant(s), and property owner(s) if different that the Applicant(s)

- B.** Names and addresses of all abutters, taken from the town records not more than five (5) days before the day of filing;
- C.** Names and addresses of all persons whose name and seal appears on the plat;
- D.** Names and addresses of all holders of conservation, preservation or agricultural preservation restrictions;
- E.** Three (3) sets of mailing labels (2 3/4" x 1") for each person identified in A through D, above;
- F.** Payment to cover filing and notification fees;
- G.** Five (5) full-size paper copies of the plat, and up to seventeen (17) colorized 11"x17" reductions, prepared according to the standards of the NH Land Surveyors Association and the Strafford County Registry of Deeds, as follows:
  - 1. Plats shall be at any scale between 1"= 20' and 1"=100'.
  - 2. The outside dimensions of the plat shall be 22" X 34". The Board requires that only one sheet size be used for preparing all plans in a set.
  - 3. The material composition shall be suitable for electronic scanning and archiving by the Strafford County Registry of Deeds.
  - 4. All plats shall have a minimum 1/2" margin on all sides.
  - 5. All plats shall include a title block to be located in the lower right hand corner. The title block shall indicate:
    - a. type of survey
    - b. owner of record
    - c. title of plan
    - d. name of the town
    - e. tax map and lot number
    - f. plan date and revision dates;
    - g. letter of authorization from the owner, if the Applicant is not the owner.

The Planning Board may require additional plans when needed. Plan sets shall be collated, stapled and folded to display title box when submitted.

- H.** The plat shall show the following information:
  - 1. Proposed subdivision name or identifying title; name and address of the Applicant and of the owner, if other than the Applicant.

2. North arrow, scale – written and graphic, date of the plan; name, license number and seal of the surveyor or other person whose seal appears on the plan.
3. Signature block for Planning Board endorsement.
4. Locus plan showing general location of the total tract within the town and the zoning district(s).
5. Boundary survey including bearings, horizontal distances and the location of permanent markers. Curved boundary lines shall show radius, delta, and length.
6. Names of all abutting subdivisions, streets, easements, building lines, parks and public places, and similar facts regarding abutting properties.
7. Location of all property lines and their dimensions; lot areas in square feet and acres. Lots numbered according to the Town tax map numbering system. It is the responsibility of the Applicant to meet with the Town's Assessing Clerk to assure correct numbering of the proposed lots.
8. Location and amount of frontage on public rights-of-way.
9. Location of building setback lines.
10. Location of existing and proposed buildings and other structures.
11. Location of all parcels of land proposed to be dedicated to public use.
12. Location and description of any existing or proposed easements.
13. Existing and proposed water mains, culverts, drains, sewers; proposed connections or alternative means of providing water supply and disposal of sewage and surface drainage.
14. Existing and proposed streets with names, classification, travel surface widths, right-of-way widths. (See Appendix A for road standards.)
15. Final road profiles, center line stationing and cross sections.
16. Location and width of existing and proposed driveways.
17. Water courses, ponds, standing water, rock ledges, stone walls; existing and proposed foliage lines; open space to be preserved; and any other man-made or natural features.
18. Existing and proposed topographic contours based upon the USGS topographical data, with spot elevations where necessary.

19. Soil and wetland delineation.
20. Location of percolation tests and test results; and outline of 4,000 square-foot septic area with any applicable setback lines;
21. Location of existing and proposed well, with 75-foot well radius on the lot serviced by the well.
22. Base flood elevations and flood hazard areas, based on available FEMA maps.

**I. Other Information**

- 1) Two (2) copies of the drainage report.
- 2) Plan for Stormwater Management and Erosion Control, if applicable (See Section 6, Paragraph F, and Section 9, Paragraph M).
- 3) State subdivision approval for septic systems; septic design approval where applicable; or certification by septic designer of adequacy of existing system.
- 4) EPA Stormwater Pollution Protection Plan (SWPPP)
- 5) Alteration of Terrain Permit from NH Department of Environmental Services.
- 6) State/Town driveway permit, as applicable.
- 7) Report from the Fire Chief, Police Chief, and/or Town Conservation Commission.
- 8) Approval for municipal water/sewer connections, if applicable.
- 9) Any deed restrictions; and all deeds covering land to be used for public purposes, easements and rights-of-way over property to remain in private ownership, and rights of drainage across private property, submitted in a form satisfactory to the Board's counsel.
- 10) Any other state and/or federal permits.
- 11) Any additional reports or studies deemed necessary by the Board to make an informed decision, including but not limited to: traffic, school, fiscal and environmental impact analyses. The Board reserves the right to request such information after an application has been accepted as complete, as well as before acceptance.

Should the Board determine that some or all of the above-described information is to be waived, the Applicant will be notified in writing within ten (10) days of the meeting at which the determination was made.

## **SECTION 9. SPECIFIC PLAN REQUIREMENT**

### **A. Subdivision Plan**

1. Scope of Review: Every application for subdivision review must incorporate the entire parcel within the review. Not to do so may cause approval of a lot or situation which is not in conformance with the zoning ordinance and/or other applicable ordinances and regulations.
2. Professional Standards: Subdivision plans shall be prepared, stamped, and signed by a registered Professional Engineer and/or Licensed Land Surveyor licensed in New Hampshire. The requirement for a Professional Engineer shall apply to all plans showing roadways, utilities, bridges and culverts, plus drainage and other construction plans. In specific cases, the Board may waive the requirement for a Professional Engineer in accordance with Section 14, Paragraph C – Waivers.

### **B. Specific Plan Information - Existing Site Conditions**

In order for the Board to comprehensively evaluate a subdivision plan proposal, the Applicant is required to show the following information as part of the subdivision plan, unless granted a waiver in accordance with Section 14, Paragraph C – Waivers. Other information may be reasonably required by the Board and shall be submitted. Such additional submittals may be required in cases where the submitted information fails to permit the Board to review the subdivision in light of the requirements of Sections 7 and 8 and the purposes of these regulations.

1. Location of site, names, and addresses of current owners of record and current abutting land owners. A separate list of current names and addresses of abutters must also be provided.
2. Proposed subdivision name. Name and address of person(s) or firm preparing the plan. Said plan must contain the date of preparation, title, north arrow, scale, legend and zoning district(s). Name and address of person(s) or firm preparing other data and information if different from the preparer of the map. Plans shall also contain a signature block for Board approval.
3. Surveyed property lines including angles or bearings, distances, monument locations and size of the entire parcel. Said plan must be attested to and stamped by a Licensed Land Surveyor licensed in the State of New Hampshire, original signature, seal, and license number shall be legible and included on the plan.
4. Existing grades and topographic contours at intervals not exceeding two (2) feet with spot elevations where the grade is less than five percent (5%).

5. The location of existing drainage systems, structures, and drainage easements, if any.
6. The shape, size, height, location and use of all existing structures, including wells and septic systems, on the site and within 200 feet of the site.
7. Natural features such as streams, marshes, lakes, ponds, rock outcrops, wooded areas, significant trees, ledge, and other significant environmental features, including wetland soils as defined under current Farmington Wetlands Ordinance, wetlands shall be identified by a NH certified soil scientist or NH certified wetland scientist.
8. Man-made features such as, but not limited to, existing roads, stone walls, pedestrian ways, and other structures. The plan shall also indicate which structures are to be retained and which are to be removed or altered.
9. The size and location of all existing public and private utilities, including off-site utilities to which connection is planned, and any underground storage tanks, abandoned or in use.
10. A vicinity sketch showing the location of the site in relation to the surrounding public street system, to be shown within a distance of 1,000 feet.
11. Location and description of all existing easements and/or rights of way, parks, reservations, conservation land, and holders of conservation easements.
12. Tax map and parcel number.
13. Each existing building or manmade structure, including stone fences, shall be shown on the plan and reviewed with the Board for historic significance. Such historic features may be destroyed or removed only with Board approval
14. Summary of Farmington Zoning Ordinance requirements, including, but not limited to summary of lot size requirements, lot area, frontage, etc.
15. The subdivision plan shall show any burial site or cemetery as a separate lot from the remainder of the subdivision by means of a fence, stone wall, or granite monuments at all four (4) corners. The fence, stone wall or granite monuments shall be placed not less than twenty-five (25) feet from any grave, monument, or tomb and will be shown on subdivision plans accordingly. Also please refer to *RSA 289:14 Right of Way to Private Burial Ground*.
16. Plans shall show all existing or planned burial site(s) or cemetery(s) as separate lot(s) which may be deeded to the Town of Farmington. Access for maintenance shall also be shown on the subdivision plan.

17. Scale should be not more than 1" = 100' (one inch = 100 feet).
18. The final plan(s) shall include sufficient data acceptable to the Planning Board and the Town's Review Engineer to determine readily the location, bearing and length of every existing and proposed street line and lot line, and to reproduce such lines upon the ground. All dimensions shall be shown to hundredths of a foot and bearings to at least half minutes. The error of closure shall not exceed a ratio of 1 to 15,000. The final plan(s) shall show the boundaries of the property and the bounds of any public or private streets and easements abutting or pertaining to the proposed subdivision in any manner.

**C. Specific Plan Information- Proposed Site Conditions**

In order for the Board to comprehensively evaluate a subdivision plan proposal, the Applicant is required to show the following information as part of the subdivision plan, unless granted a waiver in accordance with Section 14, Paragraph C – Waivers. Other information may be reasonably required by the Board and shall be submitted. Such additional submittals may be required in cases where the submitted information fails to permit the Board to review the subdivision in light of the requirements of Sections 7 and 8 and the purposes of these regulations.

1. Proposed grades and topographic contours at intervals not exceeding five (5) feet with spot elevations where grade is less than five percent (5%).
2. Construction drawings and location, name, width, curbing and paving of proposed streets, drainage ways, and profiles and the elevations of sufficient points on the property to indicate the general topography of the property , driveways and sidewalks with indication of direction of travel for one-way streets. Including the radii of streets, driveways, access ways, and sidewalks within the site and its relationship to the off-site street system.
3. Location and timing patterns of proposed traffic control devices, including painted road indicators, and all signage.
4. Designs of any bridges or culverts that may be required.
5. Where the plat submitted covers a part of the Applicant's entire holding, a sketch of the prospective future street system of the unsubmitted part shall be furnished and the street system of the submitted part will be considered in the light of adjustments and connections with the street systems for the part not submitted.
6. The location, size and layout of on and off-street parking, including loading zones. The plan shall indicate the calculations used to determine the number of parking spaces required and provided.

7. The location and layout of proposed drainage systems and structures, including elevations for catch basins designed in accordance with these regulations.
8. Note indicating that all road and drainage work to conform to Appendix A – "Road and Driveway Regulations, Design and Construction Standards" of these Regulations, the standard specifications for construction in the State of New Hampshire, and any other applicable standards.
9. The size and location of all proposed public and private utilities, including but not limited to: water lines, sewage facilities, gas lines, power lines, telephone lines, fire hydrants and alarm connection, underground storage tanks, and other utilities.
10. The location and type of street lighting, including the cone of illumination on the site.
11. Location and description of proposed easement(s) and/or rights-of-way. Locations of access to existing town roads, as stated in RSA 236-13, Section 5, and copies of permits for the access.
12. The location and size of all proposed open space areas or parcels to be dedicated to public use and the conditions of such dedication and a copy of such private deed restrictions as are intended to cover part or all of the tract.
13. Deeds or other proposed documents of conveyance of any land located within the subdivision proposed by the Applicant for use for recreational or other Town purposes and Town ownership shall be part of the application. These proposed documents of conveyance shall be in a form satisfactory to Town Counsel. The fact that the Applicant makes such offers and Town Counsel approves the form of the documents does not bind the Town or its agents to accepting the offer. The suitability of lands offered for recreational or conservation uses shall be determined by the Conservation Commission of the Town. A letter indicating the Commission's opinion shall accompany the application.
14. The location of all monumentation that is to be installed in accordance with these regulations shall be shown on the plans. If the monumentation is changed in the field after construction supplemental information shall be filed with the Planning Board to be added to the file. Any change in the actual layout of the lots shall require planning board approval in accordance with these regulations.
15. Any other information the Board may require in order to properly evaluate the proposed development including, but not limited to, the following:
  - a. Calculations relating to stormwater runoff.
  - b. Information on the composition and quantity of wastewater generated.

- c. Information on air, water, or land pollutants discharged.
- d. Estimates of traffic generation.
- e. Grading, drainage and erosion and sediment control plan.

**D. Sidewalks and Bikeways**

Sidewalks and bikeways shall be constructed in accordance with the standards found in Appendix A - "Road and Driveway Regulations, Design and Construction Standards" of these Regulations.

Sidewalks and/or bikeways, where appropriate, shall be provided for pedestrian traffic to provide connection between the subdivision and nearby destinations. Sidewalk designs shall include means for handicapped access. The board shall consider the following when determining the appropriateness of sidewalks:

- 1. Proximity to schools.
- 2. Whether recreational facilities and land is available within the subdivision.
- 3. Proximity to commercial destinations, including but not limited to, restaurants, stores, shops, etc.
- 4. Proximity to other pedestrian or bikeways, including "abandoned" ways or sidewalks.

**E. Landscaping Design and Plan**

The Town of Farmington requires attention to landscaping design in order to protect and preserve the appearance, character, and value of the surrounding neighborhoods by providing a better transition; by improving the compatibility between various land uses in the Town; and by buffering neighboring properties and areas from any adverse effects of site development.

These regulations shall mitigate the appearance and detrimental impact of non-residential uses. Any application of these regulations shall protect the value and provide for quiet enjoyment and nuisance-free use of neighboring properties.

- 1. To the extent feasible, naturally landscaped buffer strips of 25 feet must be preserved where a proposed residential development abuts non-residential zones or uses. This buffer shall adequately shield the residential properties from the adverse effects of the non-residential use. No roads shall be located within any part of this buffer zone.

Where appropriate, existing trees and vegetation must be incorporated into the buffer strips or landscaping design. Buffer strips must contain vegetation which

will screen the view from adjacent residential property during all seasons, this screening must exclude visual contact between uses and create a strong impression of the separation of spaces. Fencing alone may be considered an acceptable method of screening only if granted a waiver in accordance with Section 14, Paragraph C – Waivers.

2. Where appropriate or required, subdivisions shall be planned to provide that natural vegetation be retained as a buffer along environmentally sensitive areas such as watercourses, wetlands, and standing waters, in accordance with sound environmental practices, as described by the Department of Environmental Services. Appropriate landscaping along designated Scenic Roadways is strongly encouraged and any tree removal shall only be permitted in accordance with state and local Scenic Roadway provisions.

**F. Protection of Natural and Historic Features**

1. Each significant natural feature within the site including large or unusual trees, watercourses, natural stone outcroppings, and other scenic features shall be shown on the plan. It is recommended that such significant features be preserved in the development of the site.
2. Each existing building or manmade structure, including stone fences, shall be shown on the plan and reviewed with the Planning Board for historic significance. Such features will not be destroyed or removed without Planning Board approval.
3. Where subdivisions impact or access via designated Scenic Roads, mitigation measures shall be taken to preserve the scenic quality of such roads. These measures may balance the needs and requirements for safety and health, but should only minimally consider economic expediency.

**G. Bridges**

Bridges must be built according to the N.H. Department of Transportation manual, *Standard Specifications for Road and Bridge Construction*, current edition including all amendments. All bridge plans must be approved by the State Engineers prior to construction.

**H. Fire Protection**

Fire hydrants, fire ponds, and other improvements reasonably required for fire safety shall be provided as specified by the Farmington fire department and approved by the Planning Board. These items shall be shown on the site plan and installed by the Applicant. Please refer to Appendix B for complete requirements.

The Planning Board may require additional fire protection measures in addition to the requirements of Appendix B and the Farmington Fire Department's recommendation if the Board deems it reasonably necessary to do so.

**I. Water, Wells, On-Site Sewage, and Hydrogeological Studies**

1. Water

- a. On-site water supply: the provision of an on-site water supply shall conform to criteria of the Water Supply and Pollution Control Division of the N.H. Department of Environmental Services. It shall be the responsibility of the Applicant to provide sufficient and complete information to prove that the site is able to permit the installation and operation of both individual on-site water supply and sewage disposal systems.
- b. A hydrogeologic study shall be required for any well with a withdrawal of over 20,000 gallons per day.
- c. Drinking water supplied by a community water system serving less than twenty-five (25) persons shall be tested by the Town with the cost of such testing being borne by the Applicant. Community water systems serving more than twenty-five persons are subject to "Design Standards for Small Public Water Systems", Chapter WS 300, Part 310 of the NH Code of Administrative Rules."

2. Well Radius Placement

- a. Each newly created lot shall show the entire well radius protection area as required by the State Department of Environmental Services rules.
- b. The entire required well radius shall be located within the boundaries of the lot served by the well.
- c. Well radius easements covering neighboring parcels are not permitted in new subdivisions. This insures:
  - i. Protection of health and safety for individual on-site water resources from adverse impacts of land uses on adjacent and neighboring parcels.
  - ii. Allows for maximum flexibility in the placement of septic systems and other land uses on neighboring parcels of land.
  - iii. Promotes the wise and free use of property unencumbered by easements.

### 3. Sewered Area System Siting Requirements

If an Applicant intends to utilize Town of Farmington sewer and water service, or private community water system, they should make an appointment with the Farmington Sewer and/or Water Departments to determine proper requirements and procedures. Plans must be submitted for review by the water and sewer department, if required.

Written approval by Farmington Sewer and/or Water Departments is required prior to Planning Board approval.

### 4. Non-Sewered Area System Siting Requirements

- a. In areas not served by public sewage disposal systems at the time of subdivision, it shall be incumbent upon the Applicant or his agent to adequately demonstrate that all proposed lots will meet all current state and local septic system disposal standards. No subdivision of land will be approved where it creates a building lot that will not meet these standards.
- b. The Applicant or his agent shall be required to submit all site information, including but not limited to percolation tests, test pits, soil, slope, and minimum distance data as may be required by the Planning Board to determine the suitability of each proposed lot for on-site sewage disposal.
- c. In no case shall the Planning Board grant final approval of a proposed subdivision until the following State approvals, if necessary, have been received: New Hampshire Department of Environmental Services (DES) Subdivision Approval; DES Subsurface Disposal; DES Site Specific; DES Wetlands Board - Dredge and Fill Permit; DES Water Supply Approval; and U.S. Army Corps of Engineers 404 Permit.
- d. The location of and pertinent data on sufficient test pits and percolation tests to show that the regulations can be met on each lot created by the subdivision. Information shall include at least the following: the location of test pits; percolation test data; the certification of the test pit inspector witnessing the perc tests; and an outline of the areas reserved for leach fields which corresponds to test locations. The location of reserve leach field areas if available shall also be shown.
- e. Siting and design of septic systems shall meet all NH Dept. of Environmental Services requirements.
- f. All new on-site waste disposal systems are to be located so as to avoid impairment to them or contamination from them during flooding.

- g. All on-site waste disposal systems must be located seventy-five (75) feet from the location of a private well, two hundred (200) feet from a community well and four hundred (400) feet from a public well.
- h. The slope of a lot shall be determined by finding the average slope across the lot, measured perpendicular to the contours.
- i. Each proposed lot of a subdivision shall contain an area of land sufficient in size and site characteristics to be used as an auxiliary septic system absorption field. Said area shall be reserved for this use and must be capable of meeting the pertinent minimum standards as set forth above. The location of the auxiliary absorption field area shall be indicated on the subdivision plan and at final siting of system.

**J. Utilities**

- 1. The Applicant proposing a residential development shall insure the installation all electric, telephone, and other utility distribution lines per specifications of the public utility companies involved, and easements required for transformer units shall be provided by the developer.
- 2. The Planning Board may, in its discretion, require underground utilities.

**K. Easements**

All easements dedicating rights to the Town of Farmington are subject to review and approval by the Board and Town Counsel, and any other Town agent or body which the Board and/or Counsel deem necessary.

- 1. Where the topography is such as to make difficult the inclusion of any utilities or other facilities within the road rights-of-way, the subdivision plan shall show the boundaries of the proposed permanent easements over or under private property. Such easements shall not be less than twenty five (25) feet in width and shall have satisfactory access to existing or proposed rights-of-way.
- 2. Where a proposed residential development is traversed by a watercourse or drainage way, the Board may require a stormwater easement or drainage right-of-way of at least twenty five (25) feet in width.

**L. Open Space Requirements**

In accordance with RSA 674:36,II, a subdivision of land shall show open spaces of adequate proportions. Plats submitted to the planning board for approval which show new streets or narrowing or widening of such streets shall show a park or parks suitably located for playground or other recreational purposes that are reasonably sized for neighborhood use.

1. Natural Features. The subdivision and development shall, whenever possible, preserve in their natural condition important natural features. The Planning Board may request an advisory opinion from the Conservation Commission in the determination of the value of natural features and the boundaries of such natural systems. Such areas include watercourses, wetland areas, steep slopes, large or unique trees, groves, or special habitats. Natural features that provide buffers between lots, or sections, of a subdivision should be preserved to enhance privacy and aesthetic value.
2. Buffer Strips. The Planning Board may require the designation of buffer strips of at least fifty feet width around surface water, wetlands, or other natural features which may be adversely affected by erosion or stormwater runoff. The Board may require a vegetative buffer to provide screening where non-residential developments abut a residential zone.
3. Parks. The Board may require the dedication or reservation of such open space within the subdivision for park, playground or other recreational or open space purposes, for the residents of the subdivision.

The Board shall also require of the developer that he/she supply and plant such trees and shrubbery as are deemed compatible to the environmental design of the neighborhood. It shall also be stipulated by covenant upon the plan that such open spaces shall not contain signs other than street directional or place-name signs. Upon approval of the final plans and plantings, if the park is dedicated for public use, the maintenance of said landscaped areas shall be the responsibility of the community. If the park is solely for subdivision use, the maintenance of said landscaped areas shall be the responsibility of the residents of the subdivision.

4. Tree Planting. The planting of shade trees within all subdivision layouts where residential, commercial, or industrial development is to take place may be required of the developer who shall supply planting plans to the Board.

**M. Stormwater Drainage and Erosion Control**

1. An adequate surface stormwater drainage system for the entire subdivision area shall be provided. Storm drainage shall be carried to existing water courses or connect to existing storm drains. No new drainage ways shall be created unless necessary easements are obtained. Such easements shall be duly recorded on the plat and the property deeds involved.

No increase in surface runoff shall be permitted if such increased runoff passes beyond the property lines of the parcel upon which such development occurs, unless it is within an approved public storm drainage system. Storm drains and other subdivision drainage facilities shall be based upon a design flow to accommodate a 50-year/24-hour storm. All water courses shall be designed so as

not to create erosive velocities. Calculations of runoff used to determine stormwater system design shall be submitted for Planning Board review.

Stormwater drainage system design shall incorporate stormwater BMPs as identified in the NH Stormwater Manual, December 2008.

2. Provisions shall be made to accommodate the increased runoff caused by changed soil and surface conditions during and after development. Sediment in the runoff water shall be trapped by the use of sediment basins or other acceptable methods until the disturbed area is stabilized. Diversions, sediment retention basins, and other erosion/sedimentation control structures shall be constructed prior to any on-site grading or disturbance of existing surface material.
3. A stormwater system shall be constructed in accordance with the following requirements:
  - a. The stormwater system shall include an adequate number and sizes of catch basins and/or drop inlets, and shall be fully designed to handle all computed or reasonably anticipated stormwater drainage. The minimum size, slope, and location of the pipe shall be determined by a qualified engineer and installed under his supervision.
  - b. No stormwater pipe, catch basin, drainage inlet, or other pipe floor drain, draining surface water shall be connected to any sanitary sewer system, pipe or other part of said system. All stormwater pipe shall be inspected and approved by the Town Engineer before covered. Inspection shall be completed on a normal workday within a 24-hour period after notification.
  - c. The Applicant shall provide satisfactory information that his stormwater drainage system will not cause flooding or unreasonable deposits of such waters upon or onto adjacent private or public lands or streets, unless deed easements for the same are obtained in the name of, or to be deeded to, the Town of Farmington.
4. Low Impact Development techniques should be incorporated wherever practical.

**N. Traffic Impact and Mitigation Analysis**

All proposed developments shall be reviewed by the Board to ascertain that adequate provisions have been made by the owner or his/her agent for traffic safety. To facilitate this review, the Applicant may be required to provide a traffic impact analysis when deemed necessary by the Board due to the size, location, or any other traffic generating characteristics of the development.

1. In addition to the requirements of Section 3.20 Paragraph E of the Town of Farmington Zoning Ordinance, a traffic impact and mitigation analysis shall be

required in the following circumstances:

- a. The subdivision involves the creation of 10 or more residential lots or residential units;
  - b. The subdivision is intended to facilitate non-residential land uses;
  - c. A traffic impact analysis may be required of any development, at the discretion of the Planning Board, where information submitted does not permit the Board to with adequately identify the impacts of the development to the health, safety, and welfare of existing and proposed public.
2. The traffic impact and mitigation analysis shall be prepared by a NH licensed Professional Engineer. This analysis shall be prepared to meet, at a minimum, the NH-DOT's Policy for the Permitting of Driveways and Other Access to the State Highway System (current edition, including all revisions) and NHDOT Intersection Capacity Analysis Guidance (current edition, including all revisions).
  3. Depending on the magnitude of the proposed development, acceptable report formats may include: a letter report, a formal traffic impact and access study, or a technical memorandum addressing specific issues and concerns. All report types shall include a technical appendix containing all pertinent traffic data and analyses used in the preparation of the study.
  4. Where applicable, reports shall include a qualitative as well as quantitative analysis including, but not limited to, details concerning the following impacts and proposed efforts to mitigate these impacts:
    - a. Inventory of the existing roadway conditions surrounding the site including identification of existing deficiencies;
    - b. Description of the proposed development including a trip generation estimate for daily and peak hour conditions;
    - c. Internal circulation patterns including service, delivery, and emergency response vehicles;
    - d. Pedestrian and bicycle mobility;
    - e. Adequacy of the existing roadway network to accommodate site-generated traffic;
    - f. Sight distances;
    - g. Traffic control needs;
    - h. On and off-site parking adequacy;
    - i. Accident statistics;
    - j. Neighborhood impacts; and
    - k. Air quality and noise impacts.
    - l. Any other identifiable impact that the Board finds necessary to address.

5. The extent of the study area for the traffic analysis will depend on the location and size of the proposed development. Small projects may require minimal analysis limited to site access locations and existing intersections immediately adjacent to the project. Large-scale projects may require a more extensive study area. The study area limits shall be reviewed by the Town Planner and/or town-hired consultant prior to the preparation of the study.
6. Analysis periods shall include weekday morning and evening peak hours for residential, industrial, and office type developments. Commercial developments (depending on the use) may include weekend peak hours in addition to the weekday.
7. Reports shall include the following unless the requirement is beyond the scope of the reasonably predicted impact of the development:
  - a. Existing Conditions Analysis
    - i. ADT and peak hour volumes shall be provided for critical roadways and intersections.
    - ii. Traffic volumes shall be seasonally adjusted to reflect peak traffic month conditions. Historical traffic volume data obtained from the Town, NHDOT, or Nashua Regional Planning Commission shall be used to determine seasonal variations within the study area.
    - iii. Levels of service and vehicle queues shall be calculated for the existing (peak month) conditions at all study area intersections.
    - iv. Existing conditions traffic volume networks shall be prepared for the study area.
  - b. “No Build” Analyses
    - i. Analyses shall be performed for the opening year of the project and opening year plus ten.
    - ii. Traffic growth projections shall include regional background growth in addition to traffic generated by any nearby proposed or approved development projects. Local historical traffic volume data shall be reviewed in assessing a traffic growth rate for use in the study.
    - iii. Opening year and opening year plus ten traffic volume networks shall be prepared for the No Build condition.
  - c. Trip Generation Estimate and Distribution
    - i. Daily and peak hour trip estimates for the proposed project shall be developed using rates published by the Institute of Transportation Engineers (ITE). Deviations from the industry standard rates must be substantially supported with data collected at similar facilities.

- ii. Procedures used to determine the distribution and assignment of site-generated trips shall be documented within the study.
    - iii. Site-generated trips shall be added to the No Build traffic volume networks to establish the Build condition. Traffic volume networks demonstrating the distribution and assignment of site-generated trips shall be included in the study.
  - d. Build Analysis
    - i. Analyses shall be performed for the opening year of the project and opening year plus ten.
    - ii. Opening year and opening year plus ten traffic volume networks shall be prepared for the Build condition.
  - e. Mitigation Plan
    - i. Where traffic operations or safety deficiencies are expected to occur as a result of the proposed development, mitigation measures to alleviate such deficiencies shall be evaluated and recommended by the proponent.
    - ii. Acceptable mitigation measures may include (but are not limited to) roadway and intersection improvements that address capacity or geometric problems, traffic calming, and transportation demand management.
    - iii. Conceptual improvement plans demonstrating the recommended mitigation shall be provided when appropriate.
- 8. Recommended acceptable sources include the latest edition of the following publications:
  - a. Trip Generation, 9<sup>th</sup> Edition including all revisions, 2012, ITE
  - b. Policy for the Permitting of Driveways and Other Access to the State Highway System, March 10, 2000, NHDOT
  - c. Intersection Capacity Analysis Guidance, January 8, 2001, NHDOT Memorandum
  - d. Highway Capacity Manual 2010, Transportation Research Board
  - e. Manual on Uniform Traffic Control Devices 2009 including all revisions, FHWA
  - f. A Policy on Geometric Design of Highways and Streets AASHTO 2011 6<sup>th</sup> edition
  - g. Highway Design Manual, most current edition including all revisions, NHDOT
- 9. The Board may retain the services of a consultant qualified in traffic engineering and transportation planning to review the traffic impact analysis and to insure that adequate provisions are made in the development plan to reduce or eliminate

project-related impacts. The Board may further require, pursuant to RSA 676:4 I(g), that the developer reimburse the Town for reasonable costs of this review. No plan shall be approved until such fees, if applicable, are paid in full.

**O. Inspections**

1. Periodic inspections of the work by an engineer designated by the Board are required during construction or alteration of all roads. Inspections are required:
  - a. After clearing and grubbing and removal of topsoil has been completed, but before grading has been started.
  - b. After the addition of required fill and setting of culverts, but before gravel base has been laid.
  - c. After gravel base has been laid and compacted, but before surfacing has been placed.
  - d. During surfacing.
  - e. At such other times as may be found necessary by the Board.
2. It shall be the responsibility of the Applicant to notify the designated engineer of all required inspections at least 48 hours in advance, Saturdays, Sundays and holidays excluded, and to pay the Town for cost of inspection service at designated engineer's customary rates including travel time and reasonable mileage charges.
3. All community and municipal water systems shall be inspected for compliance. It shall be the responsibility of the designated engineer to determine the frequency of said inspections.
4. All underground pipe installations for all community and municipal systems shall be inspected prior to burial for compliance to municipal installation standards. It shall be the responsibility of the installer to notify the designated engineer to inspect all underground piping prior to burial.

**P. Performance and Maintenance Security**

1. The Planning Board may accept performance security in lieu of the Applicant's completion of street work and other required improvements in conformance with these regulations. The security shall be in a form and an amount, and with surety, and other conditions all satisfactory to the Board to insure for the Town the construction and installation of such improvements within a period of time not to exceed two (2) years. The time limit of two years for completion from the date of final approval shall be expressed in the security. The security shall remain valid

and available until drawn upon by the Town or released in accordance with this Section.

Further to the above, the security shall be one of the following:

- a. Certified check or bank check properly endorsed to the Town of Farmington, or cash.
  - b. Irrevocable letter of credit with self-calling features, submitted on the standard form approved by the Town and drawn on a bank licensed to do business in New Hampshire. The letter of credit shall be reviewed and approved by the Town Counsel as to proper legal form and enforceability. The cost of this review shall be borne by the Applicant.
2. The Applicant shall file with the Board a detailed estimate of all costs of required street improvements, drainage structures, utilities or other improvements, and the cost of preparation of as-built plans. The Board may have the estimate reviewed by a professional consultant, if deemed necessary. The cost of this review shall be borne by the Applicant. The Board, after considering the estimate, any other pertinent information received, and their own knowledge shall determine the amount of the performance security required.
  3. The Board may further extend the time of two years for completion when the reasons for delay were unforeseeable and beyond the reasonable control of the Applicant. Any such extension shall be in writing and signed by a majority of the Board signifying their concurrence and shall only be granted after ensuring the validity and availability of the security for such extension. Any such extension shall be solely at the discretion of the Planning Board.
  4. The performance security shall not be released until the Board has certified after inspection that the required improvements have been completed in accordance with the approved plat. A fee, payable by the Applicant, may be charged to cover the cost of professional consultation selected by the Board to assist in determining completion of all required work to the construction standards of the Town.
  5. All security shall be held by the Selectmen of the Town. The Selectmen shall not draw upon or release any security until they are in receipt of a resolution passed by a majority of the Planning Board stating the purpose and amount to be drawn or released. The Selectmen shall enforce such securities by all appropriate legal and equitable remedies.

**Q. Legal Documents**

Where applicable to a specific subdivision, the following are required in a form approved by Town Counsel:

1. Homeowners' association documents, including open space agreements;
2. Easements and rights-of-way over property to remain in private ownership, including drainage easements.
3. Performance security, as described in Paragraph P this Section.

Review by Town Counsel of documents identified in A and B, above, is at the expense of the Applicant.

**R. Streets and Roads**

All public and private streets, roads, driveways, sidewalks, pedestrian ways and bikeways shall be submitted as specified in Appendix A – "Road and Driveway Regulations, Design and Construction Standards" of these Regulations.

**S. Driveways**

All permits required for driveways and other accesses onto a State highway shall be obtained from the New Hampshire Department of Transportation prior to final approval of the subdivision. Any permits required for driveways onto local streets shall be obtained from the Town. The Planning Board shall attempt to assure that the location of all driveways and accesses do not endanger safety or impede reasonable traffic flow.

No driveway shall access more than two (2) single-family or duplex units, or one (1) three or four-family structure. Dual access "looped" driveways may be required if deemed necessary by the Planning Board.

Driveways will be constructed in accordance with Appendix A - "Road and Driveway Regulations, Design and Construction Standards" of these Regulations.

**T. Protection of Natural and Historic Features**

Each significant natural feature within the subdivision including large or unusual trees, watercourses, natural stone outcroppings, and other scenic features shall be shown on the subdivision plan. Planning Board approval shall be obtained before removal of such features.

Each existing building or man-made structure, including stone fences, shall be shown on the subdivision plan and reviewed with the Planning Board for historic significance. Such features will not be destroyed or removed without Planning Board approval.

**U. Off-Site Improvements**

Pursuant to RSA 674:36, the Board may require special improvements on or off-site which it deems reasonably necessary or desirable for the conditions or circumstances relative to the particular subdivision plan review. Any such special requirements shall be stated in writing in the minutes of the Board with the reasons therefore. The Board may require, either that the Applicant construct the improvements in whole or in part, or reimburse the municipality or any other party who, at the direction of the municipality, undertakes such improvements. The Applicant's responsibility for such improvements is limited to that portion of the cost of the improvements which bears a rational nexus to the needs created by, and special benefits conferred upon, the site, taking into consideration the municipality's ability to pay for such improvements.

**SECTION 10. DEVELOPMENTS HAVING REGIONAL IMPACT**

- A.** All applications shall be reviewed for potential regional impacts. Upon such a finding, the Board shall furnish the regional planning commission(s) and the affected municipalities with copies of the minutes of the meeting at which the determination was made. The copies shall be sent by certified mail within 72 hours of the meeting.
- B.** At least 14 days prior to the scheduled public hearing, the Board shall notify by certified mail the regional planning commission(s) and the affected municipalities of the date, time and place of the hearing, and of their right to appear as abutters to offer testimony concerning the proposal.

**SECTION 11. PREVIOUSLY-APPROVED SUBDIVISIONS**

If any land shown on a subdivision plat has been part of any previous subdivision approved, constructed, or created by conveyance no more than five (5) years prior to the new proposal, any such previous subdivision will be treated as part of the new proposal for purposes of analyzing its effect and applying all review criteria.

**SECTION 12. SPECIAL FLOOD HAZARD AREAS**

- A.** The Planning Board shall review the proposed development to assure that all necessary permits have been received from those governmental agencies from which approval is required by Federal or State law, including Section 404 of the Federal Water Pollution Control Act Amendments of 1972, 33 U.S.C. 1334.
- B.** The Board shall require that all subdivision proposals include base flood elevation data. Sufficient evidence (construction drawings, grading and land treatment plans) shall be submitted so as to allow determination that:
  - 1. all such proposals are consistent with the need to minimize flood damage;

2. all public utilities and facilities, such as sewer, gas, electrical, and water systems are located and constructed to minimize or eliminate flood damage; and
  3. adequate drainage is provided so as to reduce exposure to flood hazards.
- C. The Board shall require new or replacement water supply systems and/or sanitary sewage to be designed to minimize or eliminate infiltration of flood water into the systems and discharges from the systems into flood waters, and require on site waste disposal systems to be located so as to avoid impairment of them or contamination from them during flooding.

### **SECTION 13. AS-BUILT PLANS**

As-Built plans, stamped by a Certified New Hampshire Professional Engineer, shall be submitted to the Department of Planning and Community Development and Department of Public Works prior to the final release of the letter of credit.

### **SECTION 14. REVOCATION OF PLANNING BOARD APPROVAL**

A subdivision plat, street plat, site plan or other approval which has been filed with the appropriate recording official under RSA 674:37 may not be revoked, in whole or in part, by the planning board, except pursuant to this section, and only under the following circumstances:

1. At the request of, or by agreement with, the Applicant or the Applicant's successor in interest.
2. When the Applicant or successor in interest to the Applicant has performed work, erected a structure or structures, or established a use of land, which fails to conform to the statements, plans or specifications upon which the approval was based, or has materially violated any requirement or condition of such approval.
3. When the Applicant or successor in interest to the Applicant has failed to perform any condition of the approval within a reasonable time specified in the approval, or, if no such time is specified, within the time periods specified in RSA 674:39.
4. When the time periods specified in RSA 674:39 have elapsed without any vesting of rights as set forth therein, and the plat, plan or other approval no longer conforms to applicable ordinances or regulations.
5. When the Applicant or successor in interest to the Applicant has failed to provide for the continuation of adequate security as provided by RSA 674:36, III(b) and 674:44, III(d) until such time as the work secured thereby has been completed.

**SECTION 15. ADMINISTRATION AND ENFORCEMENT**

- A. These regulations shall be administered by the Planning Board. The enforcement of these Regulations is vested with the Board of Selectmen.
- B. The Code Enforcement Officer or other agent so designated by the Planning Board shall be charged with the responsibility of inspecting improvements and development of subdivisions on site for compliance with the Subdivision Regulations.
- C. Waivers: The requirements of these regulations may be waived or modified when, in the opinion of the Board, specific circumstances surrounding subdivision, or the condition of the land in such subdivision, indicate that such modifications will properly carry out the purpose and intent of the master plan and these regulations. The Applicant shall submit the waiver request in writing with reasons to support the request.
- D. Penalties and Fines: Any violation of these regulations shall be subject to a civil fine as provided in RSA 676:16 and 676:17, as amended.

**SECTION 16. APPEALS**

Any person aggrieved by a decision of the Planning Board concerning a plat or subdivision may appeal said decision to the superior court pursuant to RSA 677:15, except when a disapproval by the Board is based upon non-compliance with the zoning ordinance, in which case an appeal can be taken to the Board of Adjustment.

**SECTION 17. VALIDITY**

If any section or part of a section or paragraph of these regulations shall be declared invalid or unconstitutional, it shall not be held to invalidate or impair the validity, force or effect of any other section or part of a section or paragraph of these regulations.

**SECTION 18. AMENDMENTS**

These regulations may be amended by a majority vote of the Planning Board after at least one (1) public hearing following the notification procedure outlined in RSA 675:7.

**SECTION 19.           EFFECTIVE DATE**

These regulations shall take effect upon their adoption and all regulations or parts of regulations, inconsistent therewith, are hereby repealed.

Authorized by vote of Town Meeting - November 19, 1975

Adopted - March 31, 1976  
Amended - February 12, 1980  
Revised - February 24, 1983  
Amended - August 9, 1983  
Amended - February 2, 1988  
Amended - May 24, 1988  
Amended - June 27, 1989

Amended - September 11, 1990  
Amended - January 14, 1992  
Amended – July 15, 2008  
Amended – June 1, 2010  
Amended – April 5, 2011  
Revised – June 18, 2013

# Hampstead Water Well Handbook

## Introduction

Are you thinking about having a new water well drilled? Do you have questions about an existing well or are you experiencing adverse changes in water quality or quantity? Perhaps you are building a new home or replacing an existing water supply. Perhaps you have previously lived in a home connected to a public water supply system and you've moved to a home that uses a private well for its water supply. Whatever the case, this handbook contains important information, including an overview of:

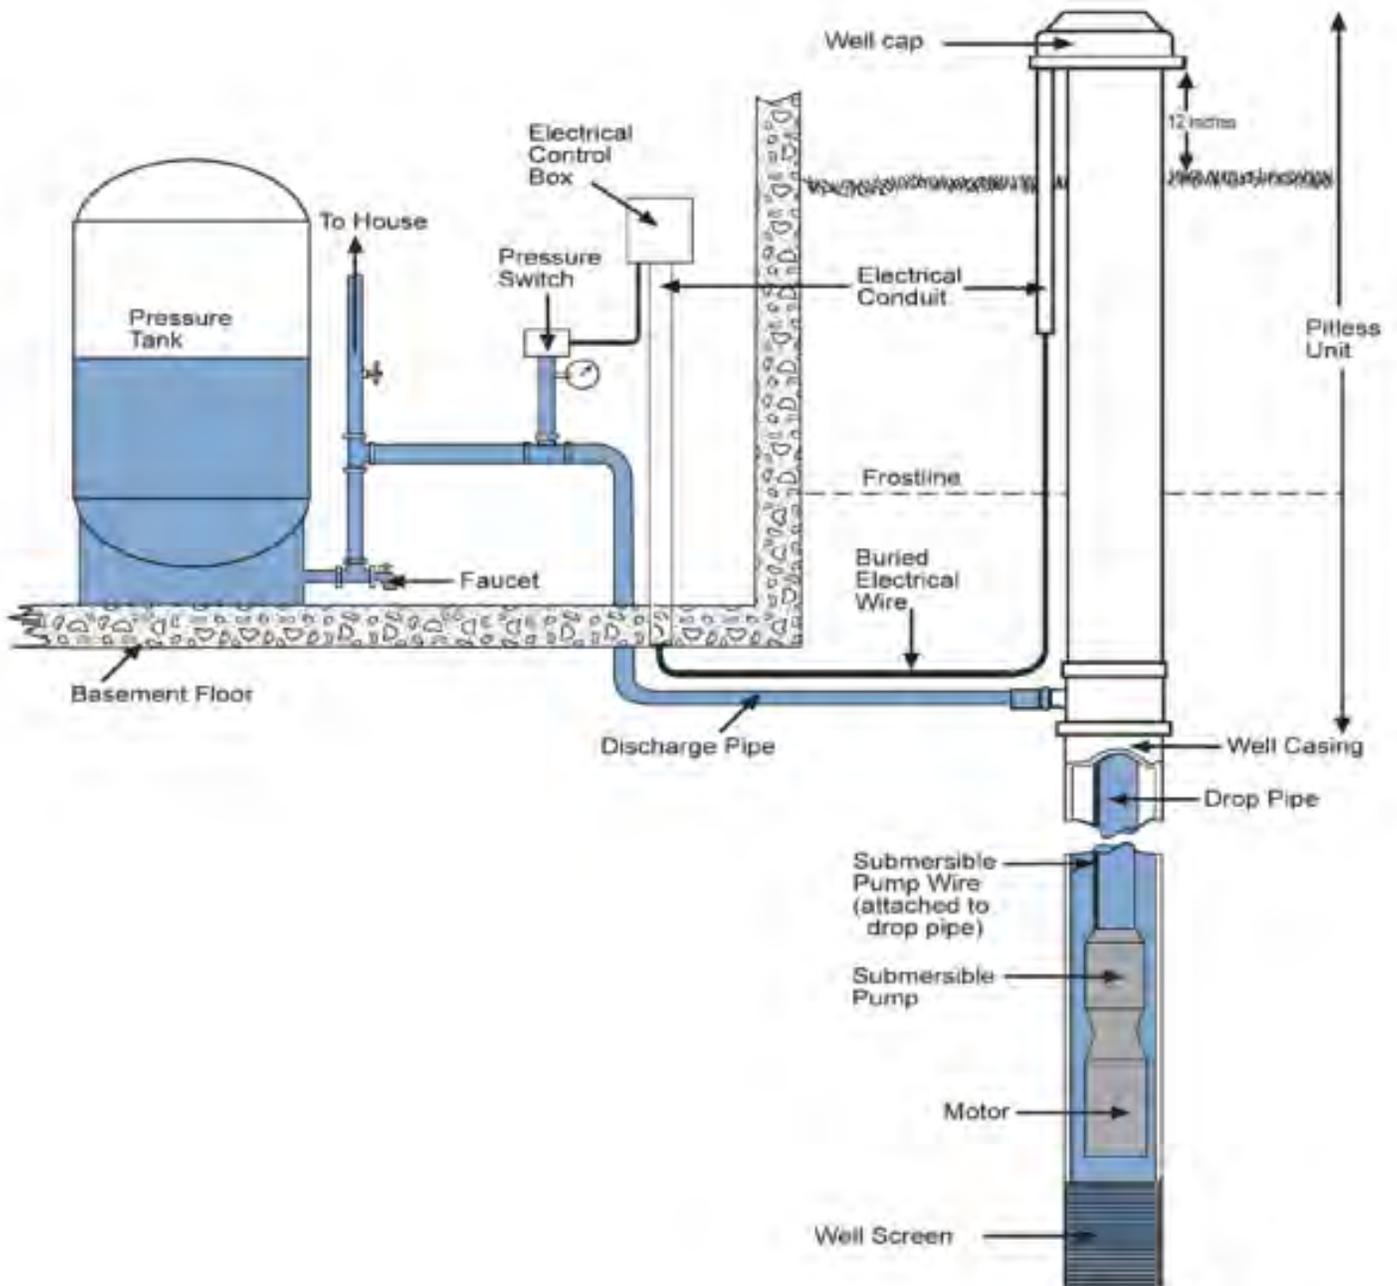

- Hampstead's groundwater resources
- Typical well construction
- Well protection and common problem troubleshooting
- Well operation and maintenance
- Well water safety and testing
- Sealing unused wells

## **What is Most Important?**

- **Learn about your well and the components of your water system.** Wells don't last forever. If your well is old or is experiencing a decline in performance, have it inspected by a licensed well contractor (pages 10-22).
- **Collect a water sample from your well on a regular basis and have it tested** for total coliform bacteria and nitrate. If you are having a new well constructed, a water sample is required to be taken from a new well by the licensed well contractor (pages 16-17).
- **Test your well water for common naturally-occurring chemicals that may be health hazards,** such as arsenic, radon and other radionuclides (pages 16-17).
- **Maintain your well in a sanitary condition.** The well should have a waterproof cap, and the well casing should extend at least 1-foot above the surface of the ground. Keep septic systems, fertilizers, gasoline, fuel oil, and chemicals away from your well (pages 19-20).

## How A Typical Well Pump System Works

Typical residential water wells have a submersible pump that pumps water directly to the house. Alternatively, some wells (e.g., shallow dug wells and driven well points) have surface pumps called “jet pumps” that are located on the surface at or near the top of the well.

As shown above, most well pumps are used in conjunction with a **pressure tank**. The goal of the well water pump system is to maintain a constant supply of pressurized water in the house and piping system. To maintain the water pressure, the well pump is switched on and off with a **pressure switch**. This usually means the pump is turned on when the pressure switch senses the pressure is at a low point (the “**cut-in**” point) and off at a pre-set high-pressure point (the “**cut-off**” point).

Image of how a well connects to a pressure tank, showing the pressure gauge, pressure switch and storage tank

Close-up view of the pressure switch that turns the pump on/off; The blue tank is the pressure tank

**A main water shutoff valve**, in this case the blue lever labeled "WATER" with white tape, is shown to the left of the pressure gauge and pressure tank drain valve in our photograph (white arrow).

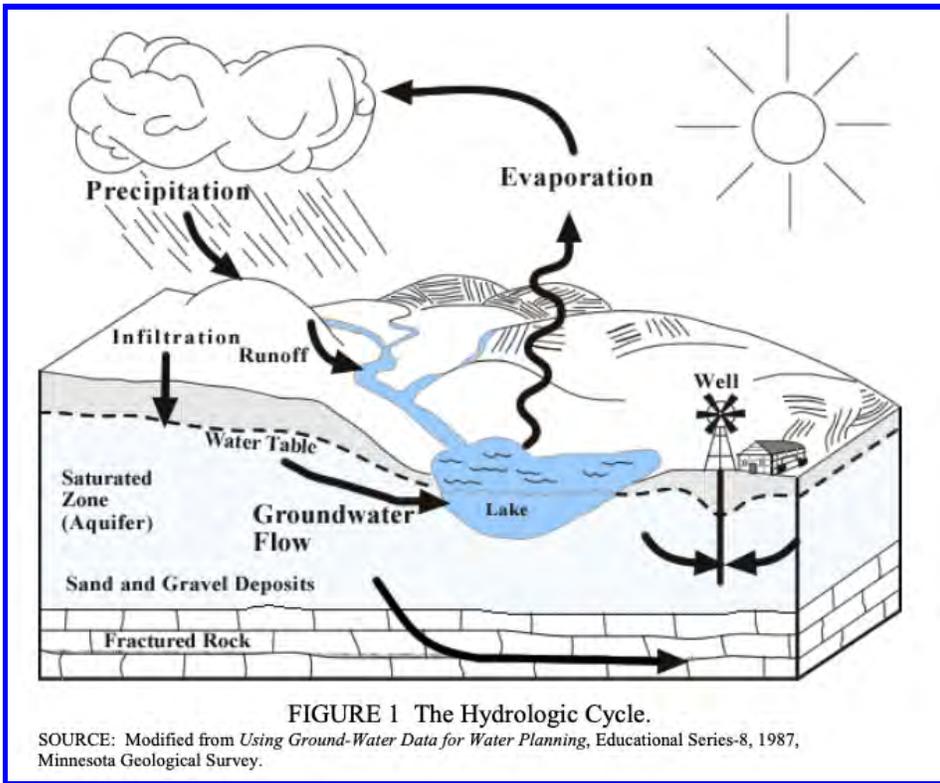

**Water tank pressure gauge.** The water pressure gauge on home water systems is one of the most helpful and simple devices used in diagnosing poor water pressure and pump, well, or pump control problems.

## Where Does Your Water Come From?

As the name implies, groundwater is found beneath the land surface — in cracks and crevices in bedrock, or in pore spaces, which are the small spaces between soil or rock particles in sand and gravel deposits.

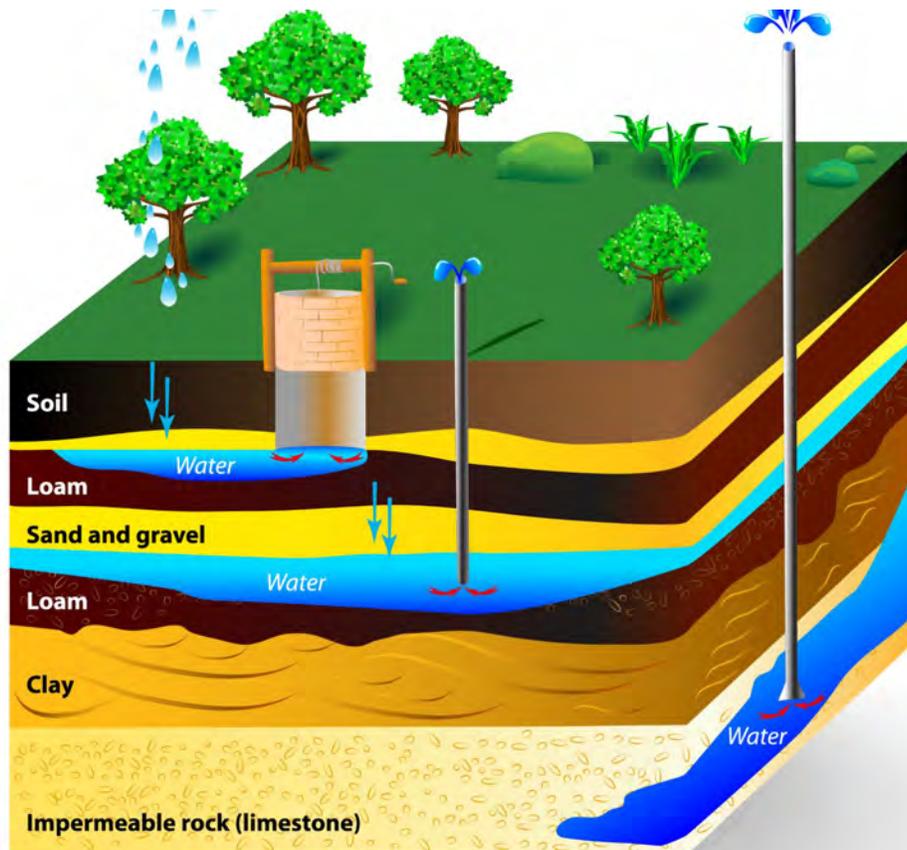

Surface water becomes groundwater when it seeps downward to the **saturated zone**. The saturated zone begins at the point where the pore spaces and cracks in the soil, sediment, or rock become completely filled with water. The top of this zone is called the **water table**.

An **aquifer** is a layer of sediment, such as sand or gravel, or permeable space within bedrock fractures, that stores and transmits water. A **confining layer** is a layer of low permeability sediment or rock that slows or prevents the downward movement of water — a thick layer of clay is an example of a confining layer.

There are several common types of water wells dependant on the source of the water:

- **Dug wells** are holes in the ground dug by shovel or backhoe. They are lined (cased) with stones, brick, tile, or other material to prevent collapse. Dug wells have a large diameter, rely on shallow groundwater and are usually not much deeper than 15 feet below land surface. These wells are generally easy to identify in your yard because they are relatively large stone or concrete objects protruding from the ground and many have well houses built over them for protection or ornamental purposes.
- **Driven wells** are constructed by driving pipe into the ground and are also relatively shallow (approximately 30 to 50 feet deep).
- **Drilled wells** may be completed in unconsolidated deposits (primarily sand and gravel) that overlay bedrock or drilled through the unconsolidated earth deposits into the upper surface of the bedrock and cased with steel pipe. Drilled bedrock wells tap water from fractures in the bedrock and range in depth from less than 100 feet to more than 1,000 feet. Drilled bedrock wells can often be identified as a capped, 6-inch steel pipe sticking out of the ground.

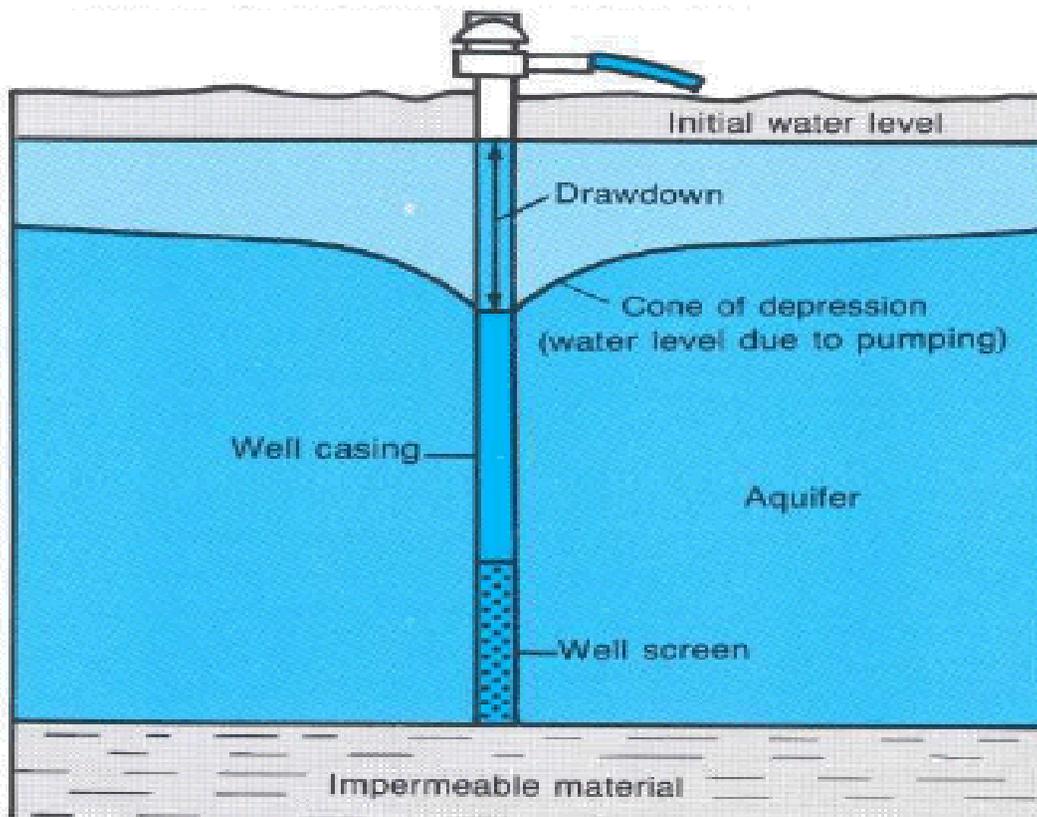

## Water Levels in Wells

Groundwater users would find life easier if the water level in the **aquifer** that supplied their well always stayed the same. Seasonal variations in rainfall and occasional drought periods affect the "height" of the subsurface water level. Withdrawing water from a well causes the water levels around the well to lower. The water level in a well can also be lowered if other vicinity wells are drawing water from the same sources (either sand and gravel or bedrock fracture zones). When water levels drop below the levels of the pump intakes, then wells will begin to pump air - they will "go dry."

Pumping a well lowers the water level around the well to form a cone of depression in the water table. If the **cone of depression** extends to other nearby wells, the water level in those wells will also be lowered. The cone develops in both shallow water-table and deeper confined-aquifer systems. In the deeper confined-aquifer system, the cone of depression is indicated by a decline in the observed water (*piezometric*) pressure and the cone may spread over a much larger and more linear area than in a water-table system. For a given rate of withdrawal, the cone of depression extends deeper in low-yielding aquifers than in high-yielding ones.

Even though water is present at some depth at almost any location, the success of obtaining an adequate domestic supply of water from a well depends on the permeability of the rock. Where permeable materials (sand and gravel) are present near land surface, a shallow well may be adequate. Elsewhere, such as where less permeable clay-rich material directly overlies bedrock (common in this area), a deeper well extending into bedrock may be needed.

## Troubles With Your Water Well

The typical modern residential water well system can generally produce water for many years with minimal servicing. However, as with any home system, your water system does require routine maintenance and service when necessary to continue operating properly. The following is a helpful online webinar:

### How to Keep your Pump and Pressure Tank in Good Condition

- <https://www.youtube.com/watch?v=6lvv0ZZwosE>

A basic well problem troubleshooting checklist is provided at the conclusion of this document, as well as useful links to more information.

The following are some telltale signs to look for that may alert you to well water problems:

### Warning signs associated with water well problems

- **Well is Pumping a Mixture of Air and Water**

If you turn on your kitchen faucet and out blasts a mixture of air and water, this can be an indication that something is wrong within the well. The worst case scenario is that your water table has dropped to a point that is at, or below the well pump and the pump is drawing in air some time during the pump cycle.

Another cause would be that the *well pump drop pipe* (the pipe that connects the pump to the top of the well and the water system) is broken or the subsurface pipeline from the well to the house is compromised.

Water system pipes are made of either iron pipe or plastic PVC or polyethylene pipe. They may become broken/corroded and develop cracks or even in some instances break apart, allowing for air to be sucked in.

In some cases, the water level is fine and there aren't any cracked pipes or fittings. Some groundwater tables do contain various types of gas. These gases may be dissolved within the water, yet later come out of solution and trigger water to spurt or sputter out of the tap. These types of gasses may be carbon dioxide, methane, hydrogen sulfide or other gasses, and can be harmful and cause significant safety and health problems. In the event that this is an ongoing problem, the well can usually be treated to eliminate these gases by means of aeration and degassing systems. Such problems should be looked into and repaired by a skilled well or pump company.

- **Well is Pumping Sand or large amounts of sediment**

If your well suddenly starts to pump sand, this is often a sign that the well is “*silting in*”, or filling with sand and silt. Typically, the well pump is installed so it is at least 10 – 20 feet above the bottom of the well.

When the pump turns on, the water level in the well can drop to a lower level. If the pump is down near the bottom of the well, sand and sediment can be sucked in.

In the case of wells with screens, the screen may have become degraded and is allowing sand or sediment in from the gravel pack around the well screen. In open rock wells, sand-sized material may be produced from bedrock fracture zones. Sand can quickly wear out the pump valves and fill up the bottom of the well with sand. In any case, a sudden presence of sand is not a good sign and the cause should be determined.

Sand can be removed from the water before the pressure tank or storage tank by means of a [sand and sediment trapper](#) or a 60 mesh filter screen with an automatic purge valve.

Above is an example of a sediment filter and a chlorine filter. If you have these you may need to change the filters periodically, check your owners manual.

- **Low Water Pressure**

There can be many causes of low water pressure. Including a failing well pump, stuck check valve, partially closed or bad gate/ball valve, and leaking/failing pressure tank. The pressure tank is usually located in the basement or a utility room, although some types of tanks may be buried underground.

The pressure tank has three purposes:

1. **To store water and provide water under pressure** when the pump is not running.
2. **To build up a reserve supply of water each time the pump runs**, so the pump has to start and stop less often. This serves to prolong the life of the pump.
3. **To provide a reserve supply of water** for use during times of high demand.

As the name implies, a pressure tank contains water under pressure. As water is pumped into the tank, it compresses the air in the tank until the pressure reaches a preset level — typically from 40 to 60 pounds per square inch (psi) — which automatically shuts off the pump.

When a faucet is opened, the air pressure in the tank forces water through the pipes until the pressure drops to another preset level — usually from 20 to 40 psi — which starts the pump again. A pressure switch starts and stops the pump at the preset pressure levels, and allows the system to work automatically.

The size of the tank usually depends on the amount of water produced by the pump in 1 to 2 minutes. The amount of water delivered by the pressure tank between the time the pump shuts down and the time it starts up again is called the "**drawdown**." The drawdown is typically much smaller than the overall size of the tank. Common pressure tank sizes range from 10 gallons to over 200 gallons. Tanks holding 20 to 44 gallons, which have a drawdown of 5 to 16 gallons, are the most frequently used. Larger tanks, or more than one tank, may be needed for low-yield wells or systems with high water demands.

The most common type of pressure tank design has a diaphragm or bladder, which provides a permanent separation between the air and the water in the tank. If the air and water are not separated, the water can eventually absorb all the air in the tank, a condition called "**waterlogging**." The pump will then rapidly turn on and off, which is called "**cycling**." It is a good idea to have a faucet placed near the pressure tank for flushing the tank and collecting water samples for testing.

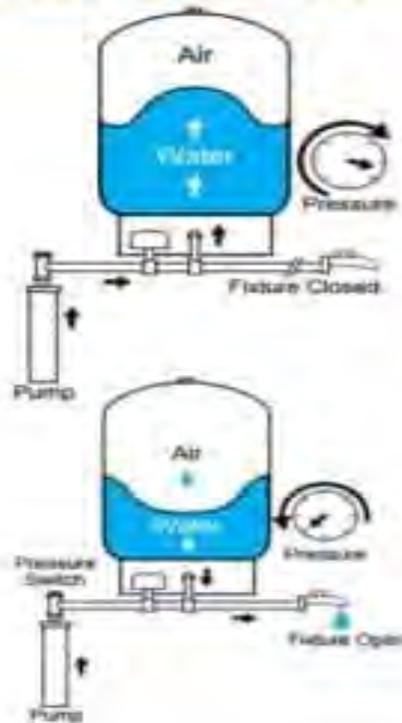

In some cases, iron bacteria clogs up the pipe nipple leading to the pressure switch causing the pressure switch to incorrectly sense the pressure. If your well water tests high in iron bacteria, your pump and/or well screen may become clogged with iron bacteria. Having the well cleaned with a special solution designed to remove iron bacteria, slime and scale can often restore the well to a better condition.

In some well systems, the pressure can be set too low for today's homes and appliances. It is sometimes possible to raise the pressure to provide adequate water pressure in the home, but care should be taken to not over-pressurize your home plumbing system..

The pressure switch can often be adjusted to accommodate this higher pressure, assuming the well pump and well can operate without difficulty at the higher pressure. Air pressure inside the pressure tank must be adjusted if the pressure switch is adjusted. A background video on How to Check and Adjust Pressure Tanks is provided at: <https://www.youtube.com/watch?v=w21qa2bMUh8>

## How a Well Tank Works

1. As the pump fills the tank with water, the air above the diaphragm is compressed. This increases the pressure in the tank and causes the pump to shut off.
2. When water is used, it is drawn from the tank and the pressure inside the tank decreases. The reduced pressure starts the pump and refills the tank.

The larger the well tank, the greater the storage capacity and the less the pump needs to run. This saves energy and extends pump life. Larger tank sizes also provide more consistent water pressure.

- **Electric Bill has increased dramatically**

When a pump wears out, or becomes blocked with sand, silt or iron bacteria, it needs to work much harder than if it was in good shape. This can result in an increasingly higher power cost.

Another common cause of a high power bill is when the check valve in the well goes bad. This enables water from your pressure tank to flow back down into the well, which then reduces pressure and signals to the pressure switch to turn the pump on again and pressurize the pressure tank. This on-and-off cycle may occur every few minutes and essentially allow the well pump to run practically 24 hours a day, causing a high power bill.

- **Pressure Switch and Pump Continuously Cycles On and Off**

This can be caused by one or more leaks in the home causing the well pump to run continuously. This can also be due to corrosion of well casing, liner or screen, causing holes. Holes can allow water of undesirable quality to enter the well. Look for leaking toilet flush valves, reverse osmosis systems, iron filters, and other backwashing filter systems that may be malfunctioning. As discussed above, another common cause is a failed check valve.

Another very common issue is the pressure tank losing its captive air pressure. This is easy to check. Turn off power to the well pump and run water after the pressure tank or in the house until there is no water pressure left. Using a tire pressure gauge check the Schrader valve on top of the pressure tank. It should be 2 PSI less than the cut-in or lower pressure. If your well turns on at 30 PSI, the pressure tank should have 28 PSI in it.

- **Water Quality has Changed**

Well water can also contain contaminants that can adversely affect health. These can either occur naturally, as in the case of arsenic or radon, or as a result of human activities such as chemical spills, improper waste disposal, or failing septic systems. Water quality can also change as a result of significant changes in the water level in your well. Wells that are old, shallow, in disrepair, or are not properly located and constructed are more likely to have unsafe water.

It is always preferable to have naturally safe well water, rather than relying on treatment. Drilling a well deeper may give additional protection from surface contaminants such as nitrate and spilled chemicals. There are a number of drinking water contaminants that can adversely affect the health of you and your family. Some of the most common include bacteria, nitrate, arsenic, radon, manganese, and synthetic chemicals such as fuels, solvents, and pesticides. If you live in an older home, reduce your potential exposure to lead in drinking water (from lead solder) by letting the faucet run for 30-60 seconds before using the water for drinking or cooking, especially after the water has not been used for more than six hours.

If testing does indicate the presence of a health-related contaminant, options may include the addition of treatment equipment, repair of the existing well, installation of a new well and removal of the source of contamination. For example, the presence of coliform bacteria in the water often does not indicate that the groundwater is contaminated, but that there is a problem with well construction, operation, or maintenance, allowing surface water or contaminants to enter the well. If multiple thorough well disinfection applications do not solve the problem, the well probably needs to be repaired, upgraded, or replaced.

A simple water quality test can tell you what you need to know about the chemical makeup of your water. This test is painless; a technician comes out and collects a couple samples of your water and takes it back to a lab for testing. Alternatively, residents can obtain sample containers from private laboratories or from the State Lab in Concord, collect water samples and drop them back off at the lab.

<https://video.nhpbs.org/video/planet-granite-test-it/>

NHDES recommends the following schedule of well testing\*:

- Test the water in a home with a private well before purchase. Thereafter:
- Bacteria & Nitrate, Yearly
- Standard and Radiological analysis, 3-5 years

The following conditions would call for more frequent testing:

- Heavily developed areas with land uses that handle hazardous chemicals.
- Recent well construction activities or repairs. NHDES recommends testing for bacteria after any well repair or pump or plumbing modification, but only after thorough flushing of the pipes.
- Unacceptable or borderline levels of contaminants found in earlier testing.
- Noticeable changes in the water, such as a change in taste, smell or appearance after a heavy rain, or an unexplained change in a previously trouble-free well.

Note that if you have any water treatment or filtration systems, the samples should be collected before treatment. This can generally be accomplished at the faucet installed at your pressure tank.

### **Water quality checklist**

- Change in water quality, often coupled with the sudden appearance of sediment in the water.
- Failure of the annulus or casing seal
- Iron bacteria or sulfate-reducing bacteria (biofouling)
- Change in water quality such as color, odor (e.g. rotten egg) or taste. Check inside of toilet tank for slime buildup and inspect pump.
- Contamination from man-made sources
- Changes in water quality as indicated by color, odor or taste. Compare results from regular water analyses for changes.
- Limited aquifer extent/Reduced aquifer recharge
- Increase in constituents such as hardness, iron, manganese and sulfate. Compare results from original water analyses for changes. Taste and color changes in the water may also occur.

- **Water Quantity has Changed**

Typically, dug wells, shallow bedrock wells, wells located near topographic high points, wells constructed in areas where bedrock is close to the ground surface and wells in hydraulic communication with high yield water production wells are more susceptible to failing. The typical homeowner does not have a means of determining a well's water level, although symptoms of well failure may be obvious.

<https://www.youtube.com/watch?v=6cJgPdM8kul>

### **Water Quantity checklist**

- No water.
- Sudden drops in water pressure or pressure surges.
- Air bubbles coming out of non-aerated faucets.
- Cloudy or heavily silted water.

There are two primary causes of well failure; a shortage of water, or other associated with the well casing, valves, waterlines, pump, pump electrical or pressure tank. A shortage of water can result from an extended drought period, large volume water withdrawals from nearby homes and businesses, or withdrawals from community water supply wells. Well problems can arise for many reasons, some simple (such as a thrown well pump circuit breaker) and others complex ( a silted-in well or burned-out pump) It is important to work with a licensed pump installer and/or well driller to diagnose the problem and determine the appropriate corrective action to take. If you are experiencing any of the above issues in your water system, turn the pump off to prevent your pump from continuously pumping air and burning itself out. A water pump can be turned off from a home's electrical panel. Also, address issues immediately as completing the work in the winter may not be possible or could be more costly.

## Routine Well Maintenance

Modern wells require remarkably little routine maintenance, but there are several steps that you can take to protect your well:

- When constructing new additions to your home, adding new buildings, or altering waste systems or chemical storage facilities, be sure to maintain adequate isolation distances.
- When landscaping your yard, keep the top of the well at least 1-foot above the soil surface. This will help keep insects, dirt, and other contaminants from entering your well. If you must grade within 1-foot of the top of the well, you should arrange with a licensed well contractor to extend the well casing. Do not pile snow, leaves, or other materials around the well. Slope the soil away from the well casing to promote proper drainage. Be careful when working around your well. Avoid damaging the well casing, which could jeopardize the sanitary condition of your well.

- Have any defective well parts repaired by a licensed well contractor or pump installer. Be sure the well cover or well cap on top of the casing is properly attached and in good repair. Any connections to the cap also should be watertight. Provide flood protection if the well is in an area subject to flooding.
- When working with hazardous chemicals like paint, fertilizer, pesticides, and motor oil, keep them away from your well.
- Take steps to prevent back-siphonage, which occurs when a drop in water pressure causes potentially hazardous substances to be sucked back through your plumbing system — and into your well. When connecting a hose to a faucet, do not submerge the hose end in a laundry tub, chemical tank, container, or sprayer — or leave it lying on the basement floor. When filling pesticide tanks or containers with water, avoid placing the hose inside the tank or container. The nozzle of the fill hose should be secured at a distance above the container or tank opening, which maintains an air gap. The distance should be equivalent to at least twice the diameter of the delivery pipe.
- Be aware of changes in your well, the water from your well, and the area around the well. Changes in how often your pump runs, or in the smell or color of the water, can tip you off to potential problems. If necessary, seek the advice of an expert, such as a licensed well contractor or a well specialist from the NH DES. Have your well inspected at the first indication of trouble. Have the water tested regularly for coliform bacteria and nitrate.
- Have any wells that are no longer in use permanently sealed by a licensed well contractor or a licensed well sealing contractor.

## Basic troubleshooting checklist

It is important that a homeowner does NOT open their well “to have a look around”! There is really nothing to see here. Your pump is probably several hundred feet down and you should not be trying to pull it out!! Further, opening a well can lead to the introduction of contamination. If the problem is thought to be the well itself, call a well contractor.

Problem	What to check / what it means	How to correct
No water	Well circuit breaker (usually a two pole breaker since the well pump is usually 240v)	Try turning the circuit breaker on, if it trips again call a licensed well contractor or licensed electrician
No water	Expansion Tank pressure gauge should be showing correct pressure (usually 20 to 40 psi)	Call a licensed well contractor
Sputtering water	Air in the system	Call a licensed well contractor Might be a malfunctioning pump or cracked water line between the pump and the house
Low water pressure	Check any sediment or other water filters for clogging Check screens in the faucet to ensure it isn't clogged It may be a pump issue, or an issue with the screen in the well	Clean the filter  Clean the screen  Call a licensed well contractor
Cloudy or muddy water	Sediment (silt/sand) is being pulled up by the pump	Call a licensed well contractor - the pump may not be filtering sediment out or well conditions have changed
Spike in electric bill	Well pump may be running all the time	Call a licensed well contractor - The pump may be malfunctioning - The water in the well is low - The pressure switch (which is mounted on the storage tank) has failed or is stuck
Funny taste / odor from the water	Conditions have changed; Here in NH it's not uncommon to get a sulfur (rotten egg) smell in the spring and again in the fall	Have your water tested by a state certified lab;

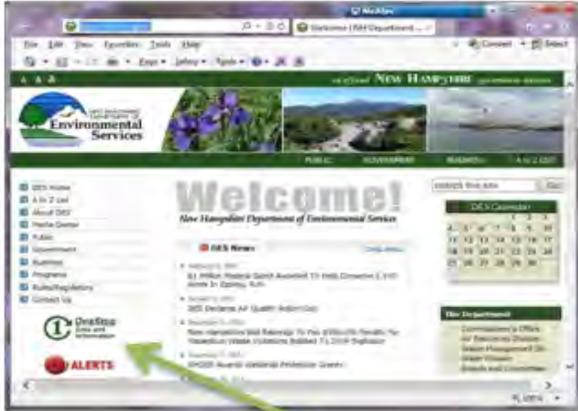

<p>How do we diagnose a pressure tank bladder issue?</p>	<p>Background videos on how to diagnose are provided at: <a href="https://www.youtube.com/watch?v=jfh3hB9XZu8">https://www.youtube.com/watch?v=jfh3hB9XZu8</a> <a href="https://www.youtube.com/watch?v=NzZI7WOnMMQ">https://www.youtube.com/watch?v=NzZI7WOnMMQ</a> <a href="https://www.youtube.com/watch?v=w21qa2bMUh8">https://www.youtube.com/watch?v=w21qa2bMUh8</a> <a href="https://www.youtube.com/watch?v=6lvv0ZZwosE">https://www.youtube.com/watch?v=6lvv0ZZwosE</a></p>

# HOW TO FIND WELL REPORTS FROM THE NHDES ONESTOP WEBSITE

1. Type in the NHDES webpage address:  
<http://des.nh.gov/>

2. Click on the green **OneStop** icon on the left.  
 3. Click on **OneStop Data**.

4. Click the **'Water Well'** box

5. Search by typing in your town and street name. For the best results keep the search entry as short as possible and omit the house number and extension (ST, RD, etc) from the address. You can also search by property owner, builder, driller, year completed and Well ID.

(ex. For 15 Settlers Green Way, Bedford, search Town 'Bedford' and 'Settler' OR 'Green' in address field.)

6. Click the **Enter** button.  
 7. Look through the search list of wells. Click **'Show'** to view an individual report, or click the **Save Results** icon to export the data for all of the results into excel.

- Please note:
- Well construction reports are filed by licensed water well contractors.
  - Reporting of well construction records was mandated by state law effective January 1, 1984. No records exist in the Well Completion Reports table prior to this date.
  - Road name changes for E911 are not reflected in the database.

QUESTIONS? Please call 603-271-1974.

## HOOKSETT RESIDENTIAL WELL WATER

HOOKSETT, NEW HAMPSHIRE

Prepared by New Hampshire Department of Environmental Services

March 23<sup>rd</sup>, 2021

Prepared under a Cooperative Agreement with the  
U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Toxic Substances and Disease Registry

Division of Community Health Investigations

Atlanta, Georgia 30333

# APPLETREE

Agency for Toxic Substances and Disease Registry's Partnership to Promote Local Efforts  
To Reduce Environmental Exposures

## Health Consultation: A Note of Explanation

A health consultation is a verbal or written response from the Agency for Toxic Substances and Disease Registry (ATSDR), or ATSDR's Cooperative Agreement Partners, to a specific request for information about health risks related to a specific site, a chemical release or the presence of hazardous materials. In order to prevent or mitigate exposures, a consultation may lead to specific actions, such as restricting use of or replacing water supplies, intensifying environmental sampling, restricting site access, or removing the contaminated material.

In addition, consultations may recommend additional public health actions, such as conducting health surveillance activities to evaluate health outcome data or trends in adverse health outcomes; measuring environmental chemicals in the human body to assess exposure (biomonitoring); and providing health education for health care providers and community members.

This recommendation of public health actions concludes the health consultation process for this site, unless additional information is obtained by ATSDR or ATSDR's Cooperative Agreement Partner which, in the Agency's opinion, indicates a need to revise or append the conclusions previously issued. The Letter Health Consultation becomes the written report retained for records and is publicly accessible.

Members of the ATSDR Cooperative Agreement in the state of New Hampshire, including members of the New Hampshire Department of Environmental Services – Environmental Health Program (NHDES EHP) and the New Hampshire Department of Health and Human Services – Division of Public Health Services (NHDHHS DPHS), conducted the following health consultation. This Letter Health Consultation report contains analysis and recommendations specific to a site of interest in the state of New Hampshire. Therefore, ATSDR, its officers and subject matter experts contributed exclusively in a supporting role.

**Memorandum**

Addressed:

March 23<sup>rd</sup>, 2021

To: Brandon Kernen, P.G., Administrator – Drinking Water and Groundwater Bureau, NHDES

From: Dr. Robert Thistle, Environmental Health Program

Re: Hooksett Residential Well Water Health Risk Assessment

Per your request, NHDES EHP has reviewed the analytical results of residential well water samples collected in 2019 and 2020 in the township of Hooksett, NH to (1) formally summarize the findings; (2) characterize potential exposures to these residential well users; and (3) recommend next steps to reduce exposure and protect public health for this community.

Review of the available residential well water sampling data indicates uranium and radon are the primary contaminants of concern in southern Hooksett. Of the wells tested, 64% exceeded acceptable health limits for uranium in drinking water as set by the Environmental Protection Agency. In addition, 90% of wells tested contain radon levels that may contribute to exceedance of recommended action levels in the air within homes. Finally, select residences have levels exceeding health standards for one or more additional contaminants such as arsenic (2%), manganese (23%), nitrates (2%), and per- and polyfluoroalkyl substances (PFAS) (22%).

A more detailed analysis of the results, including a summary of known human health risks associated with exposure and recommendations for exposure reduction, is outlined in the following document.

## Background and Statement of Issues

In September of 2019, groundwater testing around the town of Hooksett, NH detected elevated levels of uranium, and the State responded to assess the risk and propose ways to protect the health of the public. This letter is a summary of our findings; it includes guidance to help the requester, as well as municipal officials and the public, understand risk to the community and what the recommended actions are to reduce risk.

The NHDES Drinking Water and Ground Water Bureau (DWGB) responded to this by partnering with the United States Environmental Protection Agency (EPA) to conduct additional sampling of residential wells in Southern Hooksett. NHDES developed a sampling plan in a targeted study area to test the drinking water quality for uranium and other potential groundwater contaminants. The aim of this sampling effort was to inform homeowners, and provide guidance regarding actions to reduce exposure and protect health. This study was made possible at no cost to the homeowners through the support of the EPA Region 1 Laboratory and the New Hampshire Drinking Water and Groundwater Trust Fund.

Water samples were collected from residences in southern Hooksett beginning in September 2019 and concluding in February 2020. Analysis of all contaminants in these samples was completed in October 2020, at which time DWGB requested support from EHP in order to evaluate potential health risks and to formulate recommendations based on findings. Staff support for this risk assessment activity was provided by ATSDR's Partnership to Promote Local Efforts to Reduce Environmental Exposure (APPLETREE) Cooperative Agreement.

The town of Hooksett is located in Merrimack County in south-central New Hampshire, with an estimated population of 14,569 (NH Department of Health and Human Services, 2019). Hooksett is situated on the Merrimack River between the city of Manchester to the south and the city of Concord to the north. According to 2010 US Census data, Hooksett contained 4,926 households, out of which ~34% housed children under the age of 18. Hooksett mirrors the state of New Hampshire in many demographics, including race, age distribution, healthy lifestyle habits and indices of cancer (NH Department of Health and Human Services, 2019).

New Hampshire has an abundance of groundwater, which many residents utilize for drinking, food preparation, recreation, irrigation and hygienic practices. More than 500,000 residents, nearly half (40-46%) of the state's population, source drinking water from residential wells (NH Department of Environmental Services, 2014). These wells are not regulated by the same standards for safe consumption and use as public water sources in the state of New Hampshire, and can be subject to certain naturally-occurring contaminants like arsenic, iron, manganese and uranium, in addition to human-caused contamination. While the majority of ground water is safe for consumption and use, NHDES urges well users to periodically monitor well water for contaminants that can impact their health.

Based on the preliminary detection of uranium in well water, residents with potentially contaminated water were identified in an area of Southern Hooksett. NHDES and EPA undertook a holistic screening approach for uranium and additional potential contaminants in the residential water sources within the surrounding area. This Letter Health Consultation addresses three key issues:

1. Identification of potential risks to human health from contaminated residential drinking water.
2. Recommended Actions for residents who are exposed to these potential risks.
3. Additional concerns for residents of Southern Hooksett and other stakeholders.

## Current Sampling Event and Investigation

NHDES staff and partners sampled 138 residential wells located in an approximately 2.5 square-mile area of southern Hooksett, east of the Merrimack River and west of Tower Hill Pond (Appendix A, Figure 2). The samples were taken from pre- and post-treated sources, where available. Wells were selected based on a targeted area surrounding initial findings of elevated levels of uranium in groundwater. Initial screening revealed concentrations of uranium exceeding the EPA Maximum Contaminant Level (MCL) of 30 micrograms per liter ( $\mu\text{g/L}$ ) in a small number of potable water sources.

Subsequent water analysis included, but was not limited to, the following analytes.

- Volatile organic compounds (VOCs)
- Trace metals/metalloids/Inorganics
- Per- and polyfluoroalkyl substances (PFAS).
- Radiological isotopes

Results are summarized by compound category in Appendix B, Tables 1-5. VOCs were measured using EPA Method 524.2 by ChemServe Environmental Analysts (Table 1). EPA partners provided metals analysis (Table 2). Samples were analyzed by Inductively Coupled Plasma Mass Spectrometry (ICP-MS) as detailed in EPA Methods 200.2 and 200.8 for total recoverable metals. A small number of these samples were analyzed independently of EPA laboratories. As NHDES recently proposed ambient groundwater quality standards (AGQS) for certain PFAS, NHDES also analyzed 166 samples for 25 PFAS using Isotope Dilution, by Eurofins TestAmerica – Buffalo (Table 3). Radon in water was measured using Standard Method 7500 by Nelson Analytical Lab (Table 4).

Of the 124 analytes screened, 45 contaminants were within the range of detection in at least one or more residential wells. These concentrations were compared against ATSDR comparison values (CVs) to identify exposures of concern (Tables 1-5). When ATSDR CVs were not available, other guidance values from EPA or the State of New Hampshire were substituted in place. Due to the diversity of PFAS and their categorization as emerging contaminants, only those with ATSDR CVs or state-derived MCLs were further analyzed. For radiological compounds, EHP consulted with ATSDR subject matter experts (SMEs) for best available methods to characterize the radiological and chemical hazards of these substances.

Of these wells, 82 (64%) exceeded the regulatory MCL for use as a drinking water source due to the level of uranium. For radon, EPA has proposed a requirement for drinking water to contain less than 4,000 picocuries per liter (pCi/L) (this proposed MCL is non-regulatory and part of a multimedia mitigation program). In wells tested, 90% exceeded this value. For uranium and radon comparisons, sample data was also compared to available state data (Figure 1) (Flanagan, 2014); (Bartholomay, 2007). Concentrations and maps can be seen in Figures 2 and 3, Appendix A. Other contaminants of concern are listed in Table 5.

NHDES notified individual residents about their results with reports specific to their residence. Notifications included a complete list of analytes measured as well as instances of exceedance of federal and state guidelines for exposure. Notifications also included resources for more information, recommendations for actions to reduce risk by exposure, and pertinent contact information for NHDES employees. This Letter Health Consult expands on that summary.

## Discussion

The key issues discussed here are:

1. Identification of potential human health risks.
2. Recommended Actions to reduce risks.
3. Additional concerns for residents and stakeholders.

### Potential risks to human health

This health consultation evaluated exposure and risks from the use of residential wells as a source of drinking water. While exposure routes can include ingestion of drinking water, inhalation of gas and vapors, and dermal absorption; findings from testing associated with this health consultation primarily indicate ingestion as the exposure route of concern. The one exception to this is with radon. Resource limitations and lack of data to predict elevated levels of radon in drinking water prior to sampling impacted programmatic decisions to limit environmental testing to water; however, levels of radon in water are closely correlated with radon in air. Based on water results, we would predict the presence of radon in air.

It should be noted that health risks from exposure to radon by inhalation supersede those of ingestion. Therefore, this report assesses the potential impact on human health from consumption of contaminated drinking water with the understanding that inhalation should be considered as a follow up exposure route for future analysis. Other chemicals for which inhalation or dermal absorption can act as routes of exposure were either present at very low levels or not detectable (for instance, VOCs). Therefore, these routes of exposure were excluded from detailed analysis.

To evaluate potential risk, NHDES uses the dose of a given chemical to which a person is exposed from drinking water. The dose is estimated using a measured concentration from the drinking water source, a typical person's body weight, a duration of time, and other exposure factors (see Appendix C). The dose is then compared to ATSDR (CV) doses. When ATSDR lacks a CV for a given chemical, alternative guidance from either EPA (for example, a MCL) or the State's drinking water values is applied. If the dose exceeds the CV, then the analyte is further evaluated in a variety of exposure scenarios in order to inform the public if the risks require action, such as switching water sources to bottled water or installing appropriate filtration. If the dose is far below the CV or the analyte is not detected, the analyte is not retained for additional evaluation.

For the purpose of this report, contaminants of concern are defined as those contaminants that were found in one or more wells at levels likely to adversely impact human health. These levels are defined by exceedance of ATSDR, EPA or NHDES risk-based guidance values for drinking water. A complete list of contaminants tested for is included in Table 1-4; and those identified as contaminants of concern based on findings are included in table 5, and discussed in detail in this report. In addition to this report, individual well owners were provided with their specific results.

### Uranium

Uranium is a radioactive, heavy metal that occurs naturally in nearly all rocks and soils. Some parts of the United States exhibit higher than average uranium levels due to natural geological formations, such as sedimentary rock and granite formations. These metal deposits have the potential to leach into groundwater. Over the long-term, consumption of water containing levels of uranium above the MCL is not advisable. Uranium that is absorbed is deposited throughout the body with the highest levels found in the bones, liver and kidneys (Agency for Toxic Substances and Disease Registry, 2013). Animal

studies indicate that kidney damage is the primary toxic effect of uranium exposure and that this damage increases with uranium solubility and duration of exposure (Agency for Toxic Substances and Disease Registry, 2013).

ATSDR relies on the drinking water guidance value (for instance, MCL) developed by EPA, and does not have its own minimal risk level (MRL) or CV. Uranium was detected in most residential wells (more than 60%, Table 4) above the EPA MCL of 30 µg/L from untreated sample locations. Elevated uranium in drinking water is consistent with compositions predicted for the geological formations in southern Hooksett (Lyons, 1997). For wells with a uranium level at or above 30 µg/L, treatment to remove uranium should be installed or an alternate source of drinking water such as bottled water should be utilized. As levels of contaminants may change over time, retesting is recommended at least every 3-5 years for wells with a uranium level under 30 µg/L (New Hampshire Department of Health and Human Services, 2019).

### Radon

Radon is a noble gas byproduct from the radioactive decay of crustal elements like uranium and radium. Radon is released into soil pockets where it can diffuse into surrounding air, water and soil. Radon gas emits energetic alpha particles during decay. Almost all health risks from radon in water come from breathing indoor air with radon (which accumulates depending on factors like ventilation, seasonal change, and aerosolization of dissolved radon) and exposure to radon gas is the second leading cause of lung cancer in the United States, after smoking. More than 15,000 – 21,000 deaths are attributed annually to radon-related lung cancer (National Research Council, 1999). This risk is increased for people who are also exposed to cigarette smoke (RW, 2001). Based on data from the New Hampshire State Cancer Registry and Center for Disease Control (CDC) estimates about the proportion of lung cancer deaths attributable to radon at the national level, it's estimated that approximately 100 lung cancer deaths each year in New Hampshire are attributable to radon. This estimate does not take into account additional risk factors, including the age of the New Hampshire population, lung cancer screening rates and the distribution of stage at diagnosis, and, perhaps most importantly, smoking rates for the state.

Enforceable federal or state standards for radon present in drinking water or indoor air do not currently exist. However, EPA and other agencies do issue public health advisories for radon in drinking water (US Environmental Protection Agency, 1999) and indoor air (US Environmental Protection Agency, 2016). The majority (69%) of sampling results for radon in water samples collected in the study area show radon in water levels exceeding 10,000 pCi/L. As a general practice, NHDES strongly recommends that private wells with radon concentrations at or above 10,000 pCi/L install treatment for the water in conjunction with mitigation of indoor air radon. For private wells with radon concentrations between 2,000 and 10,000 pCi/L, the treatment of water may be advisable if air concentrations in the home exceed 4 pCi/L (US Environmental Protection Agency, 2016)

### Arsenic

Arsenic is a naturally occurring element in minerals of Earth's crust as well as a byproduct of the smelting process of certain metals like copper and lead. Inorganic arsenic is a well-documented toxic agent, causing hyperkeratinization (abnormally rapid shedding of skin cells) and hyperpigmentation of skin (darkening of patches of the skin). Cardiovascular, pulmonary and neurological functions are also impaired by arsenic exposure through consumption, with acute, high-level exposures causing encephaly. Following chronic exposure, pregnant women are at higher risk for pregnancy complications and children are at higher risk for neurodevelopmental effects (Gilbert-Diamond, 2016; Farazan, 2016); (Farazan, 2016). Arsenic is also a

known carcinogen implicated in increased tumor incidence in many organs, including the bladder, lung and skin (non-melanoma), following chronic exposure (Agency for Toxic Substances and Disease Registry, 2007).

Arsenic was detected above the ATSDR CV of 16 µg/L (from the untreated sample location) at three residences. At 3% of wells, concentrations exceeded the proposed New Hampshire health limit for arsenic of 5 µg/L, which will be lowered from 10 µg/L in July 2021 to protect neurodevelopment and IQ scores for infants and small children. The new value is also being lowered to protect against the carcinogenic effects of long-term exposure (Borsuk, 2015) (NH Department of Environmental Services, 2020).

### Manganese

Manganese is a natural element found in soil and groundwater within New Hampshire, and is also an essential nutrient in our diet. Excessive exposure to manganese is associated with neurological effects, including neuro-degenerative symptoms like Parkinson's, altered emotional states and neurodevelopmental delays in children. This can be especially problematic for formula-fed infants, as their body processes (or metabolizes) manganese differently than older children and adults.

ATSDR does not suggest values for exposure limits to manganese in drinking water, but does recognize the potential for human health risk as determined by EPA. Manganese was detected at select residences above the EPA lifetime health advisory value of 0.300 milligrams per liter (mg/L) from the untreated sample locations. Over the long-term, consumption of water containing levels of manganese above this level is not advisable.

### PFAS

Per- and polyfluoroalkyl substances (PFAS) are a group of man-made organic chemicals used in a variety of industrial and commercial applications. Certain PFAS are highly-bioaccumulative and associated with a variety of adverse health outcomes, including increased cholesterol, changes in liver enzyme levels, altered hormone function, delayed growth in infants and potentially certain cancers (Sunderland, 2019). The ATSDR CVs for these determined little to no intermediate exposure risks (less than 1 year) for four PFAS.

In 2019, NHDES adopted rules that establish health-based MCLs and AGQS for four PFAS that include: 12 parts per trillion (ppt) for perfluorooctanoic acid (PFOA), 15 ppt for perfluorooctane sulfonic acid (PFOS), 18 ppt for perfluorohexane sulfonic acid (PFHxS), and 11 ppt for perfluorononanoic acid (PFNA). These values were based on chronic protection of women who are planning on becoming pregnant or breastfeeding, and are therefore lower than the ATSDR CVs (NH Department of Environmental Services, 2019). Approximately 21% of residential wells exceeded the AGQS for PFOA, while 4%, 3%, and < 1% of residential wells exceeded the AGQS for PFNA, PFOS, and PFHxS, respectively.

### Recommended Actions for Homeowners

Based on the available information, there are three key recommended actions for homeowners and community members in the Southern Hooksett area.

1. **Encourage supplemental testing of wells.** Unfortunately, NHDES was not able to conduct an exhaustive survey of all possible drinking water contaminants for all residential wells, so additional testing is advisable before determining any treatment system options for a home. Some treatment system options are not designed to remove all types of contaminants, whereas others may be more economically feasible and still sufficient. NHDES recommends routine well testing every 3-5 years (except for bacteria and nitrates, which should be checked annually) (NH Department of Environmental Services, 2020). NHDES can be contacted for discussion of test results. At the end of this document are

links to resources with additional information regarding contaminants in drinking water and treatment options.

- 2. Conduct home air testing for radon gas.** Given the elevated levels of uranium and radon in drinking water for homes in the area, there is an increased probability that the indoor air of homes in the area will contain elevated levels of radon. Radon in the air of homes may come from radon in the water or radon gas infiltrating the home from the ground, or some combination of the two. DPHS recommends taking remedial action when air testing results are above the EPA Action Level of 4 pCi/L (NH Division of Public Health Services, 2011). More information can be found at the [NHDHHS Radon Program](#) and [NHDHHS Radon in Air Reduction](#) websites, including where in the home to test and during which time of year

At the end of this document are links to resources with additional information regarding contaminants in drinking water as well as testing, treatment and mitigation options.

- 3. Install filtration/treatment on untreated wells.** NHDES strongly recommends treatment of residential well water when contaminant levels are elevated and exceedances of health guidelines are observed. This is especially true for those with exceedances of uranium and radon, as the concentrations of these were far above the guidance for chronic exposures. At the end of this document are links to resources with additional information regarding contaminants in drinking water and treatment options.

For residents pursuing additional testing, the date of this letter health consultation may serve as a starting date for planning a 3-5 year follow up test. An accompanying fact sheet has been created for residents to summarize the recommended actions. New Hampshire APPLETREE will make this available and will also contact residents with future opportunities to engage with APPLETREE members regarding environmental health results and any remaining concerns.

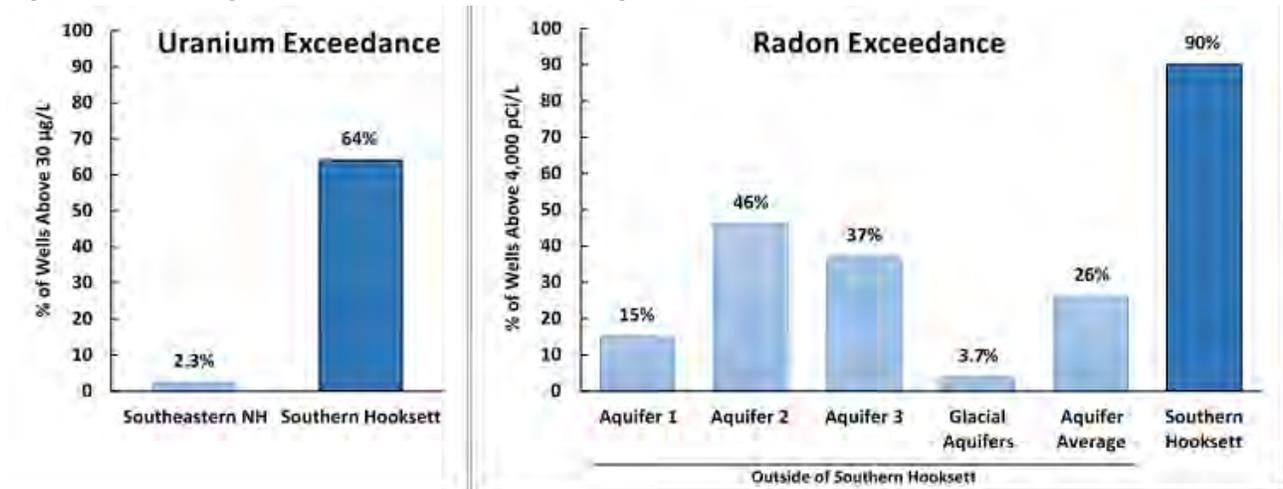

### Recommended Actions for Government Agencies and Research Institutions

It is possible that residential well sampling in this report is incomplete due to limitations in program funding and staffing. Pending the availability of resources, additional testing could be conducted to determine the full extent of geographic exposure. In addition, the community could be considered for health-related or biomonitoring studies to better assess and understand potential impacts of exposure. These studies would require additional resources at the state or federal level and involvement of other stakeholders such as academic institutions or universities.

### Additional Concerns

The elevated presence of both uranium and radon present a radiological health hazard for residents. The basic philosophy of radiation protection at ATSDR is the concept of ALARA (as low as reasonably achievable) outlined by EPA (US Environmental Protection Agency, 1988). As a guidance, all exposure should be kept as low as reasonably achievable and the regulations and guidelines are meant to give an upper limit to exposure.

**Figure 1: Percentage of Residential Wells Exceeding Guidance values for Uranium and Radon**

**Figure 1:** Levels of Uranium and Radon exceed human health guidance values with higher frequency in residential wells of Southern Hooksett compared to other regions in New Hampshire. Samples measured by United States Geological Survey (USGS) in Hillsborough, Rockingham and Strafford counties (this data set does not include Hooksett) showed only 2.3% of 232 wells had Uranium exceeding the EPA MCL of 30 µg/L compared to 64% of wells analyzed from Hooksett (Flanagan, 2014). A 2007 USGS report also measured samples from four aquifer cohorts in New Hampshire, demonstrating that 26% of 108 wells (Aquifer Average) contained radon exceeding the “US EPA human-health benchmark” of 4,000 pCi/L compared to 90% of wells analyzed from Hooksett (Bartholomay, 2007).

### Public Health Implications

Some contaminants detected in Hooksett residential wells pose potential risks to human health. However, these risks can be reduced by homeowners. In addition, it may take a lifetime of exposure (over xx years) in order to increase the risk significantly for some contaminants. It is important to note that increased risk does not mean that a negative health outcome will definitely occur. Instead, an increased risk translates to an increased chance or likelihood of a negative health outcome occurring.

Testing of residential wells in Southern Hooksett suggests that the most common contaminants to drinking water in the area of study are uranium and radon. Many wells also have high levels of arsenic, manganese and PFAS. The majority of these contaminants have the potential to adversely impact human health following chronic exposure, meaning when exposure concentrations are elevated over a number of years. However, for certain contaminants, evidence indicates that even short-term exposure can impact health negatively for special populations like infants and pregnant women. Human health implications, treatment options and additional resources are provided below.

Contaminants present in private wells found in the Hooksett community are associated with increased risk for health conditions following chronic exposure, including:

- Certain cancers, associated with exposure to arsenic and radiological contaminants (radon and uranium).
- Kidney damage, associated with chronic exposure to uranium.

- Neurological effects in infants and young children, associated with chronic exposure to manganese.
- Increased cholesterol, changes in liver enzyme levels, altered hormone function, delayed growth in infants and potentially certain cancers, associated with chronic exposure to certain PFAS.
- Impact to fetal growth and increased infections in first year of life, associated with acute exposure to arsenic during pregnancy.

Understanding risks associated with environmental exposures can help to guide changes to reduce risk and to promote health. Similarly, there are a number of additional modifiable risk factors associated broadly with chronic disease; recommendations to reduce the overall health risk burden include eating a healthy and varied diet, avoiding smoking and other tobacco products, limiting consumption of sugar and sugary beverages, limiting alcohol consumption, incorporating physical activity into daily life, and getting adequate sleep. These actions, combined with appropriate water treatment, will reduce long-term health risk for residents of New Hampshire. It is also recommended that health risks and any specific health concerns be discussed between patients and medical care providers. This helps strengthen and optimize specific patient care.

## Conclusions

Although some contaminants detected in Hooksett residential wells pose potential risks to human health, homeowners can take steps to reduce these risks. Learning about a new health risk can be worrisome for many people, yet there are simple and effective actions residents can take to test and then reduce the contaminants in their drinking water.

At the end of this document are links to resources with additional information regarding contaminants in drinking water and treatment options. NHDES strongly recommends treatment of residential well water when contaminant levels are elevated and exceedances of health guidelines are observed. Unfortunately, NHDES was not able to conduct an exhaustive survey of all possible drinking water contaminants, so additional testing is advisable before determining any treatment system options for a home. Some treatment system options are not designed to remove all types of contaminants, whereas others may be more economically feasible and still sufficient.

*For more information on how to test well water and a guide for home buyers:*

[NHDES Residential Wells webpage.](#)

[NHDHHS Water Testing Guide](#)

The most effective and inexpensive method homeowners can take to remove a large spectrum of contaminants in their drinking water is to install a point-of-use reverse osmosis (RO) treatment system. These systems typically are installed under a kitchen sink or in a basement, and provide water to a dedicated tap at the kitchen sink and potentially a refrigerator water/ice dispenser. Depending on the type of treatment system and who completes the installation, installing a reverse osmosis system will cost approximately \$200-\$1500. Please note that local plumbing codes may require a permit when installing water treatment systems.

*For questions regarding well water test results and treatment options contact NHDES Water Analysis Laboratory:*

**Table 7: Arsenic Exposure Risk Summary**

**Table 8: Manganese Exposure Risk Summary**

**Table 9: Exposure Risk Summary for Select PFAS Compounds**

**Tables 10-13: Exposure Risk Summaries for Individual PFAS**

**Notes for all Tables:**

**Keys for All Output Tables – For more calculations and further details see Appendix C**

BW	Body Weight; weight in kilograms
CR	Cancer Risk; CR > 10 <sup>-6</sup> indicates increased risk
CREG	Cancer Risk Evaluation Guide; basis for how cancer risk is evaluated
CSF	Cancer Slope Factor; a cancer specific scenario exposure factor for a contaminant
CTE	Central Tendency Exposure; the central point used from a ranged exposure data set
CV	Comparison Value; an ATSDR standard dose or concentration for a contaminant
ED	Exposure Duration; the amount of time exposed to a contaminant
EF	Exposure Factor; a corrective factor applied to evaluation to certain contaminants
EPC	Exposure Point Concentration; the concentration that is measured at a site
HQ	Hazard quotient; a fraction to determine if appreciable risk is present or not; HQ > 1 indicates increased risk
MCL	Maximum Contaminant Level; a US EPA standard concentration for a contaminant
MRL	Minimal Risk Level; an ATSDR dose at which no appreciable, non-cancer risk is expected
NC	Not Calculated
ND	Not Detected
RME	Reasonable Maximum Exposure; The maximum point used from a ranged exposure data set
RMEG	Reference dose Media Evaluation Guide; basis for how non-cancer risk is evaluated

§ Cancer risk (CR) is derived for both CTE (12 years) and RME (33 years) residential occupancy periods. For children, CRs are derived for a combined child receptor: CTE (12 years) and RME (21 years) at a given residence. For the CTE child CR, the combined child is the sum of the cancer risks for each age group for the first 12 years of exposure only. The RME CR for the combined child is derived by summing all the cancer risks for each age group from birth to < 21 years. The adult CR assumes living at the residence for 12 (CTE) or 33 (RME) years. Cancer risks can be calculated for contaminants with cancer slope factors stored in PHAST.

† Hazard Quotients are greater than 1. The health assessor should conduct further toxicological evaluation.

‡ Cancer risk is greater than  $1.0E^{-6}$ . The health assessor should conduct further toxicological evaluation.

Ω Cancer risks are not calculated for pregnant women and lactating women. Their cancer risks are similar to an adult woman exposed for 33 years. If you would like to calculate cancer risks for pregnant women and lactating women, enter site-specific scenarios.

1 Carcinogen; No cancer slope factor (CSF); See CVs and Health Guidelines Module for additional cancer class information.

3 Carcinogenicity not determined; Cancer risk was not calculated.

## Appendix C: Calculations, Exposure Parameters and Exposure Factors

Contaminants of concern were evaluated further using ATSDR's online Public Health Assessment Site Tool (PHAST). Concentrations were entered as 95% of the concentration mean, and intake rate (IR), exposure factor (EF) and body weight (BW) were entered as default fault values described in ATSDR's Exposure Dose Guidance for Water Ingestion and summarized in the tables below. These equations yield an exposure dose (D) in milligrams per kilogram per day (mg/kg)/day for each population demographic listed, which is compared to a corresponding protective dose as described in each scenario. For example, this corresponding protective dose is often an ATSDR MRL, EPA MCL, or State of New Hampshire guidance value for AGQs.

### ATSDR Comparison Values

ATSDR CVs are media-specific concentrations used to screen and identify contaminants that require additional evaluation due to concern for health risks CVs can be based on either carcinogenic or non-carcinogenic effects (Agency for Toxic Substances and Disease Registry, 2018). CVs based on carcinogenic effects account for a lifetime exposure with a calculated excess lifetime cancer risk of one extra case per one million exposed people. When a cancer and non-cancer CV exists for the same chemical, the lower of these values is used in the data comparison to ensure a more protective assessment.

CVs are derived using standard default exposure assumptions and are not site-specific. For contaminants detected below their respective CVs, exposure is not anticipated to result in adverse health effects. Contaminants detected at concentrations that exceed their respective CVs, do not necessarily represent a health threat. For oral exposure, non-cancer health effects are evaluated with either Environmental Media Exposure Guides (EMEGs) or MRLs and cancerous effects with Cancer Risk Evaluation Guides (CREGs). CVs for the concentrations of contaminants of concern are presented in Table 5. *Water contaminant concentrations that exceeded at least one CV were evaluated quantitatively.* Doses used in PHAST default to the most protective EMEG or CREG for all scenarios considered.

### ATSDR MRLs for Uranium and Radon

- **Uranium:** An MRL of (0.002 mg/kg)/day has been derived for acute-duration oral exposure ( $\leq 15$  days) to soluble compounds of uranium.
- An MRL of 0.0002 (mg/kg)/day has been derived for intermediate-duration oral exposure (15– 364 days) to soluble compounds of uranium.
- Derivation of an MRL using the NOAEL of (54 mg/kg)/day identified in the two-year uranyl fluoride rat study (Maynard and Hodge 1949; Maynard et al. 1953) as the point of departure was considered; the NOAEL/LOAEL approach was used because the lack of incidence data for most exposure groups precluded using benchmark dose analysis to identify a point of departure. Using this point of departure would result in a MRL that is higher than the intermediate-duration oral MRL for uranium; thus, a chronic-duration oral MRL has not been derived (Agency for Toxic Substances and Disease Registry, 2013).
- Due to lack of consistent drinking water MRL toxicity data in humans, ATSDR recommends using EPA's MCL of 30  $\mu\text{g/L}$  for exposure comparison.

- **Radon:** No acute-, intermediate-, or chronic-duration oral MRLs have been derived for radon due to a lack of suitable human or animal data regarding health effects following oral exposure to radon and its progeny (Agency for Toxic Substances and Disease Registry, 2012)
- As both uranium and radon are radioactive, naturally-occurring environmental elements with limited CVs, ATSDR subject matter experts were invited to review the sampling data and provide recommendations for public health implications. **All radionuclides are considered potentially carcinogenic**, although the radioactivity of naturally-occurring uranium and radon is low.

### Exposure Parameters

Water Ingestion Exposure Dose Equation					
$D = (C * IR * EF) / BW$ D = Exposure Dose (mg/kg)/day, C = Contaminant Concentration (mg/L), IR = Intake Rate (L/day), EF = Exposure Factor (unitless), BW = Body Weight (kg)					
Exposure Group	Body Weight (kg)	Age-Specific Exposure Duration (years)	Intake Rate (L/day)		
			CTE (Central Tendency Exposure)	RME (Reasonable Maximum Exposure)	Custom
Birth to < 1 year	7.8	1	0.504	1.11	
1 to < 2 years	11.4	1	0.308	0.893	
2 to < 6 years	17.4	4	0.376	0.977	
6 to < 11 years	31.8	5	0.511	1.4	
11 to < 16 years	56.8	5	0.637	1.98	
16 to < 21 years	71.6	5	0.770	2.44	
Adult	80	78	1.23	3.09	
Pregnant Women	73	NA	0.872	2.59	
Lactating Women	73	NA	1.67	3.59	

## Exposure Factors

Duration	Days	Weeks	Years	Non-Cancer Exposure Factor	$EF_{\text{cancer}} = EF_{\text{non-cancer}} \times \text{Age-Specific Exposure Duration (years)} / 78 \text{ years}$
Acute				1	
Intermediate	7			$\frac{1}{7}$	
Chronic	7	52.14	78	$\frac{1}{78}$	

### Keys for All Output Tables

§ Cancer risk (CR) is derived for both CTE (12 years) and RME (33 years) residential occupancy periods. For children, CRs are derived for a combined child receptor: CTE (12 years) and RME (21 years) at a given residence. For the CTE child CR, the combined child is the sum of the cancer risks for each age group for the first 12 years of exposure only. The RME CR for the combined child is derived by summing all the cancer risks for each age group from birth to < 21 years. The adult CR assumes living at the residence for 12 (CTE) or 33 (RME) years. Cancer risks can be calculated for contaminants with cancer slope factors stored in PHAST.

† Hazard Quotients are greater than 1. The health assessor should conduct further toxicological evaluation.

‡ Cancer risk is greater than 1.0E-6. The health assessor should conduct further toxicological evaluation.

Ω Cancer risks are not calculated for pregnant women and lactating women. Their cancer risks are similar to an adult woman exposed for 33 years. If you would like to calculate cancer risks for pregnant women and lactating women, enter site-specific scenarios.

1 Carcinogen; No cancer slope factor (CSF); See CVs and Health Guidelines Module for additional cancer class information.

3 Carcinogenicity not determined; Cancer risk was not calculated.

**Re: Water Quality Survey**  
Town of Londonderry  
Londonderry, New Hampshire

Dear Mr. Cotton:

Nobis Group® (Nobis) is pleased to provide this *Water Quality Survey* (WQS) for the Town of Londonderry. This WQS was prepared in general accordance with a proposal authorized on September 6, 2018.

The enclosed report provides a summary of water quality sampling completed throughout the town of Londonderry during 2019. Thirty-two private water supplies and thirteen surface water samples were collected as part of this WQS. This report is subject to the limitations in Appendix A.

Thank you for the opportunity to be of service to you. Please do not hesitate to contact us if you have any questions.

Sincerely,

NOBIS GROUP®

Mark R. Henderson, PG  
Senior Project Manger

## 1.0 INTRODUCTION

On behalf of the town of Londonderry (client), Nobis Group® (Nobis) prepared this Water Quality Survey (WQS) for work completed within the town of Londonderry, New Hampshire. The town and participating properties are depicted on **Figure 1**.

This report presents information collected from field sampling activities completed in 2019. This report is subject to the Limitations provided in **Appendix A**. Private drinking water supply and surface water sampling was completed in general conformance with our proposal authorized on September 6, 2018. We note, discussion and negotiation with NHDES occurred throughout the fall of 2018 eventually successfully creating a teaming arrangement to modify the sampling program.

### 1.1 Summary of Prior Sampling

An Environmental Baseline Study of Water Well and Surface Water Quality from the town of Londonderry was first completed in 2001 and 2002. The Town of Londonderry established the Environmental Baseline Study Committee (EBSC) in March 2001. The primary objective of the EBSC was to establish a baseline of the environmental quality within the town, with specific regard to well water quality and surface water quality. The EBSC randomly selected over 600 residential locations from the Town's homeowner database, and only included homes that had individual deep or dug wells and the ability to bypass any type of treatment or filtration system. The sampling program ultimately consisted of 154 residential participants at locations distributed throughout the town. Areas where town water or community wells serve the population were not included in the study.

Results from the baseline study found 27% of the wells sampled contained the metal arsenic at a concentration above 10 micrograms per liter (ug/l) within the groundwater analyzed. Additionally, lead was detected within 6 water supply samples at concentrations in excess of the maximum concentration limit (MCL). Copper, zinc, cadmium and nickel were also detected but below their respective MCLs. The gasoline additive, methyl tert butyl ether (MTBE) was detected within twelve (12) water supplies but generally below the Ambient Groundwater Quality Standard (AGQS) of 13 ug/l. Note, per- and polyfluoroalkyl substances (PFAS) were not analyzed during the 2001/2002 baseline sampling.

The 2019 sampling activities associated with this WQS were completed to augment information and data collected during the original Baseline Study. A summary of our field methods, the sampling results, and our recommendations follow.

## **2.0 PROPERTY IDENTIFICATION & REQUEST LETTERS**

Nobis was retained by the Town of Londonderry to complete a follow-up water quality study. The purpose of the follow-up study is to further document water quality conditions within the town and assess potential changes in water quality over time. As such, many of the residential water supply wells that were part of the original study were included in the current sampling program. Additionally, new ‘target’ wells were identified and included in the study. Targeted wells were identified by proximity to environmental areas of interest and/or relative location to wells previously sampled that had detections of contaminants of concern (COCs).

The study area was divided into six (6) distinct sampling districts based upon inferred local watershed areas and topographical features. Specifically, they are comprised of the following districts:

- Watts Brook watershed (District 1),
- Little Cohas Brook watershed (District 2),
- Beaver Brook and Scobie Pond watershed (District 3),
- Nesenkeag Brook watershed (District 4),
- Chase Brook and lower Beaver Brook watershed (District 5), and
- Beaver Brook watershed (District 6).

After dividing the study area into sampling districts, the original sampling locations were evaluated for the potential presence of town water or community supply wells that may serve those locations. Ultimately, 50 locations were selected, 39 of which were participants of the original study with 11 new target locations. Access agreements and water supply well questionnaires were mailed to each homeowner once approved by the town.

Due to a low initial response rate, second attempt letters were mailed to homeowners yet to respond to access agreement letters. While waiting for the return of the second attempt agreements, alternate sample locations were identified. In total, 36 alternate locations were selected, 19 of which had previously been sampled with 17 new target locations. Access agreements and water supply well questionnaires were created and mailed for these alternate locations.

Due to continued low response rates to access agreements, a second group of alternate locations were identified. In total, 25 additional locations were selected for sampling, and were all new target locations.

In total, 32 out of 111 solicited homeowners elected to participate in the study. Of the 32 locations, 22 were sampled as part of the original EBSC study while 10 were new target wells. Further, each sampling district had varied response rates, ranging from 8 samples per district (District 1) to 3 samples per district (District 2). Sampling districts and residential drinking water sample locations are depicted on **Figure 1**.

### **3.0 SUMMARY OF COMPLETED ACTIVITIES**

#### **3.1 Private Water Supply Sample Collection**

Water supply sampling occurred during the period of May through July 2019. In total, 32 private water supplies were sampled by Nobis technicians. Private water supply samples were collected from a sampling port prior to water treatment (e.g. softeners) if present, or an interior kitchen faucet. The water supplies were allowed to run for at least 15 minutes to flush/purge the lines prior to sample collection.

Sampling dates were coordinated with individual property owners after receipt of a properly executed access agreement. Water supplies were sampled for the presence of RCRA-8 metals, nitrate, nitrite, volatile organic compounds (VOCs), and PFAS. Based on the cost sharing agreement with the NHDES, samples were split for delivery to the NHDES and to Nelson Analytical, Inc. (Nelson) of Manchester, New Hampshire. NHDES then sent samples for VOC analyses to ChemServe, Inc. (ChemServe) of Milford, New Hampshire and to Eurofins/Test America (Eurofins) of Sacramento, California for analysis of PFAS. Therefore, each water supply has three laboratory reports associated with the sampling.

#### **3.2 Surface Water Sample Collection**

Surface water samples were collected from various surface water bodies within the town during the original EBSC study. In total, 13 locations were sampled and consisted of locations along Beaver Brook, Little Cohas Brook, Shields Brook, Watts Brook, Nesenkeag Brook, Cohas Brook, Moose Hill Pond outlet, and Scobie Pond outlet. To the extent possible the original sample locations were used in the current study. Coordinates of each surface water sample location were recorded during sample collection and are presented on **Figure 1**.

Surface water was sampled for the presence of RCRA-8 metals, nitrate, nitrite, total phosphate, VOCs, and PFAS. As with the water supply samples, Nelson analyzed the samples for the presence of nitrate, nitrite, phosphate, and metals. ChemServe analyzed the samples for the presence of VOCs and Eurofins analyzed the samples for the presence of PFAS.

### 3.3 Laboratory Analytical Results

Analytical results were forwarded to Nobis (some via NHDES) where the data was tracked within a spreadsheet. Data was also uploaded via the environmental monitoring database (EMD) to the NHDES. The private water supply samples were collected within laboratory supplied containers and placed on ice during transportation under proper chain-of-custody procedures to Nelson Analytical, Inc. of Manchester, New Hampshire and NHDES. Water samples were analyzed by Nelson for the presence of nitrate/nitrite via Method SM 4500; metals via EPA Method 200.8; and phosphate via HACH 8190. ChemServe analyzed samples for the presence of VOCs by NHDES *Petroleum and Hazardous Waste Full List* via Environmental Protection Agency (EPA) Method 524.2. Eurofins analyzed samples for the presence of PFAS via EPA Method 537 (mod). A copy of the laboratory analytical reports from the 2019 sampling are included as **Appendix B**.

Private water supply sampling results were previously provided to the individual property owners via mail.

### 3.4 Evaluation of Water Supply Quality

#### VOCs

Only two water supplies contained detectable VOCs: MTBE was detected at a concentration of 0.58 parts per billion (ppb) in the water supply located at 5 Allison Lane and chloroform was detected at a concentration of 13 ppb in the sample collected from 11 Ross Drive. Neither VOC compound was detected at a concentration in excess of the corresponding AGQS. We note, chloroform was reported within the 11 Ross Drive water supply during the original sampling program at a concentration of 2.1 ppb.

MTBE was reported in 8% of the original sampling program wells (12 of 154) at detected concentrations ranging from 1.7 to 20 ppb. Five (5) of those original twelve locations were sampled during this WQS. None of the five wells originally impacted by MTBE contained a detectable level of MTBE in 2019. Only one well from Allison Lane contained a trace level of MTBE. These results suggest significant improvement related to VOCs.

#### PFAS

Thirteen (13) of the twenty (20) PFAS compounds analyzed were reported as detected within at least one of the water supplies samples. Of these 13 compounds, perfluorooctanoic acid (PFOA) is the most prevalent and concerning PFAS compound. A summary of PFAS results for water supply sampling is provided as **Table 1**. PFOA was detected within 29 of the 32 water supply samples collected and within each of the six sampling districts. NHDES adopted new AGQS for four PFAS compounds; PFOA, perfluorooctane sulfonic acid (PFOS), perfluorohexane sulfonic

acid (PFHxS) and perflouoronanoic acid (PFNA) on September 30, 2019. PFOA was reported above the new AGQS of 12 parts per trillion (ppt) in 13 of the 32 water supplies sampled. PFOA concentrations ranged from 0.9 to 41 ppt. **Figures 2A and 2B** depict distribution of PFOA in wells and surface water within the town. The majority of the highest PFOA concentration impacts are located within districts 1 and 4, generally located in the western portion of town nearest to the Litchfield town boundary.

### Nitrate & Nitrite

Nitrate was reported in eleven of the 32 wells sampled. Detected nitrate concentration ranged from 1.0 to 4.0 ppm, well below the AGQS of 10 ppm. Nitrite generally was not detected during the sampling event. Nitrate and nitrite are generally related to fertilizers, animal waste and sewage and according to the US Geological Survey, “Nitrate is the most common inorganic contaminant derived from man-made sources”. In general, this study revealed low concentration and does not appear to indicate large scale nitrate issues.

### Metals

Detectable levels of four (4) metals were reported within the water supply sampling program. Arsenic, barium, chromium and lead were detected in water supplies sampled. Of these, only arsenic and lead were reported above their corresponding AGQS of 0.01 and 0.015 ppm. Lead was detected within 13 of the 32 wells samples (40%); however, only four were reported above the AGQS with a maximum detected concentration of 0.3 ppm. A summary of metals results for water supply sampling is provided as **Table 2**.

Arsenic was detected within 24 of the 32 wells sampled (75%). Five (5) of the 24 detections exceed the current AGQS of 0.010 ppm. All five of these are in the northern three districts (District 1, District 2, and District 3) and likely correspond to specific bedrock composition of water bearing fractures in this area. There does not appear to be a corresponding distribution related to orchards and pesticide use. **Figure 3** provides a map depicting the distribution of arsenic in wells and surface water within the town.

In the original study 39% of the wells contained arsenic at a detectable concentration (>0.005 ppm). Using the same threshold, 29% of the current dataset would be deemed to contain arsenic. This is significant as the NHDES has proposed a new lower AGQS for arsenic of 5 ppb (0.005 ppm). Therefore, the current 16% of wells exceeding AGQS would increase to roughly one third of the water supplies in the town.

Property	Arsenic Concentration (ppm)	
	Original 2001	2019
21 Lawson Farm Road	0.043	0.034
15 Partridge Lane	0.034	0.036
19 Pine Hollow Drive	0.016	0.002
9 Acropolis Avenue	0.010	0.006
17 Wilshire Drive	0.009	0.007
97 Gilcreast Road	0.006	0.007
28 Hazelnut Lane	0.006	0.011
46 Otterson Road	0.006	0.004
17 Wimbeldon Drive	0.006	0.001

The table above provides a comparison of arsenic concentration at those properties sampled during both the original (2001) and 2019 sampling events and which contained detectable arsenic concentrations. Generally, arsenic concentration within these wells has remained consistent and stable.

### 3.5 Evaluation of Surface Water Quality

The surface water samples were evaluated for the presence of VOCs, RCRA-8 metals, phosphate and nitrate/nitrite. VOCs were not detected within the thirteen surface water samples collected as part of this study. The metal barium was detected in all samples analyzed at concentrations ranging from 0.011 to 0.24 ppm. These concentrations appear to be low and consistent throughout the town. Arsenic was detected in only two surface water samples at low concentrations. Lead was detected in one surface water sample at a concentration of 0.002 ppm. The remaining five metals were not detected within the samples analyzed. In general, adverse impact via metals to surface waters is not suggested. A summary of results for surface water sampling is provided as **Table 3**.

Nitrate/nitrite was evaluated in six of the surface water samples. None of the six locations contained nitrate/nitrite above method detection limits. Total phosphate as phosphorus was consistently reported within all but one of the surface water samples. Phosphate was reported at concentrations ranging from 0.11 to 0.52 ppm. These concentrations appear elevated relative to ideal surface water phosphorus concentrations reported within the published literature and may be attributable to the historic agricultural nature of the town, or native rock type. NHDES suggests (Env-Wq 1703.14(a)) phosphorus should be absent from Class A water bodies unless naturally occurring. Additional testing would be required to further evaluate the potential contributors to elevated phosphate.

Thirteen (13) of the twenty (20) PFAS compounds analyzed were reported as detected within at least one of the surface water samples. Of these 13 compounds, again perfluorooctanoic acid (PFOA) is the most prevalent and concerning PFAS compound. PFOA was detected within all thirteen surface water samples collected and within each of the six sampling districts. PFOA concentration ranged from 9.8 to 42 ppt, with a mean concentration of 20.5 ppt. A summary of PFAS results for surface water sampling is provided as **Table 4**.

## **4.0 CONCLUSIONS & RECOMMENDATIONS**

### **4.1 Conclusions**

Overall, low level PFAS impact is found throughout the town but higher concentrations are evident within the town in proximity to the Litchfield town boundary; therefore, some PFAS impacts may be attributable to the Saint Gobain facility operations in Merrimack, NH. The depositional model would be similar to impacts within the town of Litchfield but generally lesser in magnitude (further from the potential source). The outer boundary from the Saint Gobain Consent Decree is shown on **Figures 2A and 2B**, and generally runs along High Range Road. Per the Consent Decree, Saint Gobain may be responsible for providing bottled water to impacted water supplies to the west of High Range Road.

We note, the 2019 sampling was a small sub-sampling of the total of water supplies within the town. The results point to overall higher impacts from PFOA in the western portions of the town. Recent changes to the AGQS for PFOA suggest there is potential for health concerns associated with PFOA above 12 ppt. This is particularly of concern for pregnant women and breastfeeding mothers.

Arsenic impacts consistent with those observed during the original study were confirmed during this WQS. The arsenic standard was lowered to 10 ppb, and NHDES has proposed an even lower standard of 5 ppb that has yet to be implemented. Arsenic is a naturally occurring metal, but also was historically related to orchard pesticide use. This study did not reveal a significant relationship to orchard locations and the arsenic found in water supplies is presumed to be of a natural origin.

Overall, drinking water quality within the town appears to have improved relative to the original study. VOCs are generally not observed within the water supplies. Nitrates are generally low and metals are found within normal ranges. However, the occurrence of PFOA throughout town water supplies is of concern.

Surface water quality within the town appears stable relative to the original study. VOCs are not observed within surface waters tested. Metals are found within normal ranges. Phosphate levels appear somewhat elevated throughout the town and may be related to agricultural use, grass lawn fertilizers, or natural rock composition.

The occurrence of PFOA consistently throughout town surface waters is also of concern. Generally, the highest detected concentrations are within surface waters in the western portions of the town.

## **4.2 Recommendations**

Nobis Group® provides the following recommendations related to water sampling:

- The town should continue with a periodic (5-year) sampling program to monitor overall water quality and compile a comparable database of water quality;
- Followup PFAS sampling at those residences with elevated PFOA results may be warranted. A discussion of results and potential for long term health effects should be completed with impacted residents. In some, if not all cases, these tasks may be the responsibility of NHDES or Saint Gobain;
- Further research/study of arsenic impacts on town bedrock water resources may be warranted. A better understanding of distribution and magnitude of arsenic occurrence could assist to direct prioritization of future water infrastructure planning by the Town.

Notes:  
 1. All samples were collected by Nobis Group on the dates indicated.  
 2. All concentrations are reported in ng/L, equivalent to parts per trillion (ppt), except where indicated.  
 3. "<X" indicates that the parameter was not detected at the specified reporting limit X. Concentrations in Bold indicate a detection, Bold and Shaded indicate exceedances of applicable AGQS. "ns" indicates that no standard is established for the compound. "NA" indicates the parameter was not analyzed.  
 4. The analyses were performed by Eurofins/Test America Laboratory of Sacramento, California by EPA Method 537 (mod) for PFAS.  
 5. AGQS refers to the Ambient Groundwater Quality Standards referenced in New Hampshire Code of Administrative Rules Part Env-Or 600 revised September 1, 2018.  
 Qualifiers: B - Compound also found in method blank; J - Less than RL but > or = to the MDL; I - Value is estimated maximum possible concentration

Notes:

1. All samples were collected by Nobis Group on the dates indicated.
2. All concentrations are reported in mg/L, equivalent to parts per trillion (ppt), except where indicated.
3. "<X" indicates that the parameter was not detected at the specified reporting limit X. Concentrations in Bold indicate a detection, Bold and Shaded indicate exceedances of applicable standard. "ns" indicates that no standard is established for the compound. "NA" indicates the parameter was not analyzed.
4. VOCs were performed by ChemServe of Milford, NH. The remaining analyses were performed by Nelson Analytical Laboratory of Manchester, NH.

\*\*AGQS = Ambient Groundwater Quality Standard

Notes:

- All samples were collected by Nobis Group on the dates indicated.
- All concentrations are reported in ng/L, equivalent to parts per trillion (ppt), except where indicated.
- "<X" indicates that the parameter was not detected at the specified reporting limit X. Concentrations in Bold indicate a detection, Bold and Shaded indicate exceedances of applicable AGQS. "ns" indicates that no standard is established for the compound. "NA" indicates the parameter was not analyzed.
- The analyses were performed by Eurofins/Test America Laboratory of Sacramento, California by EPA Method 537 (mod) for PFAS.
- Surface water quality standards (SWQS) have not been developed for PFAS at this time.

\*\*AGQS are not directly applicable to surface water and provided simply for comparison purposes  
Qualifiers: B - Compound also found in method blank; J - Less than RL but > or = to the MDL; I - Value is estimated maximum possible concentration

## LIMITATIONS

- 1) These environmental services were performed in accordance with generally accepted practices of other consultants undertaking similar assessments at the same time and in the same geographical area. The results of this assessment are based on our professional judgment and are not scientific certainties. Specifically, Nobis Group® does not and cannot represent that the site contains no hazardous wastes, oil or other latent conditions beyond those observed during this assessment. No other warranty, express or implied, is made.
- 2) The observations and conclusions presented in this report were made solely on the basis of conditions described in the report and not on scientific tasks or procedures beyond the scope of described services or the budgetary and time constraints imposed by the client.
- 3) Observations were made of the site as indicated in this report. Where access to portions of the site was unavailable or limited, Nobis Group® renders no opinion as to the presence of hazardous wastes or the presence of indirect evidence of hazardous wastes in that portion of the site.
- 4) No property boundary, site feature or topographic surveys of the site were performed by Nobis Group® unless specifically indicated in the text of the report.
- 5) Chemical constituents not searched for during the current study may be present in soil and/or groundwater at the site. In addition, where any analyses have been conducted by an outside laboratory, Nobis Group® has relied upon the data provided and has not conducted an independent evaluation of the reliability of these data.
- 6) This report has been prepared for the exclusive use for Town of Londonderry solely for use in an environmental evaluation of the site. This report shall not, in whole or in part, be conveyed to any other party, other than the identified users without prior written consent of Nobis Group®.

# Acknowledgements

The Town of Newmarket is greatly indebted to all who participated either directly or indirectly in the process of developing the 2020 Water Resources chapter. From service on municipal boards to professional technical assistance the input and guidance from so many individuals helped to shape the recommendations and vision presented herein. The town extends a thank you in advance to all who will work to implement this plan and its recommendations in the future.

A special acknowledgement should be offered to chapter's primary funder, the New Hampshire Department of Environmental Services (NHDES) Drinking Water Source Protection Program. This program has been essential in providing technical and financial assistance, and to enforce state regulations that serve to protect the state's sources of drinking water.

The contributions of those identified below are particularly noteworthy.

## **Master Plan Steering Committee**

Bill Arcieri, Member At-Large  
Gretchen Kast, Town Council  
Michal Zahorik, Planning Board Alternate  
Patrick Reynolds, Conservation Commission  
Val Shelton, Planning Board

# Introduction

The protection and use of water resources are critical concerns to the Town of Newmarket. With virtually all residents dependent upon wells for domestic use, the quantity and quality of available groundwater must be protected from depletion and contamination. Other Town water resources, such as swamps, ponds, streams, and wetlands are important because they are hydrologically related to groundwater, and provide ecological, scenic, and recreational value to residents.

In general, there is a direct relationship between land use and water quality. It is the responsibility of the Town to take reasonable and prudent precautions to protect all water resources from incompatible uses, thus protecting the health and general welfare of the community. Appropriate steps should be taken by the Town to ensure that enough water supply exists for use by Newmarket residents, as well as native wildlife and plant communities. The Town needs to examine and address water supply issues, watershed management, pollution, and potential aquifers/gravel areas.

## Vision Statement

*Protect all water resources in Newmarket from threats that include but are not limited to contamination, depletion, alteration, and degradation through appropriate policies, regulations, and actions.*

*Guidance for policies, regulations, and actions that affect Newmarket's water resources derives from the following water resources management objectives and conservation measures.*

- a) Protect public health, safety, and welfare*
- b) Maintain high environmental quality*
- c) Ensure that growth minimizes impacts to environmental quality*
- d) Direct development to environmentally suitable areas*
- e) Assure adequate water supply for residents*
- f) Preserve water quality and quantity for future residents*
- g) Educate residents about water resource issues*
- h) Participate in inter-municipal water resources management efforts*
- i) Comply with applicable local, state, and federal regulations*

## Overview

The Town of Newmarket covers a total area of 14.2 square miles (9,080.3 acres), with a land area of 12.6 square miles (8,053.5 acres) and a water area of 1.6 square miles (1,026.8 acres). With a population of 8,977 (according to the [2013-2017 American Community Survey 5-year estimates](#)), Newmarket has experienced roughly a 10.6% increase in total population since 2000 (8,027).

The topography of Newmarket is gently rolling, and elevations range from sea level along tidal areas to greater than 280 feet on Bald Hill in the westernmost area of town. Great Bay and the Lamprey River are the town's most significant waterbodies. The Town has many acres and types of water resources, which are summarized in the table below. These resources provide valuable functions and services that benefit the public health and welfare and the environment.

Table 1: Water Resource Statistics

Resource Type	Total Area	% Municipal Area
Freshwater Surface Waters	656.1 Acres	7.2%
Coastal/Tidal Waters	1,061.9 Acres	11.7%
Streams and Rivers (miles)	31.4 Miles	N/A
Freshwater Wetlands	979.3 Acres	10.8%
Prime Wetlands	908.9 Acres	10.0 %
Floodplain (2005)	512.9 Acres	5.7%
Floodplain (2014)	529.9 Acres	5.8%
Stratified Draft Aquifer	657.5 Acres	7.2%

[Sources: NH Hydrography Dataset, National Wetland Inventory, FEMA DFIRMs, NH GRANIT]

Newmarket is positioned in the lowermost reaches of the Coastal Watershed, and within portions of the Lamprey River, Exeter River, and the Great Bay watersheds. It contains both freshwater and tidal rivers and estuarine ecosystems. Tidal influence on the Lamprey River extends to Macallen Dam in downtown near the NH Route 108 crossing. Tidal influence of the Great Bay extends up Lubberland Creek and the Squamscott River, as well as several unnamed tributaries in the southern areas of town.

### Water Resource Chapter Update

The original Water Resources Chapter of the Master Plan was developed and adopted by the Planning Board in 2001; an update was completed in 2009. Since that time, social and environmental conditions have changed, including shifts in local development patterns, increases in population, and impacts from changing climate conditions, all of which have placed additional stress on the Town's water resources. As a result, Newmarket has compiled a series of recommendations from multiple reports on the town's water system into one comprehensive Capital Improvement Plan (CIP). The Town is improving their stormwater management through compliance with the EPA's [Municipal Separate Storm Sewer System \(MS4\)](#) program. Newmarket has been a part of several climate adaptation projects, including updates to their [hazard mitigation plan](#), a [flooding study](#) in the Moonlight Brook watershed, a [climate vulnerability study](#), and an [infrastructure project](#) to replace an undersized culvert on Lubberland Creek. In addition, the Town has collaborated with regional land conservation agencies to protect land containing critical water resources including wetlands, floodplain, streams and rivers, and riparian habitat.

Federal, state, and local non-governmental partners have also conducted significant research, inventories, and evaluation of water resources in the Coastal and Great Bay watersheds. These efforts have produced valuable scientific information about the status, health, and viability of water resources in these watersheds. The results of these efforts have sparked much discussion about future management and sustainability of ecosystems, natural resource functions and benefits, emerging contaminants that are a risk to human health, and drinking water supplies in many communities in the Seacoast.

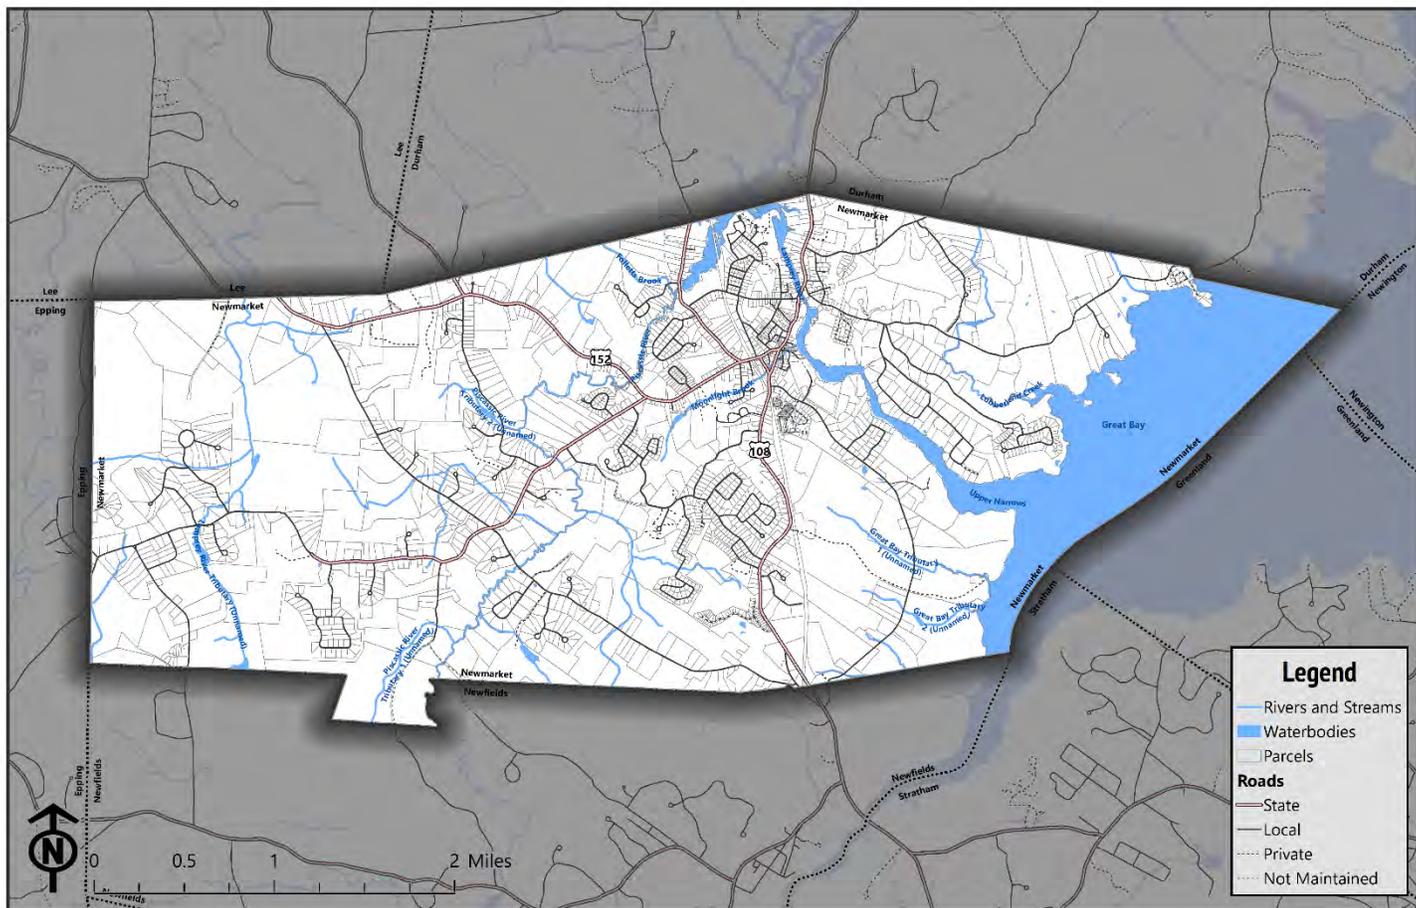

Lamprey River north of the Dam  
[Photo Credit: Mike Hickey]

In 2019, the Town of Newmarket, in partnership with the Strafford Regional Planning Commission, applied for and received funding to update the existing Water Resources Chapter of the Master Plan by incorporating new information to better plan for the management and sustainability of the Town's water resources.

# Surface & Groundwater Resources

## Surface Water Policy Statement

Reduce the loss of shoreland buffers by minimizing the granting of variances and waivers during the application and permitting process, as well as strengthening enforcement efforts.

Map 1. Newmarket's Surface Water Resources [Source: US Geological Survey (USGS), NH Hydrography Dataset (NHHD)]

## Rivers & Perennial Brooks, Creeks, Streams, and Tributaries

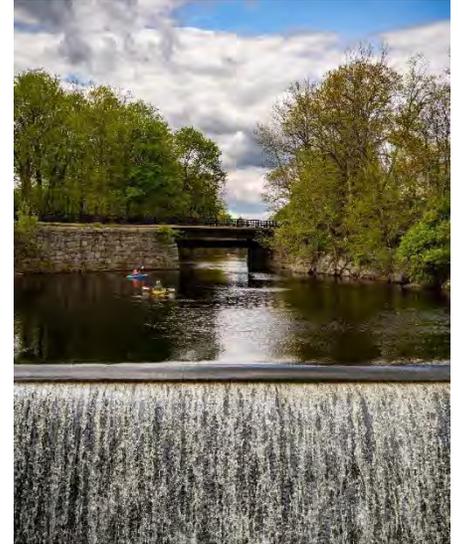

According to the New Hampshire hydrography dataset, Newmarket has a total of 24.6 linear miles of streams and rivers, including 23 miles of perennial creeks, streams and rivers and 1.6 miles of intermittent streams and creeks, that provide a myriad of benefits for residents and visitors to the region.

### Lamprey River

The portion of the Lamprey River in Newmarket is located at the confluence of the Piscassic River at the Sliding Rock Conservation Area. The river flows south towards the Macallen Dam –where it is tidally influenced— and the downtown waterfront, where there are major access points for boaters and other recreational enthusiasts using

the Great Bay. The total drainage area of the watershed covers almost 214 square miles and includes fourteen towns, making it one of the largest watersheds in New Hampshire. The Lamprey River supports a variety of recreational uses including boating, fishing, swimming in certain areas, and ice fishing and skating in the winter. It is considered to have significant ecological value, supporting some of the most important anadromous fishery habitat in the state, as well as providing aquatic habitat for numerous wildlife and waterfowl species.

The Lamprey River is recognized on both the state and federal levels as a river with outstanding resources, and for that reason, it is afforded protections not normally provided to other rivers. On the federal level, certain sections of the Lamprey are designated as a Wild and Scenic River by the National Park Service and the US Congress. At the state level, the Lamprey and its main tributaries are in the New Hampshire Rivers Management and Protection Program.

Lamprey River at the Macallen Dam  
[Photo Credit: Bill Doucet]

#### *Piscassic River*

The Piscassic River is a major tributary to the Lamprey River and flows northerly from Newfields through much of the area around Ash Swamp Road, Grant Road and Lang's Lane. The river then flows beneath Route 152, spills over the dam at Packers Falls Road and then joins up with the Lamprey River about one half mile downstream. The lower Piscassic River, below the dam at the former Water Treatment Plant on Packers Falls Road, is often mistakenly considered to be part of the Lamprey River because it is an extension of the impounded waters behind the Macallen Dam that is located downstream. The confluence with the Lamprey River is located just north of the Durham and Newmarket town boundary.

#### *Follett's Brook*

Follett's Brook flows southeasterly from Durham and joins up with the Piscassic River just above the Packers Falls Road dam. Only the lower third of Follett's Brook watershed is within Newmarket. Prior to 1990, Follett's Brook was used as the principal municipal water supply source with treatment provided at the Packers Falls Road Water Treatment Plant. The Piscassic River was used as a backup water supply source. In the last ten years, the Town has principally relied on groundwater from several municipal wells for drinking water.

#### *Moonlight Brook*

The main channel of Moonlight Brook runs for approximately 1.5 miles from its headwaters to its outlet into the Lamprey River. It is routed under three road crossings before passing under a railroad track near downtown Newmarket. Downstream of this point, Moonlight Brook is routed through a series of culverts and pipes before emerging back into its natural channel just upstream of its outlet to the Lamprey River. During large storm events, Moonlight Brook receives significant inflow from the Piscassic River, which connects to Moonlight Brook at its headwaters. During the 100-year storm event, inflows from the Piscassic River reach an estimated 307 cubic feet per second (cfs), almost doubling the peak flow within Moonlight Brook.<sup>1</sup>

<sup>1</sup> Waterstone Engineering & Horsley Witten Group (2016). *Climate Adaptation Plan for the Moonlight Brook Watershed: Building Resilience to Flooding and Climate Change in the Moonlight Brook Watershed*. [online] Available at: <https://www.nhcaw.org/wp-content/uploads/2018/05/13-306-21-Newmarket-Final-Report.pdf> [Accessed 27 Dec. 2019].

### *Lubberland Creek*

Lubberland Creek, which runs under Bay Road, is one of several smaller tributaries that drain directly to Great Bay. Lubberland Creek originates in wetlands along Dame Road in Durham and then drains southerly crossing beneath Bay Road and enters the Great Bay along the north side of Moody Point. The lower portions of the Creek contain extensive salt and freshwater wetlands. Much of the watershed associated with this drainage system remains as either open fields or forested areas with sparsely located homes, including a portion of the Gonet Drive subdivision.

Lubberland Creek  
[Photo Credit: Bill Doucet]

### *Significant Unnamed Tributaries*

There are several other unnamed tributaries of significance, including the following:

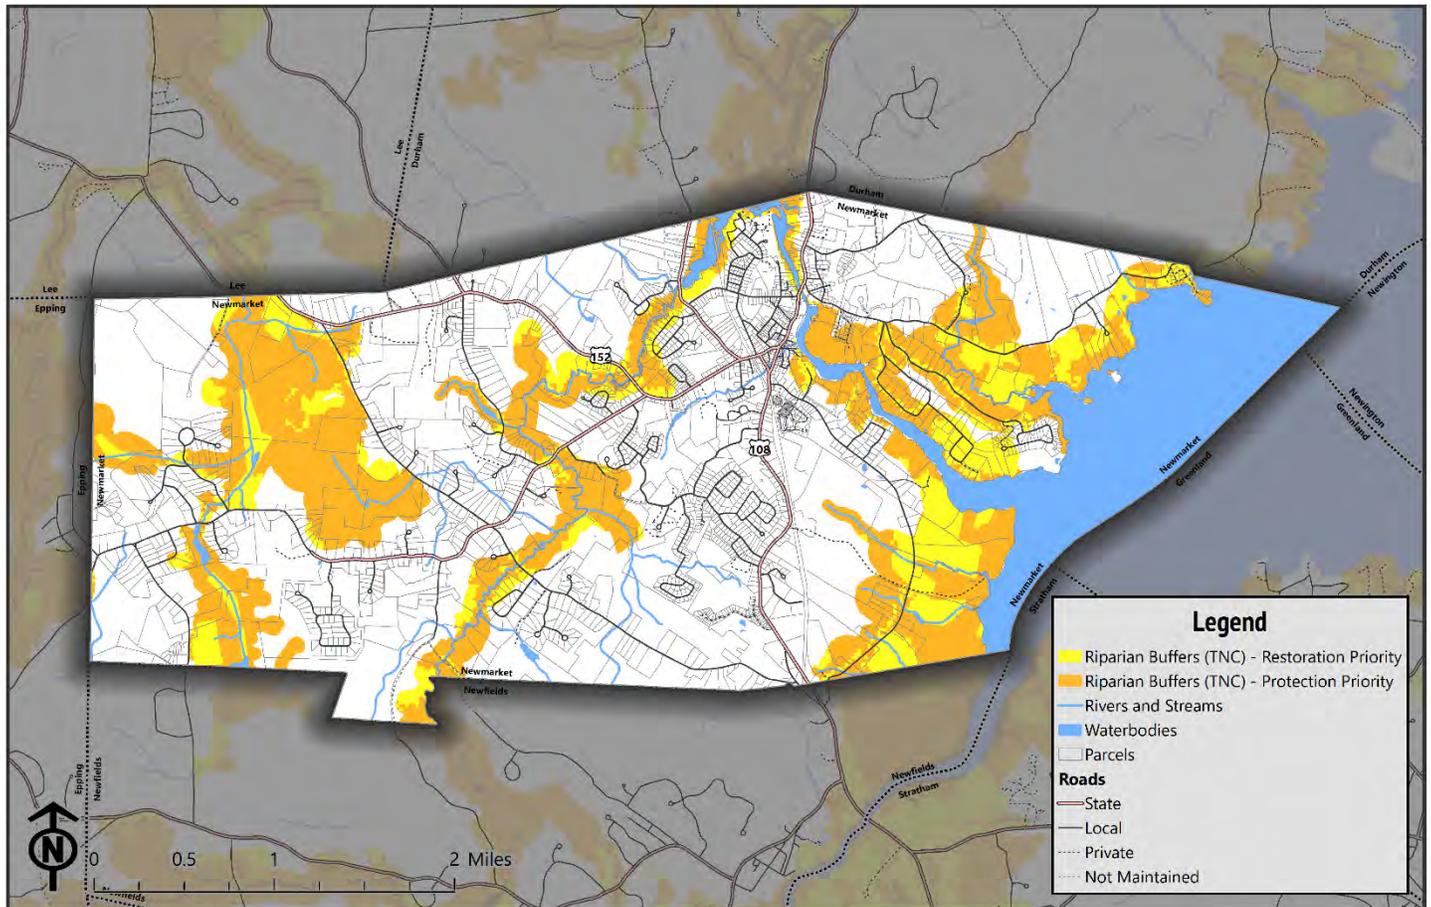

- 1) Piscassic River Tributary (1): Draining from a large wetland west of Hall's Mill Road in Newfields, this stream flows northeasterly before crossing underneath Neal Mill Road and emptying into the Piscassic River.
- 2) Piscassic River Tributary (2): Draining from several wetlands southeast of the Wadleigh Falls Road in the vicinity of the gravel pits, this stream flows easterly before crossing Langs Lane just north of Winslow Drive and emptying into the Piscassic River.
- 3) Lamprey River Tributary: Draining from a series of a large wetlands east of Bald Hill Road, this stream flows northerly before crossing Grant Road, then Doe Farm Lane, and into the Wiggins Farm Conservation Area. It continues north towards the Tuttle Swamp Conservation Area before crossing Wadleigh Falls Road and emptying into the Lamprey River.
- 4) Great Bay Tributaries: There are two relatively significant unnamed perennial streams that originate behind Newmarket Storage on Route 108 and flow easterly crossing beneath New Road and into Great Bay.

### Buffer Functions and Benefits

Buffer Options for the Bay (BOB)<sup>2</sup> defines a buffer as a "naturally vegetated segment of land directly upslope of a water resource, such as a lake, stream, river, pond, estuary, or other wetland type." The value of buffers is diverse; they support wildlife capacity, enhance water views, and help meet water quality standards for municipalities. In New Hampshire, decisions involving buffer lands around waterbodies are often made by communities and individual landowners.

According to GIS data developed by the Nature Conservancy, which was created as part of the 2016 update to the Land Conservation Plan for New Hampshire's Coastal Watersheds, there are several locations identified as priority riparian buffer areas suitable for restoration and/or protection. These locations include: 1) the unnamed Lamprey River tributary (see above for description) and areas surrounding Tuttle Swamp, 2) the mainstem of the Piscassic River, 3) the Lamprey River (both the freshwater portion and tidal portions), 4) Lubberland Creek, and 5) the shoreline of Great Bay.

<sup>2</sup> [Buffer Options for the Bay](#) is an informational resource intended to support policy and land use decisions in NH's Great Bay region that involve buffers.

Map 2. Newmarket's Surface Water Resources [Source: US Geological Survey (USGS), NH Hydrography Dataset (NHHD)]

BOB'S "Exploring the Trends, Science, & Options for Buffer Management in the Great Bay Watershed"<sup>3</sup>—an analysis of local factors influencing buffer-related decision-making in the Great Bay watershed—revealed these top four findings:

- Buffer-related decisions are inherently complex, requiring municipalities to balance many factors including property rights, community character, natural resource protection, abutters' concerns, and economic growth.
- People may not understand the individual and social benefits of buffers.
- Buffer oversight and enforcement can be logistically difficult and lack capacity.
- Developers want consistent regulations, flexibility in the review process, and not a 'one-size-fits-all' rule.

### Did you know?

Research has shown that the effectiveness of green infrastructure (natural areas like buffers that provide ecosystem services) in reducing pollution is not only comparable to that achieved by gray infrastructure (e.g., constructed stormwater interventions), but that green infrastructure typically costs markedly less.

<sup>3</sup> Flanagan, Shea E.; Patrick, David A.; Leonard, Dolores J.; and Stacey, Paul, "Buffer Options for the Bay: Exploring the Trends, the Science, and the Options of Buffer Management in the Great Bay Watershed Key Findings from Available Literature" (2017). PREP Reports & Publications. 380. <https://scholars.unh.edu/prep/380>

BOB's "[Navigating Regulations: What regulatory options do towns have?](#)" and their "[Regulatory options for buffer action](#)" are available to help communities navigate regulations and show different options for buffer action. One other additional resource is the minimum recommended buffer widths for various buffer functions (see Figure 1). These widths are a result of a synthesis of many sources. For more specific information about how these widths were generated, please reference the [Coastal Science Literature Review](#).

As Newmarket continues to grow, increased priority should be placed on increasing buffers for all waterbodies and aquifers with additional steps taken to address septic systems to ensure water quality and shoreland protection.

### Water Quality Impairments

According to the [DRAFT 2018, Section 303\(d\)](#) list of impaired waterbodies<sup>4</sup>, which is produced by the NHDES Surface Water Quality Assessment Program every two years as a federal mandate under the Clean Water Act, Newmarket has several waterbodies with water quality impairments, including the Lamprey River, Great Bay, Piscassic River, and Moonlight Brook.

### Local Water Quality Monitoring

The NH Department of Environmental Services through its Volunteer River Assessment Program (VRAP) maintains a water quality-monitoring program for the Lamprey River and its tributaries. The Lamprey River Watershed Association has undertaken this role and has been doing so since 1999. Long-term monitoring provides a basis for understanding the river's dynamics, or variations on a station-by-station and year-to-year basis. The data also serves as a baseline from which to determine any water pollution problems in the river and/or watershed.

In Newmarket, there are four sampling locations, including the Piscassic River at the Grant Road Bridge, Piscassic River at the Route 152 Bridge, Piscassic River at the Packers Falls Bridge, and the Lamprey River at the Route 108 Bridge. According the 2017 Lamprey River Watershed VRAP Data report, the only measurements not meeting New Hampshire surface water quality standards were dissolved oxygen and pH. Dissolved oxygen is essential for bottom-dwelling organisms and pH affects chemical and biological processes in the water and different organisms flourish within a range of pH levels<sup>5</sup>.

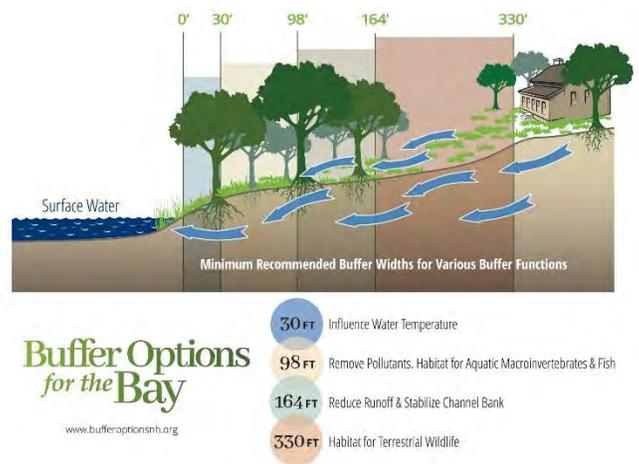

### Lakes, Ponds, and Great Bay

Lakes, ponds, freshwater/tidal rivers, and Great Bay comprise 1,046.2 acres in Newmarket. This includes Great Bay, which is a 6,000+ acre tidal estuary and represents roughly 84% of the total water area in town, that acts as

<sup>4</sup> Identified waterbodies that are impaired or threatened; not expected to meet water quality standards within a reasonable time even after application of best available technology standards for point sources or best management practices for nonpoint sources; or requires a comprehensive water quality study (total maximum daily load) in order to meet water quality standards.

<sup>5</sup> NH Volunteer River Assessment Program. (Revised 2011). Interpreting VRAP Water Quality Monitoring Parameter: Chemical Parameters. [online] [Accessed 27 Aug. 2020]. Available at: [https://www.des.nh.gov/organization/commissioner/pip/publications/wd/documents/vrap\\_parameters.pdf](https://www.des.nh.gov/organization/commissioner/pip/publications/wd/documents/vrap_parameters.pdf)

Figure 1. BOB Buffer Width Recommendations

the Town's easterly border and is home to upland forest, salt marsh, mudflats, tidal creek, rocky intertidal, eelgrass beds, channel bottom/subtidal and upland field habitats.<sup>6</sup>

Table 2: Surface Waterbodies by Type and Acreage

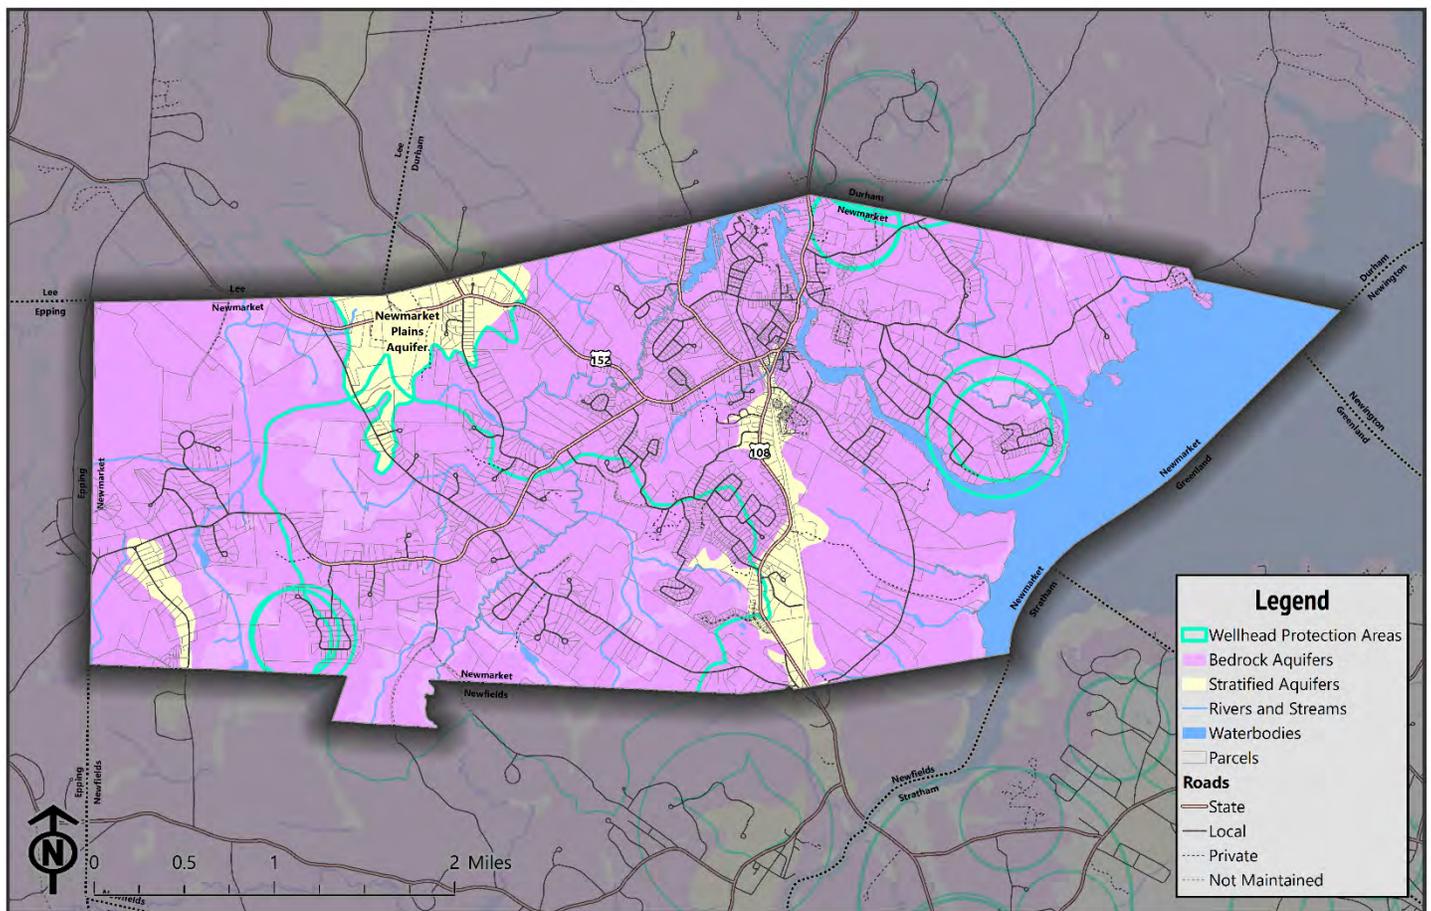

Surface Water	Acreage	% Total Water Area
Lamprey River (Freshwater)	16.8	1.6
Lamprey River (Tidal)	23.1	2.2
Lakes (Impoundments)	33.4	3.2
Ponds	95.2	9.1
Great Bay	877.7	83.9
Total	1,046.2	100

[Source: NH Hydrography Dataset]

Newmarket's many small ponds and other unnamed surface water bodies are typically located within large wetland complexes in low lying areas through which rivers, streams, and small unnamed tributaries flow.

### Groundwater Policy Statement

*Protect the volume and quality of groundwater resources for current and future sources of drinking water, and to sustain downstream surface waters and wetlands through appropriate policy and regulatory measures.*

Map 3. Newmarket's Groundwater Resources [Source: USGS, NHDES]

<sup>6</sup> Great Bay Stewards. (2019). Great Bay Map, NH & ME. [online] Available at: <https://greatbaystewards.org/home-page-great-bay-stewards-supporting-great-bay-estuary-greenland-nh/great-bay-map/> [Accessed 27 Dec. 2019].

## Stratified Drift Aquifers

Stratified drift aquifers consist of well-sorted sand and gravel deposits that are typically laid out in layers by historic glacial outwash streams and rivers. Depending on the depth and the coarseness of the material, these deposits generally provide good sources of groundwater because of their high capacity to store groundwater over large areas.

Table 3: Acres of Stratified Drift and Bedrock Aquifers

Type	Acres	% of Total Municipal Area
Stratified Drift	657.5	7.2
Bedrock Aquifers	8,127	89.5
Total	8,784.5	96.7

[Source: NH GRANIT]

### *Newmarket Plains Aquifer*

The Town's most productive groundwater resource is a stratified drift aquifer generally referred to as the Newmarket Plains Aquifer located in the northwest part of town along Route 152 near Lee Hook Road. The surficial area of the aquifer is approximately 410 acres (0.64 square miles) and is about 60 to 80 feet deep at its deepest point.<sup>7</sup> The Newmarket Plains Aquifer represents the Town's primary source of drinking water from two municipal wells, the Bennett and Sewall Wells. The Bennett Well was installed in 1974 and is 48 feet deep. The Sewall Well was installed in 1985 and is 83 feet deep. Historically, these two wells were thought to produce a safe yield of 200 and 260 gallons per minute (gpm) of high-quality drinking water that requires minimal treatment. The drought conditions in 2016 resulted in revised safe yield estimates of 110 and 155 gpm, respectively. This is a major reduction in the Town's water supply capabilities.

There are only two other identified stratified-drift aquifer deposits in Newmarket. One exists along Bald Hill Road in the western portion of the town, and the other deposit is situated directly beneath Route 108 and extends from about the Rockingham Golf Course area north to about the railroad crossing. Neither of these deposits are considered to have high water supply potential because these deposits are relatively shallow with depths of less than 20 feet and are also narrow extending out only 300 to 400 feet in width. In addition, the existing development along Route 108 presents a risk of contamination.

## Bedrock Aquifers

Bedrock aquifers are composed of fractured bedrock or ledge. Groundwater is stored in voids that are created by these fractures. On average, bedrock aquifers tend to yield smaller volumes of groundwater than wells drilled in stratified drift and finding one sizable enough void or fracture can be a costly procedure. Areas of Newmarket not covered by stratified drift deposits are underlain by bedrock. Typically, most bedrock has variable water yield depending on subsurface conditions (i.e. type of bedrock and the degree of fracturing and connectivity).

In 2016, the Town put the MacIntosh Well on-line. This well has a safe yield of 300 gpm, but due to water quality issues, this well must be blended with water from the other two wells. As a result, Bennett and Sewall Wells must be operating at 100% of their safe yield to pump MacIntosh at 300 gpm. The Town has permitted a fourth well (Tucker Well) but has not developed this well or tied it into the distribution system. This well has a permitted

<sup>7</sup> Richard B. Moore, *Geohydrologic and Groundwater Quality Data for Stratified-drift Aquifers in the Exeter, Lamprey and Oyster River Basins, Southeastern New Hampshire*, USGS, 1990. Available at <https://pubs.usgs.gov/wri/1988/4128/report.pdf>.

capacity of 275 gpm, but like the Macintosh Well, will likely be limited by water quality issues to less than this capacity unless the water is treated.

## Federal/State Protection Measures

### *Shoreland Water Quality Protection Act*

The Shoreland Water Quality Protection Act, originally named the Comprehensive Shoreland Protection Act (CSPA), was enacted into law in the 1991 session of the Legislature. The act establishes minimum standards for the subdivision, use, and development of shorelands adjacent to the state's public water bodies. During the 2011 legislative session, the CSPA was renamed to the Shoreland Water Quality Protection Act and included changes to vegetation requirements within the natural woodland and waterfront buffers, the impervious surface limitations and included a new shoreland permit by notification process.

### *Alteration of Terrain Permit*

The NHDES has jurisdictional review and a permitting process for all land development activities that will disturb an area of more than 100,000 square feet, or 50,000 square feet in locations within 250 feet of a designated public water body, to ensure that adequate erosion control and storm water management measures will be implemented to treat runoff before it leaves the proposed site.

### *Groundwater Protection Act*

The Groundwater Protection Act (RSA 485-C) was passed in 1991. This legislation recognized that a variety of activities involve the use of materials that can, if not properly handled, contaminate groundwater. There have been numerous instances of groundwater contamination in New Hampshire from leaking storage facilities, improper waste disposal, accidental spills, and from normal use of these materials. The Groundwater Protection Act directed the New Hampshire Department of Environmental Services (NHDES) to adopt rules specifying best management practices (BMPs) for the Potential Contamination Sources (PCSs) as defined by RSA 485-C.

### *NHDES 2015 Model Groundwater Protection Ordinance*

This model was created in response to municipal officials requesting more local tools to protect stratified-drift aquifers. The model provides an example of an ordinance that complies with state laws and is consistent with current approaches to groundwater protection.

### *NH Code of Administrative Rules Part Env-Wq 401 Best Management Practices for Groundwater Protection*

These rules apply to all potential contamination sources in the state. The BMPs within the rules are essentially common-sense operating practices that are simple and economical to implement. The purpose of the BMPs is to help prevent a release of regulated substances, as defined under this rule. Regulated substances include oil, as defined under RSA 146-A, III, regulated contaminants established pursuant to RSA 485-C:6, and hazardous substances listed under the Code of Federal Regulation (CFR), within 40 CFR § 302. Cleaning up the release of a regulated substance can be very expensive. Following the BMP rules reduces environmental liability and minimizes potential cleanup costs.

### *NH Code of Administrative Rules Part Env-Dw 302 Large Production Wells and Wells for Large Community Water Systems*

The purpose of these rules is to implement portions of RSA 485, the New Hampshire Safe Drinking Water Act, pertaining to the department's obligation to approve public water systems, by establishing procedures and standards for the development of large production wells for community water systems (CWS) in order to ensure that such wells will be capable of producing an adequate supply of water that meets drinking water quality standards.

## Existing Local Protection Measures

### *Shoreline Protection Overlay District*

The Shoreland Protection Overlay District shall include all land within 250 feet of the reference line. The applicable water bodies are designated on the Newmarket Shoreland Protection Overlay District Map, as amended. In Newmarket, these include all tidal waters of Great Bay, the Lamprey River and Lubberland Creek, the non-tidal portion of the Lamprey River, the impoundment above the Macallen Dam, and the Piscassic River. General requirements outline that all primary structures be setback 125 feet from the reference line, while accessory structures shall be setback at least 20 feet from the reference line.

### *Class A Watershed Protection Overlay District*

Septic systems shall be set back a minimum of 150 feet from the reference line of all Class A surface waters. The definition of "reference line," pursuant to RSA 483-B:4(XVII)(d), shall be the ordinary high-water mark. Class A surface waters in Newmarket include the Piscassic River and Follett's Brook. Septic systems shall be setback a minimum of 150 feet from the reference line of all Class A surface waters.

### *Aquifer Protection Overlay District*

The Aquifer Protection Overlay District shall include all land identified as stratified drift aquifer (of any kind) in the vicinity of Newmarket Plains (along NH Route 152, Lee Hook Road, Langs Lane, and Ash Swamp Road) on Plate 6 of the report entitled "Geohydrology and Water Quality of Stratified Drift Aquifers in the Exeter, Lamprey, and Oyster River Basins, Southeastern New Hampshire" ([USGS, Water Resources Investigations Report 88-4128, 1990 revised](#)); as well as the wellhead protection area designated by the map: Wellhead Protection Area - WHPA Delineation Map, as contained in a letter report dated October 3, 2006 to the Town of Newmarket entitled "Delineation of Newmarket Plans Aquifer Wellhead Protection Area" (Comprehensive Environmental Incorporated (CEI)).

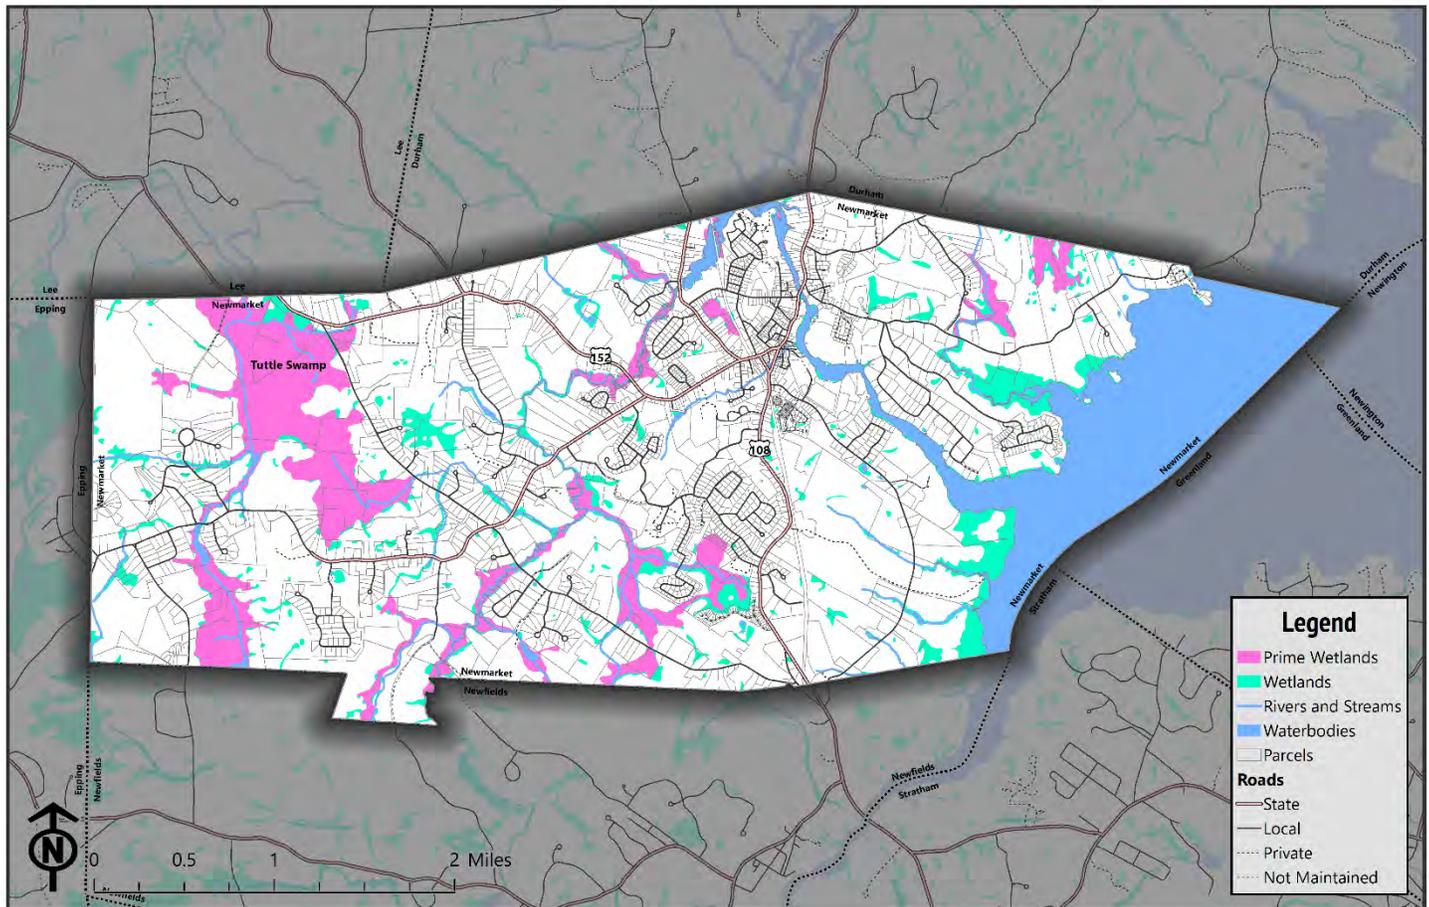

## Recommendations

1. Review the current Aquifer Protection Overlay District with the state's updated model ordinance to recommend any necessary revisions.
2. Review all permitted uses within the base zoning districts to ensure that high intensity uses are consistent and in sync with the goals and objectives outlined in the Master Plan.
3. Evaluate the current regulations and ordinances with regards to septic system setbacks to ensure all waterbodies are adequately protected.
4. Continue to support local watershed groups and organizations.
5. Investigate funding opportunities to help pay for the development of watershed-based plans to recommend methods to address specific impairments identified in the 303(d) list.
6. Use resources, such as the NH [Statewide Asset Data Exchange System](#) (SADES) crossing database, [Resilient Tidal Crossing Assessment](#), and the C-RiSe climate ready culvert analysis, to identify infrastructure projects for inclusion in the Capital Improvements Plan that would assist with long-term planning decisions regarding the placement, design, and size of new culverts or when upgrades and repairs are being made to existing culverts. Site specific projects include the replacement of the Grant Road and Ash Swamp Road crossings over the Piscassic River to help restore surface waters to natural, free flowing systems, and the replacement of the Route 108 crossing over the northernmost unnamed perennial stream behind the Newmarket Storage that flows easterly beneath New Road into Great Bay to improve wetland function.

# Wetlands

## Wetlands Policy Statement

Implement comprehensive protection of wetlands, particularly prime wetlands, and their buffers through regulatory, educational, and voluntary efforts to maintain and protect their critical functions and values.

Map 4. Newmarket's Wetland Resources [Source: National Wetlands Inventory]

## Overview of Wetlands

New Hampshire State Statute RSA 482-A:2 (X) defines wetlands as an area that is inundated or saturated by surface water or groundwater at a frequency and duration sufficient to support, and that under normal conditions does support, a prevalence of vegetation typically adapted for life in saturated soil conditions. According to the [New Hampshire Water Resources Primer](#)<sup>8</sup>, wetlands share three characteristics:

- 1) standing water or water at or near the ground surface during some portion of the growing season;
- 2) soils with characteristics that show they are saturated some of the time; and
- 3) plants adapted to growing in saturated soils.

<sup>8</sup> All, or individual chapters, of the Water Resources Primer can be accessed and downloaded at the following website: <https://www.des.nh.gov/organization/divisions/water/dwgb/wrpp/primer.htm>

State jurisdiction of wetlands is found in NHDES Administrative Rules Chapter [Env-Wt 100](#), and states that a jurisdictional area is subject to regulation under RSA 482-A, including but not limited to surface waters, streams, lakes, rivers, ponds, wetlands, banks, flats, shores, sand dunes, upland tidal buffer zones, and duly-established 100-foot buffers.

There is tremendous diversity in the types of wetlands found in the state. Tidal marshes and mud flats, freshwater red maple swamps, bogs, vernal pools, Atlantic white cedar swamps and wet meadows are all wetland types found in New Hampshire.

### Wetlands in Newmarket

Wetlands identified by the U.S. Fish & Wildlife Service, National Wetlands Inventory (NWI) are summarized below by major wetland type and acreage. The total area of NWI wetlands mapped in Newmarket is 2,185.84 acres or nearly 24.07% of the Town's total area.

Table 4: Wetlands in Newmarket

Wetland Type	Acres	% of Total Municipal Area
Estuarine and Marine Deepwater	573.71 Acres	6.32%
Estuarine and Marine Wetland	533.34 Acres	5.87%
Freshwater Emergent Wetland	176.81 Acres	1.95%
Freshwater Forested/Shrub Wetland	783.34 Acres	8.63%
Freshwater Pond	78.87 Acres	0.87%
Lake	20.61 Acres	0.23%
Riverine	19.12 Acres	0.21%
<b>Total</b>	<b>2,185.84 Acres</b>	<b>24.07%</b>

[Source: National Wetlands Inventory]

Most wetlands in Newmarket are in coastal transition zones, where tidal seawater meets freshwater rivers. A large wetland area, known locally as Tuttle Swamp, extends from Lee into Newmarket along the western side of Ash Swamp Road with a smaller area on the eastern side of Ash Swamp Road. This wetland is a major groundwater discharge area that receives drainage from the surrounding upland areas. The northern half of Tuttle Swamp discharges to the Lamprey River in Lee while the southern half and eastern areas of the wetland system discharge to the Piscassic River. This wetland, combined with others in the area, provide flood control during high flow periods.

In addition to Tuttle Swamp, there are extensive wetlands within the Piscassic River and Follett's Brook drainage areas. These wetlands provide for flood control during high flow periods. Other wetland areas of note include the extensive salt marshes along the Great Bay shoreline near New Road and in the north near Lubberland Creek. Aside from water-related issues, these wetlands provide an extensive network of habitat for a variety of flora and fauna.

### Did you know?

Given the important functions and values of wetlands described above, there have been several attempts to place an economic value on wetland resources. In 2002, a study by the Clean Water Network estimated the economic value of New Hampshire's remaining wetlands to be approximately \$1.2 billion.

[Source: New Hampshire Water Resources Primer: Chapter 5 Wetlands]

## Unique and Important Wetland Habitats

Wetlands are important for removing excess nutrients and sediment from the water, slowing and storing floodwaters, promoting groundwater infiltration, and providing habitat for a variety of vegetation and wildlife. In addition, wetlands provide recreational, educational and research opportunities.

### Salt Marsh

Salt marshes (*Spartina patens* and *Spartina alterniflora*) are intertidal wetlands typically located in low energy environments such as estuaries. They exist both as expansive meadow marshes and as narrow fringing marshes along shorelines. Salt marshes are considered one of the most productive ecosystems in the world due to high rates of plant growth. They provide important ecological functions, including shoreline stabilization, wildlife habitat, and nutrient cycling, and serve as important breeding, refuge, and forage habitats for many species of crustaceans and other invertebrates, and fish.

View of Great Bay salt marsh  
[Photo Credit: Bill Doucet]

Salt marshes are important components of the food web base that support all estuarine invertebrates, fish, and birds, and provide important, often essential, habitat for hundreds of other species. The ecological services provided by eelgrass and salt marshes include protection from shoreline erosion, nutrient and sediment trapping, and pollution filtration. Salt marshes are a scarce habitat type, occupying only about 0.1% of the land area of New Hampshire.

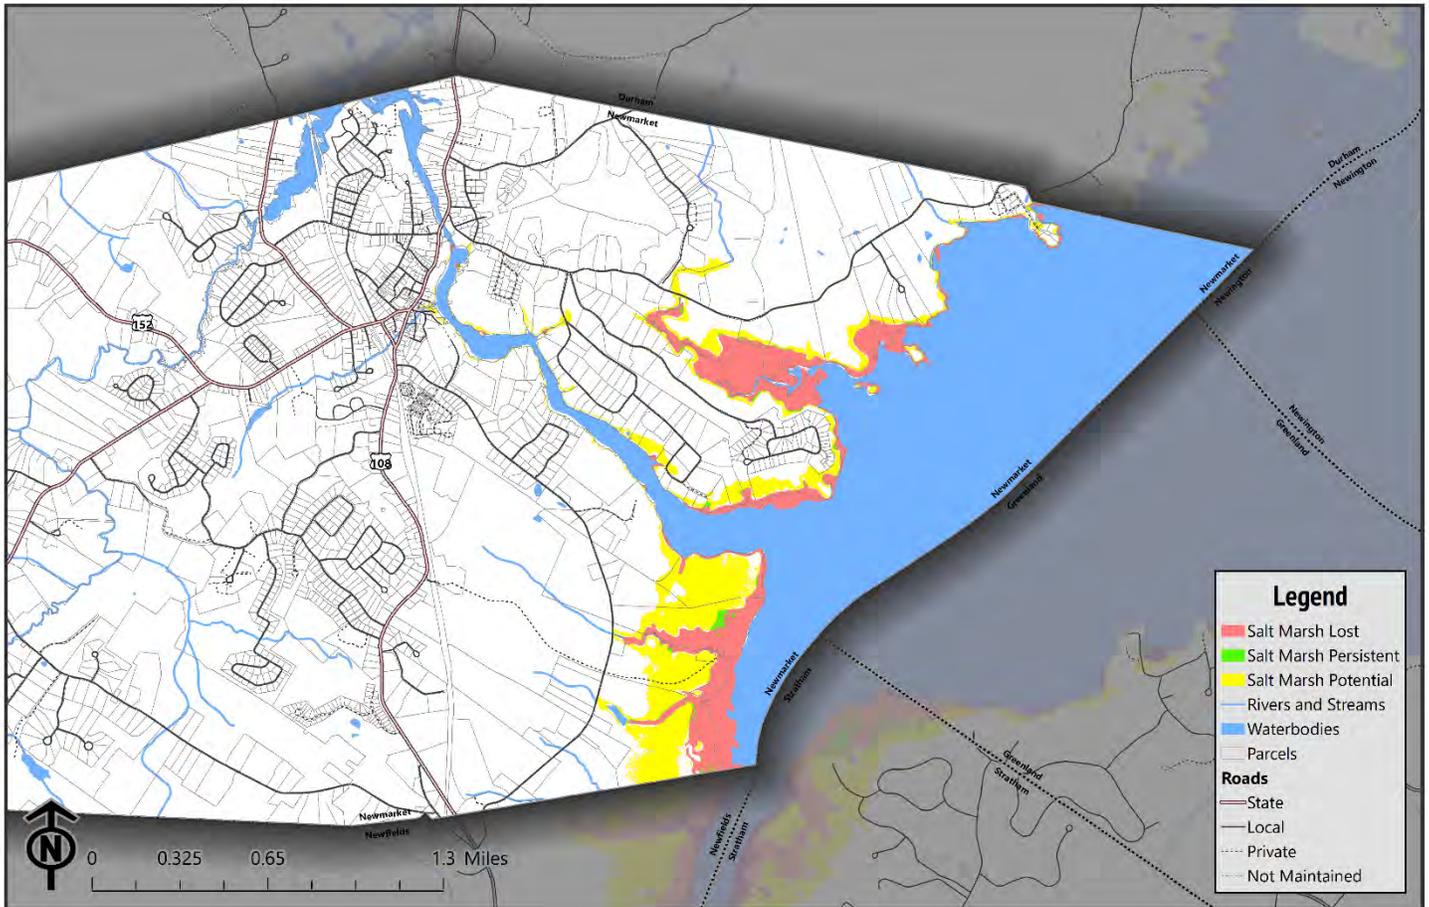

The following information was extracted from the [Wildlife Action Plan: Appendix B](#), rising sea levels will likely have the greatest impacts on current salt marsh habitats; however, many scientists believe these systems can keep pace with sea level rise by migrating landward if there is an adequate supply of sediment or peat build up and no natural, or human-made, barriers present. Future sea level rise scenarios predict that, if not able to migrate, much of today's low marsh will be mostly submerged and transformed into mudflats or sub-tidal bays. Current high marsh will change to low marsh, and high marsh will likely migrate upland several feet (if allowed).

According to the Sea-Level Affecting Marsh Migration (SLAMM) model<sup>9</sup>, Newmarket is a community within the coastal watershed where current conditions allow for potential salt marsh growth as sea levels rise. In fact, upwards of 170.7 acres of potential salt marsh will have the opportunity to migrate into surrounding upland areas as sea levels rise. The Town may, however, lose approximately 169.9 acres of salt marsh habitat due to coastal inundation (see Table 5).

<b>2100 Timeframe with 6.6 feet of SLR</b>	<b>Total Acreage</b>
Salt marsh lost	169.9
Salt marsh persistent	5.7
Salt marsh potential	170.7
[Source: New Hampshire Fish & Game, 2014]	

<sup>9</sup> This model simulates the dominant processes involved in wetland conversion and shoreline modification under different scenarios of sea level rise. SLAMM tracks the rise of water levels and the salt boundary in 25-year time steps and predicts changes to wetland habitat based on known relationships between wetland types and tide ranges. This information is available [here](#).

Tidal areas with the highest potential for salt marsh migration are found along the outskirts of the existing marsh system around Lubberland Creek, the tidal portion of the Lamprey River, and the shoreline of Great Bay east of New Road and north of the Squamscott River confluence. Protecting riparian areas through living shoreline efforts and best management practices is likely to retain the functions of these natural systems.

Map 5. Potential Salt Marsh Migration in Newmarket [Source: NH Fish and Game]

### Did you know?

In 2019, the Town of Newmarket, in partnership with The Nature Conservancy and NH Coastal Program, completed a tidal culvert replacement project on Bay Road over Lubberland Creek that will support fish passage, salt marsh migration, and reduce ongoing flooding issues in the area.

In May 2019, a report titled "[Resilient Tidal Crossing: An Assessment and Prioritization to Address New Hampshire's Tidal Crossing Infrastructure for Coastal Resilience](#)"<sup>10</sup> was published with a focus on enhancing coastal resilience for both human and natural communities. The report identified a culvert on New Road as a high priority for replacement due to the crossing being in poor condition, restrictive, and exhibiting high erosion; however, offers little potential for salt marsh migration.

<sup>10</sup> Weblink here: <https://www.des.nh.gov/organization/divisions/water/wmb/coastal/documents/r-wd-19-20-compiled.pdf>

### *Prime Wetlands*

Prime wetlands are designated by a municipality according to the requirements of RSA 482-A: 15 and Chapter Env-Wt 700 of the NHDES Administrative Rules. The designation of these wetlands must then be adopted by the municipality by vote of the residents after undertaking a process comparable to the adoption of zoning ordinances. Prime wetlands that were designated between September 11, 2009 and August 17, 2012 are subject to an additional 100-foot buffer; however, Newmarket's prime wetlands were designated in 2006, a period in which no additional buffers were required.

### *Vernal Pools*

Vernal pools are temporary bodies of water that flood each year for a limited time during wet months, typically early spring to mid- or late summer months. Their common characteristics are the absence of fish, temporary flooding regime, and the presence of vernal pool species. The hydrology of vernal pools is maintained primarily by runoff from melting snow and precipitation, and in some cases groundwater flow. Vernal pools usually dry up by mid- to late summer, depending upon climate factors such as the amount of rain and temperature. Species typically found in vernal pools in New Hampshire include: Wood Frog, Spring Peeper, Green Frog or Bullfrog, Spotted Salamander, Jefferson Salamander, Blue-spotted Salamander, Marbled Salamander, Eastern Spotted Newt, Four-toed Salamander, Fairy Shrimp, Spotted Turtle, Blanding's Turtle and Wood Turtle.<sup>11</sup> Except for the Marbled Salamander, these species are present in some of Newmarket's wetlands. The [Identifying and Documenting Vernal Pools in New Hampshire](#) is a useful tool that can be used to help train the public to identify and document vernal pool habitat.

### Federal/State Protection Measures

#### *NHDES Fill and Dredge in Wetlands*

The mission of the Wetlands Bureau is to protect, maintain and enhance the environmental quality in New Hampshire through the powers set forth in RSA 482-A to regulate impacts to those areas wherever the tide ebbs and flows or freshwater flows or stands by requiring a permit for dredge or fill or construction of structures in wetlands or other waters of the state. The law also protects sand dunes and upland tidal buffer zones. RSA-482-A and the rules promulgated under that law require that projects be designed to avoid and minimize impacts to wetlands and other jurisdictional areas.

### Existing Local Protection Measures

#### *Wetland Protection Overlay District*

The wetlands protection overlay district shall include all areas of land that meet the criteria of the NHDES Wetlands Bureau rules for determination of wetlands, poorly drained and very poorly drained soils (as amended), prime wetlands, as delineated by the Newmarket Conservation Commission and approved in accordance with RSA 482-A:15 (as amended) and associated buffers. Current regulations include:

- 1) Prime wetlands: There shall be no disturbance of any kind (including but not limited to construction, filling, dredging and the removal of vegetation) within a prime wetland or within a buffer area within 75 feet around the prime wetland. Structures shall be set back a minimum of 100 feet from prime wetlands. On-site septic systems shall be set back a minimum of 125 feet from prime wetlands.
- 2) Very poorly drained soils (hydric A):<sup>12</sup> Such wetlands shall not be included in the minimum lot size or as part of any lot density calculation as required by any provision of this chapter. There shall be no

<sup>11</sup> New Hampshire Audubon Society, *Conservation Fact Sheet: Vernal Pools*, 1998.

<sup>12</sup> A map (Map #6) of very poorly and poorly drained soils can be found in the Appendix of this chapter.

disturbance of any kind (including but not limited to construction, filling, dredging and the removal of vegetation unless in accordance with the provisions of this chapter) within such wetlands or within a buffer area 50 feet around such wetlands.

- 3) Poorly drained soils (hydric B): Such wetlands may be used to fulfill up to 25 percent of the area of the minimum lot size or 25 percent of any lot density requirement as part of any section of this chapter. There shall be no disturbance of any kind (including but not limited to construction, filling, dredging and the removal of vegetation unless in accordance with the provisions of this chapter) within such wetlands or within a buffer area 25 feet around such wetlands.

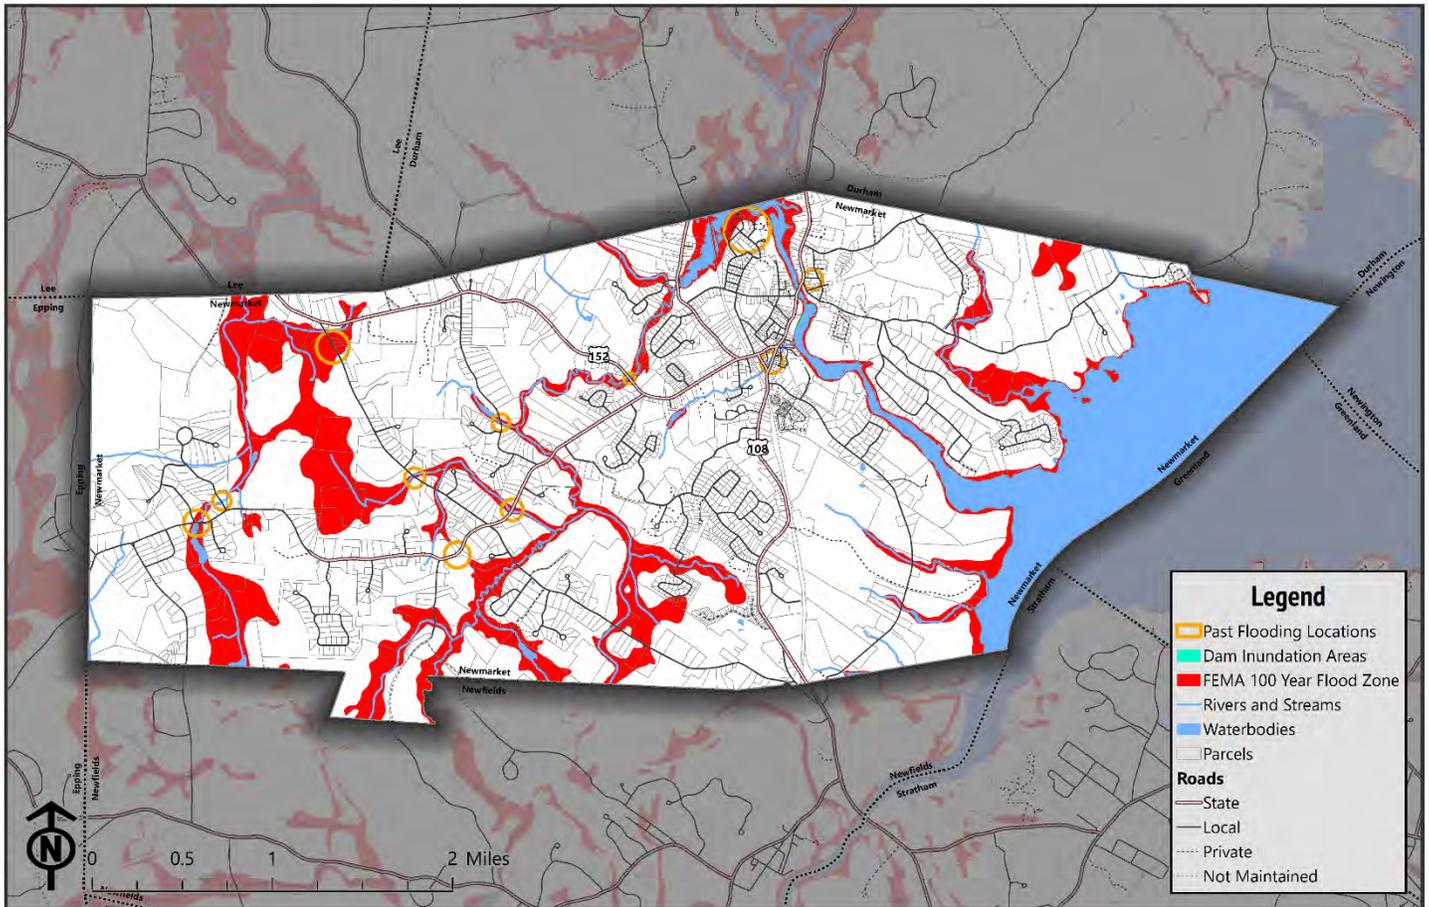

## Recommendations

1. Explore funding opportunities to conduct a town-wide vernal pool inventory to locate, document, and map vernal pools in Newmarket.
2. Update the Town's Prime Wetland Maps and associated GIS layers that were completed in 2006 using new available GIS and Lidar data.
3. Compare the existing Wetland Protection Overlay District with new state rules and make necessary revisions to be consistent with jurisdictional areas and other state-level changes.
4. Collaborate with local, regional, and statewide partners to identify other wetland mitigation projects or restoration opportunities.
5. Consider adopting stricter buffer requirements for setbacks to wetlands that include consideration of climate change in order to protect land that allows coastal habitats and populations to adapt to changing conditions and also provides ecosystem services that protect people, structures, and facilities.

# Floodplains

## Floodplain Management Policy Statement

Implement regulatory, educational, and voluntary measures that incorporate the latest science on climate change to improve resiliency against future events, maintain the natural functions of floodplains, and minimize damage to municipal and private property.

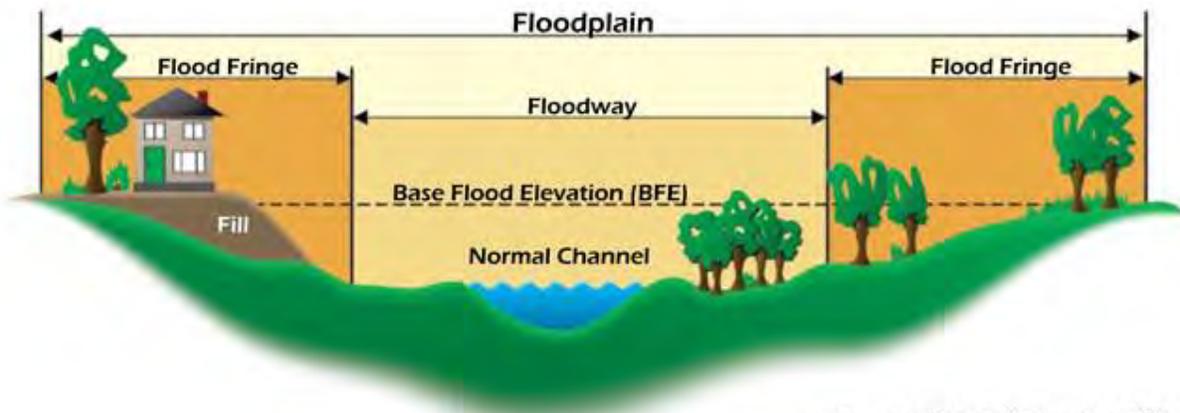

Map 7. Newmarket's Existing Floodplains [Source: FEMA Digital Flood Insurance Rate Map (DFIRM) 2005]

## Overview of Floodplains

Floodplains are generally low-lying areas adjacent to rivers, streams, and other surface water bodies, which are susceptible to flooding. Floodplains perform an important water storage function during storm events and periods of excessive water run-off, by storing water temporarily and gradually releasing it back into the drain system or infiltrating floodwater into the subsurface where it is discharged to streams and recharge groundwater.

Refer to the diagram below for the components of a floodplain: normal channel, floodway, fringe, and flood hazard area or 100-year floodplain. The floodway and flood fringe serve as critical floodwater storage areas, and the floodplain vegetation acts to slow the velocity of floodwaters and reduce erosion of the floodplain and adjacent lands.

Figure 2. Characteristics of a Floodplain

Source: NFIP Guidebook, FEMA

Although the flood mitigation capacity of floodplains is relatively well protected by federal and local regulations, other factors can contribute to increased flooding. These factors include: increases in impervious surface coverage, filling of wetlands in the upper watersheds, stormwater management practices that increase peak flow rates, inadequate infrastructure to accommodate current storm flow volumes, beaver dams and less natural dissipation of flood flows through infiltration and interception by trees and vegetation.

### Special Flood Hazard Areas

According to the Federal Emergency Management Agency (FEMA), flood hazard areas identified on the Flood Insurance Rate Map are identified as a Special Flood Hazard Area (SFHA). SFHA are defined as the area that will be inundated by the flood event having a 1-percent chance of flooding being equaled or exceeded in any given and a 26% chance of flooding over the life of a 30-year mortgage. In communities that participate in the National Flood Insurance Program, mandatory flood insurance purchase requirements apply to all high-risk zones.

### Riverine and Coastal Flooding and Flood Prone Areas in Newmarket

Riverine flooding is the most common natural disaster to impact New Hampshire. Riverine flooding occurs when surface water runoff introduced into streams and rivers exceeds the capacity of the natural or constructed channels to accommodate the flow. As a result, water overflows the river banks and spills out into adjacent low lying areas.<sup>13</sup> Floods are most likely to occur in the spring due to the increase in rainfall and the melting of snow; however, floods can occur at any time of the year because of heavy rains, hurricane, or a Nor'easter.

According to the [2018 Hazard Mitigation Plan Update](#), Newmarket has approximately 24.0% (2,183.4 acres) of its area in 100-yr. floodplain. It should be noted that this estimation is likely overstated since the FEMA floodplain contains open water. If the tidal portions along the Lamprey River and Great Bay were removed, the approximate acreage may be more accurately depicted as 12.6%. Based on extent of the floodplain, the Town has flooding potential along the Lamprey River and the Piscassic River. The Lubberland Creek, Follett Brook and Tuttle Swamp area, as well as along the tributaries to the Great Bay, also have an expansive floodplain area (1,144.1 acres). Newmarket has no existing man-made flood control measures. The Macallen Dam, originally built in 1887, does have floodgates; however, the dam's primary function is for recreation not for flood control.

<sup>13</sup> [FEMA Training Chapter 2 Types of Floods and Floodplains](#)

Coastal flooding is often associated with storm surge, extreme precipitation events, and sea-level rise, and can be devastating to human health and safety, public and private structures and facilities, and the economies of coastal and inland coastal communities. Results of the [2017 C-RiSe](#) assessment report state that the inland coastal portion of Newmarket that is most susceptible to coastal flooding are those areas located south of the Macallen Dam on the west side of the Lamprey River near the downtown, low-lying areas around Lubberland Creek, and low-lying land south of the Lamprey River along Great Bay.

King Tide flooding at pump station on Creighton St.  
Photo Credit: Kyle Pimental

### Past Flooding Events

During extreme flood events, floodwaters from the Lamprey River overflow NH Route 108 upstream in Durham and are diverted into the Oyster River basin. This diversion of floodwaters reduces peak flood discharges of the Lamprey River by approximately 20 percent before it reaches the town.<sup>14</sup> Between 2016-2018, NHDOT completed major roadway construction on Route 108, which included grade changes and drainage improvements, to construct 4-foot bike shoulders and other miscellaneous safety improvements. According to the Town's consultants, these alterations had little impact on improving or worsening flooding problems along this stretch of roadway; however, a separate project in a similar location in Durham was determined, if built, would negatively impact downstream systems and was redesigned. The Oyster River drainage basin remains an important flood protection and mitigation function for the Town, and regional projects within this sub-watershed should be carefully planned to reduce impacts upstream and down.

Numerous floods have been recorded on the Lamprey River since the U.S. Geological Survey (USGS) installed a gauging station near Packers Falls in Durham in July 1934. Historically, the two largest flood events since 1934 occurred in March 1936 (peak discharge of 5,490 cubic feet per second) and April 1987 (peak discharge of 7,500 cubic feet per second). These events had estimated frequencies of 25 and 100 years, respectively. In recent years, these historical flood events were exceeded in spring 2006 and 2007.

Overturned Jeep on Exeter Street during flooding  
Photo Credit: Town of Newmarket

#### *May 2006 Mother's Day Flood Event*

From May 11-15 2006, central and southern New Hampshire experienced severe flooding caused by as much as 14 inches of rainfall. In addition to the precipitation volume being exceptional, the month of May 2006 was the second wettest May in New Hampshire on record (based on NOAA data). The U.S. Geologic Survey Lamprey River gauging station located near Packers Falls Road Bridge measured the highest flow ever recorded of approximately 8,970 cubic feet per second (CFS) on May 16. This flood level was estimated to be a flood event with a recurrence interval between 100 and 500 years. The Piscassic River rose to a level that exceeded its normal drainage basin, entered Moonlight Brook, and was impounded behind the PanAm Railways culvert at the intersection of Gerry Avenue and Exeter Street. The earthen embankment at the railroad arch culvert

<sup>14</sup> Federal Emergency Management Agency, Flood Insurance Study, Town of Newmarket, New Hampshire, Rockingham County, 1991.

subsequently failed and storm flows flooded Route 108, in the “Exeter Street Bowl.” During this flood event, floodwaters in Exeter Street were approximately four feet deep, vehicles were submerged, oil tanks and dumpsters displaced and silt from eroded roadways and foundations was discharged into the Lamprey River. As a result of the flood damage, a presidential disaster declaration was made on May 25, 2006 for seven New Hampshire counties, including Rockingham County.

#### *Patriot's Day 2007 Flood Event*

On April 15 and 16, 2007 nearly seven inches of rain fell in Newmarket. The U.S. Geologic Survey Lamprey River gauging station located near the Packers Falls Road Bridge measured a peak flow of approximately 8,450 cubic feet per second on April 18, 2007, the second highest flow. This flood level was estimated to have a recurrence interval of just below 100 years. Normal flows for this date would be 654 cubic feet per second. While there was flooding in the “Exeter Street Bowl” again, the damage was not as severe as occurred with the 2006 flood. Flooding in the New Road area extending to Exeter Street was significant necessitating temporary road closures.

Major flooding on Exeter Street “the Bowl” during flooding event  
Photo Credit: Town of Newmarket

Both floods resulted in significant damage to public and personal property in Newmarket. Roads were impassable for days and severely damaged, and residential areas were evacuated due to high water levels and inundation of homes by floodwaters.

#### *Other Localized Events of Significance*

Data gathered from the [2018 Hazard Mitigation Plan Update](#) identified three additional flooding events of consequence, including the spring of 1996, February 2010, and October 2016. The February storm impacted parts of Route 152. The October storm impacted parts of Route 108 and Gerry Ave; however, the issues at Gerry Ave were attributed to beaver damage in a local manhole that backed up water from Moonlight Brook and has not happened since. The Committee could not recall the specifics of this storm other than it caused damage in the “bowl” area on Exeter Street. According to the Flood Insurance Study for Rockingham County (2014), this event had a recurrence interval of approximately 100 years and recorded a peak discharge of 3,060 cubic feet per second (cfs) on parts of the Exeter River in Brentwood.

#### *Compliance with the National Flood Insurance Program*

According to FEMA's Community Status Book Report, Newmarket has been a member of the National Flood Insurance Program (NFIP) since May 2, 1991. In order to remain in NFIP compliance, Newmarket has implemented several floodplain management actions, including: providing education materials to homeowners, participating in a FEMA Community Assistance Visit, updating Master Plan Chapters with a focus on climate adaptation and resilience, replacing an undersized culvert over Lubberland Creek, completing a climate study in the Moonlight Brook watershed, and improving drainage at the Middle/High School.

On July 29, 2020, FEMA issued a Letter of Final Determination (LFD) finalizing the preliminary coastal Rockingham County Flood Insurance Rate Maps (FIRMs) and Flood Insurance Study (FIS) report that were originally issued in

## Additional Studies, Plans, and Initiatives

### *New Hampshire Coastal Flood Risk Summary Part 1: Science*

The New Hampshire Coastal Flood Risk Summary – Part 1: Science provides a synthesis of the state of the science relevant to coastal flood risks in New Hampshire. Specifically, this document provides updated projections of sea-level rise, coastal storms, groundwater rise, precipitation, and freshwater flooding for coastal New Hampshire. This information is intended to serve as the scientific foundation for the companion New Hampshire Coastal Flood Risk Summary - Part II: Guidance for Using Scientific Projections and is intended to inform coastal land use planning and decision-making

### *New Hampshire Coastal Flood Risk Summary Part II: Guidance for Using Scientific Projections*

The primary purpose of the 2019 New Hampshire Coastal Flood Risk Summary, Part II: Guidance for Using Scientific Projections (NHCFR Guidance) is to help decision-makers assess and incorporate best available projections for relative sea-level rise (RSLR), coastal storms, RSLR-induced groundwater rise, and extreme precipitation into state and local land use planning and decision-making.

### *Gomez & Sullivan and GZA GeoEnvironmental, Inc.: Macallen Dam Findings*

Gomez and Sullivan Engineers (GSE) were originally contracted by the Town to conduct a dam removal feasibility study. However, as the study progressed the Town broadened the focus of the project to identify other potential alternatives, other than dam removal, to address NHDES requirements to pass the 100-year flood with one foot of freeboard based on past studies and the information gained from the study. Subsequent to that, final design and engineering services related to the rehabilitation of the Macallen Dam were prepared by GZA GeoEnvironmental to provide the Town with conceptual alternatives to choose from in meeting the NHDES letter of deficiency relative to the Macallen Dam. Construction, involving renovations to the dam, is moving forward at the time of this chapter revision, with a completion date of December 2020.

### *Climate Adaptation Plan for the Moonlight Brook Watershed*

In 2016, Newmarket, in partnership with the Horsley Witten Group, participated in a resiliency to flooding and climate change project in the Moonlight Brook watershed. This project was a two part effort to: 1) study flood risk associated with climate change as well as how future development and build out of the community affect these risks, and 2) design robust green infrastructure practices within the Moonlight Brook watershed to help reduce risk of flooding while reducing pollutant load into the Brook and further downstream into the Lamprey River and ultimately Great Bay. Current erosion at Schanda Park, as witnessed by members of the Conservation Commission, indicates increased tidal flooding, as well as impacts from severe rain events at this location.

### *Coastal Risk in the Seacoast: Vulnerability Assessment*

The Climate Risk in the Seacoast (C-RiSe) vulnerability assessment project produced maps and statistical data about the potential impacts to New Hampshire's ten inland coastal municipalities from sea-level rise and storm surge to infrastructure, critical facilities transportation systems, and natural resources. The project also assessed both aquatic organism passage capacity and hydraulic flow capacity of twelve road crossings in each of the ten inland coastal municipalities.

King Tide Flooding at the fishing weir at Schanda Park  
Photo Credit: Kyle Pimental

### *New Hampshire Flood Hazard Handbook: A Guide for Municipal Officials*

The Flood Hazards Handbook was developed and released in 2019 by the New Hampshire Silver Jackets, a unified team of individuals from federal and state agencies. The Silver Jackets work collaboratively on the state's flood risk management priorities and provide technical expertise to help reduce flood risk in New Hampshire communities.

### *A Guide to Assessing Green Infrastructure Costs and Benefits for Flood Reduction*

The purpose of this guide is to provide a process that communities can use to assess the costs and benefits of green infrastructure to reduce flooding. The guide takes a step-by-step, watershed-based approach to documenting the costs of flooding; projecting increased flooding and associated costs under future land use and climate conditions; and calculating benefits and costs of reducing flooding with green infrastructure over the long term.

## Federal/State Protection Measures

### *National Flood Insurance Program*

The National Flood Insurance Program (NFIP), administered by the Federal Emergency Management Agency (FEMA), is designed to manage floodplains, and restrict development in floodplains to reduce flood hazards and structural damage. Under this program, flood hazard areas are mapped and studied in participating communities.

## Existing Local Protection Measures

### *Floodplain Overlay District*

Section 32-158 of the Town's Zoning Ordinance (as revised June 21, 2017) outlines the Town's floodplain development regulations (last updated August 4, 2010). The purposes of the floodplain protection overlay district are to: protect floodplains from development and construction activities which would aggravate flooding; prevent development in locations which would place occupants at risk or which would likely require rescue of occupants by emergency services personnel during floods; protect the floodplains for use as habitat and for the aesthetic qualities; and ensure town compliance with the National Flood Insurance Program. The regulations shall apply to all lands designated as areas of special flood hazard by FEMA in its "Flood Insurance Study for the County of Rockingham, N.H." dated May 17, 2005. The Town has recently received word from FEMA that new modified and flood hazard information and revised map panels will become effective as of January 29, 2021.

## Recommendations

1. Review the updated floodplain model ordinance from NH Office of Strategic Initiatives and update the Town's floodplain ordinance, once FEMA maps are approved and adopted. An outreach campaign targeting existing property owners shall accompany this update.
2. Explore options to develop a creative outreach campaign to educate the public on future coastal flood risk (i.e. high-water mark initiative, participation in the king tide photo contest, etc.) at public spaces such as Schanda Park and Heron Point.
3. Use the New Hampshire Living Shoreline Site Suitability Assessment<sup>16</sup> to identify sites in Newmarket that may be suitable for specific living shoreline approaches to address erosion issues along the tidal shoreline.
4. Incorporate impacts to municipal infrastructure identified in the C-RiSe project into current and future capital infrastructure projects, including water access at Schanda Park, the pump station on Creighton

<sup>16</sup> Download report here: <https://www.des.nh.gov/organization/commissioner/pip/publications/documents/r-wd-19-19.pdf>

Street, and flooding on critical roads such as Treatment Plant Road. This also includes evaluating the extent of sea-level rise and storm surge flooding on individual facilities such as sewer pipes located at the end of Water Street, Creighton Street, and Lamprey Street and the intersection of Bay Road.

5. Revisit the Climate Resiliency in Moonlight Brook report to accomplish the two remaining ICLEI Climate Resilient Communities milestones identified in the plan. Site specific projects include: alleviate flooding in re-occurring areas by redirecting stormwater flows away from downtown in the “bowl “ area on Route 108; installing a new drainage system with a gravel wetlands to provide water quality treatment on New Road and a stormwater outfall on Young Lane; and assess impacts upstream in the watershed at the new drainage system at the Elementary School.
6. Identify and implement green infrastructure and nature-based approaches to improve flood resilience and stormwater management throughout the Town referenced in the New Hampshire Flood Hazard Handbook.
7. Review Appendix C in the Town's 2018 Multi-Hazard Mitigation Plan to identify riverine flooding mitigation approaches, including prevention, property protection, natural resource protection, emergency services, structural projects, and public education.
8. Update the Town's Open Space Plan to strategically identify high value land for future land conservation. Incorporate climate resilience benefits, such as future flood storage salt marsh migration, etc., into scoring criteria to ensure the Town considers climate adaptation benefits when evaluating land for conservation purposes.
9. Integrate climate adaptation measures into all future master plan updates.

# Potential Threats to Water Resources

## Potential Threats to Water Resources Policy Statement

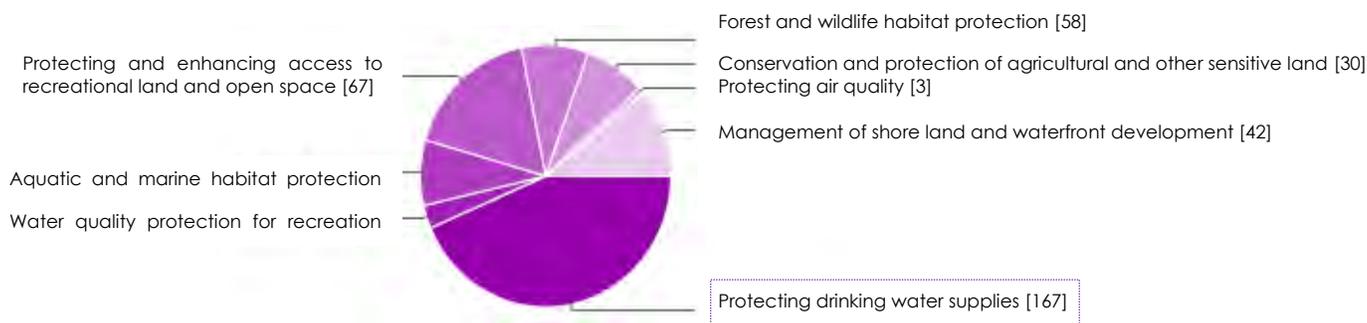

*Protect water quality for drinking water sources and wildlife habitat from current and potential threats to preserve critical functions, benefits, and the ecological integrity of these resources.*

### Overview

In previous iterations of the Water Resources Chapter, Newmarket has approached potential threats to water resources through a point and non-point source threats lens. Based on available data, this worked; however, Newmarket's revised [Vision Chapter of the Master Plan \(2015\)](#) encourages vigorous protection of **ALL** water resources. This chapter update includes a summary of local upgrades and efforts, as well as potential threats based on new information about contaminants, degradation, and climate change impacts.

Figure 3. Results from Visioning Showing the Public's Prioritization of Protecting Drinking Water Supplies

### Which of the following would you place the highest priority on in Newmarket over the next 10 years?

Source: 2015 Master Plan Visioning Public Input

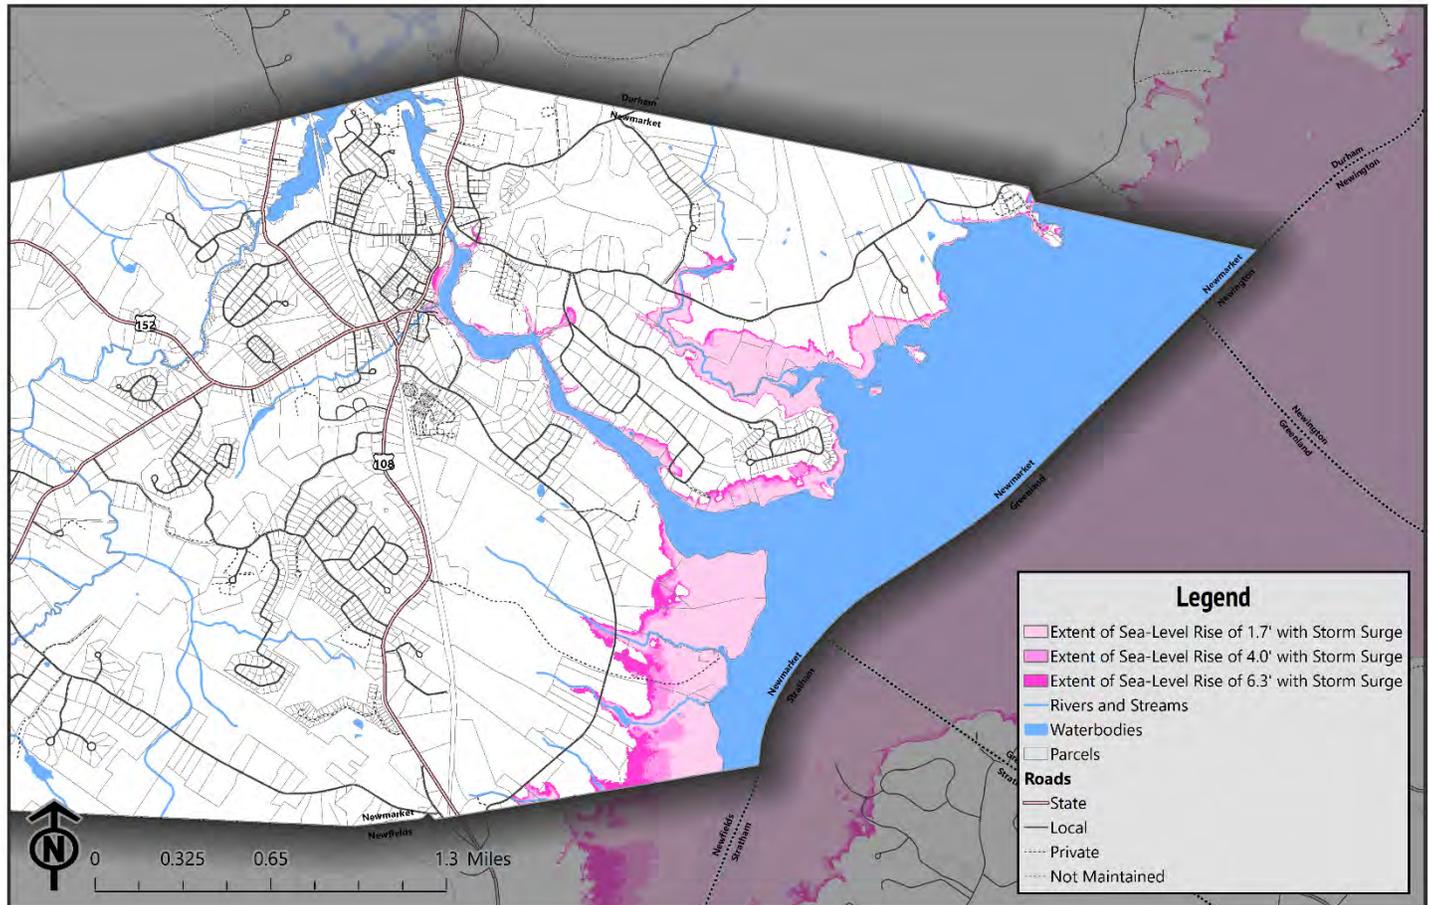

### Local Upgrades and Efforts

Historically, much of Newmarket's attention on threats to water resources has been focused on addressing challenges with the Town's wastewater system and exploring ways to improve it to minimize pollution. The Town's most recent [National Pollution Discharge Elimination System \(NPDES\) Permit](#), which was originally authorized in 2000 and extended in 2011 to 2016, allows the Town to discharge from their Young Lane Wastewater Treatment Plant to the Lamprey River below the Macallen Dam. The most current upgrade to the facility was completed in 2017 and included a 4-Stage Bardenpho process for nitrification and denitrification. This upgrade was given national recognition when the Town was awarded the 2019 PISCES Exceptional Project for Region 1, a first in New Hampshire, and will help the Town meet nitrogen effluent limits and improve the water quality of the Lamprey River and Great Bay Estuary.

Newmarket has also honed in on stormwater runoff, pollution, erosion, and sedimentation. The Town has been proactive in making substantial efforts to reduce the total nitrogen load to the Lamprey River. Strategies include infrastructure maintenance, organic waste and leaf litter collection, enhanced street and pavement cleaning, and stormwater structural BMPs. Lastly, during the development of this chapter, the Town was actively working to develop and implement a water quality program to monitor the effectiveness and in-stream quality response of implementing the 2018 Nitrogen Control Plan as part of the EPA's Administrative Order of Consent.

## Groundwater Threats

While New Hampshire is a relatively water rich state, NHDES [recommends](#) that surface waters are not used as a source for drinking water for private homes because of their risk to contamination. Instead, they suggest groundwater through bedrock wells or wells installed in sand and gravel. The Town withdraws water primarily from the Sewall Well and the Bennett Well (the MacIntosh Well facility was constructed and put into operation in 2016 and the Tucker well is permitted but has yet to be developed).

Map 9. Sea-Level Rise Scenarios in Newmarket [Source: NH GRANIT]

### *Impacts from Sea Level Rise (Groundwater Rise and Saltwater Intrusion)*

In 2017, Strafford Regional Planning Commission (SRPC), in partnership with the University of New Hampshire (UNH) implemented a [groundwater modeling study](#) to “identify existing and potential future locations where public water systems may be vulnerable to sea-level rise impact on groundwater” in Newmarket. The analysis identified one contamination hazard site, one local potential contamination site, one sewer pump station, as well as 30 private drinking water suppliers that have a potential to be impacted by groundwater rise. In addition, the study found that the Moody Point development is projected to experience saltwater intrusion.

### **Did you know?**

In March 2019, Newmarket voters approved up to \$12.2 million in municipal bonds for seven water system upgrade and extension projects, including construction plans to extend a public watermain to the Moody Point development in response to the groundwater rise threat. The project ranked #10 (out of 72) in the 2019 NHDES drinking water SRF project priority list and is scheduled for construction in the summer of 2021.

As a coastal community, Newmarket will have to explore opportunities to combat salinity concentrations with new water treatment technology, replacement of underground pipes that corrode faster under salt water, and possibly the extension of municipal water infrastructure to locations with high salt concentrations. Homeowners may need to site new private drinking wells and relocate septic systems.

#### *Public Water Supply Susceptibility*

Drinking water can be contaminated through natural or man-made causes. Man-made contamination can happen because of failing septic systems, animal waste, plumbing fixture leaching, leaking storage facilities, or improper waste disposal. Public health standards are in place to protect water sources, and New Hampshire currently tracks four man-made contaminants: atrazine, Di (2-ethylhexyl) Phthalate (DEHP), Tetrachloroethylene (PCE), and Trichloroethylene (TCE) to protect community water systems.

In 2007, NHDES assessed the vulnerability of [every source of public water in Newmarket](#). Each source is ranked according to several criteria. According to the report, of greatest concern in Newmarket are confirmed detections of certain contaminants, the presence of numbered state highways or active railroads, the presence or density of septic systems and sewer lines.

#### *Aquifers*

As mentioned in the Surface and Groundwater Section, there are four identified stratified-drift aquifers deposits in Newmarket encompassing a total of 657.5 acres. While these are extremely important from a biological standpoint, they are at risk due to the combination of inland droughts and floods, increased surface water components and diversions, increased groundwater withdrawals, sea level rise, and increased storm surges. The Sewall Well and the Bennett Well produce high quality drinking water that requires minimal treatment. However, recent studies indicated that the rate of withdrawal from this source and several years of drought conditions resulted in the lowering of the groundwater levels in the aquifer. Recovery of the aquifer after the drought years of the early 2000's has continued, reaching nearly expected capacity with careful management of water withdrawals. Since the drought, the Town has initiated a water management program, allowing better control of water use during times of drought or other periods of high demand on the water system.

#### *Land Use Discharges into Groundwater*

In Newmarket, groundwater usually flows from areas of high groundwater altitude toward natural discharge areas in the Lamprey River and Great Bay. While groundwater is naturally cleaned of particulate matter, both natural and human-induced chemicals can still be found in it. Industrial discharges, groundwater intrusion, urban activities, agriculture, groundwater pumping, and disposal of waste can all affect the groundwater quality. Any commercial activity using regulated substances or contaminants that discharges into the ground, or any activity that releases a chemical having a groundwater standard without approval from NHDES is a violation of state law (See NH Code of Administrative Rules Part Env-Ws 421 and Newmarket Code of Ordinances CH. 32 Art. V Sect. 32-153 "Aquifer Protection Overlay District).

#### *Arsenic, Radon, and other Natural Contaminants Levels*

According to survey data from the [Spring 2018 Granite State Poll](#), NH resident's top concerns about their drinking water include bacteria, PFC, lead, arsenic, radon, taste, and odor.

Arsenic occurs naturally in groundwater across New Hampshire. When present above the drinking level standard, it is important to reduce the concentration as it has negative long-term consequences on human health. In October 2019, the State of NH lowered the Maximum Contaminant Level for arsenic in drinking water from 10

parts per billion (ppb) to 5 ppb.<sup>17</sup> Currently, the Town water system levels are at 6 ppb. To become compliant by July 1, 2021, Newmarket is designing a new facility to treat water from the Macintosh and Tucker Wells to lower arsenic levels to 2 ppb.

Radioactive elements (radon, radium 226, radium 228, uranium, and gross alpha emitting particles) are naturally present in New Hampshire rock, soil, and water. When dissolved in water, radionuclides are colorless, tasteless, odorless, and cannot be detected by our senses, but are a health concern regarding such as cancer, kidney damage, and tumors with long-term exposure.<sup>18</sup> All drinking water radionuclides can be treated at the kitchen sink or point-of-use as they are not volatile and cannot be absorbed through the skin. Newmarket's water system is in compliance with the Safe Drinking Water Act requirements.

Most radon exposure is through the air because it is a gas. A smaller amount of exposure happens through water because water use (shower and water use) exposes the radon. Radon concentrations in both air and water are measured in picocuries per liter (pCi/L) and [NHDES recommends](#) a general rule of thumb that for every 10,000 pCi/L of radon in a home's water supply, the radon concentration in indoor air is increased by 1 pCi/L.

Higher sodium and chloride levels imply contamination of groundwater sources by human activities, including the use and storage of road salt, discharges from water softeners, human or animal waste disposal, leachate from landfills, and other activities.<sup>19</sup> Chloride, in the form of salt, is imported to local watersheds from several major sources: roadway deicing, snow removal, food waste, water softeners, atmospheric deposition, and roadway salt pile runoff. Chloride is most transported within a watershed through stormwater runoff and groundwater flow to surface waters. Year to year variations in chloride contributions are primarily due to differences in the severity of any given winter. Currently, the Town is not required to have a Chloride TMDL<sup>20</sup>, as it is not on the [3030D List](#) for Newmarket, but the Town might need to address it as part of NH-MS4 in the future.

According to the Groundwater Modeling study, high levels of sodium and chloride can result in increased treatment costs for water providers and may render groundwater wells unusable. This may require the development of new well locations or alternative sources of freshwater. Sodium and chloride levels in the seacoast area typically reach up to 75 mg/L sodium and 150 mg/L chloride. While the EPA does not identify a maximum contamination level, advisory drinking water standards for these two contaminants are 250 mg/L (a concentration level at which drinking water can taste salty). Higher levels of sodium and chloride can also indicate that surface water is reaching wells and is potentially bringing in other contaminants with it. While public water sources are regulated, private wells are not and could be more prone to contamination. Newmarket's water system is in compliance with the Safe Drinking Water Act requirements.

#### PFAS

PFAS stands for "Per- and Polyfluoroalkyl Substances." These are synthetic chemicals that have historically been used in a variety of household and commercial products from non-stick cookware and microwave popcorn bags, to shampoo and dental floss. Outside of the home, they have been used in firefighting foams and other industrial processes. While studies do not clearly show whether PFAS causes cancer and further study is needed, several studies suggest that PFAS may have various harmful impacts on human health.

<sup>17</sup> <https://www.newmarketnh.gov/water-wastewater/pages/arsenic-levels-october-2019>

<sup>18</sup> [NHDES Radionuclides in Drinking Water Fact Sheet](#)

<sup>19</sup> [NHDES Sodium and Chloride in Drinking Water Fact Sheet](#)

<sup>20</sup> Total Maximum Daily Load refers to pollutant reduction a water body needs to meet [NH's water quality standards](#).

In July 2016, New Hampshire Department of Environmental Services emailed and/or mailed a letter requesting that all community and non-transient, non-community water systems voluntarily sample for PFOA, PFOS, and four other per fluorinated chemicals (PFCs) totaling nine samples. Results from this effort led to NHDES deciding that Newmarket did not need to continue monitoring on a regular basis.

In July 2018, the Water Department made the decision to resample for PFOA and PFOS because technology made it possible to detect a greater number of per fluorinated chemicals. Again, Newmarket came back well under accepted levels according to New Hampshire Department of Environmental Services. The Town of Newmarket Water Department plans to continue to sample for PFOA/PFOS as science and technology improves making it possible to detect different variations of per fluorinated chemicals to try and stay ahead of this emerging contaminant. In July 2020, a NH law set new standards were set and require local water systems, landfills, and wastewater plants to routinely test and treat for four PFAS chemicals. These include PFOA, PFOS, PFHxS, and PFNA. These will take effect in October 2020.<sup>21</sup>

#### *Offline Wells*

Bennett and Sewall Well pump stations are essential to the overall supply capacity for Newmarket's drinking water system, and yet have undergone only minor upgrades since their installation. If one of these wells were to go offline line, Macintosh's well supply would need to be reduced because this water currently needs to be blended with the Sewall and Bennett wells. Improvements, according to recommendations by Underwood Engineers<sup>22</sup>, include replacing the chemical feed, electric, heating, ventilation, and some structural improvements.

#### Surface Water Threats

Newmarket currently does not use any surface waters as a source for public drinking water and there are no plans to charge aquifers with surface water from the Lamprey River; however, there are several important surface water resources that play a vital ecological role in the community. As mentioned in surface and groundwater section, the Lamprey River, Great Bay, Piscassic River, Moonlight Brook are all identified waterbodies that are impaired or threatened. This means they are not expected to meet water quality standards within a reasonable time even after the application of best available technology standards or best management practices; or they require a comprehensive water quality study (total maximum daily load) in order to meet water quality standards.

Lamprey River Winding Through the Downtown Mills  
Photo Credit: Bill Doucet

#### *Stormwater Runoff*

Studies conducted in the northeast have documented that by converting as little as ten (10) percent of a watershed to impervious surfaces, stream water quality, stream channel structure, and species habitat begins to deteriorate. As of 2015, Newmarket's land based (excluding open water) impervious coverage<sup>23</sup> was estimated to be 8% and will likely rise as Newmarket continues to grow.

<sup>21</sup> More information is available [here](#).

<sup>22</sup> [Macintosh and Tucker Wells Treatment Evaluation](#)

<sup>23</sup> An updated GIS impervious coverage dataset for 2020 will likely be available sometime in 2021.

According to data collected during the development of the 2015 Vision Chapter, residents expressed their concern with this population growth and the impacts it could have on water quality. Development associated with rapid population growth changes the natural water balance on a site by increasing impervious area and reducing the amount of ground area capable of infiltration, converting naturally vegetated areas to impervious or manicured areas, and compacting natural soils.

On July 1, 2018, Newmarket officially became subject to the United States Environmental Protection Agency (EPA) National Pollutant Discharge Elimination System (NPDES) program. This is a national program aimed at improving New Hampshire's water quality, with improved stormwater management as well as an array of training and implementation tools to assist communities with implementation, commonly referred to as the MS4 program.

### *Increased Flooding Impacts*

In New Hampshire, there are many types of flooding: riverine, flash flooding, coastal flooding, and shallow flooding. Riverine flooding is produced by a river or stream and has potential to last for longer periods of time. Flash flooding can occur when large amounts of rain fall in a short amount of time, and usually rise and recede quickly. This allows little or no warning time to evacuate and can be destructive and hazardous. Coastal flooding occurs in low-lying areas in NH's coast due to major storms in combination of full moon tides causing storm surge and wave effects. Shallow flooding occurs in flat areas where water is prevented from draining easily due to inadequate channels. One type of shallow flooding, urban drainage, occurs when man-made drainage structures, meant to handle 10-year-storm water levels, are overloaded by larger storms and result in backed-up sewers and overloads ditches.

Roadway Damage from Flooding  
Photo Credit: Town of Newmarket

Although the flood mitigation capacity of floodplains is relatively well protected by federal and local regulations, other factors can contribute to increased flooding. These factors include: increases in impervious surface coverage, filling of wetlands, stormwater management practices that increase peak flow rates, inadequate infrastructure to accommodate current storm flow volumes, beaver dams and less natural dissipation of flood flows through infiltration and interception by trees and vegetation.

Other identified flood risks include the inability of culvert stream crossings to withstand storm flows (see [C-RiSe](#) report for hydraulic ratings and assessments), loss of tidal wetlands and salt marsh habitat from sea level rise.<sup>24</sup> Current threats to salt marshes include reduced tidal flow due to undersized culverts under roadways and train beds, loss of the upland buffer due to coastal development, saltwater intrusion, and colonization by invasive species such as *Pinus strobus* (northern white pine) and *Lythrum salicaria* (purple loosestrife).

### *Erosion and Sedimentation*

The erosion and sedimentation development processes typically involve the removal of vegetation, the alteration of topography, and the covering of some previously vegetated surfaces with impervious cover such as roads, driveways, and buildings. These changes to the landscape may result in the erosion of soil and the sedimentation of water bodies as soil travels to streams, rivers, and lakes in water runoff during storms at an increased velocity due to the lack of vegetative cover. The removal of vegetative cover and its root system

<sup>24</sup> [NH Wildlife Action Plan Appendix B Habitats](#)

compromise the ability of vegetation to stabilize soil, reduce the velocity of runoff, shield the soil surface from rain, and maintain the soil's ability to absorb water.

*Increased Extreme Temperatures and Drought*

Over the past two decades, Newmarket has experienced several significant periods of drought (2001-2002; 2015-2016; and most recently 2020). According to the NH Drought Management Program, the drought that impacted the state in the early 2000's was the third worst on record. Locally, during the dry summer months, the capacity of Newmarket Plains Aquifer, which was the Town's primary source of drinking water, was significantly reduced to critical levels; however, with careful management the aquifer recovered within a few years. To accomplish this, the Town started implementing a Water Management Program in 2002 (see Figure 4.) that requires all users to adhere to restrictions during these critical dry periods.

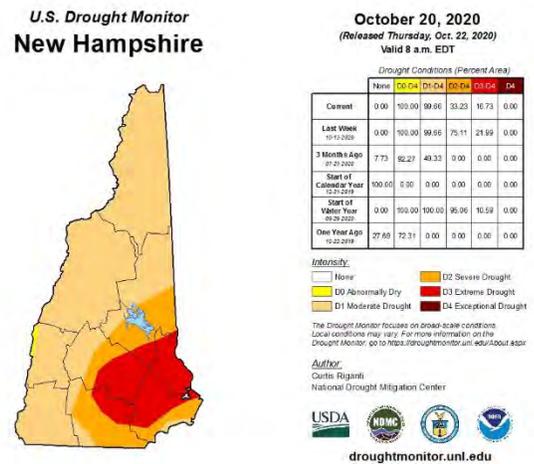

<b>NEWMARKET WATER DEPARTMENT WATER MANAGEMENT PROGRAM</b>			
<b>STAGE 1</b>	<b>STAGE 2</b>	<b>STAGE 3</b>	<b>STAGE 4</b>
<b>Voluntary Water Conservation</b> The public is requested to refrain voluntarily from watering lawns and encouraged to conserve water in all practical ways.	<b>Mandatory Odd/Even Outside Watering</b> The public is required to restrict lawn watering to every other day based on address and calendar day.  EXAMPLE Even address      Even calendar day Odd address      Odd calendar day	<b>Mandatory Two-Day Restrictions on Lawn Watering by Address.</b> Each address is to restrict watering to two (2) days per week between the hours of 5-8 am and 6-9 pm on the following schedule: <u>Allowed Days</u> <u>Street Address</u> Monday, Wednesday      Odd Number Tuesday, Thursday      Even Number No washing driveways, sidewalks, autos, or boats.	<b>Mandatory Outside Water Ban.</b> The public is required to restrict the following.  <b><u>NO OUTSIDE WATER USE</u></b>
<b>Water Conservation Ordinance #2002-05</b> is available at town office.	<b>NOTICE</b> <b>Hand held hoses may be used for flower and vegetable gardens plus shrubbery without hour and day restrictions. (STAGE 2 and 3 ONLY)</b>		For additional information on water saving ideas check these web sites:  <a href="http://www.awwa.org">www.awwa.org</a> <a href="http://www.cpa.gov">www.cpa.gov</a> <a href="http://www.des.state.nh.us">www.des.state.nh.us</a> <a href="http://www.waterwise.org">www.waterwise.org</a>
<b>How will you know what Stage is in affect?</b> Stage in effect will be posted at locations entering town, on the Town Hall marquee, and in local newspapers.	<b>WATER SAVING TIPS</b>  <ol style="list-style-type: none"> <li>1. Check your toilet for leaks.</li> <li>2. Install water-saving shower heads or flow restrictors.</li> <li>3. Check faucets and pipes for leaks.</li> <li>4. Use your automatic dishwasher only for full loads.</li> <li>5. Use your automatic washing machine only for full loads.</li> <li>6. Keep a bottle of drinking water in the refrigerator.</li> <li>7. Water your lawn only when it needs it.</li> <li>8. Water during cool parts of the day.</li> <li>9. Don't wash down driveways or gutters.</li> <li>10. Plant drought-resistant trees and plants.</li> <li>11. Put a layer of mulch around trees and plants.</li> <li>12. Cover swimming pools to reduce evaporation.</li> </ol>		
<b>Why Do We Need Levels?</b>  To ensure adequate pressure and fire protection, storage tank must be 3/4 full. If this amount cannot be replenished during non-watering times, more restrictive hours must be established by going to the next Stage.			

Figure 4. Newmarket's Water Management Program

For many years, the Town has operated at a Stage 2 level. More recently in September 2020, that warning was upgraded to a Stage 3 level. The upgraded warning was a result of severe drought conditions along with the decision to remove the MacIntosh well off-line temporary to install treatment for arsenic. Capacity at both the Bennett and Sewall wells appear to be in good condition. This is largely because when the MacIntosh well came online in 2016, it allowed the Town to operate the Bennett and Sewall wells at lower pumping rates for 4 years.

As the 2020 drought continues, 100% of New Hampshire's population is experiencing abnormally dry conditions. According to the [United States Drought Monitor](#), it is estimated that 16.7% of the State is facing extreme drought conditions, categorized by major crop or pasture losses and widespread water restrictions and shortage. Figure 5 depicts the most up-to-date drought conditions in New Hampshire (at the time this plan was developed) and indicates that Newmarket is in an area experiencing the most severe conditions in the State.

Figure 5. US Drought Monitor: New Hampshire (10/20/20)

The NHDES Drought Management Program has stated that the drought was due to a combination of a below average snowpack in the spring, little precipitation to recharge the groundwater, and the inability of watersheds to store large volumes of water due to their geology.

More extreme heat in New Hampshire, because of climate change, not only causes a rise in electricity demand and urban heat effects, but also increases the demand for water. Additionally, as air temperatures rise, so do ocean, lake, and river temperatures. This can lower water quality and affect fish populations (such as causing them to migrate and lose suitable habitat) and the deaths of other aquatic organisms. The [2014 National Climate Assessment](#) states that increasing air and water temperatures, paired with increases precipitation and runoff, and intensifying droughts can decrease water quality in several ways. These potential threats include increases in sediment, nitrogen, and other pollutant loads and other climate change triggers such as declining water levels, greater flood risk, and altered precipitation patterns.<sup>25</sup>

Often paired with increases in extreme heat are increase in drought across the U.S. Droughts are natural events that are part of the cyclical fluctuations of the climate; they can last anywhere from several months to years but there is not reliable method to accurately predict a drought.<sup>26</sup> Even in New England, where water is comparably abundant to the rest of the U.S., recent droughts—paired with NH's limited long-term water storage—have serious consequences on human demand for freshwater resources.<sup>27</sup> Compounding on these issues are increased demand for drinking water, saltwater intrusion, and rapidly development in watersheds, more extreme temperatures because of climate change.

### Regulatory and Conservation Challenges

#### Regulatory

Current water regulations, which are based around preservation and restoration, assume that natural systems “fluctuate within an unchanging envelope of variability (stationarity)”.<sup>28</sup> Climate change is projected to impact water supplies in wide-ranging and pervasive ways and may reveal weaknesses in current water regulations.

<sup>25</sup> More information can be found on the Conservation in a Changing Climate [website](#).

<sup>26</sup> [NHDES Water Resources Primer](#)

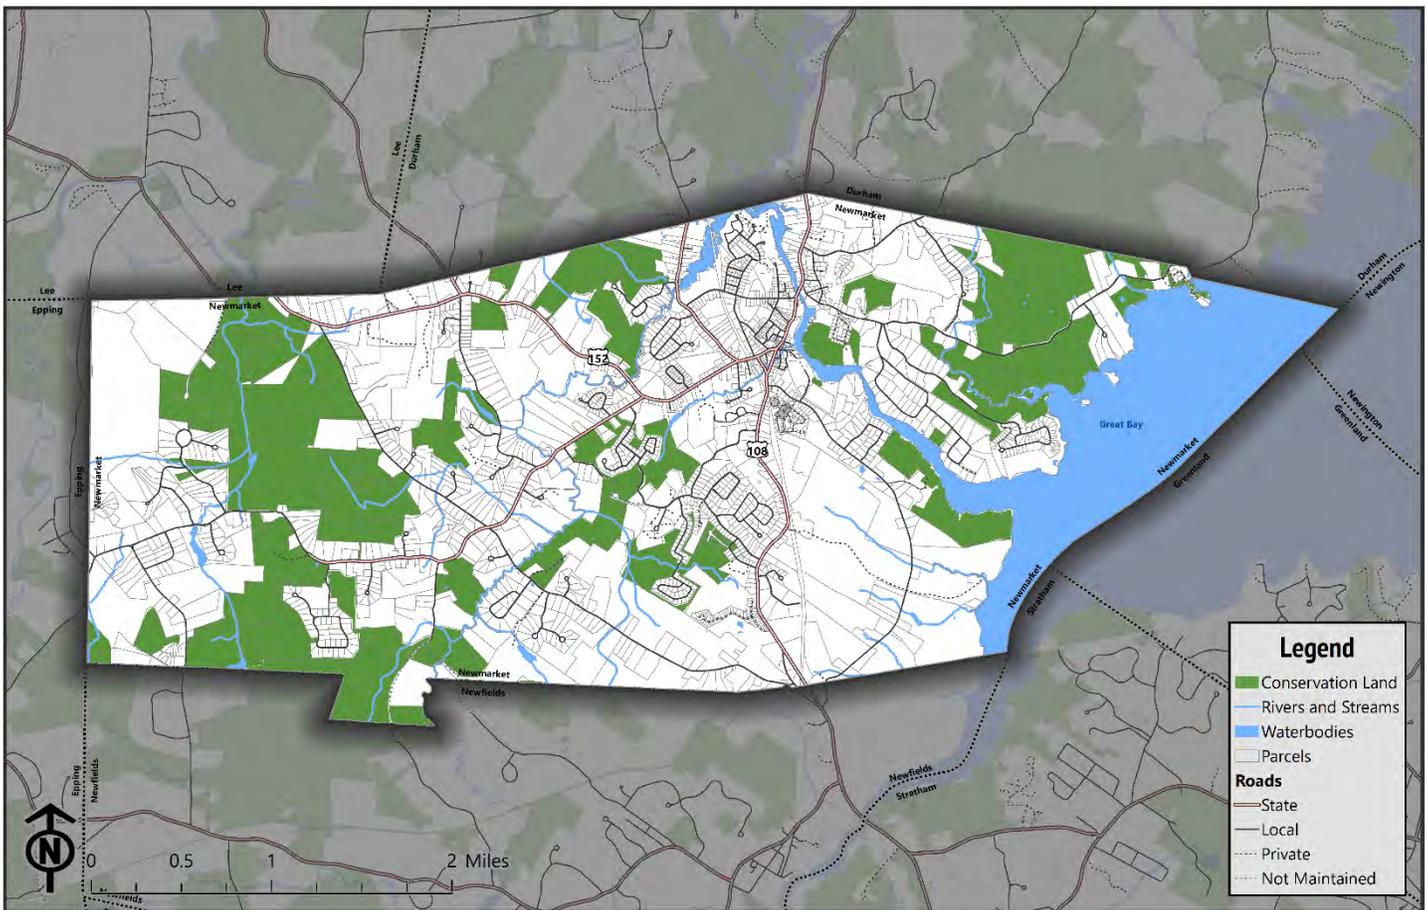

<sup>27</sup> Analysis of Drought Conditions in New Hampshire. J.M. Davis and M. Stampone. University of New Hampshire. December 2014. Available [here](#).

<sup>28</sup> [Ibid](#)

Therefore, assumptions about stationarity are unhelpful when writing and using water regulations. Agencies may need to seek flexibility in regulations and laws to achieve the best use of limited water resources and capacity.

### Conservation Challenges

New Hampshire watersheds rank among the most highly threatened watersheds in the nation because of the high potential for conversion of private forests to residential development. In fact, three of the four most threatened watersheds in the US (which could experience the largest change in water quality because of increased residential development in private forests) occur at least partially in New Hampshire.<sup>29</sup> The long-term impacts of this rapid population growth and the associated changes in land use on New Hampshire's surface waters are uncertain. Of concern are the impacts of pollution such as septic systems, urban runoff, stormwater, application of road salt and fertilizers, deforestation, and wetland conversion.

Map 10. Conservation Lands in Newmarket [Source: NH GRANIT]

Newmarket's [Vision for the Future](#) emphasizes the importance of numerous environmental protection measures, including conservation of land and preservation of open spaces for the town's ongoing drinking water goals to be met. The 2015 Master Plan Visioning Public Input Session revealed that the public values the Town's emphasis on conservation and want to see it continue to be a priority.

<sup>29</sup> Stein et al. Private Forests, Public Benefits: Increased Housing Density and Other Pressures on Private Forest Contributions. USDA. 2009. Available [here](#).

The Newmarket Open Space Plan reports identifies areas with key natural resources and a high priority for protection through land conservation efforts, including the Town's drinking water sources (Newmarket Plains Aquifer and surrounding wellhead protection areas); floodplains of the Lamprey and Piscassic Rivers; prime wetlands; the Great Bay Estuary; highest quality wildlife habitat (NH Fish and Game, Wildlife Action Plan); ecologically significant areas (NH Coastal Program, The Nature Conservancy, and partners); and large unfragmented blocks of forests and farmland.

### Federal/State Protection Measures

*Refer to Surface and Groundwater Resources section.*

### Existing Local Protection Measures

*Refer to Surface and Groundwater Resources section.*

### Recommendations

1. Ensure that the sanitary protective radius around the four (4) existing wells (Tucker, MacIntosh, Bennett, and Sewall) are all protected and controlled by the Town through ownership or easements.
2. Continue to explore grant opportunities to secure funding for existing and future drinking water protection efforts.
3. Finalize DRAFT stormwater regulations and adopt at the Planning Board.
4. Ensure that land use regulations protect environmentally sensitive resources including drinking water aquifers, tidal wetlands, and salt marsh that are subject to potential saltwater intrusion or other negative impacts associated with groundwater rise.
5. Collaborate with NHDES to update 2007 assessment of public water supply sources for susceptibility criteria including well proximity to septic, highways, and agriculture. Use this assessment to identify threats and target protection management (such as education for landowners, an inspection program, or emergency response planning) techniques.
6. Encourage better management of activities that add salt into or onto the ground (i.e. using newer technologies, equipment upgrades, good housekeeping measures, and inspection of storage sites on commercial areas such as Bennett Way).
7. Consider requiring advanced treatment for septic systems to reduce pollution often associated with traditional systems.
8. Increase awareness of radon levels and protection practices for Newmarket residents by posting NHDES information on the Building Department's webpage.
9. Work with state, federal regulators, and the Seacoast PFAS Commission to minimize PFAS contamination in the Town. This may including exploring water and land uses that could mitigate PFAS use and release; obtaining the latest inventory of (Tier II) data collection for facilities that have the potential to discharge PFAS using guidance from NHDES (SWP Grant 301).
10. Increase coordination with other watershed towns, higher-level collaboration with water-related organizations and stakeholders, and encourage a greater involvement of Newmarket's Conservation Commission in leading public education programs on water resources management and efforts to ensure compliance with stormwater requirements.
11. Prioritize buffer and floodplain protection based on Buffer Options for the Bay's regulatory options and suggestions.
12. Review appropriate zoning for activities that use chemicals or processes that could affect drinking water to proactively protect these resources.

13. Research effective education and outreach efforts to strengthen Newmarket's community values around water resources. Create community dialog around water resource stewardship for future generations.
14. Ensure that Planning and Zoning Board members are aware and have access to relevant land use trainings (e.g. OSI conferences, NHMA lectures, regional planning workshops) so that participants fully understand local ordinances, regulations, and state laws when making important decisions.
15. Continue to appropriate adequate funding to enable the Town to implement recommendations set forth in Newmarket's "Twenty-Year Water and Wastewater System Build-Out Study."
16. Continue efforts in implementing the Water Management Plan and educating the public of what they can do to complement these local actions.

# Implementation Key

## **Action Type:**

There are three action types, including:

- Regulatory
- Operations, Policies, and Procedures
- Outreach, Engagement, and Partnerships

## **Action Item:**

Various recommendations for the Town to consider implementing to protect water resources over the lifespan of the chapter.

## **Chapter Topic:**

There are five water resource topics:

- SW: Surface Water
- GW: Groundwater
- WET: Wetlands
- FLD: Floodplains
- THR: Potential Threats

## **Protection Type:**

- RP: Resource Protection
- DWP: Drinking Water Protection
- WQP: Water Quality Protection

## **Priority:**

There are four priority rankings, including:

- Ongoing: Actions which are continuous or already being carried out
- High: Actions which should be undertaken in 1–2 years
- Moderate: Actions which should be undertaken in 3–5 years
- Low: Actions which will take more than 5 years to initiate and complete

## **Responsible Party:**

The identified party or municipal department that is the acting or responsible body to implement that action item.

# Implementation Matrix

Action Items		Chapter Topics	Protection Type	Priority	Timeframe	Responsible Party
Regulatory						
1.	Review the current Aquifer Protection Overlay District with the state's updated model ordinance to recommend any necessary revisions.	GW	DWP	High	1–2 years	Planning Board & Conservation Commission
2.	Review all permitted uses within the base zoning districts to ensure that high intensity uses are consistent and in sync with the goals and objectives outlined in the Master Plan.	SW/GW	RP/DWP	High	1–2 years	Planning Board & Conservation Commission
3.	Evaluate the current regulations and ordinances with regards to septic system setbacks to ensure all waterbodies are adequately protected.	SW	RP	High	1–2 years	Planning Board & Conservation Commission
4.	Compare the existing Wetland Protection Overlay District with new state rules and make necessary revisions to be consistent with jurisdictional areas and other state-level changes.	WET	RP	High	1–2 years	Planning Board & Conservation Commission
5.	Review the updated floodplain model ordinance from NH Office of Strategic Initiatives and update the Town's floodplain ordinance once FEMA maps are approved and adopted. An outreach campaign targeting existing property owners shall accompany this update.	FLD	RP	High	1–2 years	Planning Board, Conservation Commission, Building Official
6.	Ensure that the sanitary protective radius around the four (4) existing wells (Tucker, MacIntosh, Bennett, and Sewall) are all protected and controlled by the Town through ownership or easements.	THR	WQP	High	1–2 years	Town Council, Conservation Commission, Water Department
7.	Finalize DRAFT stormwater regulations and adopt at the Planning Board.	THR	WQP	High	1–2 years	Planning Board
8.	Review appropriate zoning for activities that use chemicals or processes that could affect drinking water to proactively protect these resources.	THR	WQP	Moderate	3-5 years	Fire Department & Town Council
9.	Consider adopting stricter buffer requirements for setbacks to wetlands that include consideration of climate change in order to protect land that allows coastal habitats and populations to adapt to changing conditions and also provides ecosystem services that protect people, structures, and facilities.	WET	RP	Low	5+ years	Planning Board & Conservation Commission
10.	Ensure that land use regulations protect environmentally sensitive resources including drinking water aquifers, tidal wetlands, and salt marsh that are subject to potential saltwater intrusion or other negative impacts associated with groundwater rise.	THR	WQP	Low	5+ years	Regional Planning Commissions (Strafford/Rockingham)
11.	Consider requiring advanced treatment for septic systems to reduce pollution often associated with traditional systems.	THR	WQP	Low	5+ years	Building Official
12.	Prioritize buffer and floodplain protection based on Buffer Options for the Bay's regulatory options and suggestions.	THR	WQP	Low	5+ years	Planning Board & Conservation Commission

Action Items		Chapter Topics	Protection Type	Priority	Timeframe	Responsible Party
Operations, Policies, and Procedures						
13.	Incorporate impacts to municipal infrastructure identified in the C-RiSe project into current and future capital infrastructure projects, including water access at Schanda Park, the pump station on Creighton Street, and flooding on critical roads such as Treatment Plant Road. This also includes evaluating the extent of sea-level rise and storm surge flooding on individual facilities such as sewer pipes located at the end of Water Street, Creighton Street, and Lamprey Street and the intersection of Bay Road.	FLD	RP	Ongoing	-	Town Department of Environmental Services
14.	Encourage better management of activities that add salt into or onto the ground (i.e. using newer technologies, equipment upgrades, good housekeeping measures, and inspection of storage sites on commercial areas such as Bennett Way).	THR	WQP	Ongoing	-	MS4 Coordinator, Town Planner, Town Engineer, and Public Works
15.	Continue to appropriate adequate funding to enable the Town to implement recommendations set forth in Newmarket's "Twenty-Year Water and Wastewater System Build-Out Study."	THR	WQP	Ongoing	-	Town Engineer & Town Department of Environmental Services
16.	Continue efforts in implementing the Water Management Plan and educating the public of what they can do to complement these local actions.	THR	WQP	Ongoing	-	
17.	Revisit the Climate Resiliency in Moonlight Brook report to accomplish remaining ICLEI Climate Resilient Communities milestones identified in the plan. Site specific projects include:	FLD/THR	RP/WQP	Ongoing/ High	1-2 years	MS4 Coordinator, Public Works, Town Department of Environmental Services
	Alleviate flooding in re-occurring areas by redirecting stormwater flows away from downtown in the "bowl " area on Route 108; installing a new drainage system with a gravel wetlands to provide water quality treatment on New Road and a stormwater outfall on Young Lane; and assess impacts upstream in the watershed at the new drainage system at the Elementary School.		RP/WQP			
			RP/WQP			
18.	Update the Town's Prime Wetland Maps and associated GIS layers that were completed in 2006 using new available GIS and Lidar data.	WET	RP	High	1-2 years	Conservation Commission & Planning Department
19.	Update the Town's Open Space Plan to strategically identify high value land for future land conservation. Incorporate climate resilience benefits, such as future flood storage salt marsh migration, etc., into scoring criteria to ensure the Town considers climate adaptation benefits when evaluating land for conservation purposes.	FLD	RP	High	1-2 years	Conservation Commission

Action Items		Chapter Topics	Protection Type	Priority	Timeframe	Responsible Party
20.	Identify and implement green infrastructure and nature-based approaches to improve flood resilience and stormwater management throughout the Town referenced in the New Hampshire Flood Hazard Handbook.	FLD	RP	High	1–2 years	Planning Department, MS4 Coordinator, Planning Board
21.	Use resources, such as the NH Statewide Asset Data Exchange System (SADES) crossing database, Resilient Tidal Crossing Assessment, and the C-RiSe climate ready culvert analysis, to identify infrastructure projects for inclusion in the Capital Improvements Plan that would assist with long-term planning decisions regarding the placement, design, and size of new culverts or when upgrades and repairs are being made to existing culverts. Site specific projects include:	SW/WET/ FLD	RP	High	1–2 years	Conservation Commission & Public Works
	*Replacement of the Grant Road and Ash Swamp Road crossings over the Piscassic River to help restore surface waters to natural, free flowing systems.		RP			
	*Replacement of the Route 108 crossing over the northernmost unnamed perennial stream behind the Newmarket Storage that flows easterly beneath New Road into Great Bay to improve wetland function.		RP			
*Projects should include hydraulic analyses and survey data on channel dimensions to determine appropriate bridge sizing as part of a larger Town-wide infrastructure capacity assessment.						
22.	Integrate climate adaptation measures into all future master plan updates.	FLD	RP	Moderate	3-5 years	Planning Board & SRPC
<b>Data, Studies, and Research Needs</b>						
23.	Explore funding opportunities to conduct a town-wide vernal pool inventory to locate, document, and map vernal pools in Newmarket.	WET	RP	Ongoing	-	Conservation Commission
24.	Review Appendix C in the Town's 2018 Multi-Hazard Mitigation Plan to identify riverine flooding mitigation approaches, including prevention, property protection, natural resource protection, emergency services, structural projects, and public education.	FLD	RP	Ongoing	-	Emergency Management Director, Public Works, Town Engineer
25.	Continue to explore grant opportunities to secure funding for existing and future drinking water protection efforts.	THR	WQP	Ongoing	-	Town Department of Environmental Services
26.	Collaborate with NHDES to update 2007 assessment of public water supply sources for susceptibility criteria including well proximity to septic, highways, and agriculture. Use this assessment to identify threats and target protection management (such as education for landowners, an inspection program, or emergency response planning) techniques.	THR	WQP	Ongoing	-	Town Department of Environmental Services
27.	Use the New Hampshire Living Shoreline Site Suitability Assessment to identify sites in Newmarket that may be suitable for specific living shoreline approaches to address erosion issues along the tidal shoreline.	FLD	RP	Low	1–2 years	Conservation Commission, Riverfront Committee, Lamprey River Advisory Committee, SRPC

Action Items		Chapter Topics	Protection Type	Priority	Timeframe	Responsible Party
28.	Work with state, federal regulators, and the Seacoast PFAS Commission to minimize PFAS contamination in the Town. This may including exploring water and land uses that could mitigate PFAS use and release; obtaining the latest inventory of (Tier II) data collection for facilities that have the potential to discharge PFAS using guidance from NHDES (SWP Grant 301).	THR	WQP	Low	1–2 years	Water Department & Town Department of Environmental Services
29.	Investigate funding opportunities to help pay for the development of watershed-based plans to recommend methods to address specific impairments identified in the 303(d) list.	SW	RP	Moderate	3-5 years	MS4 Coordinator, Town Engineer, Town Department of Environmental Services, and Conservation Commission
Outreach, Engagement, and Partnerships						
30.	Continue to support local watershed groups and organizations.	SW/GW	RP/DWP	Ongoing	-	All Town Boards, Commissions, and Departments
31.	Collaborate with local, regional, and statewide partners to identify other wetland mitigation projects or restoration opportunities.	WET	RP	Ongoing	-	Conservation Commission
32.	Explore options to develop a creative outreach campaign to educate the public on future coastal flood risk (i.e. high-water mark initiative, participation in the king tide photo contest, etc.) at public spaces such as Schanda Park and Heron Point.	FLD	RP	Ongoing	-	Conservation Commission & Historical Society
33.	Increase coordination with other watershed towns, higher-level collaboration with water-related organizations and stakeholders, and encourage a greater involvement of Newmarket's Conservation Commission in leading public education programs on water resources management and efforts to ensure compliance with stormwater requirements.	THR	WQP	Ongoing	-	Conservation Commission
34.	Research effective education and outreach efforts to strengthen Newmarket's community values around water resources. Create community dialog around water resource stewardship for future generations.	THR	WQP	Ongoing	-	MS4 Coordinator
35.	Ensure that Planning and Zoning Board members are aware and have access to relevant land use trainings (e.g. OSI conferences, NHMA lectures, regional planning workshops) so that participants fully understand local ordinances, regulations, and state laws when making important decisions.	THR	WQP	Ongoing	-	Planning & Zoning Boards
36.	Increase awareness of radon levels and protection practices for Newmarket residents by posting NHDES information on the Building Department's webpage.	THR	WQP	Low	1-2 years	Building Department

# What inspections might I need for my project?

## A SUMMARY OF INSPECTIONS GROUPED 1 THROUGH 5

The plan review will determine which inspections are required for your project:

### 1<sup>ST</sup> Inspection

1. Appropriate erosion control
2. Foundation location pursuant to setbacks
3. Temporary power for approval
4. Compaction of excavated area
5. Foundation substrate & footing forms per R403
6. port-o-let on site

### 2<sup>nd</sup> Inspection

Summary of  
Inspections

1. Anchor bolts (straps not permitted)
2. All snap tie ends removed interior/exterior
3. Perimeter drain extended 35' from foundation
4. Temporary power for approval
5. Sleeve for soil pipe (2) pipe sizes larger
6. Sleeve for water line (2) pipe sizes larger
7. Stone for perimeter drain
8. Filter fabric in place
9. Water stop at snap ties ends
10. Moisture proof/water proof foundation
11. Foundation test for re-bar if code required
12. Erosion control maintained
13. Ground to re-bar (Ufer Ground)

### 3<sup>rd</sup> Inspection

1. Rough frame
2. rough electrical
3. Rough plumbing
4. No corner boards, siding or building wrap applied
5. Roofing per manufacturers installation
6. U 0.35 or less windows installed with flexible flashing (spec stickers left on)
7. Doors installed with flexible flashing
8. Fire safing/stopping
9. Chimneys and vents
10. Erosion control maintained

### 4<sup>th</sup> Inspection

1. Insulation installed per IECC
2. Permanent power approval
3. Erosion control maintained

### 5<sup>th</sup>/ Final Inspection

1. Electrical panel, with panel front removed, by electrician
2. Circuit directory typed and secured inside of panel door
3. Final electrical
4. Energy Code Compliance Certificate secured inside of Service Entrance panel door
5. Finish grade sloped 6: in 10' from foundation and finish grade 6" from wood siding, sheathing, and wall framing
6. Wellhead inspection well report, standard analysis, DES, fact sheet WD-WSEB-2-1
7. Garage/ Unit fire separation
8. Decks
9. Siding installed per manufacturers guidelines
10. Homeowners manuals on maintaining their septic system, as well as those provided with appliances and products
11. Interior stairs, rails and safety glass
12. Stairs exterior with concrete stair rest at base
13. Property number
14. Escape window to grade checked
15. Impact fee paid by certified bank check

16. Fire Department sign off on boiler
17. Fire Department sign off on smoke detectors
18. Public Works director sign off on driveway
19. Water Department sign off for Town water
20. Sewer Department sign off for Town sewer
21. Exterior lighting shaded to property line
22. Erosion control maintained – leach field loamed and seeded
23. Septic permit to operate

**TOWN OF ROLLINSFORD**

**LAND SUBDIVISION REGULATIONS**

**SECTION 1 - AUTHORITY AND TITLE**

Pursuant to the authority vested in the Rollinsford Planning Board by the voters of the Town of Rollinsford at the Annual Town Meeting of \_\_\_\_\_, and to the authority granted to the Planning Board under Chapter 674:35-36 of the Revised Statutes Annotated of New Hampshire of 1983, as amended, the Planning Board hereby adopts the following regulations governing the subdivision of land in the Town of Rollinsford.

These regulations shall be known, and may be cited as, the "Town of Rollinsford Subdivision Regulations," hereinafter referred to as "Subdivision Regulations." The current set of Regulations revise and replace the Rollinsford Subdivision Ordinance of 1970, as amended, and take effect upon adoption by the Board and filing with the Selectmen and Town Clerk in accordance with RSA 675:6.

**SECTION 2 - CONFLICTING PROVISIONS AND VALIDITY**

Whenever the regulations made under the authority hereof differ from those prescribed by any statute, ordinance, or other regulations, that provision which imposes the greater restriction or the highest standard shall govern.

If any section, clause, provision, portion or phrase of these regulations shall be held to be invalid or unconstitutional by any court of competent authority, such holding shall not affect, impair or invalidate any other section, clause, provision, portion or phrase of these regulations.

**SECTION 3 - JURISDICTION**

The provisions of these regulations shall apply to all land within the boundaries of the Town of Rollinsford.

3.1 Subdivisions. The provisions of these regulations shall apply to all land within the boundaries of the Town of Rollinsford.

Any person proposing to subdivide in the Town of Rollinsford must apply to the Planning Board for approval of such subdivision.

A subdivision application must be made and approved before any offer to sell, rent or lease a proposed subdivision or part thereof before any construction, land clearing or building development is begun, before any permit for the erection of any building may be granted, and before a subdivision plat may be filed with the Strafford County Registry of Deeds.

3.2 Permits. No building permit may be issued for the construction or alteration of any building or structure within the purview of these Regulations until a copy of an approved subdivision plat has been presented by the applicant to the Building Inspector/Code Enforcement Officer.

**SECTION 4 - PURPOSE**

Consistent with the enabling legislation cited above, the purpose of these Regulations are to ensure that the subdivision of land is consistent with the enumerated purposes of RSA 674:36, as amended, which are incorporated by reference herein, and that all subdivision and development shall be consistent with the following purposes:

- (a) Subdivision of land and development shall not be “scattered or premature” as would involve danger or injury to health, safety, or prosperity by reason of the lack of water supply, drainage, transportation, schools, fire protection, or other public services, or necessitate the excessive expenditure of public funds for the supply of such services.
- (b) Proposed streets shall be properly arranged and coordinated in relation to other existing or planned streets.
- (c) Subdivision and development shall be harmonious with the Town and its environs. Developments must contribute to a rational and safe transportation system, provision of appropriate recreational opportunities, and must not be inconsistent with the recommendations of the Rollinsford Master Plan.
- (d) Subdivision of land and development shall be provided with adequate services and utilities.
- (e) Suitably located streets shall be required of sufficient width to accommodate existing and prospective traffic and to afford adequate light, air, and access for fire-fighting apparatus and equipment to buildings, and be coordinated so as to compose a convenient system.
- (f) Subdivision of land and development shall promote and not harm the public's health, safety, and welfare.
- (g) Provision of open spaces and green spaces of adequate proportion.
- (h) Subdivisions that show new streets or narrowing or widening of such streets shall show a park or parks suitably located for playground or other recreational uses purposes.

**SECTION 5 - DEFINITIONS**

**ABUTTER:** abutter shall mean any person whose property is located in New Hampshire adjoins, or is directly across a street or stream from, the land under consideration by the Board. For purposes of receiving testimony only and not for purposes of notification, the term "abutter" shall include any person who is able to demonstrate that his/her land will be directly affected by the proposal under consideration, for purposes of these regulations anyone who owns land within 100' of the site is presumed to be directly affected. For purposes of receipt of notification by the Town of a Board hearing, in the case of an abutting property being under condominium or other collective ownership, the term abutter shall mean the officers of the collective or association, as defined in RSA 356-B:3, XXIII, and any amendments thereto.

**ACCEPTANCE:** an affirmative vote by a majority of the planning board at a public meeting that an application contains all of the items required by the subdivision regulations.

**APPLICANT:** applicant shall mean the owner of record of the land which is proposed to be subdivided, including any subsequent owner of record who proposes such development, or the duly authorized, in writing, agent of any such owner.

**APPROVAL WITH CONDITIONS PRECEDENT:** action by a majority of the board that signifies that not all of the applicable regulations have been met but that require only minor revisions or non-discretionary issues such as receiving state permits, bonds to be posted with the town, or payment of fees. This action is not a final action of the board and plats shall not be signed. Such approvals may have reasonable time limits for compliance. However, in certain circumstances, such action may result in a "final action" for purposes of appealing the decision to the courts.

**APPROVAL WITH CONDITIONS SUBSEQUENT:** action by the board which includes conditions that appear on the plat or within the minutes or decision which place restrictions on the use of the property or safeguards that must be observed during development of the parcel or once the project is in use. Such issues might include the location of a road, preservation of vegetation and stone walls, etc. Such action is a final action and can result in the signing of plats as long as other issues are met.

**APPROVAL:** action by a majority of the planning board signifying that the proposal meets all applicable regulations and that there are no unresolved concerns requiring further board consideration.

**BOARD:** shall mean the Planning Board of the Town of Rollinsford, New Hampshire as established under the provisions of RSA 673:2, as amended.

**CERTIFIED SOIL SCIENTIST:** a person qualified in soil classification and mapping whom is certified by the State of New Hampshire.

**COMMERCIAL USES:** As defined by the Town of Rollinsford Zoning Ordinance.

**COMMUNITY WASTEWATER SYSTEM:** A non-municipal wastewater disposal system that serves more than one lot. When this type of system is proposed, the design and specifications for the same shall be submitted and shall have been certified by a professional engineer qualified and registered under applicable New Hampshire statutes.

**COMMUNITY WATER SUPPLY:** A non-municipal water supply system that serves more than one lot. When this type of system is proposed, the design and specifications for the same shall be submitted and shall have been certified by a professional engineer qualified and registered under applicable New Hampshire statutes.

**COMPLETED APPLICATION:** this term refers to the application form with all information completed as requested on the form (with the exception of requested waivers from applicable regulations), all attachments, drawings, approvals, additional studies, and other paperwork as requested in the form, elsewhere in these regulations, or required by the planning board, and all fees and administrative expenses as indicated in these regulations. The information provided shall

provide sufficient information to allow the Board to proceed with consideration and to make an informed decision. Once accepted an application shall become a public document and carries no restriction as to reproduction or availability.

**DEVELOPMENT:** this term shall mean the construction of improvements on a tract or tracts of land, including the enlargement of a structure or physical changes to the site in an effort to accommodate an intended use.

**DRIVEWAY:** Means a privately owned and maintained access way to not more than one lot.

**EASEMENT:** an easement shall mean the private landowners right or privilege that a person may have in another's land usually for the purpose of installing and/or maintaining utilities, drainage ways, or for access. Such areas shall not be considered presumptive locations for public roadways unless specifically approved as such by the Planning Board.

**ENGINEER OR SURVEYOR:** these terms shall denote the duly designated, legally recognized, New Hampshire licensed engineer or surveyor employed by the applicant as may be pertinent to the actual services to be performed in accordance with the provisions set forth in RSA 310-A, as amended.

**HARDPAN:** this term refers to a compact soil layer high in silt and very fine sand, generally low in clay; its permeability is less than 0.6 inches per hour.

**IMPROVEMENT:** this term shall refer to site grading, landscaping, street or road construction, and utilities (including water, sewer, electric, gas, storm drainage, and their appurtenances) to be installed or agreed to be installed by the applicant on land to be used for public or private streets and easements or other purposes as are necessary for general development of the site. Agricultural and silvicultural activities are not necessarily improvements under this definition and may require a case-by-case analysis.

**INDIVIDUAL WASTE DISPOSAL SYSTEM:** this term refers to any sewage disposal and/or treatment system other than a municipal system or community system.

**INDIVIDUAL WATER SUPPLY SYSTEM:** this term refers to any water supply system other than a municipal system or a public water system, which provides potable water.

**LOT LINE ADJUSTMENT:** a lot line adjustment or boundary line agreement where no buildable lots are created. Such action requires notice and opportunity to be heard but does not require a public hearing for board action.

**LOT:** this term refers to a piece or parcel occupied or intended to be occupied by a principal building or a group of such buildings and accessory buildings, or utilized for a principal use and uses accessory or incidental to the operation thereof, together with such open spaces as required by these regulations and/or the Rollinsford Zoning Ordinance, and having frontage on a public street.

**MUNICIPAL WATER SUPPLY:** A water supply system that serves an average of at least twenty-five (25) individuals daily year-round or that has at least fifteen (15) service connections and that is owned and operated by a municipal or regional government.

**PLANNING BOARD AGENT:** Means the planning consultant, official, or other person(s) assigned by the Board to perform plan review and other such duties.

**PLAT or PLAN:** refers to the complete set drawings, reports, and accompanying information that comprises a submittal in accordance with these regulations. Statements made by the applicant or applicant's agent at public hearings shall also be considered an integral part of the plat or plan upon which a decision was made.

**PUBLIC MEETING:** is any meeting of the planning board that has been properly noticed in accordance with these regulations and/or RSA 91-A, as applicable.

**REGIONAL IMPACT:** refers to a proposal before the planning board that could reasonably be expected to impact on neighboring municipality, because of factors such as, but not limited to, size, proximity to border, transportation, emissions, water resource impact, and shared facilities.

**RIGHT-OF-WAY:** refers to any area or interest in land that is intended for public traverse, whether accepted by the town or not.

**SEASONAL HIGH WATER TABLE (SHWT):** this term refers to the upper limit of the ground water in a soil that becomes seasonally saturated with water.

**SENSITIVE AREAS:** this term refers to land and resources that possess environmental, cultural, or historic factors that warrant special consideration during planning board review. Such area may include, but are not limited to, historic homes, stream banks, wetlands, wildlife habitat (plant and animal), trails, etc.

**SLOPE:** The average steepness of the land surface under consideration. For the purpose of determining lot size categories, slope shall be determined by slope factors used U.S. Soil Conservation Service Soil Survey (National Cooperative Soil Survey) soils classification (where A = 0-3%; B = 3-8%; C = 8-15%; D = 15-25%; and E = >25%).

**SOIL TYPE:** As defined by the U.S. Soil Conservation Service, United States Department of Agriculture. For the purpose of this Regulation, soil type shall be determined by a certified soil scientist.

**STREAM:** A course of water that flows for sufficient time of the year to develop and maintain defined channels but may not flow during dry portions of the year. Includes but is not limited to all perennial and intermittent streams located on USGS maps.

**STREET:** As set forth in RSA 672:13, street means, relates to and includes street, avenue, boulevard, road, land, alley viaduct, highway, freeway and other ways. The term "streets" shall also apply to areas on any plans designated as streets, roads, lanes, etc.

**SUBDIVIDER:** Means an individual, firm, association, syndicate, partnership, corporation, trust, or any other legal entity or agent therefore that undertakes the subdivision of land in the Town of Rollinsford.

**SUBDIVISION, MINOR:** Means a subdivision of land into three or fewer lots, with no potential for resubdivision, and requiring no new roads, utilities or other municipal improvements.

**SUBDIVISION:** subdivision means the division of a lot, tract, or parcel (which may include one or more tracts, lots, or parcels) of land into two or more lots, plats, sites, or other divisions of land for the purpose, whether immediate or future, for sale, rent, lease, or building development: in short, any division of land which creates the potential for additional dwelling units or bedrooms. The term includes re-subdivision, and when appropriate to the context, relates to the process of subdividing or to the land or territory subdivided. The division of a parcel of land held in common and subsequently divided into parts among several owners shall be deemed a subdivision for the purpose of these regulations, in accordance with RSA 672:14, as amended.

**SUBMISSION:** this term refers to the process of applying to the Board for site plan review, formal submission is the formal presentation of a site plan to the Board at a public hearing, submission is a prerequisite for acceptance of a complete application.

**TOWN ENGINEER:** Means the duly designated registered professional engineer of the Town of Rollinsford.

**UPLAND SOILS:** Refers to soils that are not poorly or very poorly drained in accordance with these regulations.

WETLANDS: A wetland is defined as an area that is inundated or saturated by surface or groundwater at a frequency and duration sufficient to support and that under normal conditions does support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands include, but are not limited to, swamps, marshes, bogs and similar areas.

**SECTION 6 - GENERAL STANDARDS**

**In review of any subdivision plans conducted under these regulations, the Planning Board will require that adequate provisions be made by the owner or his agent for:**

- 6.1 The safe and attractive development of the tract and to guard against such conditions as would involve danger or injury to health, safety, and the diminution in value of surrounding properties;
- 6.2 Traffic circulation and access including adequacy of entrances and exits, traffic flow, sight distances, access to state highways, turning lanes, and traffic signalization;
- 6.3 Pedestrian and bicycle safety and access;
- 6.4 Off-street parking;
- 6.5 Storm water drainage and ground water recharge;
- 6.6 Water supply, waste water and septage disposal, and solid waste disposal;
- 6.7 Adequate fire safety, prevention, and control;
- 6.8 The harmonious and aesthetically pleasing development of the municipality and its environs;
- 6.9 Suitably located and coordinated travelways of sufficient width to accommodate existing and prospective traffic and to afford adequate light, air, and access to buildings for fire fighting apparatus and other emergency equipment;
- 6.10 Conformance with all existing regulations and ordinances;
- 6.11 Demonstration that the proposal is generally consistent with the Town's Master Plan;
- 6.12 The minimization of encroachment on neighboring land uses;
- 6.13 Adequate green areas, open space, conservation easements, slope and drainage easements as may be necessary/applicable;
- 6.14 Facilities to meet the recreational needs of the residents in the subdivision.
- 6.15 Sidewalks, when required, shall be installed and constructed in accordance with the specifications of the Town of Rollinsford.

**SECTION 7 - GENERAL INFORMATION**

- 7.1 The subdivider shall make application using appropriate forms provided by the Planning Board and shall conform to the application procedures and any other applicable regulations adopted by the Town.
- 7.2 For more complete information it is strongly recommended that the applicant read the Town of Rollinsford Zoning Ordinance, Building Code, and Site Plan Review Regulations (as applicable).
- 7.3 Changes in lot line locations require subdivision application and approval in the same manner as ordinary subdivisions as defined in these regulations except that a public hearing may not be required as specified in Section 8.4 of these regulations. However, abutters must be notified of the meeting. (RSA 676:4, I(e)1.)
- 7.4 The applicant shall be required to pay all reasonable costs or fees for special investigative studies and the review of documents, which are particular to the application, in addition to administrative and notification fees as required by the Board.
- 7.5 In accordance with RSA 676:16, as amended, the transfer or sale of any lot in an unapproved subdivision will be enjoined by the Town and subject to a civil penalty of \$1,000 for each lot or parcel so transferred or sold.
- 7.6 The Board may make a visual on-site inspection of the land at any stage of the proposal. Inspection is to be at such time when the site is free of snow cover, unless the Board is otherwise satisfied that such inspection is not required.
- 7.7 If a plan is withdrawn prior to hearing notification for the plan, no further action is required by the Board, and it will be considered terminated. One copy of any such plan(s) shall be retained for Board files.
- 7.8 Approval of the plan by the Board shall not constitute an acceptance by the Town of the dedication of any proposed street, highway, park or other public open space.
- 7.9 The Board may approve the plan with such conditions as may be necessary to insure proper completion of required improvements, as detailed in Sections 9 and 10 of these regulations.
- 7.10 The Planning Board adopts the provisions of RSA 674:40-41 "Improvements in Unapproved Streets" and "Erection of Buildings on Streets; Appeals."
- 7.11 Only the Town of Rollinsford Planning Board has the authority to waive any Subdivision Regulations.

**SECTION 8 - PROCEDURES**8.1 **FORMAL APPLICATION**

## 8.1.1 Submission

Applications for subdivision approval shall be filed with the Planning Board and shall fulfill all the requirements of §9 and 10 of these regulations. An application shall be on forms available from the Planning Board office. All subdivision plans may be reviewed by the Chairman and/or his/her designee who shall determine their compliance with these regulations and any other applicable regulations including, but not limited to, the Town's Zoning Ordinance, Subdivision Regulations. Subsequent to this review the Chairman or designee may recommend either acceptance or request further information from the applicant.

A completed application shall be submitted to, and accepted by the Board only at a public hearing for which notice has given to the applicant, abutters, and the general public in accordance with RSA 676:4, I(d) and § 6.1.7 of these Regulations. Only completed applications will be placed on the Board's agenda for formal review. Submission and formal review can occur at the same public hearing.

Submission requirements:

**Preapplication Review Phase** (RSA 676:4,II)

8.1.1 **Preliminary Conceptual Consultation Phase.** This is an optional phase directed at review of the basic concept of the proposal and suggestions which might be of assistance in resolving problems with meeting requirements during final consideration. Such consultation shall not bind either the applicant or the board and statements made by planning board members shall not be the basis for disqualifying said members or invalidating any action taken. The board and the applicant may discuss proposals in conceptual form only and in general terms such as desirability of types of development and proposals under the master plan. Such discussion may occur without the necessity of giving formal public notice as required under RSA 676:4,I(d), however such discussions may occur only at formal meetings of the board.

8.1.2 **Design Review Phase.** This is an optional phase intended for nonbinding discussions with the applicant, beyond conceptual and general discussions, which involve more specific design and engineering details; provided, however, that the design review phase may proceed only after identification of and notice to abutters and the general public as required by RSA 676:4,I(d). Statements made by planning board members shall not be the basis for disqualifying said members or invalidating any action taken.

8.1.3 Persons wishing to engage in either the conceptual consultation, or design review pre-application phases shall request an appointment with the planning board.

8.1.4 It is recommended that the applicant submit the following information for the preliminary consultation with the Board:

1. Correct names and mailings addresses and zip codes of owner(s) of record (and applicant, if different), and location of the proposal.
2. A rough sketch of the site should be provided which shows the following:
  - a) Approximate location of proposed lot lines.

- b) Approximate lot measurements, and area of new lots.
- c) Street(s) on which lots have frontage.

## 8.2 Application for Subdivision Review

8.2.1 A completed application sufficient to invoke jurisdiction of the Board shall be filed with the Board's designee or the Town Office at least 19 days prior to the public meeting of the Board at which it is to be submitted.

All completed applications scheduled for Planning Board hearings shall be accompanied by the following:

1. A copy of the deed(s) to be filed with the Planning Board.
2. On a separate form provided by the Planning Board, the correct names and mailing addresses and zip codes of the applicant and owner(s) of record (if different), and all abutters (including those across the street or stream) as indicated in Town records -- to be obtained not more than 5 days before the day of filing. Three copies of mailing labels for all abutters shall also be provided.
3. All applicable fees.

8.2.2 Applications for subdivision plan review shall be filed with the Planning Board and shall fulfill all the requirements of these Regulations.

8.2.3 Applications shall be disapproved by the Board without public hearing on the grounds of failure of the applicant to supply information or to pay fees as required by these regulations.

8.2.4 Fees for Subdivision Review. All fees will be due before any application will be placed upon an agenda. Certain fees may be subject to change based upon cost increases incurred by the Board. Fee amounts are assessed in accordance with the Schedule of Fees attached hereto as Addendum B and incorporated by reference herein. The Schedule of Fees shall be adopted in accordance with the procedures required by state law for subdivision regulation adoption. The Schedule of Fees is available at Town Hall and from the Planning Board. These fees are assessed by authority of RSA 676:4,I(g), as amended.

8.2.5 The applicant shall submit to the Planning Board a complete application for subdivision approval, including all supporting exhibits as specified under Sections 9 and 10. Applications determined complete in accordance with Sections 9 & 10 of these regulations may, at the discretion of the Planning Board, be subject to review by the designated Town Engineer, Planner and/or other applicable Town departments including but not limited to Fire, Police and Water and Sewer.

### 8.2.6 Additional Town Review

The Board may send applications and copies of such plans to the Conservation Commission, building inspector, health officer, road agent, Fire department, Police department and any other department or board for review and comments. Copies shall be available at the Selectmen's office and Town Clerk's office for public review.

## 8.3 Board Action

- 8.3.1 Upon delivery of an application, in accordance to Section 8.2, the Board shall have thirty (30) days to determine if the submitted application is complete, according to the Board's regulations, and shall vote upon its acceptance. Formal consideration may begin on the same night as the completed application is accepted by the Board provided that notice of public hearing has been given.

Within sixty-five (65) days after a completed subdivision application has been accepted for jurisdiction, the board shall approve, approve with conditions, or disapprove said application. In cases where a subdivision review application has been disapproved, the grounds for such disapproval shall be clearly stated in the minutes of the board's meeting and notice provided to the applicant.

The receipt date in the above section shall be the last date upon which information necessary to determine completeness was received by the board. It shall not be the date upon which the information was first filed or any date in between. The board shall not find an application complete without all required information.

Any application not found to be complete shall be determined to be incomplete and a denial shall be provided in accordance with RSA 676:3, however, the board, at its discretion, may continue the hearing for determination of completeness to receive further information.

- 8.3.2 Extensions

The Planning Board may apply to the Board of Selectmen for an extension not to exceed an additional ninety (90) days before acting to approve, approve with conditions, or disapprove an accepted non-residential site plan review application. An applicant may waive the requirement for Board action within the time periods specified in §8.1.3 and consent in writing to such extensions as may be mutually agreeable to both the Board and the applicant; in such an event, no application to the Board of Selectmen is required.

- 8.3.4 Failure To Act

Upon failure of the Board to approve, conditionally approve, or disapprove the application, the Board of Selectmen shall, upon request of the applicant, immediately issue an order directing the Planning Board to act on the application within thirty (30) days per RSA 676:4, I(c)(1). If the Board does not act on the application within the thirty (30) day time period, then within forty (40) days of the issuance of the order, the Selectmen shall certify on the applicant's non-residential site plan review application that the plat is approved, unless within those forty (40) days the Selectmen have identified in writing a specific provision of the Subdivision Regulations, Zoning Ordinance, Non-residential Site Plan Review Regulations, or other applicable regulation or by-law with which the application does not comply. Such certification by the Selectmen of the foregoing shall constitute final approval under RSA 674:37 and 676:18, and court review under RSA 677:15.

- 8.3.5 Conditional Approval

- A. The Board may grant conditional approval of a subdivision review application, but the plan will not be signed or recorded until all of the conditions have been met. Conditions of this nature must be fulfilled before the planning board may give final approval to an application. Approval will become final without further public hearing, upon certification to the Board or by its designee based upon evidence submitted by the applicant of satisfactory compliance with the conditions imposed. Conditional Approval without a public hearing will only be granted when the conditions are:

1. Minor changes whether or not imposed by the Board as a result of a public hearing, compliance with which is administrative in nature and which does not involve discretionary judgment; or
  2. Conditions which are in themselves administrative and which involve no discretionary judgment on the part of the Board, such as, payment of additional fees, minor textual corrections to submitted documents, submission of additional copies of submitted documents, or other similar items; or
  3. Involve the applicant's possession of permits and approvals granted by other Boards or governmental agencies, provided that the permits and approvals themselves have not required a change to the submitted plat or any other conditions imposed by the Board.
- C. Unless otherwise specified within the approval, the applicant shall have six months to comply with the conditions of the approval and have the plan signed by the Board. If the conditions are not met within six months, the conditional approval shall lapse, unless a mutually agreeable extension has been granted by the Board. Extensions shall be granted only if there have been no amendments to the Zoning Ordinance, Subdivision Regulations, Non-residential Site Plan Review Regulations, or any other ordinances and regulations which would render the subdivision plan non-conforming, and if all other required permits are still valid.

8.3.6 Final Approval

Upon determination that the requirements of these and any other town regulations or ordinances have been met, the board may approve the application. Where any of these regulations have not been met or are not applicable, the board may grant a waiver in accordance with the procedures in Section 13.3, Waivers.

The Board shall have the authority to grant approval subject to conditions that are subsequent. Such conditions may be necessary to secure the intent and purpose of these regulations or help to mitigate the impacts presented by the development itself. These are conditions that may appear on the plat and deal with restrictions on the use of property or safeguards that must be observed during development of the parcel or once the project is completed. Such issues might include the location of a road, preservation of vegetation and stone walls, or hours of operation and construction.

8.3.7 Public Hearing and Notice

When acting on a completed subdivision review application, the Board shall hold a public hearing to discuss the application. Per RSA 676:4, I(e), a public hearing shall not be required when the Board disapproves an application based upon an applicant's failure to supply information required by these regulations, including abutter's identification, failure to meet reasonable deadlines established by the Board, or failure to pay costs of notice or other fees required by the Board.

It shall be the responsibility of the applicant to supply the names and addresses of all the abutters upon filing the subdivision application with the Board. Per RSA 676:4, I(d), as amended, notification shall also be given to the applicant and all professionals, including every engineer, architect, land surveyor, or soil scientist, whose seals are affixed to the plan, as well as any holder of a conservation easement on the subject parcel. The board will conduct no review of submitted names for determination of complete abutter notification. Furthermore, the board takes no responsibility or liability for improperly noticed hearings resulting from applicant-generated abutter lists.

Abutters and the applicant shall be notified by the Board, in the form of a certified mailing, of the date upon which the application will be formally submitted for acceptance by the Board. Notice shall be mailed at least ten (10) days prior to submission of the application. Notice to the general public will be given at the same time by advertisement in a newspaper of general circulation in the Town of Rollinsford, and shall be posted in at least two (2) public places. All costs of notice, whether mailed, posted or published, shall be paid in advance by the applicant (RSA 676:4, I(d)). Fees are more fully laid out in the Schedule of Fees.

#### 8.3.8 Developments of Regional Impact

In accordance with RSA 36:54-58, the Board shall review all subdivision plans to determine if they have regional impact and shall follow the notification procedures required in RSA 36:57.

#### 8.3.9 Recording Procedures

The Board shall require residential subdivision and lot line adjustment plans to be recorded with the Strafford County Registry of Deeds, once said plan is approved or approved with conditions. Per RSA 676:4, I(g), the cost of said filing is considered an administrative expense, and shall be borne by the applicant. The filing fee must be paid prior to recording.

#### 8.3.10 Active and Substantial Development

In accordance with RSA 674:39, the Board, at its discretion, may require all plans to include a note that shall specify the threshold level of work which shall constitute "active and substantial development or building" for purposes of fulfilling the requirements of RSA 674:39, I. This threshold for "active and substantial development or building" must be reached within 12 months of approval before the plan will be eligible for the four-year exemption, as provided in 674:39, from subsequent changes in the Town of Rollinsford Zoning Ordinance, Subdivision Regulations, or Non-residential Site Plan Review regulations. The Board may extend this period for up to 12 months only for good cause.

### **SECTION 9 - GENERAL REQUIREMENTS FOR THE SUBDIVISION OF LAND**

The subdivider shall observe the following general requirements and principles of land subdivision:

- 9.1 The minimum dimensional requirements of lots shall be determined by the provisions of the Town of Rollinsford Soil Type Lot Size Regulations (Section 11 of these regulations) and by applicable provisions of the Rollinsford Zoning Ordinance.
- 9.2 Reserve strips of land which, in the opinion of the Planning Board, show an intent on the part of the subdivider to control access to land dedicated or to be dedicated to public use shall not be permitted.
- 9.3 Intersecting property lines at proposed street intersections shall be joined by a curve of at least 20-foot radius.
- 9.4 There shall be adequate width and area on every proposed lot after the erection of a residence to permit the parking of at least three (3) cars for each dwelling unit within the lot and within the lot clearances required by the Zoning Ordinance and Building Code, within a garage or other enclosure, or in lieu thereof, upon a gravel or surfaced parking area.
- 9.5 Land of such character that it cannot be safely used for building purposes because of exceptional danger to health

or peril from fire, flood, impermeable soil or other menace shall not be platted for residential occupancy, nor for such other uses as may increase danger to health, life or property or aggravate the flood or sewage hazard, until appropriate measures have been taken by the owner or his agent to eliminate such hazards.

- 9.6 The Board may, where it deems necessary, due to the character, size, and location or other factor specific to the proposed subdivision, require that one or more sites within the subdivision be dedicated for use as recreation (neighborhood park or playground) or open-space land. Such sites shall be of suitable character and size for the intended use. Such areas, whether privately or publicly owned shall have a sufficient restrictive covenant, which shall run with the land, recorded in the deed to assure permanent use as a recreation or open space land. Privately owned recreation or open space land shall be deeded in such a way that will assure the maintenance of the land and facilities in an orderly manner suitable for the intended use.
- 9.7 All public or private streets, roadways, utilities, sewerage and drainage facilities, curbs and sidewalks, when required, shall be installed and constructed in accordance with the specifications spelled out in the Town of Rollinsford Subdivision Regulations.
- 9.8 A layout indicating how the site will be served by electric, telephone and any other public utility must be provided. If the utility company(s) requires an easement to provide service, no final approval shall be granted by the Rollinsford Planning Board until such easements are secured. If no easements are required, a letter of intent to provide service from the utility company(s) must accompany the application.
- 9.9 Until such time as permanent monumentation is established in a subdivision location, all lot corners of boundary lines shall be maintained with temporary pin placements consisting of wood or metal stakes flagged with survey ribbons. This is to be accomplished after all roadside stakes are in place.
- 9.10 The subdivider shall install two (2) granite monuments at least thirty-six (36") inches in length and four (4") inches square with suitable center point at every corner which abuts a road, street, or right-of-way. In addition, the subdivider shall install iron pin monuments not less than one (1) inch in diameter and thirty-six (36) inches long at all other points on the boundary lines of lots where there is a change in direction.
- These monuments are to be in place prior to completion of the project.
- 9.11 The Board may require special improvements which it deems reasonably necessary or desirable for the conditions or circumstances relative to the particular subdivision. Any such special requirements shall be stated in writing in the minutes of the Board with the reasons therefore.
- 9.12 The Board may provide against such scattered or premature subdivision of land as would involve danger or injury to health, safety, or prosperity by reason of the lack of water supply, drainage, transportation, schools, fire protection, or other public services or necessitate the excessive expenditure of public funds for the supply of such services.
- 9.13 Lots for development shall not change the topography of the land to be developed by the removal of trees, shrubs, soil and rocks, except that which is necessary for the building of structures and roads.
- 9.14 The Town of Rollinsford does not allow the creation of pork chop lots in any zone.
- 9.15 The Town of Rollinsford does not allow the act of subdivision along Class VI roads. All subdivisions must occur along Class V roads or better.

**SECTION 10 - SPECIFIC PLAN REQUIREMENTS**10.1 **SUBDIVISION PLAN**

## 10.1.1 Scope of Review

Every application for subdivision review must incorporate the entire parcel within the review. Not to do so may cause approval of a lot or situation which is not in conformance with the zoning ordinance and/or other applicable ordinances and regulations.

## 10.1.2 Professional Standards

Subdivision plans shall be prepared, stamped, and signed by a registered Professional Engineer and/or Licensed Land Surveyor licensed in New Hampshire. The requirement for a Professional Engineer shall apply to all plans showing roadways, utilities, bridges and culverts, plus drainage and other construction plans.

## 10.1.3 Sheet Size

All plans shall be drawn in ink and be presented on sheet sizes that conform to the requirements of the Strafford County Registry of Deeds. The Board requests only one sheet plan size be used for preparing all plans in a set.

## 10.1.4 Copies

A completed application shall contain six (6) full size copies of the plans. However, only two (2) copies of the drainage report shall be required. Eight (8) 11"X17" plans shall also be submitted for distribution to board members prior to the meeting for which the application is scheduled. The Planning Board may require additional plans when needed. A digital copy of the plan shall also be submitted in current electronic media for the Planning Board files.

10.2 **Specific Plan Information - Existing Site Conditions**

In order for the Board to comprehensively evaluate a subdivision plan proposal, the applicant is required to show the following information as part of the subdivision plan, unless granted a waiver in accordance with Section 13.3, Waivers. Other information may be reasonably required by the Board and shall be submitted. Such additional submittals may be required in cases where the submitted information fails to permit the Board to review the subdivision in light of the requirements of Sections 7 and 8 and the purposes of these regulations.

- A. Location of site, names, and addresses of current owners of record and current abutting land owners. A separate list of current names and addresses of abutters must also be provided.
- B. Proposed subdivision name. Name and address of person(s) or firm preparing the plan. Said plan must contain the date of preparation, title, north arrow, scale, legend and zoning district(s). Name and address of person(s) or firm preparing other data and information if different from the preparer of the map. Plans shall also contain a signature block for Board approval.
- C. Surveyed property lines including angles or bearings, distances, monument locations and size of the entire parcel. Said plan must be attested to and stamped by a Licensed Land Surveyor licensed in the State of New Hampshire, signature, seal, and license number shall be legible and included on the plan.

- D. Existing grades and topographic contours at intervals not exceeding two (2) feet with spot elevations where the grade is less than five percent (5%).
- E. The location of existing drainage systems, structures, and drainage easements, if any.
- F. The shape, size, height, location and use of all existing structures, including wells and septic systems, on the site and within 200 feet of the site.
- G. Natural features such as streams, marshes, lakes, ponds, rock outcrops, wooded areas, significant trees, ledge, and other significant environmental features, including wetland soils as defined under current Rollinsford Wetlands Ordinance, wetlands shall be identified by a NH certified soil scientist or NH certified wetland scientist.
- H. Man-made features such as, but not limited to, existing roads, stone walls, pedestrian ways, and other structures. The plan shall also indicate which structures are to be retained and which are to be removed or altered.
- I. The size and location of all existing public and private utilities, including off-site utilities to which connection is planned, and any underground storage tanks, abandoned or in use.
- J. A vicinity sketch showing the location of the site in relation to the surrounding public street system, to be shown within a distance of 1,000 feet.
- K. A High Intensity Soil Survey (HISS) of the entire site, or the portion as determined by the Board. Such soil survey shall be prepared and stamped by a certified soil scientist in accordance with the standards established by the Strafford County Conservation District. Any cover letters or explanatory data provided by the certified soil scientist shall also be submitted.
- L. Location and description of all existing easements and/or rights of way, parks, reservations, conservation land, and holders of conservation easements.
- M. Tax map and parcel number.
- N. Each existing building or manmade structure, including stone walls, shall be shown on the plan and reviewed with the Board for historic significance. Such historic features may be destroyed or removed only with Board approval.
- O. Summary of Rollinsford Zoning Ordinance requirements, including, but not limited to summary of lot size requirements, lot area, frontage, etc.
- P. The subdivision plan shall show any burial site or cemetery as a separate lot from the remainder of the subdivision by means of a fence or stone wall. This fence shall be placed not less than twenty-five (25) feet from any grave, monument, or tomb and will be shown on subdivision plans accordingly. Access for maintenance shall also be shown on the subdivision plan.
- Q. Scale should be not more than 1" = 100' (one inch = 100 feet).
- R. The final plan(s) shall include sufficient data acceptable to the Planning Board and the Town Engineer to determine readily the location, bearing and length of every existing and proposed street line and lot line, and to reproduce such lines upon the ground. All dimensions shall be shown to hundredths of a foot and bearings to at least half minutes. The error of closure shall not exceed a ratio of 1 to 10,000. The final plan(s) shall show the boundaries of the property and the bounds of any public or private streets and easements abutting or pertaining to the proposed subdivision in any manner.

10.3 Specific Plan Information- Proposed Site Conditions

In order for the Board to comprehensively evaluate a subdivision plan proposal, the applicant is required to show the following information as part of the subdivision plan, unless granted a waiver in accordance with Section 13.3, Waivers. Other information may be reasonably required by the Board and shall be submitted. Such additional submittals may be required in cases where the submitted information fails to permit the Board to review the subdivision in light of the requirements of Sections 7 and 8 and the purposes of these regulations.

- A. Proposed grades and topographic contours at intervals not exceeding two (2) feet with spot elevations where grade is less than five percent (5%).
- B. Construction drawings and location, name, width, curbing and paving of proposed streets, drainage ways, and profiles and the elevations of sufficient points on the property to indicate the general topography of the property, driveways and sidewalks with indication of direction of travel for one-way streets. Including the radii of streets, driveways, access ways, and sidewalks within the site and its relationship to the off-site street system.
- C. Location and timing patterns of proposed traffic control devices, including painted road indicators, and all signage.
- D. Designs of any bridges or culverts that may be required.
- E. Where the plat submitted covers a part of the subdivider's entire holding, a sketch of the prospective future street system of the unsubmitted part shall be furnished and the street system of the submitted part will be considered in the light of adjustments and connections with the street systems for the part not submitted.
- F. The location, size and layout of on and off-street parking, including loading zones. The plan shall indicate the calculations used to determine the number of parking spaces required and provided.
- G. The location and layout of proposed drainage systems and structures, including elevations for catch basins designed in accordance with these regulations.
- H. Note indicating that "all road and drainage work to conform to the standard specifications for construction in the State of New Hampshire".
- I. The size and location of all proposed public and private utilities, including but not limited to: water lines, sewage facilities, gas lines, power lines, telephone lines, fire hydrants and alarm connection, underground storage tanks, and other utilities.
- J. The location and type of street lighting, including the cone of illumination on the site.
- K. Location and description of proposed easement(s) and/or rights-of-way. Locations of access to existing town roads, as stated in RSA 236-13, Section 5, and copies of permits for the access.
- L. The location and size of all proposed open space areas or parcels to be dedicated to public use and the conditions of such dedication and a copy of such private deed restrictions as are intended to cover part or all of the tract.

- M. Deeds or other proposed documents of conveyance of any land located within the subdivision proposed for use for recreational or other Town purposes and Town ownership shall be part of the application. These proposed documents of conveyance shall be in a form satisfactory to Town Counsel. The fact that the Subdivider makes such offers and Town Counsel approves the form of the documents does not bind the Town or its agents to accepting the offer. The suitability of lands offered for recreational or conservation uses shall be determined by the Conservation Commission of the Town. A letter indicating the Commission's opinion shall accompany the application.
- N. The location of all monumentation that is to be installed in accordance with these regulations shall be shown on the plans. If the monumentation is changed in the field after construction supplemental information shall be filed with the Planning Board to be added to the file. Any change in the actual layout of the lots shall require planning board approval in accordance with these regulations.
- O. Any other information the Board may require in order to properly evaluate the proposed development including, but not limited to, the following:
  - a. Calculations relating to stormwater runoff.
  - b. Information on the composition and quantity of wastewater generated.
  - c. Information on air, water, or land pollutants discharged.
  - d. Estimates of traffic generation.
  - e. Grading, drainage and erosion and sediment control plan.
  - f. Any other plan required under § 8.2.

10.4 Sidewalks and Bikeways

Sidewalks and/or bikeways, where appropriate, shall be provided for pedestrian traffic to provide connection between the subdivision and nearby destinations. Sidewalks shall be at least six (6) inches above grade and shall be protected by curbing. Sidewalk designs shall include means for handicapped access. The board shall consider the following when determining the appropriateness of sidewalks:

- A. Proximity to schools.
- B. Whether recreational facilities and land is available within the subdivision.
- C. Proximity to commercial destinations, including but not limited to, restaurants, stores, shops, etc.
- D. Proximity to other pedestrian or bikeways, including “abandoned” ways or sidewalks.

10.5 Landscaping Design and Plan

The Town of Rollinsford requires attention to landscaping design in order to protect and preserve the appearance, character, and value of the surrounding neighborhoods by providing a better transition; by improving the compatibility between various land uses in the Town; and by buffering neighboring properties and areas from any adverse effects of site development.

These regulations shall mitigate the appearance and detrimental impact of non-residential uses. Any application of these regulations shall protect the value and provide for quiet enjoyment and nuisance-free use of neighboring properties.

- A. To the extent feasible, naturally landscaped buffer strips of 25 feet must be preserved where a proposed residential development abuts non-residential zones or uses. This buffer shall adequately shield the residential properties from the adverse effects of the non-residential use. No roads shall be located within any part of this buffer zone.
- B. Where appropriate, existing trees and vegetation must be incorporated into the buffer strips or landscaping design. Buffer strips must contain vegetation which will screen the view from adjacent residential property during all seasons, this screening must exclude visual contact between uses and create a strong impression of the separation of spaces. Fencing alone may be considered an acceptable method of screening only if granted a waiver in accordance with Section 13.3, Waivers.
- C. Where appropriate or required, subdivisions shall be planned to provide that natural vegetation be retained as a buffer along environmentally sensitive areas such as watercourses, wetlands, and standing waters, in accordance with sound environmental practices, as described by the Department of Environmental Services. Pre-existing or non-conforming lots which are the subject of subdivision shall not be subject to the landscaping recommendations or requirements described above.

#### 10.6 Bridges

Bridges must be built according to the N.H. Department of Transportation manual, *Standard Specifications for Road and Bridge Construction* dated 1990 and as amended. All bridge plans must be approved by the State Engineers prior to construction.

#### 10.7 Fire Protection

Fire hydrants, fire ponds, and other improvements reasonably required for fire safety shall be provided as specified by the Rollinsford Fire Department and approved by the Planning Board. These items shall be shown on the site plan and installed by the applicant.

The Planning Board in its discretion may require the applicant to consult with the Rollinsford Fire Department to determine what, if any, appropriate fire protection measures are reasonably necessary. The applicant shall provide the Planning Board with the results of such consultation in the form of a letter or representations of facilities on the plan. The Planning Board may require additional fire protection measures in addition to the Rollinsford Fire Department's recommendation if reasonably necessary.

#### 10.9 Water, Wells, On-site Sewage, and Hydrogeological Studies

##### A. Water:

1. On-site water supply: the provision of an on-site water supply shall conform to criteria of the Water Supply and Pollution Control Division of the N.H. Department of Environmental Services. It shall be the responsibility of the applicant to provide sufficient and complete information to prove that the site is able to permit the installation and operation of both individual on-site water supply and sewage disposal systems.
2. A hydrogeologic study shall be required for any well with a withdrawal of over 20,000 gallons per day.

3. Drinking water supplied by a community water system serving less than twenty-five (25) persons shall be tested by the Town with the cost of such testing being borne by the applicant. Community water systems serving more than twenty-five persons are subject to "Design Standards for Small Public Water Systems", Chapter WS 300, Part 310 of the NH Code of Administrative Rules."

B. Well Radius Placement:

1. Each newly created lot shall show the entire well radius protection area as required by the State Department of Environmental Services rules.
2. The entire required well radius shall be located within the boundaries of each newly created lot.
3. Well radius easements covering neighboring parcels are not permitted in new subdivisions. This insures:
  - (a) Protection of health and safety for individual on-site water resources from adverse impacts of land uses on adjacent and neighboring parcels.
  - (b) Allows for maximum flexibility in the placement of septic systems and other land uses on neighboring parcels of land.
  - (c) Promotes the wise and free use of property unencumbered by easements.

10.10 Sewered Area System Requirements

If an applicant intends to utilize Town of Rollinsford sewer and water service, or private community water system, they should make an appointment with the Rollinsford Sewer and Water Department to determine proper requirements and procedures. Plans must be submitted for review by the water and sewer department, if required.

Written approval is required prior to Planning Board approval.

10.11 Non-Sewered Area System Siting Requirements

- A. In areas not served by public sewage disposal systems at the time of subdivision, it shall be incumbent upon the subdivider or his agent to adequately demonstrate that all proposed lots will meet all current state and local septic system disposal standards. No subdivision of land will be approved where it creates a building lot that will not meet these standards.
- B. The subdivider or his agent shall be required to submit all site information, including but not limited to percolation tests, test pits, soil, slope, and minimum distance data as may be required by the Planning Board to determine the suitability of each proposed lot for on-site sewage disposal.
- C. In no case shall the Planning Board grant final approval of a proposed subdivision until the following State approvals, if necessary, have been received: New Hampshire Department of Environmental Services (DES) - Water Supply and Pollution Control Division Subdivision Approval; DES Subsurface Disposal; DES Site Specific; DES Wetlands Board - Dredge and Fill Permit; DES Water Supply Approval; and U.S. Army Corps of Engineers 404 Permit.
- D. The location of and pertinent data on sufficient test pits and percolation tests to show that the

regulations can be met on each lot created by the subdivision. Information shall include at least the following: the location of test pits; percolation test data; the certification of the test pit inspector witnessing the perc tests; and an outline of the areas reserved for leach fields which corresponds to test locations. The location of reserve leach field areas if available shall also be shown. (Local septic system requirements must be met prior to obtaining approval from the NH Water Supply and Pollution Control Division.)

- E. The bottom of the proposed leachfield, trench system, or dry well shall be a minimum of four (4) feet above any seasonal high water table and six (6) feet above any impermeable substratum (six feet with municipal or New Hampshire Water Supply and Pollution Control Division approved community water supply). Impermeable substratum is defined as any soil with a percolation rate of less than one (1) inch per 60 minutes. Clay and hardpan layers will be assumed impermeable unless shown to be permeable by a properly conducted percolation test. Bedrock, shale and rotten ledge are considered impermeable. (RSA 149-E)
- F. Where there is less than five (5) feet of natural soil over ledge, or other impermeable substratum, the disposal system must be designed by a licensed civil or sanitary engineer registered in the State of New Hampshire and having a valid NH. septic designers license. This does not, however, guarantee that the lot will be approved. (RSA 149-E)
- G. The bottom of the leaching field shall be 6 feet above bedrock or any impermeable substratum unless there is municipal or state approved community water supply, in which case the distance to bedrock or impermeable substratum may be reduced to 4 feet.
- H. The receiving layer for a leaching system shall meet the following criteria before a site is considered suitable for modification, as needed, for system design and approval:
  - a. there shall be no type A hydric soils, determined in accordance with Env-Ws 1014.02, under or within 75 feet laterally of the proposed system;
  - b. there shall be no type B hydric soils, determined in accordance with Env-Ws 1014.02, under or within 50 feet laterally of the proposed system.
- I. Any soil with a seasonal high water table less than eighteen (18) inches of the soil shall not be used for the disposal of septic tank effluent.
- J. All new on-site waste disposal systems are to be located so as to avoid impairment to them or contamination from them during flooding.
- K. All on-site waste disposal systems must be located seventy-five (75) feet from the location of a private well, two hundred (200) feet from a community well and four hundred (400) feet from a public well.
- L. The bottom of the leaching field shall be 4 feet above the seasonal high water table.
- M. When the design shows that at least 50% of the bed or trench area meets the requirements established by Env-Ws 1014.03 and Env-Ws 1014.04, a reduction in the distances required by Env-Ws 1014.03 and Env-Ws 1014.04 shall be allowed.

Pertaining to sloping sites, the distance between the bottom of the leach field and the seasonal high water mark shall be no less than two (2) feet.
- N. The slope of a lot shall be determined by finding the average slope across the lot, measured

perpendicular to the contours.

- O. Each proposed lot of a subdivision shall contain an area of land sufficient in size and site characteristics to be used as an auxiliary septic system absorption field. Said area shall be reserved for this use and must be capable of meeting the pertinent minimum standards as set forth above. The location of the auxiliary absorption field area shall be indicated on the subdivision plan and at final siting of system.
- P. Planning Board approval is subject to all septic requirements of the Rollinsford Health Regulations.

10.12 Utilities

- A. The applicant proposing a residential development shall insure the installation all electric, telephone, and other utility distribution lines per specifications of the public utility companies involved, and easements required for transformer units shall be provided by the developer.
- B. All proposed utilities shall be located underground.

10.13 Easements

A. All easements dedicating rights to the Town of Rollinsford are subject to review and approval by the Board and Town Counsel, and any other Town agent or body which the Board and/or Counsel deem necessary.

- 1. Where the topography is such as to make difficult the inclusion of any utilities or other facilities within the road rights-of-way, the subdivision plan shall show the boundaries of the proposed permanent easements over or under private property. Such easements shall not be less than twenty-five (25) feet in width and shall have satisfactory access to existing or proposed rights-of-way.
- 2. Where a proposed residential development is traversed by a watercourse or drainage way, the Board may require a stormwater easement or drainage right-of-way of at least twenty-five (25) feet in width.

10.14 Open Space Requirements

In accordance with RSA 674:36,II, a subdivision of land shall show open spaces of adequate proportions. Plats submitted to the planning board for approval which show new streets or narrowing or widening of such streets shall show a park or parks suitably located for playground or other recreational purposes that are reasonably sized for neighborhood use.

- A. Natural Features. The subdivision and development shall, whenever possible, preserve in their natural condition important natural features. The Planning Board may request an advisory opinion from the Conservation Commission in the determination of the value of natural features and the boundaries of such natural systems. Such areas include watercourses, wetland areas, steep slopes, large or unique trees, groves, or special habitats. Natural features that provide buffers between lots, or sections, of a subdivision should be preserved to enhance privacy and aesthetic value.
- B. Buffer Strips. The Planning Board may require the designation of buffer strips of at least fifty feet in width around natural features which may be adversely affected by erosion or stormwater runoff. The Board may require a vegetative buffer to provide screening where non-residential developments abut a

residential zone.

- C. Parks. The Board may require the dedication or reservation of such open space within the subdivision for park, playground or other recreational or open space purposes, for the residents of the subdivision.
- D. Tree Planting. The planting of shade trees within all subdivision layouts where residential, commercial, or industrial development is to take place may be required of the developer who shall supply planting plans to the Board. The planting plans of shade trees within proposed or accepted rights-of-way must be submitted to the Conservation Commission and receive its approval before planting.

#### 10.15 Storm Water Drainage and Erosion Control

- A. An adequate surface storm water drainage system for the entire subdivision area shall be provided. Storm drainage shall be carried to existing water courses or connect to existing storm drains. No new drainage-ways shall be created unless necessary easements are obtained. Such easements shall be duly recorded on the plat and the property deeds involved. No increase in surface runoff shall be permitted if such increased runoff passes beyond the property lines of the parcel upon which such development occurs, unless it is within an approved public storm drainage system. Storm drains and other subdivision drainage facilities shall be based upon a design flow to accommodate a 25-year/24-hour storm. All water courses shall be designed so as not to create erosive velocities. Calculations of runoff used to determine storm water system design shall be submitted for Planning Board review.
- B. Provisions shall be made to accommodate the increased runoff caused by changed soil and surface conditions during and after development. Sediment in the runoff water shall be trapped by the use of sediment basins or other acceptable methods until the disturbed area is stabilized. Diversions, sediment retention basins, and other erosion/sedimentation control structures shall be constructed prior to any on-site grading or disturbance of existing surface material.
- C. A storm water system shall be constructed in accordance with the following requirements:
  - 1) The storm water system shall include an adequate number and sizes of catch basins and/or drop inlets, and shall be fully designed to handle all computed or reasonably anticipated storm water drainage. The minimum size, slope, and location of the pipe shall be determined by a qualified engineer and installed under his supervision.
  - 2) No storm water pipe, catch basin, drainage inlet, or other pipe floor drain, draining surface water shall be connected to any sanitary sewer system, pipe or other part of said system. All storm water pipe shall be inspected and approved by the Town Engineer before covered. Inspection shall be completed on a normal workday within a 24-hour period after notification.
  - 3) The subdivider shall provide satisfactory information that his storm water drainage system will not cause flooding or unreasonable deposits of such waters upon or onto adjacent private or public lands or streets, unless deed easements for the same are obtained in the name of, or to be deeded to, the Town of Rollinsford.

#### 10.16 Traffic Impact and Mitigation Analysis

All proposed developments shall be reviewed by the Board to ascertain that adequate provisions have been made by the owner or his/her agent for traffic safety. To facilitate this review, the applicant may be required to provide a traffic impact analysis when deemed necessary by the Board due to the size, location, or any other traffic

generating characteristics of the development.

- A. A traffic impact and mitigation analysis shall be required in the following circumstances:
1. The subdivision involves the creation of 10 or more residential lots or residential units;
  2. The subdivision is intended to facilitate non-residential land uses;
  3. A traffic impact analysis may be required of any development, at the discretion of the Planning Board, where information submitted does not permit the Board to with adequately identify the impacts of the development to the health, safety, and welfare of existing and proposed public.
- B. The traffic impact and mitigation analysis shall be prepared by a NH licensed Professional Engineer. This analysis shall be prepared to meet, at a minimum, the NHDOT's Policy for the Permitting of Driveways and Other Access to the State Highway System (March 10, 2000) and NHDOT Intersection Capacity Analysis Guidance (Jan. 8, 2001).
- C. Depending on the magnitude of the proposed development, acceptable report formats may include: a letter report, a formal traffic impact and access study, or a technical memorandum addressing specific issues and concerns. All report types shall include a technical appendix containing all pertinent traffic data and analyses used in the preparation of the study.
- D. Where applicable, reports shall include a qualitative as well as quantitative analysis including, but not limited to, details concerning the following impacts and proposed efforts to mitigate these impacts:
1. Inventory of the existing roadway conditions surrounding the site including identification of existing deficiencies;
  2. Description of the proposed development including a trip generation estimate for daily and peak hour conditions;
  3. Internal circulation patterns including service, delivery, and emergency response vehicles;
  4. Pedestrian and bicycle mobility;
  5. Adequacy of the existing roadway network to accommodate site-generated traffic;
  6. Sight distances;
  7. Traffic control needs;
  8. On and off-site parking adequacy;
  9. Accident statistics;
  10. Neighborhood impacts; and
  11. Air quality and noise impacts.
  12. Any other identifiable impact that the Board finds necessary to address.
- E. The extent of the study area for the traffic analysis will depend on the location and size of the proposed development. Small projects may require minimal analysis limited to site access locations and existing intersections immediately adjacent to the project. Large-scale projects may require a more extensive study area. The study area limits shall be reviewed by the Town Planner and/or town-hired consultant prior to the preparation of the study.
- F. Analysis periods shall include weekday morning and evening peak hours for residential, industrial, and office type developments. Commercial developments (depending on the use) may include weekend

peak hours in addition to the weekday.

- G. Reports shall include the following unless the requirement is beyond the scope of the reasonably predicted impact of the development:
1. Existing Conditions Analysis
    - i. ADT and peak hour volumes shall be provided for critical roadways and intersections.
    - ii. Traffic volumes shall be seasonally adjusted to reflect peak traffic month conditions. Historical traffic volume data obtained from the Town, NHDOT, or Nashua Regional Planning Commission shall be used to determine seasonal variations within the study area.
    - iii. Levels of service and vehicle queues shall be calculated for the existing (peak month) conditions at all study area intersections.
    - iv. Existing conditions traffic volume networks shall be prepared for the study area.
  2. "No Build" Analyses
    - i. Analyses shall be performed for the opening year of the project and opening year plus ten.
    - ii. Traffic growth projections shall include regional background growth in addition to traffic generated by any nearby proposed or approved development projects. Local historical traffic volume data shall be reviewed in assessing a traffic growth rate for use in the study.
    - iii. Opening year and opening year plus ten traffic volume networks shall be prepared for the No Build condition.
  3. Trip Generation Estimate and Distribution
    - i. Daily and peak hour trip estimates for the proposed project shall be developed using rates published by the Institute of Transportation Engineers (ITE). Deviations from the industry standard rates must be substantially supported with data collected at similar facilities.
    - ii. Procedures used to determine the distribution and assignment of site-generated trips shall be documented within the study.
    - iii. Site-generated trips shall be added to the No Build traffic volume networks to establish the Build condition. Traffic volume networks demonstrating the distribution and assignment of site-generated trips shall be included in the study.
  4. Build Analysis
    - i. Analyses shall be performed for the opening year of the project and opening year plus ten.
    - ii. Opening year and opening year plus ten traffic volume networks shall be prepared for the Build condition.
  5. Mitigation Plan

- i . Where traffic operations or safety deficiencies are expected to occur as a result of the proposed development, mitigation measures to alleviate such deficiencies shall be evaluated and recommended by the proponent.
- i i . Acceptable mitigation measures may include (but are not limited to) roadway and intersection improvements that address capacity or geometric problems, traffic calming, and transportation demand management.
- i i i . Conceptual improvement plans demonstrating the recommended mitigation shall be provided when appropriate.

H. Recommended acceptable sources include the latest edition of the following publications:

1. Trip Generation, 6<sup>th</sup> Edition, 1997, ITE
2. Trip Generation Handbook – An ITE Proposed Recommended Practice, October 1998, ITE
3. Policy for the Permitting of Driveways and Other Access to the State Highway System, March 10, 2000, NHDOT
4. Intersection Capacity Analysis Guidance, January 8, 2001, NHDOT Memorandum
5. Highway Capacity Manual 2000, Transportation Research Board
6. Manual on Uniform Traffic Control Devices Millennium Edition 2000, FHWA
7. A Policy on Geometric Design of Highways and Streets 2001, Fourth Edition, AASHTO
8. Highway Design Manual, March 1999, NHDOT

I. The Board may retain the services of a consultant qualified in traffic engineering and transportation planning to review the traffic impact analysis and to insure that adequate provisions are made in the development plan to reduce or eliminate project-related impacts. The Board may further require, pursuant to RSA 676:4 I(g), that the developer reimburse the Town for reasonable costs of this review. No plan shall be approved until such fees, if applicable, are paid in full.

#### 10.18 Performance and Maintenance Security

A. The Planning Board may accept performance security in lieu of the subdivider's completion of street work and other required improvements in conformance with these regulations. The security shall be in a form and amount, and with surety, and other conditions all satisfactory to the Board to insure for the Town the construction and installation of such improvements within a period of time not to exceed two (2) years. The time limit of two years for completion from the date of final approval shall be expressed in the security. The security shall remain valid and available until drawn upon by the Town or released in accordance with 10.9.5 below.

Further to the above, the security shall be one of the following:

1. Certified check or bank check properly endorsed to the Town of Rollinsford.
2. Irrevocable letter of credit submitted on the standard form approved by the Town. (If other than the Town's approved form, the performance agreement shall be reviewed and approved by the Town Counsel as to proper legal form and enforceability. The cost of this review shall be borne by the subdivider.

B. The subdivider shall file with the Board a detailed estimate of all costs of required street improvements, drainage structures, utilities or other improvements. The Board may have the estimate reviewed by a professional consultant, if deemed necessary. The cost of this review shall be borne by the subdivider. The Board, after considering the estimate, any other pertinent information received, and their own knowledge shall determine the amount of the performance security required.

- C. The Board may further extend the time of two years for completion when the reasons for delay were unforeseeable and beyond the reasonable control of the subdivider. Any such extension shall be in writing and signed by a majority of the Board signifying their concurrence and shall only be granted after ensuring the validity and availability of the security for such extension. Any such extension shall be solely at the discretion of the Planning Board.
- D. The performance security shall not be released until the Board has certified after inspection that the required improvements have been completed in accordance with the approved plat. A fee, payable by the subdivider, may be charged to cover the cost of professional consultation selected by the Board to assist in determining completion of all required work to the construction standards of the Town.
- E. All security shall be held by the Selectmen of the Town. The Selectmen shall not draw upon or release any security until they are in receipt of a resolution passed by a majority of the Planning Board stating the purpose and amount to be drawn or released. The Selectmen shall enforce such securities by all appropriate legal and equitable remedies.

10.19 Legal Documents

Where applicable to a specific subdivision, the following are required in a form approved by Town Counsel:

- A. Agreement to convey to the Town land to be used for streets or other public purposes, with transfer of title.
- B. Easements and rights-of-way over property to remain in private ownership, including drainage easements.
- C. Performance security, as described in Section 10.12.

10.20 Streets and Roads

All public and private streets, roads, driveways, sidewalks, pedestrian ways and bikeways shall be submitted as specified in Addendum A - "Road Design and Construction Specifications" of these Regulations.

10.21 Driveways

All permits required for driveways and other accesses onto a State highway shall be obtained from the New Hampshire Department of Transportation prior to final approval of the subdivision. Any permits required for driveways onto local streets shall be obtained from the Town. The Planning Board shall attempt to assure that the location of all driveways and accesses do not endanger safety or impede reasonable traffic flow.

No driveway shall access more than two (2) single-family or duplex units, or one (1) three or four-family structure. Dual access "looped" driveways may be required if deemed necessary by the Planning Board.

10.22 Off-Site Improvements

Pursuant to RSA 674:36, the Board may require special improvements on or off-site which it deems reasonably necessary or desirable for the conditions or circumstances relative to the particular subdivision plan review. Any such special requirements shall be stated in writing in the minutes of the Board with the reasons therefore. The Board may require, either that the applicant construct the improvements in whole or in part, or reimburse the

municipality or any other party who, at the direction of the municipality, undertakes such improvements. The applicant's responsibility for such improvements is limited to that portion of the cost of the improvements which bears a rational nexus to the needs created by, and special benefits conferred upon, the site, taking into consideration the municipality's ability to pay for such improvements.

**SECTION 11 - SOIL BASED LOT SIZE DETERMINATION**

The Planning Board of the Town of Rollinsford, New Hampshire hereby adopts the following as part of their subdivision regulations in accordance with RSA 674:35-36 for the following purposes:

To assure that the land indicated on plats submitted to the Planning Board shall be of such character that it can be used for the building purposes without danger to health;

To prescribe minimum areas of lots so as to assure conformance with local zoning ordinances and to assure such additional areas as may be needed for each lot for on-site sanitary facilities; and

To protect ground water quality for purposes of public health and safety.

The lot sizes for subdivisions in the Town of Rollinsford shall be based on the following specified criteria.

11.1 Minimum Lot Sizes

11.1.1 In the absence of municipal wastewater system, minimum lot sizes within all subdivisions shall, in addition to meeting the requirements of the zoning ordinance for the zone wherein the subdivision is proposed, also meet the lot size requirements as may be needed for each lot to insure ground water quality protection. These additional requirements are specified in Table 1A and 1B, "Minimum Lot Size by Soil Type." Each lot shall have a soil carrying capacity of one or greater.

This requirement is subject to the following modifications:

11.1.1.1 Where more than one soil type is found on a lot, a soil carrying capacity of those soils occurring on the lot shall be used to determine the minimum lot size.

11.1.1.2 Wetlands may be used as part of the computed lot size according to the following:

- a. Areas designated as type B hydric soils may be utilized to fulfill the minimum lot size required by the Town of Rollinsford ordinances and subdivision regulations provided that a contiguous non-wetland area sufficient in size and configuration to adequately accommodate all housing and required utilities such as sewage disposal and water supply to include setbacks, is provided.
- b. Areas designated as type A hydric soils (very poorly drained soils, fresh or saltwater marsh or surface water areas) may not be utilized to fulfill minimum lot size.
- c. No subsurface wastewater disposal system shall be constructed within 75 feet of any type A hydric soil or 50 feet of any type B hydric soil.

11.1.1.3 Slopes greater than 25% may be used as a part of the computed lot size according to the following:

- a. Areas designated with slopes greater than 25% may be utilized to fulfill the minimum lot size required by town ordinances and subdivision regulations provided that a contiguous area with less than 15% slopes sufficient in size and configuration to adequately accommodate all housing and required utilities such as sewage disposal and water supply to include setbacks, is provided.

11.1.1.4 Minimum lot sizes for residential developments with greater than four (4) bedrooms per building and for cluster developments shall be determined as follows:

- a. For multi-family residential use the minimum lot size shall be proportionately smaller per dwelling unit than the lot size indicated in the appropriate table as determined by the following formulas:
  1. Number of 1 and/or 2 bedroom units = Area of each soil type on the lot divided by (lot size from Table 1A/B x .65).
  2. Number of three bedroom units = Area of each soil type on the lot divided by (lot size from Table 1A/B x .85).
- b. In the case of cluster subdivisions, the overall density of lots or dwelling units for development within the parcel shall be determined by using the appropriate table and computing a soil carrying capacity of all allowed soils found in the parcel proposed for subdivision. Wetland soils (type B hydric) will be given credit up to the density computed for the non-wetland portion of the property. The overall computed density may then be increased by 2%.
- c. For duplex use, where the total number of bedrooms in the building shall not exceed 5, the lot size shall be increased by 40% of the minimum lot size as determined by the appropriate table.

11.1.1.4 For single family homes with greater than 4 bedrooms the required lot size will be increased 15% for each additional bedroom exceeding four.

11.1.1.5 In developments where a municipal water supply system is to be provided and whose water source is outside the drainage basin of the proposed development, minimum lot sizes may be reduced by 15% of the minimum requirements as stated in the appropriate table.

11.1.1.6 For commercial and industrial uses with residential quality waste, lot sizes will be determined by the formula:

$$\text{Lot Size} = \frac{Q \text{ (gpd)}}{2000 \text{ gpd}} \times \text{Lot Size from Table 1A/B}$$

**where:** Q = gallons of wastewater to be discharged per day. The amount of flow will be determined by use of Env-Ws 1008.02 Average Daily Flow Volume.

- a. Final site plan approval for commercial/industrial development which generate wastes of such nature or character as to require state or federal

permits for pre-treatment and discharge or subsurface disposal shall not be granted until all such permits are secured provided, however that conditional approval may be granted per RSA 676:4, I(i). The conditions upon which such permits are issued shall comply with state and local regulations and be made part of the record before the Planning Board.

11.2 Sources of Soils Information

- 11.2.1 Soils information shall be provided by the following method: High Intensity Soil Maps.
- 11.2.2 HISS maps prepared by field examination shall be performed by a Certified Soil Scientist and so stamped.
- 11.2.3 All costs of preparing soil data shall be borne by the subdivider.

11.3 Relationship Between State and Local Regulations

Where both state and local regulations are applicable, the more stringent regulation shall take effect. If the state regulation addresses an issue not included in the local regulation or if the local regulation addresses an issue not included in the state regulation, that regulation shall automatically apply.

TABLE 1

## MINIMUM LOT SIZE BY SOIL TYPE USING HISS MAPS

**NOTE:** The following may not be a complete list of soil types in your town. Contact the Strafford County Conservation District for assistance. (Lot sizes in square feet.)

Soil Type	B	C	Slope	D	E
111-H	35500	42000		51500	68000
112-H	35500	42000		51500	68000
11X-H	68000	76000		86000	100000

563-H	68000	76000
56X-H	68000	76000
575-H	68000	

The soil types listed below have one or more limiting characteristics that make the soil type "NA" or require on-site investigation, no matter what other characteristics of the soil may be present.

<u>Soil Type</u>	<u>Minimum Lot Size</u>
6***H	NA, very poorly drained soil, Type A hydric
*66*H	NA, fill does not meet the Standards for Fill Material (see Key to Soil Types)
76**H	On-site evaluation needed

The Soil Type symbols are explained in "High Intensity Soil Maps for New Hampshire, Standards and Origins. SSSNNE Special Publication No. 1".

"NA" means not allowed.

"\*" means any slope or any number.

#### 11.4 Lot Shape and Size Regulations

These regulations are adopted to assure conformance with the requirements and intents and purposes of the Zoning Ordinance. These regulations affect lot shape and size within a proposed subdivision to the extent they create conditions specific to the subdivision that assure safe, convenient, and prosperous developments for the current owner and all subsequent residents, the provision of adequate access for safety vehicles, additional areas for each lot necessary to accommodate on-site septic facilities, provide for clarity of ownership, and to prevent the occurrence of zoning violations caused by poorly designed lot shapes.

These regulations carry out the intent of the zoning ordinance and provide clarity and flexibility in the administration of the requirements of the zoning ordinance where questions are left unresolved. They are not meant to supplant the zoning ordinance and may be waived in accordance with Section 13.3 Waivers.

##### 11.4.1 Intent and Purposes for Lot Shape and Size Regulations

The intent of these regulations is to enhance and insure consistency with the Rollinsford Zoning Ordinance.

The following purposes are:

- A. Lots shall be shaped in a manner that promotes clarity of ownership, access across fee-title land rather than easement interests which may promote destructive property disputes, and to promote the convenient and harmonious development of the land.
- B. The layout of lots which violate these purposes is not permitted.
- C. The close proximity of narrow portions of lots that will create a situation that reduces privacy

and increases congestion and overcrowding of the land are not permitted.

- D. The close proximity of house sites tend to create conflicts among the use of the land, including maintenance disputes, use disputes, and property ownership disputes between landowners and is not permitted.
- E. Oddly shaped lots cannot reasonably be interpreted to be an orderly layout of the land or insure that proper description of ownership or ease of identification will carry forward in time are not permitted.

**SECTION 12 - SPECIAL FLOOD PROTECTION PROVISIONS**

- 12.1 If any part of the area of the proposed subdivision, or development subject to site review, lies within the boundaries of the Special Flood Hazard Area, as shown on the map on file in the Planning Board (Selectmen's) office, the following special criteria shall apply:
  - 12.1.1 Drainage -- drainage structures and ways shall be constructed in a manner to accommodate a so-called 100-year frequency flood;
  - 12.1.2 Wastewater Disposal and Water Supply -- all systems for the supply of water or the discharge of household wastewater shall be constructed in a way which will prevent the infiltration of floodwater and contamination of water supplies or backing up of wastewater resulting from a 100-year frequency flood;
  - 12.1.3 Building Sites -- the subdivision or site shall be so laid out that sites for buildings to be used for human occupancy will either:
    - 12.1.3.1 not be located in the flood hazard area, or
    - 12.1.3.2 if a building is to be located within the flood hazard area, it shall be constructed in such a fashion that neither the structure or its essential utilities will be harmed by a 100 year frequency flood.
  - 12.1.4 Restrictions necessary to achieve the goals of this Section shall be placed on the plan or shall accompany the plan and be referenced by it.

**SECTION 13 - ADMINISTRATION AND ENFORCEMENT**

13.1 General

13.1.1 These Regulations shall be administered by the Planning Board with the assistance of the Building Inspector, Town Engineer and such other persons as the Board shall designate. It shall be the duty of the Board of Selectmen to enforce the Subdivision Regulations. The Selectmen in enforcing these Regulations shall act upon complaint or information from the Planning Board, Building Inspector, Town Engineer, or otherwise, and shall, whenever practicable, take such action as the Planning Board or such other officer requests.

13.1.2 The Code Enforcement Officer or other agent so designated by the Planning Board shall be charged with the responsibility of inspecting improvements and development of subdivisions on site for compliance with the Subdivision Regulations.

13.2 Appeals

13.2.1 Any person aggrieved by any decision of the Planning Board concerning a plat or subdivision may appeal said decision to the Superior Court, as provided by R.S.A 677:15.

13.3 Waiver Procedure

13.3.1 When a proposed subdivision plat is submitted for approval, the applicant may request in writing to waive specific requirements of these Regulations as they pertain to the subdivision plan. The applicant shall present reasons in writing why the waiver is needed.

13.3.2 The Planning Board may grant a waiver in a special case, so that justice may be done and the public interest secured, provided that such waiver will not have the effect of nullifying the intent and purposes of these Regulations; and further provided that the Planning Board shall not approve waivers unless it shall make findings based upon the evidence presented to it in each specific case.

13.4 Amendments

The Planning Board may from time to time amend these regulations. Amendments to the Subdivision Regulations shall include the following steps:

13.4.1 The Board shall hold at least one (1) public hearing on the proposed regulations and/or amendments.

13.4.2 Notice for time, place and date of any hearing to amend shall be given at least ten (10) calendar days before hearing, not including day of posting or day of hearing. Notice of hearing shall be published in a paper of general circulation in Town and posted in two (2) public places. Notice shall include an adequate statement describing the proposal and the place where a full text of proposal is on file for public inspection. Posting shall include a copy of the full text.

13.4.3 The Planning Board may adopt the amendments upon completion of the public hearing by an affirmative vote of a majority of its members.

13.4.4 Regulations and/or amendments adopted shall be legal and have full force and effect when copies are certified by a majority of the Planning Board members and filed with the Town Clerk and the Board of Selectmen. A copy of the regulations and/or amendments shall be forwarded to the Office of State Planning.

13.5 Penalties for Transferring Lots in Unapproved Subdivisions.

13.5.1 Any owner, or agent of the owner, of any land located within Rollinsford, who transfers or sells any land before a plat of said subdivision has been approved by the Planning Board and filed with the appropriate recording official under RSA 674:35 II, shall forfeit and pay a civil penalty of \$1000 for each parcel or lot so transferred or sold; and the description by metes and bounds in the instrument of transfer or other document used in the process of selling or transferring shall not exempt the transaction from such penalties. The Town of Rollinsford may enjoin a transfer or sale which violates the provisions of this Section and may recover the penalty imposed by civil action. (RSA 676:16)

13.6 Fines and Penalties

13.6.1 Any person who violates any of the provisions of this title, or any local ordinance, code, or

regulation adopted under this title, or any provision or specification of any application, plat, or plan approved by, or any requirement or condition of a permit or decision issued by, any local requirement or condition of a permit or decision issued by, any local administrator or land use board acting under the authority of this title:

- a) Shall be guilty of a misdemeanor if a natural person, or guilty of a felony if any other person.
- b) Shall be subject to a civil penalty not to exceed \$275 for the first offense and \$550 for subsequent offenses for each day that such violation is found to continue after the conviction date or after the date on which the violator receives written notice from the municipality that the violator is in violation, whichever is earlier. (RSA 676:17)

13.7 Separability

If any part or provision of these Regulations or application thereof to any person or circumstances is judged invalid by any court of competent jurisdiction, such judgment shall be confined in its operation to the part, provision, or application directly involved in all controversy in which such judgment shall have been rendered and shall not affect or impair the validity of the remainder of these Regulations or the application thereof to other persons or circumstances.

13.8 Effective Date

These revised regulations are effective as of August 22, 2007 on which day they have been filed with the Rollinsford Town Clerk and Board of Selectmen.

## WELL TEST REQUIREMENTS

EFFECTIVE FEBRUARY 7, 2000

Pursuant to the Board of Selectmen adoption of revisions to Salem Chapter 253- Salem Disposal Systems and Wells, the following well test results and requirements shall be met prior to the issuance of a Certificate of Occupancy on any building serviced by a well in the town of Salem:

Salem Chapter 253-Salem Disposal Systems and Wells: §253-10 D

### 10 D. Wells

1. A permit must be obtained before any drinking well is installed, and must be accompanied by a scaled diagram of the location. Diagram must show existing or proposed subsurface disposal system on that and adjacent lots. The applicable fee as established by the Board of Selectmen shall accompany the application. The plan shall be submitted with the site address, map and lot number.
  
2. In all new construction, prior to issuance of a Certificate of Occupancy and in all well replacements, a State of NH certified testing lab shall do a well water analysis of the following parameters:
  - a. Bacteria
  - b. Chloride
  - c. Sodium
  - d. Iron
  - e. Manganese
  - f. pH
  - g. Hardness
  - h. Fluoride
  - i. Nitrate/Nitrite
  - j. Lead
  - k. Arsenic
  - l. \*Volatile Organic Compound Screen (VOC)

\* If the VOC Screen is positive, further testing shall be done to determine the type of contaminant and concentration.

3. All test results shall be submitted to the Health Division and shall meet EPA Maximum Contaminant Level (MCL) Standards prior to the issuance of a Certificate of Occupancy.

For your information:

VOC Testing

The NH Department of Environmental Services, Laboratory Services Unit at 29 Hazen Drive in Concord, provides a water analysis test called:

**EPA METHOD # 524.2**

This test is \$120 and requires a special sampling bottle obtainable from the lab. They can be contacted at 271-3445.

The test provides the lowest detection levels for 60 some odd organic compounds and meets the intent of the requirements. The test quantitates the amount of any volatile organic compound tested, therefore eliminating the need for further, and more expensive quantitative testing.

Please call the lab directly for more information.  
Well testing may also be done at any NH Certified Well Testing Lab.

\*\*\*\*\*

**WELL INSTALLERS AND BUILDERS PLEASE NOTE:**

**IT TAKES APPROXIMATELY TWO (2) WEEKS TO GET VOC TEST RESULTS. PLEASE PLAN ACCORDINGLY AS VOC WELL TEST RESULTS ARE REQUIRED PRIOR TO ISSUING THE CERTIFICATE OF OCCUPANCY.**

# TITLE XII

## PUBLIC SAFETY AND WELFARE

### CHAPTER 155-A

#### NEW HAMPSHIRE BUILDING CODE

##### Section 155-A:1

###### **155-A:1 Definitions. –**

In this chapter:

I. "Building" means building as defined and interpreted by the International Code Council's International Building Code 2015, as amended by the state building code review board and ratified by the legislature in accordance with RSA 155-A:10.

II. "County" means the local legislative body of a county in which there are unincorporated towns or unorganized places.

III. "Local enforcement agency" means for a municipality that has adopted enforcement provisions or additional regulations under RSA 674:51 or RSA 47:22, the building inspector, code official, or other local government official qualified and authorized to make inspections and to enforce the laws, ordinances, and rules enacted by the state and by local government that establish standards and requirements applicable to the construction, alteration, or repair of buildings. For the purpose of enforcement of the state fire code for buildings and structures not owned by the state, the local enforcement agency means the municipal fire chief or his or her representative, pursuant to RSA 154:2, II.

IV. "New Hampshire building code" or "state building code" means the adoption by reference of the International Building Code 2015, the International Existing Building Code 2015, the International Plumbing Code 2015, the International Mechanical Code 2015, the International Energy Conservation Code 2015, the International Swimming Pool and Spa Code 2015, and the International Residential Code 2015, as published by the International Code Council, and the National Electrical Code 2017, as amended by the state building code review board and ratified by the legislature in accordance with RSA 155-A:10. The provisions of any other national code or model code referred to within a code listed in this definition shall not be included in the state building code unless specifically included in the codes listed in this definition.

IV-a. "New Hampshire fire code" or "state fire code" means the state fire code as defined in RSA 153:1 and as amended by rules adopted pursuant to RSA 153:5.

V. "Person" means any individual or organized group of any kind, including partnerships, corporations, limited liability partnerships, limited liability companies, and other forms of association, as well as federal, state or local instrumentalities, political subdivisions, or officers.

VI. "Structure" means structure as defined and interpreted by the International Code Council's International Building Code 2015, as amended by the state building code review board and ratified by the legislature in accordance with RSA 155-A:10.

See Emergency Order #23 (NH LEGIS E.O. 2020-23-Emerg. (2020, 2023:1.)), issued pursuant to Executive Order 2020-04 (NH LEGIS E.O. 2020-04 (2020, 1004:1.)) as extended by Executive Orders 2020-05 (NH LEGIS E.O. 2020-05 (2020, 1005:1.)); 2020-08 (NH LEGIS E.O. 2020-08 (2020, 1008:1.)); 2020-09 (NH LEGIS E.O. 2020-09 (2020, 1009:1.)); 2020-010 (NH LEGIS E.O. 2020-010 (2020, 1010:1.)); 2020-014 (NH LEGIS E.O. 2020-014 (2020, 1014:1.)); 2020-015 (NH LEGIS E.O. 2020-015 (2020, 1015:1.)); 2020-016 (NH LEGIS E.O. 2020-016 (2020, 1016:1.)); 2020-017 (NH LEGIS E.O. 2020-017 (2020, 1017:1.)); 2020-018 (NH LEGIS E.O. 2020-018 (2020, 1018:1.)); 2020-020 (NH LEGIS E.O. 2020-020 (2020, 1020:1.)); 2020-021 (NH LEGIS E.O. 2020-021 (2020, 1021:1.)); 2020-022 (NH LEGIS E.O. 2020-022 (2020, 1022:1.)); 2020-023 (NH LEGIS E.O. 2020-023 (2020, 1023:1.)); 2020-024 (NH LEGIS E.O. 2020-024 (2020, 1024:1.)); 2020-025 (NH LEGIS E.O. 2020-025 (2020, 1025:1.)); 2021-01 (NH LEGIS E.O. 2021-01 (2021, 1001:1.)), and related to the COVID-19 State of Emergency, for potential impact on the terms of this section.

### **155-A:2 State Building Code. –**

- I. All buildings, building components, and structures constructed in New Hampshire shall comply with the state building code and state fire code. The construction, design, structure, maintenance, and use of all buildings or structures to be erected and the alteration, renovation, rehabilitation, repair, removal, or demolition of all buildings and structures previously erected shall be governed by the provisions of the state building code.
- II. To the extent that there is any conflict between the state building code and the state fire code, the code creating the greater degree of life safety shall take precedence, subject to the review provisions contained in RSA 155-A:10. If the municipal building and fire code officials cannot agree which code creates the greater degree of life safety, the property owner may notify the 2 officials in writing that if agreement is not reached within 2 business days of delivery of said notification, that the decision shall be made by the property owner to comply with either the applicable building code or fire code. Such decision by the property owner after proper notification shall not be grounds for the denial of a certificate of occupancy.
- III. To the extent that it does not conflict with any other provision of law, and except as otherwise provided in this paragraph, the issuance of permits and the collection of fees pursuant to the state building code is expressly reserved for counties, towns, cities, and village districts where such activities have been authorized in accordance with RSA 674:51 and RSA 47:22. Pursuant to the state fire marshal's authority to enforce the state building code under RSA 155-A:7, I, the fire marshal may establish for municipalities that do not have a building inspector or other enforcement mechanism authorized in RSA 155-A:4, with approval of the commissioner of safety and by rules adopted under RSA 541-A, fees to defray the cost of issuing building permits in accordance with the state building code. Such fees shall be deposited in the fire standards and training and emergency medical services fund established in RSA 21-P:12-d.
- IV. Except for buildings owned by the state, the community college system of New Hampshire, or the university system, the issuance of permits and certificates of occupancy pursuant to the state building code is expressly reserved for counties, towns, cities, and village districts. The state fire marshal shall issue permits, conduct inspections, and issue certificates of occupancy for buildings owned by the state, the community college system of New Hampshire, and the university system. Nothing in this section shall prohibit the state fire marshal from contracting with or authorizing a local enforcement agency or other qualified third party for these services, provided the fees for such services are paid for by the applicant. Any municipality that has adopted an enforcement mechanism under RSA 674:51 alternatively may request the services of the state fire marshal under the state building permit system, including issuance of permits, conducting inspections, and issuance of certificates of occupancy, for buildings or projects owned by the counties, town, cities, or village districts, if a project requires specialized knowledge of the fire marshal or due to staffing limitations of the municipality. Nothing in this section shall require the state fire marshal to accept a project under the state

building permit system when requested by a municipality.

V. Counties, towns, cities, and village districts may adopt by ordinance pursuant to RSA 674:51 or RSA 47:22 any additional regulations provided that such regulations are not less stringent than the requirements of the state building code and the state fire code.

V-a. Any event tent erected on public or private property shall comply with the applicable provisions of the state building code and state fire code. Notwithstanding paragraph V, counties, towns, cities, and village districts shall not adopt any rule, regulation, or ordinance regarding event tents erected on public or private property in addition to those established in the state building code and state fire code. A building permit shall not be required for a tent of any size erected as an accessory structure on property that is an owner-occupied, one or 2-family dwelling.

VI. For any municipality which has not adopted an enforcement mechanism under RSA 674:51, the contractor of the building, building component, or structure shall notify the state fire marshal concerning the type of construction before construction begins excluding one- and 2-family dwellings. Any municipality that has adopted an enforcement mechanism under RSA 674:51 may contract with a local enforcement agency or a qualified third party for these services as an alternative to establishing the position of building inspector under RSA 674:51, III(c), and such agency or third party shall have the same authority as a building inspector as provided in that section.

VII. The contractor of a building, building component, or structure shall be responsible for meeting the minimum requirements of the state building code and state fire code. No municipality shall be held liable for any failure on the part of a contractor to comply with the provisions of the state building code.

VIII. Nothing in this chapter shall be construed as amending, repealing, or superseding any local law, ordinance, code, or regulation, except local code requirements that are less stringent than the state building code or state fire code, and all buildings, building components, and structures shall comply with all applicable state or local building and fire code requirements, land use restrictions including but not limited to subdivision regulations, use and location restrictions, density and dimensional limitations, or historic district laws or ordinances.

IX. Nothing in this chapter shall be construed to permit or encourage the state to initiate or assume an independent role in the administration and enforcement of the New Hampshire building code for a building or structure that is not owned by the state unless otherwise authorized by law.

X. No state agency, authority, board, or commission shall vary, modify, or waive the requirements of the state building code or state fire code, unless approved by the state building code review board pursuant to RSA 155-A relative to the state building code or the state fire marshal pursuant to RSA 153:8-a, I(c) for the state fire code. Nothing in this chapter shall affect the statutory authority of the commissioner of labor, the state board for the licensing and regulation of plumbers, or the state electricians' board to administer their respective programs, provided that any changes to codes proposed under the rulemaking authority of these agencies shall not be enforced until approved by the state building code review board.

XI. Notwithstanding the inclusion of the National Electrical Code 2017 in the state building code under RSA 155-A:1, IV, the amended provisions of section 210.12 of the National Electrical Code, which modify the National Electrical Code 2014 version to add arc-fault circuit interrupter requirements for dormitory unit devices and bathrooms, guest rooms and guest suites, and branch circuit extensions or modifications for dormitory units shall not be enforced under the state building code or this chapter.

**Source.** 2002, 8:3. 2003, 245:2. 2009, 175:1. 2010, 326:2. 2012, 242:11, eff. June 18, 2012. 2017, 201:6, eff. Sept. 3, 2017. 2018, 39:1, eff. Jan. 1, 2019. 2020, 37:85, eff. July 29, 2020.

### Section 155-A:3

**155-A:3 Local Amendments; Application. –**

For a municipality which has adopted an enforcement mechanism or additional regulations to the state building code pursuant to RSA 674:51:

I. The municipality may adopt local amendments to the state building code which do not prohibit minimum implementation and enforcement of the state building code.

II. The procedure for amendment shall be in accordance with applicable statutes and local regulations.

III. At a minimum, the municipality shall ensure that implementation and enforcement includes:

(a) Review and acceptance of appropriate plans.

(b) Issuance of building permits.

(c) Inspection of the work authorized by the building permits.

(d) Issuance of appropriate use and occupancy certificates.

IV. (a) The provisions of this chapter and any local amendments under this section shall not be construed to restrict or encumber the local governing body's authority relative to the appointment, removal, or duties of municipal employees and the organization of municipal departments.

(b) Any provision of the state building code that conflicts with existing or amended local ordinances, regulations, policies, practices, or procedures regarding the appointment, removal, or duties of municipal employees and the organization of municipal departments, shall not apply provided that the ordinances, regulations, policies, practices, or procedures do not prevent effective enforcement of the state building code or state fire code.

**Source.** 2002, 8:3. 2012, 242:12, eff. June 18, 2012.

**Section 155-A:3-a****155-A:3-a Code Requirements; Biomass Burning Boilers. –**

I. Notwithstanding any provisions of the state building code or state fire code, the board shall adopt a code and amendments thereto which shall regulate the installation and operation of biomass burning boilers. The code adopted shall include the 1999 EN 303-5 standard established by the European Committee for Standardization, and shall include requirements for the safe installation, operation, and repair of such boilers, and for data plates and warning labels written in English, limits on temperature and pressure with associated relief valves, and the filing of construction and emissions specifications written in English.

II. The inspection procedures and enforcement requirements for the commissioner of labor in RSA 157-A shall apply to boilers installed according to the code and amendments adopted by the board under this section.

III. The code and amendments thereto adopted under paragraph I shall be ratified by appropriate legislation within 2 years of their adoption. If such code and amendments are not ratified, then the code and amendments shall expire at the end of the 2-year period.

**Source.** 2010, 326:1, eff. Sept. 18, 2010.

**Section 155-A:3-b****155-A:3-b Code Requirements; Log Structures. –**

I. Notwithstanding any provisions of the state building code or state fire code, the state building code review board shall adopt amendments to the state building code regulating the design and construction of log structures. The adopted amendments shall include ICC 400 Standard on the Design and Construction of Log Structures.

II. The amendments adopted under paragraph I shall be ratified by appropriate legislation within 2 years of their adoption. If such amendments are not ratified, then the amendments shall expire at the end of the 2-year period.

**Source.** 2012, 189:1, eff. June 11, 2012.

### **Section 155-A:3-c**

#### **155-A:3-c Installation of Arc-Fault Circuit Interrupters (AFCI); Exception. –**

I. Notwithstanding any provision of the state building code or state fire code requiring the installation of arc-fault circuit interrupters, after repeated tripping of an AFCI device and determination the branch circuit is not causing the AFCI to trip, an AFCI device may be replaced with one without AFCI protection in accordance with this section.

II. All receptacle outlets supplied by the branch circuit without AFCI protection shall prior to occupancy either be:

(a) Marked "No AFCI Protection;" or

(b) Identified in a notice given by the property owner to all occupants.

III. If an electrician installs a device without AFCI protection, within 5 working days the electrician shall file an AFCI unwanted tripping report with the National Electrical Manufacturers Association on the association's webpage for arc fault breaker safety, and shall submit a copy of the report to the property owner and the electricians' board.

IV. The device without AFCI protection shall be permitted to remain in place for the period of time it takes for the manufacturer to resolve the matter.

V. Nothing in this section shall prevent a homeowner from making electrical installations in or about a single family residence owned and occupied by him or her or to be occupied by him or her as his or her bona fide personal abode.

**Source.** 2017, 157:1, eff. June 28, 2017.

### **Section 155-A:4**

#### **155-A:4 Permit Required. –**

I. Before starting new construction or renovation of buildings and structures as described in RSA 155-A:2, I, the person responsible for such construction shall obtain a permit.

II. In municipalities that have adopted an enforcement mechanism pursuant to RSA 674:51 and RSA 47:22, the permit under this section shall conform to the locally adopted process. No permit shall be issued that would not result in compliance with the state building code and state fire code.

III. For buildings and structures owned by the state, the community college system of New Hampshire, or the university system, the person responsible for such activities shall obtain a permit from the state fire marshal. Before issuing the permit, the state fire marshal shall give due consideration to any written recommendations of the municipal fire chief, building official, or designee in the community where the state building is located.

**Source.** 2002, 8:3. 2012, 242:13, eff. June 18, 2012.

### **Section 155-A:5**

#### **155-A:5 Accessibility Standards for Public Buildings; Purpose and Intent. –** The requirements of this

section and RSA 155-A:5-a and RSA 155-A:5-b are intended to establish a system of certification and enforcement for the accessibility standards in the state building code for public buildings. For purposes of this section, public building means any building that is regulated by the accessibility standards contained in the state building code. This section is not intended to enlarge upon or expand any substantive standard of the state building code. This section is intended to apply solely to the new construction, addition, or alteration of a public building that is commenced on or after July 1, 2010 and only to the extent that the new construction, addition, or alteration is regulated by the accessibility standards in the state building code.

**Source.** 2002, 8:3. 2009, 285:1, eff. Jan. 1, 2010.

## **Section 155-A:5-a**

### **155-A:5-a Accessibility Standards for Public Buildings. –**

- I. The new construction, addition, or alteration of a public building as described in RSA 155-A:5 and as governed under RSA 155-A:2, I shall be subject to the requirements of this section and RSA 155-A:5-b.
- II. Except as provided in paragraph III, the contractor shall obtain and submit to the owner of the public building a written certification from a person qualified under RSA 155-A:5-b that:
  - (a) The design drawings or construction drawings for the proposed new construction, addition, or alteration meets the accessibility standards of the state building code; and
  - (b) Upon the completion and after inspection, the new construction, addition, or alteration meets the accessibility standards of the state building code.
- III. The requirements of paragraph II shall not apply to a public building for which the review of design drawings or construction drawings and inspection of completed work is performed by a municipal building inspector who:
  - (a) Satisfies the qualifications under RSA 155-A:5-b;
  - (b) Examines the design drawings or construction drawings prior to the commencement of work and inspects the building upon completion of work for compliance with the accessibility standards in the state building code; and
  - (c) Provides the governing body of the municipality with a written certification that the design and construction of the building upon completion of work comply with the accessibility standards of the state building code.
- IV. Nothing in this section shall be construed as requiring municipalities to inspect and certify public buildings for compliance with accessibility standards. Public buildings located in a municipality that has chosen to authorize its municipal building inspector to inspect and certify shall remain subject to all other provisions of this section.
- V. In addition to other enforcement authority granted in this chapter, the protection and advocacy system for New Hampshire, as designated by the governor pursuant to 42 U.S.C. section 15043, shall have standing to enforce the accessibility standards required by this section. If the protection and advocacy system determines that probable cause exists that a public building violates the accessibility certification or inspection requirements of this section, it shall issue a letter to the owner of the building specifically identifying the deficiencies and requesting that the building be brought into compliance. The owner shall have 30 days to respond to the letter and 270 days to bring the building into compliance. If the owner does not respond, does not agree that there are some or all of the deficiencies asserted, or does not agree to bring the building into compliance within the specified time periods, or any other dispute remains as to compliance, either the owner or the protection and advocacy system may file an action in the superior court to determine compliance with this section. The protection and advocacy system may bring the action in its name or in the name of any individual with a physical impairment who is adversely affected by the alleged failure to adhere to the

accessibility standards of the state building code, or both. If it is determined by the superior court that the building is not in compliance with the accessibility standards in the state building code, the court shall order that the responsible party bring the building into compliance. The court may award reasonable attorney's fees and costs to the prevailing party. For purposes of this section, a party prevails only if it receives either an enforceable judgment on the merits or a consent decree.

VI. Any individual with a physical impairment who is adversely affected by the failure to adhere to the requirements of this section shall have a private right of action against the owner pursuant to the procedure established in paragraph V, including the right to court costs and reasonable attorney's fees as the prevailing party.

VII. Any owner of a public building or contractor who is found by a preponderance of the evidence in a proceeding under this section to have knowingly violated the accessibility standards of the state building code shall be subject to a civil penalty. The penalties shall be the same as those established by RSA 155-A:8. All civil penalties shall be deposited into the general fund. The party bringing the action shall be entitled to reasonable attorney's fees and costs if it is determined by the court to be the prevailing party.

### **Section 155-A:5-b**

#### **155-A:5-b Accessibility Certifiers and Inspectors; Penalty. –**

I. New Hampshire licensed architects, professional engineers, certified building officials, and master code officials may certify building plans and/or inspect public buildings for compliance with the accessibility standards in RSA 155-A:5 and RSA 155-A:5-a without further examination. Any other person engaged in the business of certifying building plans and/or inspecting public buildings for compliance with accessibility standards required by RSA 155-A:5 and RSA 155-A:5-a shall successfully pass an International Code Council examination that covers the accessibility standards contained in the state building code prior to certifying that a building complies with RSA 155-A:5 and RSA 155-A:5-a. All accessibility certifiers and inspectors shall complete 2 hours of continuing education related to accessibility codes every 3 years and be able to produce proof of continuing education upon request.

II. Whoever falsely claims to be certified under this section through advertising, signage, or other written or oral representation shall be guilty of a violation if a natural person, or guilty of a class B misdemeanor if any other person.

### **Section 155-A:6**

#### **155-A:6 Repealed by 2012, 242:22, eff. June 18, 2012. –**

### **Section 155-A:7**

#### **155-A:7 Enforcement Authority. –**

I. The local enforcement agency appointed pursuant to RSA 674:51 or RSA 47:22 shall have the authority to enforce the provisions of the state building code and the local fire chief shall have the authority to enforce the provisions of the state fire code, provided that where there is no local enforcement agency or contract with a qualified third party pursuant to RSA 155-A:2, VI, the state fire marshal or the state fire marshal's designee

may enforce the provisions of the state building code and the state fire code, subject to the review provisions in RSA 155-A:10, upon written request of the municipality.

II. Upon the request of a local enforcement agency, state agencies, boards, and commissions may provide advisory services and technical assistance concerning any building or any construction project in the local enforcement agent's jurisdiction.

III. The local enforcement agency appointed to enforce the state building code shall have the authority to inspect all buildings, structures, construction sites, and other places in the jurisdiction. If consent for such inspection is denied or not reasonably obtainable, the local enforcement agency may obtain an administrative inspection warrant under RSA 595-B.

IV. All local enforcement agencies and selectmen and the state fire marshal in those communities without a local enforcement agency shall provide information on the local and state appeals process when issuing a building permit or notice of violation.

V. Any notice of violation issued by an enforcement authority as described in paragraph I shall include the relevant section of the state or local building or fire code.

**Source.** 2002, 8:3. 2012, 225:1, eff. Aug. 14, 2012; 242:14, eff. June 18, 2012. 2019, 48:2, eff. Aug. 4, 2019.

### **Section 155-A:8**

**155-A:8 Penalty.** – Fines, penalties, and remedies for violations of this chapter shall be the same as for violations of title LXIV, as stated in RSA 676:15 and 676:17.

**Source.** 2002, 8:3, eff. Sept. 14, 2002.

### **Section 155-A:9**

**155-A:9 Fees.** – The municipality may establish fees to defray the costs of administration, implementation, and enforcement of the state building code and any local amendments. Such fees shall be for the general use of the municipality having responsibility over the local enforcement agency.

**Source.** 2002, 8:3, eff. Sept. 14, 2002.

### **Section 155-A:10**

#### **155-A:10 State Building Code Review Board. –**

I. There is established a state building code review board consisting of the commissioner of safety or the commissioner's designee, and the following members, appointed by the commissioner of safety:

- (a) One architect licensed in this state for a minimum of 5 years, nominated by the board of architects established in RSA 310-A:29.
- (b) One structural engineer licensed in this state for a minimum of 5 years, nominated by the board of professional engineers established in RSA 310-A:3.
- (c) One mechanical engineer licensed in this state for a minimum of 5 years, nominated by the board of professional engineers established in RSA 310-A:3.
- (d) One electrical engineer licensed in this state for a minimum of 5 years, nominated by the board of professional engineers established in RSA 310-A:3.
- (e) One representative of the state's municipalities, nominated by the New Hampshire Municipal Association.
- (f) One municipal building official, nominated by the New Hampshire Building Officials Association.

- (g) One municipal fire chief, nominated by the New Hampshire Association of Fire Chiefs.
- (h) One active fire prevention officer, nominated by the New Hampshire Association of Fire Chiefs.
- (i) One building contractor, primarily engaged in the business of constructing nonresidential buildings, nominated by the Associated General Contractors of New Hampshire.
- (j) One building contractor primarily engaged in the business of constructing residential buildings, nominated by the New Hampshire Home Builders Association.
- (k) One representative from the New Hampshire public utilities commission, nominated by the chairman of the commission.
- (l) One master plumber licensed in this state for a minimum of 5 years, nominated by the mechanical licensing board established in RSA 153:27-a.
- (m) One mechanical contractor, primarily engaged in the business of mechanical construction, nominated by the Plumbers, Fuel Gas Fitters, and HVAC Association of New Hampshire.
- (n) One master electrician licensed in this state for a minimum of 5 years, nominated by the electricians' board established in RSA 319-C.
- (o) One representative of the Committee on Architectural Barrier-Free Design nominated by the governor's commission on disability.
- (p) One electrical contractor, nominated by Electrical Contractors Business Association.

II. The term of each member shall be 3 years. The chair of the board shall be appointed by the commissioner of safety after meeting with the board. Board members shall be appointed for no more than 3 consecutive 3-year terms. The board shall elect from among the members a vice-chair, who shall assume the responsibilities of the chair in the event of the chair's absence. Each appointing authority may appoint one alternate member, qualified as defined in subparagraphs I(a) through (p), who shall serve at the pleasure of the appointing authority.

III. The board shall be administratively attached to the department of safety under RSA 21-G:10.

IV. The board shall meet to review and assess the application of the state building code and shall recommend legislation, as the board deems necessary, to amend the requirements of the state building code in order to provide consistency with the application of other laws, rules, or regulations, to avoid undue economic impacts on the public by considering the cost of such amendments, and to promote public safety and best practices.

- (a) The board may recommend adoption of a newer version of a code that has been published for at least 2 years, and shall provide a summary of all significant changes, cost estimates of these changes, and documentation of the need for the change in the recommended legislation.
- (b) Amendments to the codes shall be reviewed and approved by the board, then submitted annually to the legislature for ratification by the adoption of appropriate legislation before they become effective.
- (c) The board may hear appeals of final decisions of any local building code board of appeals established under RSA 674, provided that the appeal shall be based on a claim that the intent of the code or the rules legally adopted thereunder have been incorrectly interpreted, the provisions of the code do not fully apply, or there is an alternative construction. The board shall not have authority to waive or grant variances to requirements of the code.
- (d) Amendments adopted by municipalities shall be published by the board.

V. The board shall maintain a publicly accessible list of applicable building codes and amendments to such codes. Amendments proposed by municipalities shall be listed, with specific applicability if not statewide.

VI. The state building code review board shall not adopt or enforce any rule requiring the installation of fire sprinkler systems in any new or existing detached one- or 2-family dwelling unit in a structure used only for residential purposes. This paragraph shall not prohibit a duly adopted requirement mandating that fire sprinkler systems be offered to the owners of dwellings for a reasonable fee.

VII. Members of the board shall receive mileage at the rate established in the United States Internal Revenue

Code and Regulations when attending meetings of the board for the round trip distance from their residences to the location of the board meeting.

### **Section 155-A:10-a**

**155-A:10-a Energy Code Compliance Form.** – The state building code review board shall prescribe by rule and make available to the public, in electronic formats, a simplified residential energy code compliance form based upon the energy provisions in the International Residential Code and the International Energy Conservation Code identified in RSA 155-A:1. The correctly completed form shall be accepted by all code enforcement authorities within the state of New Hampshire as one method of verification that the applicable project meets the code requirements. Completed compliance forms shall be submitted to the building official in those municipalities that have adopted an enforcement mechanism under RSA 674:51. For municipalities without an adopted code enforcement mechanism, completed compliance forms shall be submitted to the New Hampshire public utilities commission, on behalf of the building code review board, for verification that the applicable project meets the code requirements. The public utilities commission shall then forward the reviewed compliance forms to the municipality for retention in property records.

**Source.** 2018, 181:1, eff. Aug. 7, 2018.

### **Section 155-A:11**

#### **155-A:11 Appeals of Decisions of the State Fire Marshal.** –

I. Any person aggrieved by a decision of the state fire marshal relative to the application and enforcement of the state building code pursuant to RSA 153:8-a, I(a), or the state fire code, may appeal the decision to the board.

II. The board shall hold a hearing within 40 days of receipt of a complaint, unless an extension of time has been granted by the board at the written request of one of the parties and shall render a decision within 30 days of the conclusion of a hearing.

**Source.** 2002, 8:3. 2012, 242:16, eff. June 18, 2012.

### **Section 155-A:11-a**

#### **155-A:11-a Appeal of Decisions of the Electricians' Board and the Board of Home Inspectors.** –

I. The board shall hear appeals of final decisions of the board established under RSA 319-C:4 and the board established under RSA 310-A:186.

II. The board shall hold a hearing within 40 days of the receipt of an appeal, unless an extension of time has been granted by the board at the written request of one of the parties and shall render a decision within 30 days of the conclusion of the hearing.

**Source.** 2004, 257:55. 2008, 339:3. 2013, 275:11, eff. July 1, 2013.

## Section 155-A:11-b

### **155-A:11-b Appeal of Decisions of Local Building Code Board of Appeals. –**

- I. The board shall hear appeals of final decisions of any local building code board of appeals established under RSA 674.
- II. An application for appeal shall be based on a claim that the intent of the code or the rules legally adopted thereunder have been incorrectly interpreted, the provisions of the code do not fully apply, or an alternative construction is proposed. The board shall not have authority to waive or grant variances to requirements of the code.
- III. The board shall hold a hearing within 40 days of the receipt of an appeal, unless an extension of time has been granted by the board at the written request of one of the parties, and shall render a decision within 30 days of the conclusion of the hearing.

**Source.** 2019, 219:4, eff. Aug. 11, 2019.

## Section 155-A:12

### **155-A:12 Appeal From Board's Decision. –**

- I. A party to the proceeding shall have the right to file a petition in the superior court of the county in which the building or structure is located to review the final order of the board within 30 days of the date of the final order.
- II. At the earliest practical time, the court shall review the record as developed before the board, together with any written legal argument presented to the court. Based on that review, the court may affirm or reverse the decision of the board or order that oral argument be held. As justice may require, the court may remand the case to the board for further findings and rulings. The petition for appeal shall set forth all the grounds upon which the final order is sought to be overturned. Issues not raised by the appellant before the board shall not be raised before the superior court. The burden of proof shall be on the appellant to show that the decision of the board was clearly unreasonable or unlawful.
- III. No new or additional evidence shall be introduced in the superior court, but the case shall be determined upon the record and evidence transferred, except that in any case, if justice requires the review of evidence which by reason of accident, mistake, or misfortune could not have been offered before the board, the superior court shall remand the case to the board to receive and consider such additional evidence.

**Source.** 2002, 8:3, eff. Sept. 14, 2002.

## Section 155-A:13

### **155-A:13 Building Requirements for State Funded Buildings. –**

- I. Any new construction, reconstruction, alteration, or maintenance in any state owned building, plant, fixture, or facility, meeting the definition of "project" in RSA 21-I:78, considered a major project under RSA 21-I:80, and constructed using any state funding, shall meet a high performance, energy efficient, sustainable design standard determined by the commissioners of the department of environmental services and the department of administrative services, in consultation with the division of historic resources and the community college system, that shows the building or structure can recoup the incremental costs of implementing the requirements of this section as measured by reduced energy costs over a 10-year period of time.
- II. The following construction or renovation projects shall be exempt from the requirements of paragraphs I:

- (a) A building or structure that is less than 25,000 square feet.
- (b) A building or structure that does not consume energy for heating, ventilating, or air conditioning.
- (c) A renovation or modification that is estimated to cost less than \$1,000,000.
- (d) Temporary structures.
- (e) Public school facilities that are subject to RSA 198:15-c.
- (f) The university system of New Hampshire.
- (g) Projects employing new, innovative, or experimental energy efficient technology that may not recoup their incremental costs within 10 years, as may be determined by the commissioner of the department of administrative services to be in the best interest of the state.

**Source.** 2010, 347:1, eff. July 1, 2011.

# TITLE L

# WATER MANAGEMENT AND PROTECTION

## CHAPTER 482-B

## NEW HAMPSHIRE WATER WELL BOARD

### Section 482-B:1

**482-B:1 Purpose.** – The purpose of this chapter is to protect and improve the general health and welfare of the people of the state of New Hampshire; to protect the groundwater resources of the state; to regulate the construction of water wells and the installation of well pumps; to license water well contractors and well pump installers; to provide well records; to create a water well board; and to provide for penalties for violations of this chapter.

**Source.** 1989, 339:1. 1998, 89:1, eff. July 18, 1998.

### Section 482-B:2

#### **482-B:2 Definitions.** –

For the purposes of this chapter:

I. "Board" means the New Hampshire water well board established under RSA 482-B.

I-a. "Commissioner" means the commissioner of environmental services.

I-b. "Department" means the department of environmental services.

II. "Person" includes an individual, partnership, corporation, association, or organization, or any combination thereof.

III. "Pump installations" means and includes the industry, procedure, and all operations engaged in by any person, full time or part time, for compensation or otherwise, to connect a pump or pipe to a water system or its appurtenances, or to install a pump or pipe in a well.

IV. "Pump installer" means a person who engages in pump installations.

IV-a. "Technical drilling" means and includes the industry, procedure and all operations engaged in by any person, full time or part time, for compensation or otherwise, to conduct subsurface soil exploration, foundation borings including cased or auger borings, rock core drilling, and monitoring well installation.

IV-b. "Technical driller" means a person licensed to engage in technical drilling.

V. "Water well construction" means and includes the industry, procedure, and all operations engaged in by any person, full time or part time, for compensation or otherwise, to obtain water from a well by drilling, digging, developing including hydrofracturing, or other method, for any purpose or use.

VI. "Water well contractor" means a person who engages in water well construction.

VII. "Well" means a hole or shaft sunk into the earth which is deeper than it is wide to observe, sample, or withdraw groundwater, or to transfer heat to or from the subsurface.

**Source.** 1989, 339:1. 1998, 89:2-5. 2009, 27:1, eff. July 7, 2009.

### Section 482-B:3

**482-B:3 Water Well Board. –**

I. There is created a board to be known as the New Hampshire water well board. The water well board shall be administered by the commissioner of environmental services. The board shall consist of 7 members who are residents of the state, appointed by the governor with the advice and consent of the council as follows: one member shall be the commissioner, department of environmental services, or designee; one shall be the state geologist; 2 shall be active water well contractors with at least 10 years of experience; one shall be an active pump installer with at least 10 years of experience; one shall be an active technical driller licensed in the state of New Hampshire with at least 10 years of experience; and one shall be a member of the public who has demonstrated concern for and knowledge of water resources management in New Hampshire. Each member shall hold office for a term of 3 years and until a successor is appointed and qualified. No member shall serve more than 2 consecutive terms. Appointments to fill vacancies shall be for the unexpired term. The governor and council may remove any member of the board for good cause.

II. The board shall meet at least 4 times a year. The board shall elect a chairman and a secretary annually from its membership. The secretary shall keep a complete record of all meetings and proceedings of the board and shall perform the usual duties pertaining to the office. The board may employ such assistants as may be required.

III. To safeguard the public health, the board shall promote and encourage cooperation among water well contractors, pump installers, technical drillers, and governmental agencies in the development and protection of records of underground water formations and resources. The board shall prepare and make available to the public information relative to groundwater resources in the state.

**Source.** 1989, 339:1. 1996, 228:64. 1997, 339:1, eff. June 23, 1997.

**Section 482-B:4****482-B:4 Rulemaking. –**

The water well board shall adopt rules under RSA 541-A relative to:

I. The application procedure for a water well contractor or pump installer license.

II. The qualifications of applicants in addition to those requirements set by RSA 482-B:5, III.

III. The types of licenses to be issued.

IV. Applicant examination methods including:

(a) Time and place of examination, and

(b) Passing grade.

V. License renewal, including the requirements for continuing education.

VI. The establishment of all fees required under this chapter at rates which will make the board self-supporting, including fees for the processing of license applications, for examination of applicants, for licensure and for renewal of licenses, for transcribing and transferring records, and other services.

VII. Applicant examination for professional and technical proficiency when the applicant has been:

(a) Licensed in another state but has not taken a written examination, or

(b) Holding nonactive status for a period of 3 years or more.

VIII. Procedures for hearings held under RSA 482-B:9, II.

IX. The information to be included in records required under RSA 482-B:10.

X. Standards for the construction, maintenance, and abandonment of wells.

XI. Procedures for requesting an exemption pursuant to RSA 482-B:13.

**Source.** 1989, 339:1. 1998, 89:6-8, eff. July 18, 1998.

## Section 482-B:5

See Emergency Order #29 (NH LEGIS E.O. 2020-29-Emerg. (2020, 2029:1.)), issued pursuant to Executive Order 2020-04 (NH LEGIS E.O. 2020-04 (2020, 1004:1.)) as extended by Executive Orders 2020-05 (NH LEGIS E.O. 2020-05 (2020, 1005:1.)); 2020-08 (NH LEGIS E.O. 2020-08 (2020, 1008:1.)); 2020-09 (NH LEGIS E.O. 2020-09 (2020, 1009:1.)); 2020-10 (NH LEGIS E.O. 2020-10 (2020, 1010:1.)); 2020-014 (NH LEGIS E.O. 2020-014 (2020, 1014:1.)); 2020-015 (NH LEGIS E.O. 2020-015 (2020, 1015:1.)); 2020-016 (NH LEGIS E.O. 2020-016 (2020, 1016:1.)); 2020-017 (NH LEGIS E.O. 2020-017 (2020, 1017:1.)); 2020-018 (NH LEGIS E.O. 2020-018 (2020, 1018:1.)); 2020-020 (NH LEGIS E.O. 2020-020 (2020, 1020:1.)); 2020-021 (NH LEGIS E.O. 2020-021 (2020, 1021:1.)); 2020-022 (NH LEGIS E.O. 2020-022 (2020, 1022:1.)); 2020-023 (NH LEGIS E.O. 2020-023 (2020, 1023:1.)); 2020-024 (NH LEGIS E.O. 2020-024 (2020, 1024:1.)); 2020-025 (NH LEGIS E.O. 2020-025 (2020, 1025:1.)); 2021-01 (NH LEGIS E.O. 2021-01 (2021, 1001:1.)), related to the COVID-19 State of Emergency, for potential impact on the terms of this section.

### **482-B:5 Licensing for Water Well Contractors and Pump Installers. –**

- I. A person, before engaging in the business of constructing a well or installing a pump, shall obtain the proper license annually as a water well contractor or pump installer. A license shall not be transferable and shall expire on June 30 of each year. After July 31 of each year, a license may be renewed only upon application for renewal and payment of a late fee of \$20 in addition to the regular license fee.
- II. The water well contractor's license and the pump installer's license shall contain the following information, in addition to such other information as the board may require:
  - (a) The name of the licensed water well contractor or licensed pump installer.
  - (b) If the licensee is a partnership, the names and addresses of all partners.
  - (c) If the licensee is a corporation, the name and principal address of the corporation and the names and addresses of all officers, directors, and stockholders of the corporation; except that this requirement shall not apply to a publicly held corporation.
  - (d) If the licensee is an individual, the name and address of the individual.
- III. Water well contractors and pump installers shall be required to have been actively engaged in their trade for a period of 3 years prior to the date of their application and to pass an examination prepared and administered by the board. The required 3 years experience shall be directly related to the type of license to be issued. One year of experience for drilling contractors shall be in drilling water wells in crystalline rocks of the Appalachian Region.
- IV. The board may issue an appropriate license without examination to a person to whom a water well contractor's license or a pump installer's license has been previously issued by another state if the other state maintained a standard of requirements equivalent to those of this state and who presents satisfactory proof to the board that he is a bona fide water well contractor or pump installer. An applicant under this paragraph shall be exempt from examination only if he holds a license from another state and, if under the laws or rules of the other state issuing the license, a like exemption is granted to water well contractors or pump installers duly licensed under the laws of this state.
- V. Pump installers shall complete a minimum of 2 hours annually of continuing education.

**Source.** 1989, 339:1. 1998, 89:9-11, eff. July 18, 1998.

## Section 482-B:6

**482-B:6 Display of License. –** A water well contractor shall place in a conspicuous location on both sides

of each well drilling rig or other machine used to construct a well and a pump installer shall place in a conspicuous location on both sides of each pump service truck the license number in letters not less than 2 inches high. A seal furnished by the board designating the year the license was issued or renewed and the words 'Licensed New Hampshire Water Well Contractor' or 'Licensed New Hampshire Pump Installer' shall be affixed directly adjacent to the license number.

**Source.** 1989, 339:1. 1998, 89:12, eff. July 18, 1998.

### **Section 482-B:7**

**482-B:7 Plumbers Exempted.** – This chapter shall not restrict a plumber from engaging in the trade for which the plumber has been licensed if such plumber holds a pump installer's license. No examination shall be required for a person who is a plumber licensed under RSA 153:27-a and holds a valid pump installer's license on the effective date of this section.

**Source.** 1989, 339:1. 1998, 89:12, eff. July 18, 1998. 2013, 275:13, eff. July 1, 2013.

### **Section 482-B:8**

#### **482-B:8 Refusal; Revocation; Suspension; Disciplinary Action. –**

I. A license may be refused, or a license duly issued may be suspended or revoked, or the renewal of such license refused by the board on the board's own investigation and motion or upon motion or written complaint of an interested party if the board has good and sufficient reason to believe or finds that the applicant for or the holder of such a license has:

- (a) Made a material misstatement in the application for a license or any application for renewal of such license.
- (b) Obtained the license through willful fraud or misrepresentation.
- (c) Demonstrated incompetency to act as a water well contractor or pump installer as determined by the water well board.
- (d) Been guilty of willful failure to comply with the provisions of this chapter or rules adopted under RSA 482-B:4.
- (e) Refused to file reports as required under RSA 482-B:10.
- (f) Been found guilty, by the board or by a court of competent jurisdiction of any fraud, deceit, gross negligence, incompetence, or misconduct in the industry, operations, or business of water well construction or pump installations.

II. The department may undertake one or more of the following disciplinary actions upon the department's own investigation and motion or upon written complaint and motion of an interested party if the department has good and sufficient reason to believe or finds that the applicant for or the holder of such a license has violated the provisions of RSA 482-B and the rules of the board:

- (a) Written reprimand.
- (b) Administrative order.
- (c) Administrative fine.
- (d) Requiring the licensee to participate in a program of continuing education in the area or areas in which the licensee has been found deficient.

**Source.** 1989, 339:1. 1998, 89:13, eff. July 18, 1998.

## Section 482-B:9

### 482-B:9 Hearing. –

I. Before taking any action under RSA 482-B:8, the board or department shall give notice of its intention to do so by certified mail to the person against whom the proposed action is to be taken. Upon receipt of such notice, the person affected may within 30 days request a hearing. If a hearing is requested, the board or department shall not act until such hearing is completed.

II. Hearings held by the board shall be held in the county in which the person affected has his or her place of business or in the office of the board, whichever the board may decide. At least 10 days prior to the date of hearing, the board shall send written notice of the time and place of such hearing to the applicant for, or holder of, such license by certified mail to the last known address of such person. The testimony presented and the proceedings of such hearing shall be recorded and preserved as the records of the board. The board shall as soon after the hearing as possible, and not later than 90 days after the date of such hearing, make its findings and determination on the license and shall send a copy of its decision to each interested party by certified mail return receipt requested or by personal service. Revocation or suspension of a license shall be effective upon receipt of such board decision.

III. Appeal from a decision of the board may be made in accordance with RSA 541.

IV. Hearings held by the department shall be held in accordance with the rules of practice and procedure of the department.

**Source.** 1989, 339:1. 1998, 89:14, eff. July 18, 1998.

## Section 482-B:10

### 482-B:10 Record of Wells; Monitoring Wells. –

I. Within 90 days after completion of a well, the water well contractor shall provide the board with a record of the well containing the following information:

- (a) Name of the owner of the property on which the well is situated.
- (b) Name of the building contractor, if applicable.
- (c) Location of the well by:
  - (1) Coordinates provided by global positioning technology in units of degrees and decimal minutes of latitude and longitude, with at least 3 decimal places of precision and referenced to the World Geodetic System 1984 (WGS 84) datum or its successor;
  - (2) Street address of the property as listed in the enhanced 911 street address guide to the extent it is publicly available on the date of submission of the report;
  - (3) Tax map and lot number of the property; and
  - (4) A drawing indicating the position of each well, if more than one well is located within the lot, relative to significant permanent man-made or natural features at a given site.
- (d) Date well was completed.
- (e) Proposed use of well.
- (f) Reason for constructing well.
- (g) Type of well.
- (h) Total depth of well.
- (i) Casing details.
- (j) Method or methods of sealing casing into bedrock, if applicable.
- (k) Screen details, if applicable.
- (l) Results, method, and duration of yield test or tests conducted.

- (m) Static water level, if encountered.
- (n) Depth to bedrock.
- (o) Description and depth intervals of unconsolidated surficial deposits encountered during the well drilling process.
- (p) Yield test at various depths, if performed.
- (q) Hydro fracturing or other well development details, if applicable.
- (r) Name of water well contractor or technical driller.
- (s) Additional well seals installed, if applicable.
- (t) A statement specifying whether a water quality sample was collected by the driller.
- (u) If the well location does not comply with setback requirements for wells under New Hampshire law or rules of the water well board, a statement identifying the law or rule with which the wells do not comply.
- (v) Date of the report.
- (w) Any other information required by rules adopted by the water well board.

II. At a minimum, the technical drillers shall comply with the requirements of paragraph I for the deepest monitoring well installed at each property or place of business and for each monitoring well installed into the bedrock at each property or place of business.

III. If the technical driller does not comply with the requirements of paragraph I for all the monitoring wells the driller installs at a single property or place of business, then the technical driller shall prepare and submit a map showing the location of each monitoring well installed by the technical driller relative to significant permanent man-made or natural features at a given site and relative to wells located with GPS coordinates in accordance with paragraph I.

**Source.** 1989, 339:1. 1998, 89:15. 2007, 89:1, eff. Dec. 8, 2007.

## **Section 482-B:11**

**482-B:11 Wells Constructed for Oil, Gas, Brine, or Mining.** – Drilling, excavating and pumping associated with the oil, gas or brine well industries and the construction, quarrying, and mining industries and the disposal of any materials shall be subject to this chapter only insofar as they relate to the pollution and depletion of underground water resources.

**Source.** 1989, 339:1, eff. Jan. 1, 1990.

## **Section 482-B:12**

**482-B:12 Wells Constructed for Farming or Private Use.** – Nothing in this chapter shall prevent a person from constructing a well on the person's own or leased property if the well is intended for use only for noncommercial farming purposes or if the waters to be produced are not intended for use by the public or by persons in any residence other than the person's own permanent residence. Such person shall submit records as required under RSA 482-B:10 and shall comply with any applicable rules.

**Source.** 1989, 339:1. 1998, 89:16, eff. July 18, 1998.

## **Section 482-B:13**

**482-B:13 Exemptions.** – Where the board finds that compliance with all the requirements of this chapter or rules adopted under RSA 482-B:4 would result in undue hardship, an exemption from any one or more of

such requirements may be granted by the board to the extent necessary to ameliorate such undue hardship and to the extent such exemption can be granted without impairing the intent and purpose of this chapter.

**Source.** 1989, 339:1, eff. Jan. 1, 1990.

### **Section 482-B:14**

**482-B:14 Fees.** – Fees received under this chapter shall be paid over to the state treasurer and deposited in the general fund.

**Source.** 1989, 339:1, eff. Jan. 1, 1990.

### **Section 482-B:15**

**482-B:15 Maintenance and Repair of Wells and Pumps.** – All wells shall be maintained in a proper condition to conserve and protect groundwater resources and shall not be a source or cause of contamination or pollution of the water supply of any aquifer. All materials and construction practices used in the construction of a new well or new pump installation or in the maintenance, repair, or replacement of any well or pump installation shall conform with rules adopted by the board. All maintenance and repair work shall be done only by a licensed water well contractor, licensed pump installer, licensed plumber or licensed electrician.

**Source.** 1989, 339:1, eff. Jan. 1, 1990.

### **Section 482-B:16**

#### **482-B:16 Enforcement and Penalties.** –

I. The department may issue an administrative order to any person who violates any provision of this chapter, any rule adopted under this chapter, or any license or approval issued under this chapter, or who makes or certifies a material false statement relative to any document required by this chapter. The department may order the person to cease and desist from the violation and may require such corrective measures as are necessary to correct the violation. Upon receipt of an order, the person affected may, within 30 days, appeal the order to the board. Following an appeal hearing, the board may uphold or overturn the order. Rehearings and appeals from a decision of the board shall be in accordance with RSA 541.

II. The commissioner, after notice and hearing pursuant to RSA 541-A, may impose an administrative fine not to exceed \$2,000 for each offense upon any person who violates any provision of this chapter, any rule adopted under this chapter, or any license or approval issued under this chapter, or who makes or certifies a material false statement relative to any document required by this chapter. The person may appeal the decision to the board within 30 days of the date of the decision. Following an appeal hearing, the board may uphold or overturn the decision or impose a lesser or greater fine. Rehearings and appeals from a decision of the board under this paragraph shall be in accordance with RSA 541. Any administrative fine imposed under this section shall not preclude the imposition of further penalties under this chapter. The commissioner shall adopt rules subject to the approval of the water well board, under RSA 541-A, relative to:

- (a) A schedule of administrative fines which may be imposed under this paragraph; and
- (b) Procedures for notice and hearing prior to the imposition of an administrative fine.

III. Any person who engages in water well construction or pump installation or offers to engage in water well construction or pump installation or advertises or holds oneself out or acts temporarily or otherwise as a

water well contractor or pump installer without first having obtained the required license under RSA 482-B:5 and any person who violates any other provision of this chapter or any rule adopted under this chapter, or who makes or certifies a material false statement relative to any document required by this chapter may be subject to a civil penalty of not more than \$2,000 for each violation. Such a violation may also be enjoined by the superior court upon application of the attorney general.

IV. Any person shall be guilty of a misdemeanor who knowingly:

- (a) Engages in water well construction or pump installation or offers to engage in water well construction or pump installation or advertises or holds oneself out or acts temporarily or otherwise as a water well contractor or pump installer without first having obtained the required license under RSA 482-B:5; or
- (b) Violates any other provision of this chapter, any rule adopted under this chapter, or any license or approval issued under this chapter; or
- (c) Makes or certifies a material false statement relative to any document required by this chapter.

V. Notwithstanding RSA 651:2, a natural person may, in addition to any sentence of imprisonment, probation, or conditional discharge, be fined not more than \$5,000 if found guilty of any violation under RSA 482-B:16, IV.

VI. All moneys collected under this section shall be forwarded to the state treasurer and deposited into the general fund as unrestricted revenue.

VII. Each day of a continuing violation under this chapter shall constitute a separate offense.

**Source.** 1989, 339:1. 1998, 89:17, eff. July 18, 1998.

### **Section 482-B:17**

**482-B:17 Exceptions.** – The provisions of this chapter shall not apply to a person who regularly employs a maintenance person whose duties include replacement and maintenance of pump installations on the property of that person when such employee is actually so engaged or to an owner or an owner's agent who does pump installation repairs or replacement on property owned by him or her; provided, however, that said repairs, replacements, and maintenance shall conform to rules relative to such repairs, replacements, and maintenance adopted by the board.

**Source.** 1989, 339:1. 1998, 89:18, eff. July 18, 1998.

### **Section 482-B:18**

**482-B:18 Complaints.** – Written complaints filed with the board against a licensed water well contractor or a licensed pump installer shall be public records. The board may maintain a registry of written complaints. If such a registry is established, the board shall establish, by rules adopted pursuant to RSA 541-A, a procedure for providing information contained in the registry to the public. Written complaints shall be removed from the registry upon the request of the licensee, provided that the board has not received a written complaint for 3 consecutive years prior to the date of the request.

**Source.** 1998, 89:19, eff. July 18, 1998.

# TITLE L

## WATER MANAGEMENT AND PROTECTION

### CHAPTER 485-A

#### WATER POLLUTION AND WASTE DISPOSAL

##### Section 485-A:1

**485-A:1 Declaration of Purpose.** – The purpose of this chapter is to protect water supplies, to prevent pollution in the surface and groundwaters of the state and to prevent nuisances and potential health hazards. In exercising any and all powers conferred upon the department of environmental services under this chapter, the department shall be governed solely by criteria relevant to the declaration of purpose set forth in this section.

**Source.** 1989, 339:1. 1996, 228:106, 108, eff. July 1, 1996.

##### Section 485-A:2

###### **485-A:2 Definitions.** –

I. "Developed waterfront" property means any parcel of land upon which stands a structure suitable for either seasonal or year-round human occupancy, where such parcel of land is contiguous to or within 200 feet of the reference line, as defined in RSA 483-B:4, XVII, of:

- (a) A fresh water body, as defined in RSA 483-B:4, XVI(a);
- (b) Coastal waters, as defined in RSA 483-B:4, XVI(b); or
- (c) A river, as defined in RSA 483-B:4, XVI(c).

I-a. "Certificate" means a certificate of competency issued by the department stating that the operator has met the particular requirements established by the department for certification at each level of operation.

I-b. "Certification committee" means those persons designated by the commissioner, and those persons elected by the New Hampshire Water Pollution Control Association to serve as the review committee for certification of wastewater treatment plant operators.

I-c. "Commissioner" means the commissioner of the department of environmental services.

II. "Development plan" means the final map, drawing, plat or chart on which the subdivider presents his plan of subdivision to the department of environmental services for approval of planned or proposed sewage or waste disposal systems.

III. "Department" means the department of environmental services.

III-a. "Encroachment waiver" means any waiver of the rules adopted in accordance with this chapter which, if granted, would affect the ability of an owner of abutting property to fully utilize his property.

IV. "Failure" means the condition produced when a subsurface sewage or waste disposal system does not properly contain or treat sewage or causes the discharge of sewage on the ground surface or directly into surface waters, or the effluent disposal area is located in the seasonal high groundwater table.

V. "Groundwaters" shall mean all areas below the top of the water table, including aquifers, wells and other sources of groundwater.

VI. "Industrial waste" means any liquid, gaseous or solid waste substance resulting from any process of

industry, manufacturing trade or business or from development of any natural resources.

VII. "Lot" means a part of a subdivision or a parcel of land which can be used as a building site or intended to be used for building purposes, whether immediate or future.

VII-a. "Operator" means:

(a) The individual who has full responsibility for the daily operation of a wastewater treatment plant or a pollution control facility;

(b) The individual normally responsible for the operations shift; or

(c) Individuals who perform important operating functions.

VIII. "Other wastes" means garbage, municipal refuse, decayed wood, sawdust, shavings, bark, lime, ashes, offal, oil, tar, chemicals and other substances other than sewage or industrial wastes, and any other substance harmful to human, animal, fish or aquatic life.

IX. "Person" means any municipality, governmental subdivision, public or private corporation, individual, partnership, or other entity.

IX-a. "Septage" means material removed from septic tanks, cesspools, holding tanks, or other sewage treatment storage units, excluding sewage sludge from public treatment works and industrial waste and any other sludge.

X. "Sewage" means the water-carried waste products from buildings, public or private, together with such groundwater infiltration and surface water as may be present.

XI. "Sewage disposal system" means any private sewage disposal or treatment system, other than a municipally owned and operated system.

XI-a. "Sludge" means the solid or semisolid material produced by water and wastewater treatment processes, excluding domestic septage; provided, however, sludge which is disposed of at solid waste facilities permitted by the department shall be considered solid waste and regulated under RSA 149-M.

XII. "Subdivider" means the legal owner or his authorized agent of a tract or parcel of land being subdivided.

XIII. "Subdivision" means the division of a tract or parcel of land into 2 or more lots, tracts, or parcels for the purpose, whether immediate or future, of sale, rent, lease, building development, or any other reason; provided, however, that sale or other conveyance which involves merely an exchange of land among 2 or more owners and which does not increase the number of owners, and on which no sewage disposal system is to be constructed shall not be deemed a subdivision for the purposes of this chapter. Without limiting the generality of the foregoing, subdivision shall include re-subdivision, and, in the case of a lot, tract or parcel previously rented or leased, the sale, condominium conveyance, or other conveyance thereof; provided however that a re-subdivision of lots in previously approved subdivisions, where lot lines are relocated to conform to necessary changes in the plans because of errors in a survey or new street, access or siting requirements, or errors in building locations, and where the lot sizes are not substantially altered shall not be deemed a subdivision for the purposes of this chapter; and provided further that a re-subdivision in which previously approved lots are grouped together to form larger lots shall not be deemed a subdivision for the purposes of this chapter. The division of a parcel of land held in common and subsequently divided into parts among the several owners shall be deemed a subdivision under this chapter.

XIV. "Surface waters of the state" means perennial and seasonal streams, lakes, ponds, and tidal waters within the jurisdiction of the state, including all streams, lakes, or ponds bordering on the state, marshes, water courses, and other bodies of water, natural or artificial.

XV. "Tract or parcel of land" means an area of land, whether surveyed or not surveyed.

XVI. "Waste" means industrial waste and other wastes.

XVI-a. "Wastewater treatment plant" means the treatment facility or group of treatment devices which treats domestic or combined domestic and industrial wastewater through alteration, alone or in combination, of the physical, chemical, or bacteriological quality of the wastewater and which dewater and handles sludge removed from the wastewater.

XVII. "Bypass" means the intentional diversion of waste streams from any portion of the wastewater facilities.

XVIII. "Upset" means an exceptional incident in which there is unintentional and temporary noncompliance with permit effluent limitations because of factors beyond the reasonable control of the permittee.

XIX. "Wastewater facilities" means the structures, equipment, and processes required to collect, convey, and treat domestic and industrial wastes, and dispose of the effluent and sludge.

XX. "Bedroom" means a room furnished with a bed and intended primarily for sleeping, unless otherwise specified by local regulations.

XXI. "Innovative/alternative waste treatment" means treatment which differs from standardized and conventional practice, offers an advantage over such practice in a proposed application and satisfies the pollution abatement and treatment requirements for sewerage and sewage or waste treatment systems in such application.

XXII. "Biosolids" means any sludge derived from a sewage wastewater treatment facility that meets the standards for beneficial reuse specified by the department.

XXIII. "Short paper fiber" means any sludge derived from a pulp or papermill wastewater treatment facility that meets the standards for beneficial reuse specified by the department.

XXIV. "7Q10" means the lowest average flow that occurs for 7 consecutive days on an annual basis with a recurrence interval of once in 10 years on average, expressed in terms of volume per time period.

**Source.** 1989, 339:1. 1990, 197:1-3; 248:1; 252:9, 10. 1993, 57:1; 172:1. 1996, 219:1; 228:74-76, 105, 106, 108. 1998, 102:2, 3. 2000, 76:3; 121:1. 2008, 349:2, 3, eff. Jan. 1, 2009. 2017, 211:1, eff. Sept. 8, 2017.

### **Section 485-A:3**

#### **485-A:3 Policies. –**

It is hereby declared, as a matter of legislative intent, that the department shall, in the administration and enforcement of this chapter, strive to provide that all sources of pollution within the state shall be abated within such times and to such degrees as shall be required to satisfy the provisions of state law or applicable federal law, whichever is more stringent. To the extent not inconsistent with the foregoing nor the aims of any joint state-federal permit program that may from time to time be agreed upon and in force pursuant to this chapter and applicable federal law, the department shall adhere to the following policies:

I. Insofar as practicable, the initial objective of the control program will be to obtain the installation of primary treatment (with adequate disinfection where sewage discharges are involved) for all discharges of sewage and industrial wastes.

II. The second objective will be to require the installation of secondary treatment whenever such additional treatment is necessary to protect the uses assigned to the particular stream classification.

III. The third objective, after all stream classification requirements throughout the state have been satisfied, will be to continue the program of pollution abatement by installing other forms of treatment desirable to maintain all surface waters of the state in as clean a condition as possible, consistent with available assistance funds and technological developments.

IV. Until such time as appropriate methodology and reasonable levels of financial assistance are made available, municipalities with combined sewer systems shall not be required to provide treatment facilities with capacity greater than that necessary to handle anticipated peak dry weather flows.

V. A further objective will be to advance the development and application of innovative/alternative waste treatment systems with guidelines, procedures, pilot projects, demonstration projects, community projects or in any other manner the department may elect.

**Source.** 1989, 339:1. 1993, 172:2. 1996, 228:106, eff. July 1, 1996.

## Section 485-A:4

### **485-A:4 Duties of Department. –**

It shall be the duty of the department and the department is authorized:

- I. To exercise general supervision over the administration and enforcement of this chapter.
- II. To study and investigate all problems connected with the pollution of the surface waters or groundwaters of the state.
- III. To conduct scientific experiments, investigations and research to discover economical and practical methods for the elimination, disposal or treatment of industrial wastes to control pollution of the surface waters or groundwaters of the state.
- IV. To cooperate with any other public or private agency in the conduct of such experiments, investigations and research. In order to utilize fully the facilities of the state, it shall be the duty of all other state agencies to cooperate and render such assistance as may be necessary to implement the provisions of this chapter.
- V. To do all necessary work relative to the establishment of a proper and reasonable classification pursuant to RSA 485-A:9.
- VI. To require the filing with the department of plans and specifications of the installation of systems and devices for handling, treating, or disposing of sewage, industrial and other wastes, at least 30 days prior to the beginning of construction.
- VII. To investigate and approve after making such modification as the department deems necessary to conform to the purpose of this chapter and RSA 486, any portions of the applications of those municipalities, industries, or other persons of the state as may request state or federal aid that may at any time be made available in the interest of pollution control. The commissioner of environmental services shall receive or make agreements on behalf of the state for any federal or other moneys as may be allotted for such purposes. Those who have already incurred expense in order to comply with a classification adopted by the legislature or made under RSA 485-A:11 shall be equally eligible to receive any federal or other moneys with those who have not incurred but who are required to incur expense by reason of such classification.
- VIII. To confer with responsible authorities of other states relative to methods, means and measures to be employed to control pollution of interstate streams and other waters, and to submit to the legislature recommendations relative to the adoption of interstate compacts pertaining to pollution or its control on all said waters. After said compacts and agreements have been concluded by the necessary legislative and congressional action, the department shall carry out said agreements or compacts by appropriate orders provided for in either the compacts or the provisions of this chapter.
- IX. To set standards of design and construction for sewerage and sewage or waste treatment systems and standards or design guidelines as the department determines to be appropriate for innovative/alternative waste treatment systems. Innovative/alternative waste treatment systems shall include solar and such other systems as shall be identified or accepted by the department. To reject, if necessary, or modify and approve as deemed necessary for the purposes of the state water pollution control program all engineering or other documents associated with the design and construction of pollution control projects and perform such other related engineering or inspectional work as will provide for proper design, construction and operation of the facilities involved, and take such other action as the department deems necessary, to maximize the effectiveness of sewerage and other pollution control facilities, both proposed and in construction. The department is authorized to purchase professional liability insurance annually in order to provide coverage in connection with resident construction engineering services which may be made available to municipalities by the department for projects undertaken with benefit of a federal grant under the provisions of this chapter; provided, however, that no construction engineering services shall be provided to any municipality with a

population of greater than 5,000 according to the office of strategic initiatives estimate for that even decade year preceding project application to the department or when the estimated project costs exceed \$2,000,000. The purpose of this paragraph is to ensure the planning, construction and operation of publicly owned pollution control facilities which in the judgment of the department will produce maximum benefits with the least expenditure of federal, state and local funds.

IX-a. Any person submitting plans and specifications to the department, as provided for in this section, for the construction of sewerage systems shall pay to the department a fee of \$30 for each 300 gallon per day unit of flow for the first 10,000 gallons per day of total flow for which such systems are designed and \$15 for each 300 gallon per day unit of flow in excess of such amount. A fee of \$200 per plan sheet shall be paid for review of pump stations, force mains, interceptors, and wastewater treatment facilities which are submitted independently of a sewer collection system. This fee shall not apply to municipalities.

IX-b. Any person submitting a request to the department, not accompanied by plans and specifications, for a permit to discharge additional sewage or industrial wastes to a municipal sewer system shall pay to the department a fee of \$50. The request, accompanied by the fee, shall be submitted through, and approved by, the affected municipality. This fee shall not apply to municipalities, counties, state agencies, or school districts. These fees shall be deposited with the state treasurer as unrestricted revenue.

IX-c. Any person submitting plans and specifications to the department for the construction or installation of facilities for the pretreatment of industrial wastes shall pay to the department a permit fee of \$1,000. The discharge permit request, accompanied by the plans and specifications and the fee, shall be submitted through and approved by the affected municipality. This fee shall not apply to municipalities, state agencies, or school districts. These fees shall be deposited with the state treasurer as unrestricted revenue.

X. To provide such services and technical assistance in the area of sanitary engineering as may be required by the commissioner of the department of health and human services to implement the statutory obligations imposed upon the commissioner of the department of health and human services and the rules adopted by said commissioner.

XI. To scientifically measure and monitor residual pesticides in the waters and in the aquatic resources in the waters of the state.

XII. To review, establish maximum state participation fees and modify in any other way which in the judgment of the department will promote economy and the purposes of this chapter, and following such review or modification, approve and cosign jointly with the municipality or other governmental subdivision concerned any proposed contracts or other proposed agreements or changes in contracts or agreements for engineering services related to sewerage and other pollution control facilities. Further, the department shall prescribe the contract documents to be employed and may provide for the assessment of liquidated damages for failure to complete the work within the time stipulated therefor. Except for the financial assistance available to municipalities under the provisions of RSA 486, nothing in this chapter shall be construed to place any additional financial obligation on the state, the department or its personnel.

XIII. To establish rules governing the prequalification of consulting engineers employed in the planning and construction of public water supply and pollution control projects. Any licensed engineering firm seeking initial prequalification shall pay to the department a fee of \$200. Prequalification shall be renewed annually and shall be accompanied by a \$50 renewal fee. These fees shall be deposited with the state treasurer as unrestricted revenue. The department is further empowered to prescribe the contract award procedures to be followed in the awarding of construction contracts involving state financial assistance.

XIV. To formulate a policy relating to long-term trends affecting the purity of the surface waters or groundwaters of the state. Insofar as practicable and necessary, a continuing program of sampling and subsequent chemical or biological analysis, or both, shall be conducted to establish patterns and reveal long-term trends to serve as a basis for formulating such policy. In conducting said program of sampling and analysis, the department is authorized to accept any assistance as may be proffered by persons that the

department deems to be qualified. The department shall provide proper warning to the public by posting a sign indicating where water quality standards are not being attained as they relate to specified designated uses.

XV. To establish and prescribe physical, chemical and biological pretreatment standards to which waste must conform before discharge into the collection system or the sewage treatment facility of a municipality or other governmental entity being served by or under order to construct a public sewage treatment facility. In establishing and prescribing pretreatment standards, the department shall give consideration to the following:

- (a) The treatment capabilities and operating efficiency of the facilities to which they apply.
- (b) The discharge criteria applicable to the facility in order for it to conform to established water quality standards for the receiving water, as expressed in the discharge permit or compliance order issued to the municipality.
- (c) Toxic effluent standards.
- (d) Such standards as will prevent the discharge of any pollutant through the facility that interferes with, passes through without being rendered innocuous or is otherwise incompatible with the effective operation of the facility.

XVI. To enter into, with the consent of the governor and council, cooperative agreements with the United States Environmental Protection Agency or any other federal agency having jurisdiction in the premises relative to any joint state-federal water pollution enforcement abatement and control programs authorized by law, and involving the issuance of discharge permits.

XVI-a. To regulate the removal, transportation, and disposal of septage through administration of a permit system. As a condition of any permit issued under this chapter, the department may require payment of a reasonable fee, established by rules adopted under RSA 485-A:6, X-a. Funds collected under this paragraph shall be deposited with the treasurer as unrestricted revenue.

XVI-b. To regulate the removal, transportation, and disposal of sludge through administration of a permit system. As a condition of any permit issued under this chapter, the department may require payment of a reasonable fee, established by rules adopted under RSA 485-A:6, X-a. Funds collected under this paragraph shall be deposited with the treasurer as unrestricted revenue.

XVI-c. (a) To design and implement a program for state or independent third party sampling and testing of sludge or biosolid materials that are intended for land application. The department shall design the sampling methodology, in consultation with university of New Hampshire statisticians and sludge and biosolid experts, to provide a statistical evaluation of the contaminant levels contained in sludge or biosolids. The department shall concentrate its testing on those contaminants that pose greater risks to public health and the environment due to their toxicity, potential availability, concentration levels, or concentration uncertainty. The department shall maintain a database of testing results and prepare, in consultation with university of New Hampshire statisticians and sludge and biosolid experts, and make available to the public and the general court, a biennial report by November 1 of each year which analyses the compiled test results, including data from prior years, as appropriate. The analysis shall detail contaminant concentrations on both a statewide and generator level and shall indicate the statistical degree of certainty in the results of the analysis. The department shall attempt to present the report in terms that are understandable to the layperson including practical examples such as the probability that any given load of untested sludge exceeds a contaminant standard.

(b) The department shall establish a fee of \$500, to be paid by sludge quality certificate holders by January 1 of each year. The fee shall be deposited in a special, nonlapsing sampling and analysis of sludge or biosolids samples fund, for exclusive use by the department to implement the program established in subparagraph (a).

XVI-d. To conduct on-site inspections of sludge or biosolid application sites to monitor adherence to all state and federal requirements for such activity.

XVII. To give notice by first-class mail to the city or town clerk of the municipality in which is located the

point of discharge or point of potential discharge, and all adjacent municipalities located on the same receiving water as the water at the point of discharge, when an application is made for a new permit or when a permit is renewed by the department.

XVIII. To establish rules for dental offices relative to the use of environmentally appropriate disposal equipment or methods for amalgam waste to trap and dispose of mercury.

## **Section 485-A:5**

### **485-A:5 Pretreatment Standards. –**

I. After the effective date of any pretreatment standards established and prescribed by the department pursuant to RSA 485-A:4, XV, no person shall discharge into the collection system or the sewage treatment facility of any municipality or other governmental entity being served by or under orders to construct a public sewage treatment facility, nor discharge to the surface waters of the state if such person will be served by the public sewage treatment facility upon construction of such facility, any waste that does not comply with such pretreatment standards.

II. In setting a date for conformance to pretreatment standards, the department may establish compliance schedules providing a reasonable time for compliance and may give due consideration to expected in-service dates of public sewage and waste treatment facilities not in existence at the time of establishment of pretreatment standards applicable to such facilities. Any such compliance schedule shall be consistent with the purposes and requirements of federal law.

III. No municipality or other governmental entity owning or controlling any public sewage and waste treatment facility shall permit the discharge of any waste to such facility which does not comply with pretreatment standards established by the department.

IV. Pretreatment standards or effluent limits adopted by a municipality as part of its sewer use ordinance or industrial pretreatment program and approved by the department shall be enforceable by the department as pretreatment standards established under RSA 485-A:4, XV and rules adopted under RSA 485-A:6.

V. The department of environmental services may require the installation and operation of monitoring programs by persons subject to pretreatment standards to ensure adherence to such standards.

**Source.** 1989, 339:1. 1996, 228:106, 108, eff. July 1, 1996.

## **Section 485-A:5-a**

**485-A:5-a Operator Certification Required. –** The department shall certify operators of wastewater treatment plants. Wastewater treatment plants shall be operated only by certified operators.

**Source.** 1989, 81:1. 1990, 197:4. 1996, 228:106, eff. July 1, 1996.

## **Section 485-A:5-b**

### **485-A:5-b Municipal Responsibility. –**

I. Each municipality shall either provide, or assure access to, a department of environmental services approved septage facility or a department approved alternative option for its residents.

II. For the purposes of paragraph I, "provide, or assure access to" shall mean a written agreement with a recipient facility, or department approved alternative option, indicating that the recipient facility agrees to accept septage generated in that municipality. The municipality shall consider providing sufficient annual capacity equal to the number of households with septic multiplied by the average septic tank capacity of 1, 000 gallons divided by the average septage pumpout frequency of 5 years.

**Source.** 1990, 252:12. 1996, 228:108. 2005, 98:2, eff. Jan. 1, 2006.

### **Section 485-A:5-c**

#### **485-A:5-c Notice of Septage or Sludge Spreading. –**

I. No person shall spread septage or sludge as defined in RSA 485-A:2 before providing all property owners abutting the spreading site with written notice of the intended date and location of the spreading. Such notice shall be provided by publishing a notice at least 14 days before the intended date of the first spreading of septage or sludge each year in a newspaper of general circulation in the town or city.

II. The notice shall include the names, addresses, and telephone numbers of the following:

- (a) The applicant, if applicable.
- (b) The generator of the sludge, if applicable.
- (c) The person responsible for managing the activities on-site, if different from the applicant under subparagraph (a).
- (d) The landowner, if not given under subparagraph (a) or (c).

III. A copy of such notice shall be posted continually on the entrances to the site beginning 3 days prior to the application and ending 3 days after the application.

**Source.** 1998, 60:1, eff. July 11, 1998.

### **Section 485-A:5-d**

**485-A:5-d Land Application of Sludge. –** Sludge or biosolids which are to be land applied in New Hampshire shall not exceed the maximum concentrations for specific chemical contaminants contained in the rules of the department, or the rules or regulations of the state in which the sludge was generated, whichever are more stringent.

**Source.** 1998, 230:3, eff. June 24, 1998.

### **Section 485-A:6**

#### **485-A:6 Rulemaking. –**

The commissioner shall adopt rules, under RSA 541-A, after public hearing, relative to:

- I. The classification system required by RSA 485-A:9.
- II. Requirements under RSA 485-A:4, VI.
- III. Requirements under RSA 485-A:4, IX and establishing the methodology and review process for approval of innovative/alternative wastewater treatment systems.
- IV. The fees and contract documents required under RSA 485-A:4, XII.
- V. The prequalification and contract award procedures required under RSA 485-A:4, XIII.
- VI. The standards required under RSA 485-A:4, XV.
- VI-a. Procedures and criteria for requesting, reviewing, and granting certifications under RSA 485-A:12, III

and IV.

VII. The required information and prescribed conditions needed to implement the program described in RSA 485-A:13, I(a).

VIII. The requirements for a permit under RSA 485-A:17.

IX. [Repealed.]

X. The safety standards for swimming pools and bathing places required by RSA 485-A:26.

X-a. The requirements for permits under RSA 485-A:4, XVI-a and XVI-b.

XI. The minimum qualifications for and certification of operators of pollution control facilities.

XI-a. The contents of the written notification required in RSA 485-A:13, I(c).

XI-b. Certification of operators of wastewater treatment plants and revocation and suspension of such certificates as provided in RSA 485-A:7-d.

XI-c. The location, extent, and duration of the standards specified in RSA 485-A:8, III for the temporary partial use areas provided for in RSA 485-A:8, II.

XII. [Repealed.]

XIII. The disposal of dental office waste under RSA 485-A:4, XVIII.

XIV. Dissolved oxygen water quality standards under RSA 485-A:8, II and II-a.

XV. Water quality standards consistent with RSA 485-A:8 and as required by the Clean Water Act.

**Source.** 1989, 339:1. 1990, 197:5; 248:4; 252:13. 1991, 371:2. 1993, 172:4. 1996, 228:110. 1998, 102:5. 2002, 96:4. 2008, 337:3, eff. Sept. 5, 2008. 2017, 211:3, eff. Sept. 8, 2017. 2019, 346:136, I, eff. Jan. 1, 2020. 2020, 10:2, eff. July 14, 2020.

## Section 485-A:7

**485-A:7 State Guarantee.** – In view of the general public benefits resulting from the elimination of pollution from the public waters of the state, the governor and council are authorized in the name of the state of New Hampshire to guarantee unconditionally, but at no time in excess of the total aggregate sum for the entire state of \$50,000,000, the payment of all or any portion, as they may find to be in the public interest, of the principal of and interest on any bonds or notes issued by any municipality, town, city, county or district for construction of sewerage systems, sewage treatment and disposal plants, or other facilities necessary, required or desirable for pollution control, and the full faith and credit of the state are pledged for any such guarantee. The outstanding amount of principal and interest on such bonds and notes, the payment of which has been guaranteed by the state under the provisions of this section, shall at no time exceed the amount of \$50,000,000. The state's guarantee shall be endorsed on such bonds or notes by the state treasurer; and all notes or bonds issued with state guarantee shall be sold at public sealed bidding to the highest bidder. Any and all such bids may be rejected and a sale may be negotiated with the highest bidder. In the event of default in payment of any such notes or bonds, the state may recover any losses suffered by it by action against the municipality, town, city, county or district as provided in RSA 530. Provided, further, that in accordance with RSA 35-A:29, the foregoing requirement for public sealed bidding shall not be applicable to any bonds or notes or both so guaranteed which are sold to the New Hampshire municipal bond bank, and any bonds or notes or both so guaranteed may be sold to the New Hampshire municipal bond bank at private sale in accordance with the provisions of RSA 35-A.

**Source.** 1989, 339:1. 1991, 179:2. 1999, 234:1. 2008, 49:1, eff. July 1, 2008.

## Wastewater Operator Certification

## Section 485-A:7-a

### **485-A:7-a Application; Special Fund. –**

- I. Any operator of a wastewater treatment plant seeking certification or to increase his level of certification shall file an application with the certification committee at least 6 weeks prior to the next examination date on a form provided by the department.
- II. All applications shall be accompanied by a \$50 fee to cover department expenses for conducting the certification program. All fees shall be deposited with the state treasurer and deposited in a special nonlapsing wastewater plant operator certification fund to be used by the department for the administration of this subdivision and for the operation of the department-owned Wastewater Plant Operator Training Center.
- III. Any applicant failing the examination shall be allowed one retest at the same certification level at no additional cost to the applicant.

**Source.** 1990, 197:6. 1996, 228:106, eff. July 1, 1996.

## Section 485-A:7-b

**485-A:7-b Examinations. –** The department shall prepare written examinations to determine the knowledge, ability, and judgment of operators. Such examinations shall be administered in accordance with rules adopted by the department pursuant to RSA 485-A:6.

**Source.** 1990, 197:6. 1996, 228:106, eff. July 1, 1996.

## Section 485-A:7-c

### **485-A:7-c Issuance of Certificates. –**

- I. Upon satisfactory completion by an applicant of the established requirements, the department shall issue to the applicant a suitable certificate designating the applicant's competency. The certificate shall indicate the level of operation for which the operator is qualified. The certificate shall remain in effect for 2 years from the date of issuance.
- II. Certificates shall be renewed biennially and shall be accompanied by a \$50 renewal fee, which shall be deposited pursuant to RSA 485-A:7-a, II. If the renewal fee is not submitted within 90 days of the certificate's expiration date, the certified individual's name shall be removed from the current status and the certificate shall be deemed expired. The department shall charge a late fee of 50 percent of the renewal fee in addition to the renewal fee if the renewal is late.
- III. Certificates may be issued, upon payment of the \$50 fee, without examination, for a comparable classification to any person actively seeking employment in New Hampshire who holds a certificate issued by the appropriate certification agency of any federal, state, interstate, territorial, or other jurisdiction if, in the judgment of the committee, the certification requirements of the jurisdiction granting such certification do not conflict with the department's rules and are not less stringent than rules adopted under this subdivision. The fee shall be deposited pursuant to RSA 485-A:7-a, II.

**Source.** 1990, 197:6. 1996, 228:106. 1997, 261:7, eff. July 1, 1997.

## Section 485-A:7-d

**485-A:7-d Revocation.** – The department may suspend or revoke the certificate of an operator under rules adopted pursuant to RSA 485-A:6.

**Source.** 1990, 197:6. 1996, 228:106, eff. July 1, 1996.

## Classification of Waters

### Section 485-A:8

#### **485-A:8 Standards for Classification of Surface Waters of the State. –**

It shall be the overall goal that all surface waters attain and maintain specified standards of water quality to achieve the purposes of the legislative classification. For purposes of classification there shall be 2 classes or grades of surface waters as follows:

I. Class A waters shall be of the highest quality and shall contain not more than either a geometric mean based on at least 3 samples obtained over a 60-day period of 47 *Escherichia coli* per 100 milliliters, or greater than 153 *Escherichia coli* per 100 milliliters in any one sample; and for designated beach areas shall contain not more than a geometric mean based on at least 3 samples obtained over a 60-day period of 47 *Escherichia coli* per 100 milliliters, or 88 *Escherichia coli* per 100 milliliters in any one sample; unless naturally occurring. There shall be no discharge of any sewage or wastes into waters of this classification. The waters of this classification shall be considered as being potentially acceptable for water supply uses after adequate treatment.

II. Class B waters shall be of the second highest quality and shall have no objectionable physical characteristics and shall contain not more than either a geometric mean based on at least 3 samples obtained over a 60-day period of 126 *Escherichia coli* per 100 milliliters, or greater than 406 *Escherichia coli* per 100 milliliters in any one sample; and for designated beach areas shall contain not more than a geometric mean based on at least 3 samples obtained over a 60-day period of 47 *Escherichia coli* per 100 milliliters, or 88 *Escherichia coli* per 100 milliliters in any one sample; unless naturally occurring. There shall be no disposal of sewage or waste into said waters except those which have received adequate treatment to prevent the lowering of the biological, physical, chemical or bacteriological characteristics below those given above, nor shall such disposal of sewage or waste be inimical to aquatic life or to the maintenance of aquatic life in said receiving waters. The pH range for said waters shall be 6.5 to 8.0 except when due to natural causes. The commissioner shall adopt rules, under RSA 541-A, relative to dissolved oxygen water quality standards in a manner consistent with Environmental Protection Agency guidance on dissolved oxygen water criteria published pursuant to section 304(a) of the Clean Water Act, and other relevant scientific information. Any stream temperature increase associated with the discharge of treated sewage, waste or cooling water, water diversions, or releases shall not be such as to appreciably interfere with the uses assigned to this class. The waters of this classification shall be considered as being acceptable for fishing, swimming and other recreational purposes and, after adequate treatment, for use as water supplies. Where it is demonstrated to the satisfaction of the department that the class B criteria cannot reasonably be met in certain surface waters at all times as a result of combined sewer overflow events, temporary partial use areas shall be established by rules adopted under RSA 485-A:6, XI-c, which meet, as a minimum, the standards specified in paragraph III. The commissioner shall not calculate nutrient discharge limits for aquatic life and human health criteria based on 7Q10 flow or such other flow criteria more restrictive than 7Q10.

II-a. The commissioner shall adopt rules, under RSA 541-A, relative to dissolved oxygen water quality standards for tidal and saline waters in a manner consistent with Environmental Protection Agency guidance on dissolved oxygen water criteria published pursuant to section 304(a) of the Clean Water Act, and other

relevant scientific information.

III. The waters in temporary partial use areas established under paragraph II shall be free from slick, odors, turbidity, sludge deposits, and surface-floating solids of unreasonable kind or quantity, shall contain not less than 5 parts per million of dissolved oxygen; shall have a hydrogen ion concentration within the range of pH 6.0 to 9.0 except when due to natural causes; and shall be free from chemicals and other materials and conditions inimical to aquatic life or the maintenance of aquatic life. These criteria shall apply during combined sewer overflow discharges and up to 3 days following cessation of said discharge. At all other times the standards and uses specified in paragraph II shall apply.

IV. Notwithstanding anything contained in this chapter, the department in submitting classifications relating to interstate waters to the New England Interstate Water Pollution Control Commission for review and approval, as provided for under the terms of Article V of the compact whereby the interstate commission was created by RSA 484, shall submit such classifications in accordance with the standards of water quality as currently adopted by said interstate water pollution control commission provided, however, that the standards for any classification thus submitted for review and approval shall not be less than, nor exceed the standards of the classification duly adopted by the General Court as provided for in RSA 485-A:9 or 10.

V. Tidal waters utilized for swimming purposes shall contain not more than either a geometric mean based on at least 3 samples obtained over a 60-day period of 35 enterococci per 100 milliliters, or 104 enterococci per 100 milliliters in any one sample, unless naturally occurring. Those tidal waters used for growing or taking of shellfish for human consumption shall, in addition to the foregoing requirements, be in accordance with the criteria recommended under the National Shellfish Program Manual of Operation, United States Department of Food and Drug Administration.

VI. Notwithstanding anything contained in this chapter, the commissioner shall have the authority to adopt such stream classification criteria as may be issued from time to time by the federal Environmental Protection Agency or its successor agency insofar as said criteria may relate to the water uses specified in RSA 485-A:8, I and II, provided, however, that the criteria thus issued shall not result in standards that are less than nor exceed the standards of the classification duly enacted by the general court as provided for in RSA 485-A:9 or 485-A:10.

VII. All tests and sampling for the purposes of examination of waters shall be performed and carried out in a reasonable manner and whenever practicable, in accordance with the commonly accepted scientific method as selected by the department. The waters in each classification shall satisfy all the provisions of all lower classifications. The minimum treatment for the lowest classification shall be as follows:

- (a) For sewage, secondary treatment and disinfection as necessary to comply with water quality standards.
- (b) For industrial wastes and combined sewer overflows, such treatment as the department shall determine.

Appeal from any such determination shall be in the manner provided for in RSA 21-O:14.

VIII. In prescribing minimum treatment provisions for thermal wastes discharged to interstate waters, the department shall adhere to the water quality requirements and recommendations of the New Hampshire fish and game department, the New England Interstate Water Pollution Control Commission, or the United States Environmental Protection Agency, whichever requirements and recommendations provide the most effective level of thermal pollution control.

IX. Subject to the provisions of RSA 485-A:13, I(a), the fish and game department may use rotenone or similar compounds in the conduct of its program to reclaim the public waters of the state for game fishing.

**Source.** 1989, 339:1. 1991, 371:3-5. 1996, 228:77, 106, 110. 1998, 63:1, eff. July 11, 1998. 2017, 211:2, eff. Sept. 8, 2017.

## Section 485-A:9

**485-A:9 Classification Procedure. –**

The department shall follow the procedures provided in this section and recommend to the legislature a classification for all streams, lakes, ponds, and tidal waters or section of such water.

I. A notice setting forth the contemplated classification of any stream, lake, pond, tidal water or section of such water, shall be published for 3 successive weeks in a newspaper circulated within the county or counties in which the surface water in question is situated. The last notice shall be published at least 7 days before the hearing date. The notice shall stipulate the time and place where a public hearing on the contemplated classification shall be held.

II. A public hearing shall be conducted by the department, at which hearing all interested parties shall be heard relative to their views on classification of the area or areas in question.

III. Following the hearings the department shall review the pertinent evidence and data presented.

IV. After such hearing and review of evidence the department shall determine which classification is for the best interest of the public giving consideration to the health, industrial, economic, geographical and social factors involved.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

**Section 485-A:10**

**485-A:10 Reclassification Procedure. –** After adoption of a classification for any surface water or section of such water by the legislature, the department may, by its own motion, or upon the petition of not less than 100 persons, legal inhabitants of the county or counties in which the surface water in question is situated, reinvestigate the conditions of pollution in said surface water or section of such water by following the procedure above outlined, and may at any time make recommendation to the legislature for reclassification.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

**Section 485-A:11**

**485-A:11 Public Waters Classified. –** All lakes and ponds defined as public waters of the state by RSA 271:20 shall be classified by the passage of this section as not less than Class B, as set forth in RSA 485-A:8 relating to standards for classification of surface waters of the state.

**Source.** 1989, 339:1. 1999, 232:2, eff. Jan. 1, 2000.

**Enforcement****Section 485-A:12****485-A:12 Enforcement of Classification. –**

I. After adoption of a given classification for a stream, lake, pond, tidal water, or section of such water, the department shall enforce such classification by appropriate action in the courts of the state, and it shall be unlawful for any person or persons to dispose of any sewage, industrial, or other wastes, either alone or in conjunction with any other person or persons, in such a manner as will lower the quality of the waters of the stream, lake, pond, tidal water, or section of such water below the minimum requirements of the adopted classification. If the department shall set a time limit for abatement of pollution under paragraph II, and it

becomes apparent at any time during the compliance period that full compliance with the adopted classification will not be attained by the end of such period due to the failure of any person to take action reasonably calculated to secure abatement of the pollution within the time specified, the department shall notify such person or persons in writing. If such person or persons shall fail or neglect to take appropriate steps to comply with the classification requirements within a period of 30 days after such notice, the department shall seek appropriate action in the courts of the state.

II. If, after adoption of a classification of any stream, lake, pond, or tidal water, or section of such water, including those classified by RSA 485-A:11, it is found that there is a source or sources of pollution which lower the quality of the waters in question below the minimum requirements of the classification so established, the person or persons responsible for the discharging of such pollution shall be required to abate such pollution within a time to be fixed by the department. If such pollution is of municipal or industrial origin, the time limit set by the department for such abatement shall be not less than 2 years nor more than 5 years. For good cause shown, the department may from time to time extend any time limit established under this paragraph. Any determination by the department under this paragraph shall be subject to appeal as provided for in RSA 485-A:19.

III. No activity, including construction and operation of facilities, that requires certification under section 401 of the Clean Water Act and that may result in a discharge, as that term is applied under section 401 of the Clean Water Act, to surface waters of the state may commence unless the department certifies that any such discharge complies with the state surface water quality standards applicable to the classification for the receiving surface water body. The department shall provide its response to a request for certification to the federal agency or authority responsible for issuing the license, permit, or registration that requires the certification under section 401 of the Clean Water Act. Certification shall include any conditions on, modifications to, or monitoring of the proposed activity necessary to provide assurance that the proposed discharge complies with applicable surface water quality standards. The department may enforce compliance with any such conditions, modifications, or monitoring requirements as provided in RSA 485-A:22.

IV. No activity that involves surface water withdrawal or diversion of surface water that requires registration under RSA 488:3, that does not otherwise require the certification required under paragraph III, and which was not in active operation as of the effective date of this paragraph, may commence unless the department certifies that the surface water withdrawal or diversion of surface water complies with state surface water quality standards applicable to the classification for the surface water body. The certification shall include any conditions on, modifications to, or monitoring of the proposed activity necessary to provide reasonable assurance that the proposed activity complies with applicable surface water quality standards. The department may enforce compliance with any such conditions, modifications, or monitoring requirements as provided in RSA 485-A:22.

**Source.** 1989, 339:1. 1996, 228:106. 2008, 337:2. 2009, 26:1, eff. July 7, 2009.

## Section 485-A:13

### **485-A:13 Water Discharge Permits. –**

I. (a) It shall be unlawful for any person or persons to discharge or dispose of any sewage or waste to the surface water or groundwater of the state without first obtaining a written permit from the department of environmental services. Applications for permits shall be made upon forms prescribed by the department of environmental services and shall contain such relevant information as the department of environmental services may require. The department of environmental services shall include in such permits effluent limitations, which may be based upon economic and technological factors, upon the classification enacted by the legislature, upon the projected best use of the surface water downstream or upon the requirements of the

Federal Water Pollution Control Act as amended from time to time, and all regulations, guidelines and standards promulgated thereunder, whichever provides the most effective means to abate pollution. The department of environmental services may also prescribe such other reasonable conditions as may be necessary or desirable in order to fulfill the purpose of this chapter or applicable federal law. Such permits may contain, in the case of sources not in compliance with such effluent limitations at the time the permit is issued, compliance schedules, including interim requirements necessary or desirable in order to fulfill the purposes or requirements of this chapter, and any such compliance schedules may be imposed without regard to the time limits for abatement of pollution referred to in RSA 485-A:12, II and shall be consistent with the purposes and requirements of applicable federal law. The department of environmental services may prescribe a monitoring program to be performed by the applicant with periodic reports to the department of environmental services, including, where appropriate in terms of the nature of the effluent, continuous monitoring. Permits shall be issued for a fixed term, not to exceed 5 years. The department of environmental services may revise, modify or suspend in whole or in part or terminate any permit, following hearing, upon a finding that just cause exists for such action. Further, whenever in its judgment the purposes of this chapter will be best served, the department of environmental services may require as a condition to the granting of such permits that either the ownership and operation of the collection and treatment facilities involved be vested in the municipality or any subdivision thereof in which the system is located, if said municipality by legal action agrees thereto, or such other reasonable conditions as will ensure continuous and continuing operation and maintenance of the facilities. No permit shall be granted to utilize the entire assets of the surface water, or in any other case in which the department of environmental services determines that the grant of a permit would be inconsistent with the purposes of this chapter. Any determination by the department of environmental services under this paragraph shall be subject to appeal as provided for in RSA 485-A:19.

(b) Notwithstanding any other provision of law, no permit to discharge sewage or waste shall be issued authorizing any of the following discharges:

- (1) The discharge of any radiological, chemical or biological warfare agent or high level radioactive waste.
- (2) Any discharge into navigable waters which the secretary of the army of the United States acting through the chief of engineers determines would substantially impair anchorage and navigation.
- (3) Any discharge to which the regional administrator of the United States Environmental Protection Agency, or his successor in jurisdiction, has objected in writing pursuant to any right to object each provided such official in section 402(d) of the Federal Water Pollution Control Act, as amended from time to time; provided, that this subparagraph and subparagraph (2) above shall not preclude the department of environmental services or any other person from availing itself of the judicial review of any such objection, or any determination by the secretary of the army, available under applicable federal law.
- (4) Any discharge from a point source which is in conflict with a plan or amendment to such plan approved pursuant to section 208(b) of the Federal Water Pollution Control Act, as amended from time to time.

(c) Any person responsible for a bypass or upset at a wastewater facility shall give immediate notice of the bypass or upset to all public or privately owned water systems drawing water from the same receiving water and located within 20 miles downstream of the point of discharge. The permittee shall maintain a list of persons, and their telephone numbers, who are to be notified immediately by telephone. In addition, written notification, which shall be postmarked within 3 days of the bypass or upset, shall be sent to such persons.

II. On application of the department of environmental services, the superior court or any justice of such court, in term time, or in vacation may enjoin any act in violation of any lawful order of the department of environmental services.

III. In the interim between the effective date of classification legislation hereafter enacted affecting any surface water of the state or section of such water, and the time limit for abatement of pollution set thereafter either by the department of environmental services under RSA 485-A:12, II or by the legislature, it shall be

unlawful for person or persons to dispose of any sewage or waste into said surface water of the state in excess of the maximum quantity or of a different character, than that being disposed of during the period of one year prior to the effective date of such legislative classification without first obtaining written permission from the department of environmental services.

**Source.** 1989, 339:1. 1990, 248:3. 1996, 228:108, eff. July 1, 1996.

### **Section 485-A:13-a**

**485-A:13-a Groundwater Permit Fee.** – Any person, except for state, and local governments, including counties, and political subdivisions, issued a groundwater permit under RSA 485-A:13, I(a) shall pay to the department a fee of \$1,000 for the 5-year permit. Said fee shall be for processing such permits, including any necessary inspections and monitoring performed by the department in enforcing the terms and conditions of such permits. The fees shall be deposited with the state treasurer as unrestricted revenue.

**Source.** 1990, 3:89. 1996, 228:106, eff. July 1, 1996.

### **Section 485-A:14**

#### **485-A:14 Prohibited Acts.** –

- I. The lawful owner of any petroleum-powered vehicle or petroleum container that becomes partially or completely submerged in the surface waters of the state shall remove the vehicle or container from the water within 48 hours or as soon thereafter as safety and weather conditions permit. Petroleum-powered vehicles include, but are not limited to, cars, trucks, motorcycles, snowmobiles, motorized boats, off highway recreational vehicles, all terrain vehicles, construction equipment, trains, and airplanes. Petroleum containers include, but are not limited to, drums, barrels, tanks, pails, cans, jugs, or equipment which contains oil.
- II. The lawful owner of the submerged vehicle or container shall notify the department of environmental services in accordance with RSA 146-A, and the department shall investigate any possible contamination and ensure the safe removal of the vehicle or container from the body of water involved. Any partially or completely submerged vehicle or petroleum container shall be presumed to be discharging oil into the surface waters of the state and shall be subject to the reporting, removal, and strict liability requirements of RSA 146-A.
- III. The lawful owner of a vehicle shall notify the department of safety, division of state police, if any person is injured or killed in an incident involving a submerged vehicle.
- IV. If the owner refuses or fails to remove a submerged vehicle or container as required by paragraph I, or if no owner can be identified, the department of environmental services may contract for the removal of the vehicle or container in question. The owner of the submerged vehicle or container shall be strictly liable for the costs of removing the vehicle or container and the costs of the investigation, containment, cleanup, removal, and corrective measures associated with the discharge. The cost shall be recoverable by the state in an action of debt brought by the attorney general in the name of the state. If the owner of the vehicle or container has been identified, the contractor who removes the vehicle or container shall impound the recovered vehicle or container, at the expense of the owner. No contractor shall release the vehicle or container to the owner until informed by the department that all costs incurred by the state have been paid by the owner of the vehicle or container or that the impounded vehicle or container otherwise may be released. Upon receiving approval from the department to release the impounded vehicle or container, the contractor shall dispose of the impounded vehicle or container in accordance with RSA 262:36-a. If no owner can be identified after reasonable efforts, the contractor who removes the vehicle or container shall deliver the

vehicle or container to an appropriate salvage yard. Neither the state nor the contractor shall be liable for such delivery of the vehicle or container to anyone subsequently claiming ownership of the vehicle or container.

V. (a) Any person who fails to remove a submerged or partially submerged vehicle or container, as required by paragraph I, shall be guilty of a violation. Agents of the department of safety, division of state police, or any police officer of the municipality in which the vehicle or container is submerged may issue citations for a violation of this section and issue fines of \$500 for each day the vehicle remains in the water. No citation or fine so issued shall preclude the department of environmental services from taking action pursuant to subparagraph (b).

(b) The department of environmental services may take action against any person who fails to remove a submerged or partially submerged vehicle or container, as required by paragraph I, in accordance with RSA 485-A:22. No action initiated by the department of environmental services under RSA 485-A:22 shall preclude the issuance of citations and fines pursuant to subparagraph (a).

VI. Unless otherwise provided in this chapter, any person who knowingly fails to remove a submerged or partially submerged vehicle or container, as required by paragraph I, shall be guilty of a class B felony if the surface water is the source, or a tributary to a source, from which the domestic water supply of a city, town, or village is taken, in whole or in part.

## Section 485-A:15

### 485-A:15 Penalties. –

I. It shall be unlawful for any person to put or place, or cause to be put or placed into a surface water of the state or on the ice over such waters, or on the banks of such waters, any solid waste as defined in RSA 149-M or hazardous waste as defined in RSA 147-A, including but not limited to bottles, glass, crockery, cans, scrap metal, junk, paper, garbage, tires, old automobiles or parts thereof, trees or parts thereof, or similar litter.

II. For any violation of this section any authorized member or agent of the department of environmental services shall order the immediate removal of material involved in the violation, by the person responsible for the material in question.

III. If the person or persons responsible for a violation of paragraph I refuse or fail to obey the order of any authorized member or agent of the department of environmental services, the department of environmental services or authorized member or agency may contract for the removal of the material in question and the cost of the removal shall be recoverable by the state in an action of debt brought by the attorney general in the name of the state.

IV. Any person who recklessly violates paragraph I shall be guilty of a misdemeanor if a natural person, or guilty of a felony if any other person.

V. Any person who purposely or knowingly violates paragraph I shall be guilty of a class B felony.

**Source.** 1989, 339:1. 1996, 228:108. 2009, 190:2, 3, eff. Jan. 1, 2010.

## Section 485-A:16

**485-A:16 Emergency.** – If the department finds that an emergency has arisen from failure of or casualty to facilities for the control of pollution, the department may, if it finds that the best interests of the public will not unduly suffer, authorize any person for a reasonable time to discharge sewage or other wastes into surface waters or groundwaters, although such discharge would have the effect of lowering the quality of such waters

below the adopted classification.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

## **Section 485-A:17**

### **485-A:17 Terrain Alteration. –**

I. Any person proposing to dredge, excavate, place fill, mine, transport forest products or undertake construction in or on the border of the surface waters of the state, and any person proposing to significantly alter the characteristics of the terrain, in such a manner as to impede the natural runoff or create an unnatural runoff, shall be directly responsible to submit to the department detailed plans concerning such proposal and any additional relevant information requested by the department, at least 30 days prior to undertaking any such activity. The operations shall not be undertaken unless and until the applicant receives a permit from the department. The department shall have full authority to establish the terms and conditions under which any permit issued may be exercised, giving due consideration to the circumstances involved and the purposes of this chapter, and to adopt such rules as are reasonably related to the efficient administration of this section, and the purposes of this chapter. Nothing contained in this paragraph shall be construed to modify or limit the duties and authority conferred upon the department under RSA 482 and RSA 482-A.

II. (a) The department shall charge a fee for each review of plans, including project inspections, required under this section. The plan review fee shall be based on the total area to be disturbed. Except for property subject to RSA 483-B:9, the fee for review of plans encompassing an area of at least 100,000 square feet but less than 200,000 square feet shall be \$3,125. For the property subject to RSA 483-B:9, the fee for review of plans encompassing an area of at least 50,000 square feet but less than 200,000 square feet shall be \$3,125. An additional fee of \$1,250 shall be assessed for each additional area of up to 100,000 square feet to be disturbed. No application shall be accepted by the department until the fee required by this paragraph is paid. All fees required under this paragraph shall be paid when plans are submitted for review and shall be deposited in the water resources fund established in RSA 482-A:3, III.

(b) The department shall charge a non-refundable fee of \$500 plus a \$.10 per square foot fee for each request to amend a permit that requires plans to be reviewed.

II-a. [Repealed.]

II-b. In processing an application for permits under RSA 485-A:17:

(a) Within 50 days of receipt of the application, the department shall request any additional information required to complete its evaluation of the application, together with any written technical comments the department deems necessary. Any request for additional information shall specify that the applicant submit such information as soon as practicable and shall notify the applicant that if all of the requested information is not received within 120 days of the request, the department shall deny the application.

(b) If the department requests additional information pursuant to subparagraph (a), the department shall, within 30 days of the department's receipt of the information:

- (1) Approve the application in whole or in part and issue a permit; or
- (2) Deny the application and issue written findings in support of the denial; or
- (3) Extend the time for rendering a decision on the application for good cause and with the written agreement of the applicant.

(c) If no request for additional information is made pursuant to subparagraph (b), the department shall, within 50 days of receipt of the application:

- (1) Approve the application, in whole or in part and issue a permit; or
- (2) Deny the application, and issue written findings in support of the denial; or
- (3) Extend the time for rendering a decision on the application for good cause and with the written agreement

of the applicant.

(d)(1) The time limits prescribed by this paragraph shall supersede any time limits provided in any other provision of law. If the department fails to act within the applicable time frame established in subparagraphs (b) and (c), the applicant may ask the department to issue the permit by submitting a written request. If the applicant has previously agreed to accept communications from the department by electronic means, a request submitted electronically by the applicant shall constitute a written request.

(2) Within 14 days of the date of receipt of a written request from the applicant to issue the permit, the department shall:

(A) Approve the application, in whole or in part, and issue a permit; or

(B) Deny the application and issue written findings in support of the denial.

(3) If the department does not issue either a permit or a written denial within the 14-day period, the applicant shall be deemed to have a permit by default and may proceed with the project as presented in the application. The authorization provided by this subparagraph shall not relieve the applicant of complying with all requirements applicable to the project, including but not limited to requirements established in or under this section and RSA 485-A relating to water quality.

(4) Upon receipt of a written request from an applicant, the department shall issue written confirmation that the applicant has a permit by default pursuant to subparagraph (d)(3), which authorizes the applicant to proceed with the project as presented in the application and requires the work to comply with all requirements applicable to the project, including but not limited to requirements established in or under this section and RSA 485-A relating to water quality.

(e) The time limits under this paragraph shall not apply to an application from an applicant that has been found in violation of this chapter pursuant to RSA 485-A:22-a within the 5 years preceding the application or an application that does not otherwise substantially comply with the department's rules relative to the permit application process.

(f) The department may extend the time for rendering a decision under subparagraphs (b)(3) and (c)(3), without the applicant's agreement, on an application from an applicant who, within the 5 years preceding the application, has been determined, after the exhaustion of available appellate remedies, to have failed to comply with this section or any rule adopted or permit or approval issued under this section, or to have misrepresented any material fact made in connection with any activity regulated or prohibited by this section, pursuant to an action initiated under RSA 485-A:22. The length of such an extension shall be no longer than reasonably necessary to complete the review of the application, and shall not exceed 30 days unless the applicant agrees to a longer extension. The department shall notify the applicant of the length of the extension.

(g) The department may suspend review of an application for a proposed project on a property with respect to which the department has commenced an enforcement action against the applicant for any violation of this section, RSA 482-A, RSA 483-B, or RSA 485-A:29-44, or of any rule adopted or permit or approval issued pursuant to this section, RSA 482-A, RSA 483-B, or RSA 485-A:29-44. Any such suspension shall expire upon conclusion of the enforcement action and completion of any remedial actions the department may require to address the violation; provided, however, that the department may resume its review of the application sooner if doing so will facilitate resolution of the violation. The department shall resume its review of the application at the point the review was suspended, except that the department may extend any of the time limits under this paragraph and its rules up to a total of 30 days for all such extensions. For purposes of this subparagraph, "enforcement action" means an action initiated under RSA 482-A:13, RSA 482-A:14, RSA 482-A:14-b, RSA 483-B:18, RSA 485-A:22, RSA 485-A:42, or RSA 485-A:43.

II-c. The department shall submit a biennial report to the house and senate finance committees, the house resources, recreation, and development committee, and the senate energy and natural resources committee relative to administration of the terrain alteration review program.

II-d. All permits issued, except for projects covered by paragraph II-e, pursuant to this section shall be valid for a period of 5 years. Requests for extensions of such permits may be made to the department. The department shall grant an extension of up to 5 additional years, provided the applicant demonstrates all of the following:

- (a) The permit for which extension is sought has not expired prior to the date on which a written extension request from the permittee is received by the department.
- (b) The permit for which extension is sought has not been revoked or suspended without reinstatement.
- (c) Extension would not violate a condition of statute or rule.
- (d) Surface water quality will continue to be protected as under the original permit.
- (e) The project is proceeding towards completion in accordance with plans and other documentation referenced by the permit.
- (f) If applicable, any inspection reports have been completed and submitted as required by the permit.
- (g) The permit has not previously been extended, unless the subdivision plat or site plan associated with the permit has been deemed substantially complete by the governing municipal planning board in accordance with RSA 674:39, II, in which case subsequent extensions of the permit are allowed.

II-e. A permit issued under this section that is associated with the ongoing excavation or mining of materials from the earth shall not expire for the life of the project identified in the permit application, provided that the permit holder submits a written update of the project's status every 5 years from the date of the permit issuance using a form obtained from the department as specified in department rules.

III. Normal agricultural operations shall be exempt from the provisions of this section. The department may exempt other state agencies from the permit and fee provisions of this section provided that each such agency has incorporated appropriate protective practices in its projects which are substantially equivalent to the requirements established by the department under this chapter.

IV. Timber harvesting operations shall be exempt from the fee provisions of this section. Timber harvesting operations shall be considered in compliance with this section and shall be issued a permit by rule provided such operations are in accordance with procedures prescribed in the Best Management Practices for Erosion Control on Timber Harvesting Operations in New Hampshire, published by the department of natural and cultural resources, and provided that the department of revenue administration's intent to cut form is signed.

V. Trail construction operations for the purposes of modifying existing biking and walking trails shall be exempt from the provisions of this section. Such operations shall be considered in compliance with this section and shall be issued a general permit by rule provided such operations are implemented by a non-profit organization, municipality, or government entity, are limited to a disturbed area no more than 12 feet in width, and are in accordance with procedures prescribed in the Best Management Practices for Erosion Control During Trail Maintenance and Construction, published by the department of natural and cultural resources, bureau of trails in 2004.

## Section 485-A:18

### 485-A:18 Investigation and Inspection; Records. –

I. Any authorized member or agent of the department may enter any land or establishment for the purpose of collecting information that may be necessary to the purposes of this chapter and no owner of such establishment shall refuse to admit any such member or employee.

II. The department, its employees and authorized agents shall at reasonable times have access to any records

and monitoring equipment and shall have the authority to sample effluents of any person subject to RSA 485-A:13, I(a) and RSA 485-A:5. Upon written request of the department, such person shall provide to the department such information pertaining to any activities of such person to which this chapter applies as the department may reasonably require. Any information obtained pursuant to this section or under this chapter shall be available to the public at the offices of the department, subject to paragraph III.

III. Any other provisions of law notwithstanding, upon a showing satisfactory to the department by any person that any record, report, or information or any particular part thereof, to which the department has access, if made public would divulge methods or processes entitled to protection as trade secrets of such person, the department shall consider such record, report, information or particular part thereof confidential, and it shall thereafter not be disclosed to the public. All financial information shall be considered confidential for purposes of this chapter. Nothing in this section shall preclude the department from transmitting any such confidential information to any agency of the United States having jurisdiction over water pollution, provided that such agency is authorized by law to maintain the confidentiality of such information and agrees to maintain the confidentiality of any such information. In no case, however, shall effluent data, standards or limitations, names or addresses of permit applicants or permittees, nor permit applications or permits be considered confidential information.

### **Section 485-A:19**

**485-A:19 Review of Orders.** – The procedure for rehearings and appeal shall be that prescribed by RSA 21-O:14.

**Source.** 1989, 339:1, eff. Jan. 1, 1990.

### **Section 485-A:20**

**485-A:20 Summons; Oath.** – The department shall have power to subpoena witnesses and administer oaths in any proceeding or examination instituted before or conducted by it, and to compel the production of any account books, contracts, records, documents, memoranda and papers of any kind necessary to the purposes of this chapter.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

### **Section 485-A:21**

**485-A:21 Witnesses; Perjury.** – Witnesses summoned before the department shall be paid the same fee as witnesses summoned to appear before the superior court, and such summons issued by any justice of the peace shall have the same effects as though issued for appearance in court. No person so testifying shall be exempt from prosecution or punishment for any perjury committed by him in his testimony.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

### **Section 485-A:22**

**485-A:22 Penalties and Other Relief; Failure to Provide Facility. –**

I. Any person who willfully or negligently violates any provision of this subdivision or RSA 485-A:4-6; or any rule of the department adopted pursuant to this subdivision or RSA 485-A:4-6 or any condition or limitation in a permit issued under this subdivision or RSA 485-A:4-6; or who knowingly makes any material false statement, representation, or certification in any application, record, report, plan, or other document required to be filed or maintained pursuant to this subdivision or RSA 485-A:4-6 or pursuant to a rule adopted by the department under this subdivision or RSA 485-A:4-6 or who knowingly makes any such statement, representation, or certification in connection with any permit issued under this subdivision or RSA 485-A:4-6; or who knowingly renders inaccurate, falsifies, or tampers with any monitoring device or method required under this subdivision or RSA 485-A:4-6 or rule of the department adopted under this subdivision or RSA 485-A:4-6 or required in connection with any permit issued under this subdivision or RSA 485-A:4-6; or who knowingly fails, neglects, or refuses to obey any lawful order of the department, shall, notwithstanding the provisions of RSA title LXII, be punished by a fine of not more than \$25,000 for each day of such violation or imprisoned for not more than 6 months or both.

II. Any person who shall violate any provisions of this subdivision or RSA 485-A:4-6, or any lawful regulation of the department issued pursuant to this subdivision or RSA 485-A:4-6, or any condition or limitation in a permit issued under this subdivision or RSA 485-A:4-6, or who shall fail, neglect, or refuse to obey any order lawfully issued pursuant to this subdivision or RSA 485-A:4-6, shall be subject to a civil penalty not to exceed \$10,000 per day of such violation.

III. The department shall issue a written cease and desist order against any discharge or act in violation of this subdivision or RSA 485-A:4-6 or lawful regulation of the department made under them or any condition of any permit lawfully issued by the department, and any such discharge or act may be enjoined by the superior court upon application of the attorney general, whether the court is in term time or vacation. Municipalities shall comply with such orders pursuant to RSA 38:25.

III-a. Municipalities may apply to a justice of the superior court for injunctive relief against existing or impending violations of RSA 485-A:17, or any rule or order issued under that section. The municipality shall give notice of any such action to the attorney general and the commissioner of environmental services, who may take such steps as they deem necessary to ensure uniform statewide enforcement, including but not limited to joining the action, assuming sole prosecution of the action, or, as of right dismissing the action without prejudice. Such notice shall be given at least 30 days prior to the commencement of any such action, unless more immediate action is necessary to prevent irreparable environmental damage or other serious public harm, in which case such notice shall be given as soon as practicable, but in no event later than the date of commencement of the action. This paragraph shall not be construed to affect, in any manner, existing authority of municipalities to act based upon the provisions of other statutes or local ordinances.

IV. The written cease and desist order issued pursuant to the provisions of paragraph III shall be recorded by the department in the registry of deeds for the county in which the property is situated and, upon recordation, said order shall run with the land; provided, however, that an appropriate description of the land involved including the accurate name of the owner of the land shall be incorporated in the cease and desist order. No fee shall be charged for recording such an administrative order; however, the fee for discharge of any such order shall be the same as for the discharge of a real estate property.

V. The commissioner of environmental services, after notice and hearing pursuant to RSA 541-A, may impose an administrative fine not to exceed \$2,000 for each offense upon any person who violates any provision of this subdivision or, RSA 485-A:4-6, any rule adopted under this subdivision or RSA 485-A:4-6, or any permit issued under the authority of this subdivision or RSA 485-A:4-6. Rehearings and appeals from a decision of the commissioner under this paragraph shall be in accordance with RSA 541. Any administrative fine imposed under this section shall not preclude the imposition of further penalties under this chapter. The proceeds of administrative fines levied pursuant to this paragraph shall be deposited by the

department in the general fund. The commissioner shall adopt rules, under RSA 541-A, relative to:

(a) A schedule of administrative fines which may be imposed under this paragraph for violations of this chapter, rules adopted under this chapter, and permits issued under this chapter, as provided above.

(b) Procedures for notice and hearing prior to the imposition of an administrative fine.

V-a. Upon receipt of information by the department that a municipality has not complied with RSA 485-A:5-b relative to septage disposal, the department shall issue an order directing said municipality to provide or assure access to an approved septage disposal facility not later than 180 calendar days following issuance of the order. Any municipality to whom such an order is directed may appeal in accordance with RSA 21-O:14.

V-b. If any municipality fails to comply with an order under paragraph V-a, it shall be subject to an administrative fine pursuant to paragraph V. Each day of continuous violation shall constitute a separate offense. The department shall take the following steps:

(a) The department shall conduct an investigation of opportunities for joint action with other municipalities, the availability of private facilities, and possible facility sites within the municipality.

(b) The department shall report findings to the precinct and municipality, and seek local agreement to an acceptable solution to the septage problem.

(c) If no agreement is reached within 60 calendar days after the findings are delivered, the department shall schedule and hold a public hearing in the municipality. The hearing shall be held to solicit alternative septage disposal solutions for the municipality. Notice of the hearing shall be posted in 2 or more public places in the municipality for at least 14 calendar days before it is held, and shall be published in a newspaper of local circulation, at least twice, not less than 10 days prior to the hearing date.

(d) If no agreement is reached within 45 calendar days after the hearing, the department shall either order the municipality to participate in an existing or planned approved facility, or shall recommend that land within the municipality be taken by eminent domain for the establishment of an approved facility.

(e) Before land is taken by eminent domain, the department shall hold a public hearing in the municipality. Such hearing shall be noticed pursuant to the provisions of subparagraph (c).

(f) If the department determines that land shall be taken, the department shall institute eminent domain proceedings.

(g) The department shall be responsible for the facility's design and construction.

V-c. If land is taken for construction of a facility:

(a) The property shall be held in the name of the state and shall not be taxed.

(b) Upon completion, the facility shall be operated by the municipality in accordance with the facility plan.

(c) At the time of the taking, the department shall certify to the commissioner of revenue administration the costs of establishing the facility. The certification shall be revised when the facility is complete to reflect actual costs, including land, buildings, equipment, administration, planning, consultants, and any other necessary costs.

(d) The commissioner of revenue administration shall assess the costs on the municipality over a 20-year period. Each annual assessment shall include the interest on any debt incurred by the state for this purpose. The assessment shall be made as provided in RSA 21-J:15 and RSA 81.

(e) When all costs and interest are paid, the property shall be deeded to the municipality, or in the case of an unincorporated town or unorganized place, to the county.

VI. The provisions of RSA 651:1 shall not apply to offenses under this chapter.

**Source.** 1989, 339:1. 1990, 252:14, 17. 1991, 340:4. 1995, 217:7. 1996, 228:78, 106. 1997, 206:8. 1999, 232:3, 4, eff. Jan. 1, 2000. 2013, 247:6, eff. Mar. 24, 2014.

## Section 485-A:22-a

**485-A:22-a Cease and Desist Orders; Penalty. –**

The director of the division of forests and lands, department of natural and cultural resources, or his or her authorized agents, may:

I. Issue a written cease and desist order against any timber operation in violation of this chapter. Any such violation may be enjoined by the superior court, upon application of the attorney general. A person failing to comply with the cease and desist order shall be guilty of a violation.

II. Prosecute any violation of this chapter as a violation. This provision shall not limit the state's enforcement authority under this chapter.

**Source.** 1989, 214:19. 1990, 29:4. 2005, 32:2, eff. July 9, 2005. 2017, 156:14, I, eff. July 1, 2017.

### **Section 485-A:26**

**485-A:26 Swimming Pools and Bathing Places Public Bathing Facilities. –**

I. In this section:

(a) "Pool" means a man-made structure and associated pump, filter, drain, and electrical equipment that is used for recreational or therapeutic bathing, swimming, diving, or other contact with the water such as by wading, splashing, tubing, or sliding. "Pool" shall include, but is not limited to, swimming pools, therapy pools, spas, special recreation pools, slides, and tubing courses, at hotels, motels, health facilities, water parks, condominium complexes, apartment complexes, youth recreation camps, public parks, and recreational campgrounds or camping parks as defined in RSA 216-I:1, VII. "Pool" shall not include any pool, spa, or other pool that serves 3 or fewer living units and is used only by the residents of the living units and their guests, and does not include baptismal fonts or similar structures owned by a religious organization and used for religious rituals.

(b) "Public bathing facility" means a pool that is operated by or for any governmental subdivision, public or private corporation, partnership, association, or educational institution and that is open to the public, members, or students, whether for a fee or free.

II. (a) No person shall construct or install, operate or maintain an artificial swimming pool or bathing place open to and used by the public, or as a part of a business venture, or a public bathing facility unless the construction, design, and physical specifications of such pool or bathing place have received prior approval from the department. The department shall charge a non-refundable design review fee of \$100 for a pool 400 square feet in area and an additional \$25 for every additional 100 square feet. The fee shall be paid to the department upon submission of such plans for review. Fees collected under this paragraph shall be deposited in the public bathing facility program fund.

(b) Effective January 1, 2020, no person shall operate or maintain a public bathing facility unless the facility is registered with the department under this section. The owner of a public bathing facility shall register the facility using a form provided by the department. If all of the requirements for the form are adopted in narrative rules, the form shall not be subject to RSA 541-A.

(c) The owner of a public bathing facility that existed as of January 1, 2019 shall register within 60 days of the effective date of this provision. All other public bathing facilities shall register prior to initiating operations. The owner or operator of the facility shall report any changes in the information provided under subparagraph (b) within 10 days of the change.

(d) The registration required under this section shall be valid for the life of the facility. The owner shall notify the department in writing that the facility has closed within 30 days of the closure. The notice of closure shall include the date of such closure.

III. The commissioner shall adopt rules under RSA 541-A relative to safety standards to protect persons using said facilities. Nothing in this section shall be deemed to affect the powers of local health officers or the department of health and human services, with respect to nuisances.

IV. The department may take samples of the water of any such public bathing facility for analysis to determine compliance with water quality requirements. The costs of such sampling and analysis shall be paid by the owner or operator of such facility. The costs recovered for such sampling shall be deposited in the public bathing facility program fund. The costs recovered for analysis shall be consistent with the fee structure established in RSA 131:3-a and deposited as provided in RSA 131:3-a. Any municipality which establishes a program of sampling and analysis which is equivalent to the department's program shall not be subject to additional sampling and analysis by the department.

V. There is hereby established a public bathing facility program fund. This separate, nonlapsing fund shall be continually appropriated to the department and used to administer the public bathing facility program under this chapter. Fees collected by the department shall be deposited with the state treasurer to the credit of such fund and may be invested as provided by law. Interest received on such investment shall also be credited to the fund.

**Source.** 1989, 339:1. 1990, 3:88. 1995, 310:181. 1996, 228:79. 1997, 267:1, eff. July 1, 1997. 2019, 346:124, eff. July 1, 2019.

## Section 485-A:26-a

### **485-A:26-a Public Bathing Facility Compliance Self-Certification. –**

I. The owner of a public bathing facility that is open for 9 months or more in a calendar year shall on an annual basis submit to the department, a self-certification declaration stating that each pool at the facility is in compliance with all applicable public bathing facility requirements.

II. The owner of a public bathing facility that is open fewer than 9 months in a calendar year shall on an annual basis submit to the department, prior to opening a self-certification declaration stating that each pool at the facility is in compliance with all applicable public bathing facility requirements.

III. The self-certifications required by paragraphs I and II shall be on a form provided by the department. If all of the requirements for the form are adopted in narrative rules, the form shall not be subject to RSA 541-A.

IV. (a) The owner of a public bathing facility shall pay a non-refundable fee of \$250 per pool up to a maximum of \$1,500 per public bathing facility with each self-certification, to cover department expenses for conducting the self-certification program and hiring of program staff.

(b) If the self-certification fee is not paid within 30 days of the due date, a late fee shall accrue at the rate of \$50 per 3-month period or portion thereof that the fee is not paid. The commissioner may waive all or any portion of the late payment fee for good cause.

(c) Political subdivisions of the state shall be exempt from the fee for submitting a self-certification declaration, but not from the requirement to submit the self-certification.

V. (a) Effective January 1, 2021, the owner of a public bathing facility that is open for 9 months or more in a calendar year and that existed as of January 1, 2019 shall file the initial self-certification within 60 days of January 1, 2021.

(b) The owner of a public bathing facility that is open fewer than 9 months in a calendar year and that existed as of January 1, 2019 shall file the initial self-certification prior to initiating operations in 2021.

**Source.** 2019, 346:126, eff. July 1, 2019.

## Section 485-A:27

### **485-A:27 Injunction; Emergency Closures. –**

I. Any person operating or maintaining a public swimming pool or bathing place facility without the same having been approved by the department may be enjoined by the superior court or any justice of the court upon petition brought by the attorney general.

II. Whenever the department determines that conditions at a public bathing facility jeopardize the health and safety of patrons of the facility, the department shall issue an emergency closure notice. The department shall apply the following procedure in determining whether to issue an emergency closure notice:

(a) The department shall perform an on-site inspection to determine whether each pool at the facility is in compliance with the following standards established in rules adopted by the commissioner pursuant to RSA 541-A:

(1) Bacteriological, chemical, and physical water quality standards; and

(2) Patron safety requirements relating to emergency response, emergency rescue equipment, first aid kits, suction outlet covers/grates, and security fencing.

(b) If the department determines that a pool at the facility is not in compliance with the standards and safety requirements specified in subparagraph (a) and that the deficiencies threaten the health or safety of patrons of the facility, the department shall issue an emergency closure notice to the owner of the facility or the owner's on-site representative. The notice shall identify which pool must be closed and specify the reason for the emergency closure.

(c) Upon receipt of an emergency closure notice, the owner shall immediately close the identified pool. The owner shall not reopen the pool until each deficiency cited in the emergency closure notice has been corrected and the department has confirmed the corrections.

(d) If an owner believes an emergency closure notice has been issued in error, the owner shall notify the department in writing, which may be sent by email, fax, United States Postal Service delivery, or private delivery. The written notice shall identify each reason why the owner or operator believes the emergency closure notice is not appropriate. The department shall provide the owner or operator with an opportunity for an adjudicative hearing within 10 days of receiving the written notice.

**Source.** 1989, 339:1. 1996, 228:106. 1997, 267:1, eff. July 1, 1997. 2013, 250:5, eff. Jan. 1, 2014. 2019, 346:127, eff. July 1, 2019; 346:135, eff. Jan. 1, 2020.

## Section 485-A:27-a

### **485-A:27-a Certified Operator Training Required. –**

I. Effective January 1, 2022, a public bathing facility shall be operated only under the supervision of an individual who has successfully completed a certified pool and spa operator certification program offered by the Association of Pool and Spa Professionals, National Swimming Pool Foundation, or other pool and spa operator certification programs approved by the department.

II. (a) By January 1, 2022, each owner of a public bathing facility that is open for 9 months or more in a calendar year shall submit to the department the name and daytime telephone number including area code of each certified pool operator engaged by the owner to supervise the pool at the facility. The submission of this information shall occur as part of the self-certification in RSA 485-A:26-a.

(b) For facilities that begin operation after January 1, 2022, the information in subparagraph (a) shall be submitted prior to beginning operation.

**Source.** 2019, 346:128, eff. July 1, 2019.

## Section 485-A:28

### **485-A:28 Penalty; Administrative Fines. –**

- I. Whoever violates any of the provisions of this subdivision, or rules adopted under this subdivision shall be guilty of a violation if a natural person, or guilty of a misdemeanor if any other person.
- II. The commissioner, after notice and hearing, may impose an administrative fine not to exceed \$2,000 for each offense upon any person who violates any provision of this subdivision, any rule adopted under this subdivision, or any license or approval issued under this subdivision. Rehearings and appeals from a decision of the commissioner under this paragraph shall be in accordance with RSA 541. Any administrative fine imposed under this section shall not preclude the imposition of further penalties under this chapter. The proceeds of administrative fines levied pursuant to this paragraph shall be deposited in the general fund. The commissioner shall adopt rules, under RSA 541-A, relative to:
- (a) A schedule of administrative fines which may be imposed under this paragraph; and
  - (b) Procedures for notice and hearing prior to the imposition of an administrative fine.

**Source.** 1989, 339:1. 1997, 267:2, eff. July 1, 1997.

## Sewage Disposal Systems

### Section 485-A:29

#### **485-A:29 Submission and Approval of Plans and Specifications. –**

- I. Any person proposing either to subdivide land, except as provided in RSA 485-A:33, or to construct a sewage or waste disposal system, shall submit 2 copies of such locally approved plans as are required by the local planning board or other local body having authority for the approval of any such subdivision of land, which is subject to department approval, and 2 copies of plans and specifications for any sewage or waste disposal systems which will be constructed on any subdivision or lot for approval in accordance with the requirements of the department as provided in this paragraph. In the event that such subdivision plans which receive final local approval differ from the plans which are reviewed by the department, the person proposing the subdivision shall resubmit those plans to the department for reapproval. The planning board or other local body having final local approval authority shall submit one copy of such plans which receive final local approval to the department for informational purposes within 30 days of granting such final approval. The department shall adopt rules, pursuant to RSA 541-A, relative to the submission of plans and specifications as necessary to effect the purposes of this subdivision. The rules shall specify when and where the plans and specifications are to be submitted, what details, data and information are to be contained in the plans and specifications, including the location of known burial sites or cemeteries within or adjacent to the property on which the proposed sewage or waste disposal system is to be located, what tests are to be required, what standards, guidelines, procedures, and criteria are to be applied and followed in constructing any sewage or waste disposal system, and other related matters. The rules shall also establish the methodology and review process for approval of innovative/alternative wastewater treatment systems and for approval of a plan for operation, maintenance, and financial responsibility for such operations. For any part or parts of the subdivisions where construction or waste disposal is not contemplated, only the lot lines, property boundaries drawn to scale, and general soil and related data shall be required. The constructed sewage or waste disposal systems shall be in strict accordance with approved plans, and the facilities shall not be covered or placed in operation without final inspection and approval by an authorized agent of the department. All inspections by the department shall be accomplished within 7 business days after receipt of written notification from the

builder that the system is ready for inspection. Plans and specifications need not be submitted for subdivision approval for subdivisions consisting of the division of a tract or parcel of land exclusively in lots of 5 or more acres in area. The presence of hydric soils on lots of 5 or more acres in area shall be insufficient, without additional supporting data, to classify these lots as wetlands, or to make such lots unsuitable for sewage or waste disposal systems designed for poorly drained soils. This exemption in no way relieves any person from responsibility for obtaining approval under this chapter for construction of individual or other sewage or waste disposal systems or both in any exempted lots. In such cases, it shall be the responsibility of the subdivider to provide to the lot purchasers satisfactory assurance as the purchasers may require at the time of sale that lots sold shall be adequate to support individual sewage or waste disposal systems or both in accordance with rules adopted by the department and the requirements of this subdivision.

II. The department shall develop and approve an outline of brief instructions for the periodic maintenance, care and proper usage of waste disposal systems, including a warning of the potential public health hazard and pollution of public and private water supplies and surface water of the state from improperly maintained sewage and waste disposal systems.

III. The department shall not approve any plan which will cause a violation of the setback requirements in RSA 289:3, III.

**Source.** 1989, 339:1. 1991, 379:2. 1993, 172:5. 1994, 198:1. 1995, 93:1. 1996, 228:106; 233:9. 2006, 87:1, 2, eff. July 4, 2006. 2017, 238:1, eff. Sept. 16, 2017.

## Section 485-A:30

### 485-A:30 Fees. –

I. Any person submitting plans and specifications for a subdivision of land shall pay to the department a fee of \$300 per lot. Said fee shall be for reviewing such plans and specifications and making site inspections. Any person submitting plans and specifications or an application for a permit by rule as provided in RSA 485-A:33, IV for sewage or waste disposal systems shall pay to the department a fee of \$290 for each system. Said fee shall be for reviewing such plans and specifications or application for permit by rule, making site inspections, the administration of sludge and septage management programs, and establishing a system for electronic permitting for waste disposal systems, subdivision plans, and permits and approvals under the department's land regulation authority. The fees required by this paragraph shall be paid at the time said plans and specifications or application for permit by rule are submitted and shall be deposited in the subsurface systems fund established in paragraph I-b. For the purposes of this paragraph, the term "lot" shall not include tent sites or travel trailer sites in recreational parks which are operated on a seasonal basis for not more than 9 months per year.

I-a. In addition to fees required under paragraph I, any person submitting plans and specifications or an application for a permit by rule as provided in RSA 485-A:33, IV for sewage or waste disposal systems shall pay to the department a fee of \$10 for each system for use in the septage handling and treatment facilities grant program to municipalities under RSA 486:3, III. The fees required by this paragraph shall be paid at the time said plans and specifications or application for permit by rule are submitted and shall be deposited in the septage management fund established in paragraph I-c.

I-b. There is hereby established the subsurface systems fund into which the fees collected under paragraph I shall be deposited. The fund shall be a separate, nonlapsing fund, continually appropriated to the department for the purpose of paying all costs and salaries associated with the subsurface systems program.

I-c. There is hereby established the septage management fund into which the fees collected under paragraph I-a shall be deposited. The fund shall be a separate, nonlapsing fund, continually appropriated to the department for the purpose of paying costs associated with the septage handling and treatment facilities grant

program or for research, engineering analysis, or septage sampling and analysis by the department to advance septage management in the state of New Hampshire.

II. [Repealed].

III. Any person submitting plans and specifications as a resubmission for reapproval of such shall not be required to pay any additional fee under RSA 485-A:30, I or I-a if changes to such plans and specifications would not constitute a new subdivision under the provisions of RSA 485-A:2, XIII.

**Source.** 1989, 339:1. 1990, 252:15. 1991, 379:3. 1994, 198:2. 1996, 228:106; 233:5, 7, II, 8. 2001, 128:2, 3. 2003, 246:2. 2005, 141:1. 2009, 144:43. 2012, 174:1, eff. June 11, 2012.

## **Section 485-A:30-a**

### **485-A:30-a Notice Requirements; Encroachment Waivers. –**

I. (a) Any person intending to submit an application for approval of a sewage or waste disposal system, which application will include a request for an encroachment waiver, shall notify the local code enforcement officer or other appropriate designated authority and all abutters as defined in RSA 672:3 that the person intends to file the application. Such notification shall include:

- (1) The name and address of the property owner.
- (2) Identification of the property for which an encroachment waiver is being requested, including tax map and lot numbers.
- (3) Names of abutters, together with applicable tax map and lot numbers.
- (4) A description of the specific waivers being requested.
- (5) A reasonable facsimile of the plan.
- (6) Identification of any local code or ordinance for which a waiver, variance or exception is required, and whether such waiver, variance or exception has been obtained.
- (7) Notice that the department is required by law to act on the application within 15 working days of receipt of the application, and that objections to the proposed encroachment waiver may be submitted to the department during the review process or by filing a motion for reconsideration of the decision with the department within 20 days of the department's decision on the application.

(b) Encroachment waiver requests shall appear on the plans. No application which includes any request for an encroachment waiver shall be accepted by the department unless the application includes a copy of the notice, a list of the names and addresses of the abutters to whom the notice was mailed, and a statement signed by the applicant or property owner certifying that the notices were sent by certified mail to the abutters listed.

II. No construction permit shall be issued for a septic system until the department has received a copy of the recorded notice showing that all easements and encroachment waivers associated with the application have been recorded by the property owner in the registry of deeds.

**Source.** 1989, 79:2. 1996, 228:106, eff. July 1, 1996.

## **Section 485-A:30-b**

### **485-A:30-b Protective Well Radii. –**

I. All lots on which wastewater is or will be disposed on-site and all lots on which a private well serving a public water system exists or will be installed, including lots created prior to August 20, 1989, shall be subject to the following conditions:

- (a) Rules adopted under this section concerning such lots shall include provisions allowing abutting lot

owners to overlap their respective well radii for their mutual benefit and provisions allowing well radii to extend over property lines onto state and locally-mandated property line setbacks, recorded easements, or land which is permanently dedicated to a use which precludes development.

(b)(1) For any private well being installed or utilized to serve one or more new commercial buildings or a non-community public water system, the entire protective well radius shall be located on one or more of the following: on-lot, on a recorded easement, on land which is permanently dedicated to a use which precludes development, or on state or locally mandated property line setbacks.

(2) A private well may be installed without being located as required by subparagraph (1) only if it is needed to replace a well serving one or more existing commercial buildings or a public water system, there will be no increase in water use to a level that requires a larger protective well radius under rules adopted by the department, and the lot is not part of a larger parcel that is being subdivided. In such cases, the on-lot protective radius shall be maximized to the extent practicable and the owner of the property shall sign a standard release form prepared by the department, upon which the actual protective radius shall be noted together with a narrative description of the location of the well, to acknowledge the potential loss of the protection of any portion of the radius which extends over the property line. The owner shall record the release form in the registry of deeds and shall file a copy of the recorded release form with the department.

(3) If a private well installed under the provisions of subparagraph (2) is not regulated as a public water supply well under RSA 485, the department shall require such water quality monitoring, recordkeeping, and reporting as is needed to ensure the water is suitable for its intended uses.

(4) For the purposes of this section, the term "commercial building" means a building that houses a commercial use but shall not include a residence which is also used for commercial purposes unless the total water withdrawal exceeds 600 gallons per day. A new commercial building means a new structure intended for commercial use, an existing residential structure being converted to commercial use, or an increase in water use at an existing commercial building to a level that requires a larger protective well radius under rules adopted by the department.

(c) For private wells serving buildings other than commercial buildings, if the protective well radius cannot be wholly maintained on an existing lot of record due to the size or other physical characteristics of the lot, then the on-lot protective radius shall be maximized to the extent practicable. Subject to the foregoing sentence, the protective well radius shall be maintained on one or more of the following: on-lot, on a recorded easement, on land which is permanently dedicated to a use which precludes development, or on state and locally mandated property line setbacks.

(d) Any person submitting plans and specifications for a sewage or waste disposal system for a property which is or will be served by an on-lot well, shall show the location or proposed location of the well, or a designated area within which the well will be located, on such plans and shall show the protective radius as specified in the department's rules.

(e) Whenever the department approves a septic plan with an on-lot well radius which is less than the optimum standard, the department shall notify the applicant of the consequences of such reduced radius and advise the applicant whether special precautions should be taken relative to well installation.

(f) If the well is not installed prior to the sewage or waste disposal system being constructed, then the property owner shall provide the water well contractor with a copy of the approved plan showing the location of the well, and the water well contractor shall ensure, to the best of his ability that the well is installed in accordance with the approved plan.

(g) When, for reasons of the condition of the lot or the placement of buildings thereon, the well cannot be installed as shown on the approved plan, the water well contractor shall advise and consult with the property owner, or the property owner's agent, on the best possible alternative location, considering distance to property boundaries and to the sewage or waste disposal system. Using a standard release form prepared by the department, the water well contractor shall alert the owner to the consequences of the alternate

installation, including the potential loss of the protection of any portion of the radius which extends over the property line. The owner, or the owner's agent, may defer to the designer of the sewage or waste disposal system or may allow the water well contractor to proceed in the identified alternative location. Prior to installing the well in the identified alternative location, the well contractor shall, using the standard release form, obtain a written acknowledgment, from the property owner, or the owner's agent, that the consequences are understood. The designer shall prepare an amended plan showing the actual location of the well. The property owner shall forward the amended plan, together with a copy of the signed release form, to the department and the local code enforcement officer or other appropriate designated local official prior to using the well. If the on-lot protective well radius is less than the optimum prescribed standard, the owner shall record the release form, upon which the actual protective radius shall be noted, together with a narrative description of the location of the well in the registry of deeds, and a copy of the recorded release form shall be filed with the department.

II. For lots approved under RSA 485-A:29, the rules adopted under this section concerning such lots shall include provisions allowing abutting lot owners to overlap their respective well radii for their mutual benefit by allowing well radii to extend over property lines, onto state and locally mandated property line setbacks, recorded easements, or land which is permanently dedicated to a use which precludes development. If after a lot is created pursuant to this section, the well cannot be installed as shown on the subdivision plan, then the provisions of RSA 485-A:30-b, I(d), (e), (f), and (g) shall apply.

III. For the purposes of this paragraph, the term "cluster development" means a form of residential subdivision that permits dwelling units to be grouped on sites or lots with dimensions, frontages, and setbacks reduced from conventional requirements, provided that the remaining land area is permanently designated as open space for cluster development. For cluster developments the following provisions shall apply:

(a) Where the sewage waste disposal systems are located off of the individual home lots or the cluster development is served by municipal sewers, the wells and associated protective radii serving those home lots need not be confined to the individual lot which each well serves so long as all wells and their associated protective radii are confined within the tract of home lots and common land permanently designated as open space, and shall not encumber property situated outside of the cluster development except by recorded easement.

(b) Where the home lots are serviced by on-lot sewage or waste disposal systems, wells and their protective radii may be located wholly or partially on common land permanently designated as open space, and shall not encumber adjacent lots or property situated outside of the cluster development except by recorded easement. The department shall not approve such off-lot wells and radii unless the lot owner or developer demonstrates to the department's satisfaction, by means of recorded easements, land use restrictions or other appropriate mechanisms, that the well owner will be able to maintain and service the well in perpetuity and that the area covered by the protective well radius is permanently dedicated to a use which precludes development.

IV. The commissioner shall adopt rules under RSA 541-A providing for protective well radii for private water wells, and for regulation of land use within the radii boundary.

**Source.** 1991, 215:2. 1996, 228:106, 110, eff. July 1, 1996. 2015, 236:3, eff. Sept. 11, 2015.

## **Section 485-A:31**

### **485-A:31 Action on Applications. –**

I. Subject to paragraphs II and III, the department shall give notice in writing to the person submitting the plans and specifications for subdivision of land of its approval or disapproval of such plans and specifications within 30 days of the date such plans and specifications and the required fees are received by the department and shall give notice in writing to the person submitting plans and specifications for sewage or waste disposal

systems of its approval or disapproval of such plans and specifications within 15 working days of the date such plans and specifications and the required fees are received by the department. Unless such written disapproval shall be mailed to the person submitting plans and specifications within 30 days in the case of plans and specifications for subdivision of land and 15 working days in the case of plans and specifications for sewage or waste disposal systems from the date of receipt with the required fees by the department, the plans and specifications shall be deemed to have been approved. The department shall send a copy of the approval or disapproval of such plans and specifications to the planning board or board of selectmen of the affected municipality.

II. The department may extend the time for rendering a decision under paragraph I, without the applicant's agreement, on an application from an applicant who previously has been determined, after the exhaustion of available appellate remedies, to have failed to comply with RSA 485-A:29-44, or any rule adopted or permit or approval issued pursuant to RSA 485-A:29-44, or to have misrepresented any material fact made in connection with any activity regulated or prohibited by RSA 485-A:29-44, pursuant to an action initiated under RSA 485-A:42 or RSA 485-A:43. The length of such an extension shall be no longer than reasonably necessary to complete the review of the application and shall not exceed 30 days unless the applicant agrees to a longer extension. The department shall notify the applicant of the length of the extension.

III. The department may suspend a review of an application for a proposed project on a property with respect to which the department has commenced an enforcement action against the applicant for any violation of RSA 485-A:29-44; RSA 482-A; RSA 483-B; or RSA 485-A:17, or of any rule adopted or permit or approval issued pursuant to RSA 485-A:29-44; RSA 482-A; RSA 483-B; or RSA 485-A:17. Any such suspension shall expire upon conclusion of the enforcement action and completion of any remedial actions the department may require to address the violation; provided, however, that the department may resume its review of the application sooner if doing so will facilitate resolution of the violation. The department shall resume its review of the application at the point the review was suspended, except that the department may extend any of the time limits under this paragraph and its rules up to a total of 30 days for all such extensions. For purposes of this subparagraph, "enforcement action" means an action initiated under RSA 482-A:13; RSA 482-A:14; RSA 482-A:14-b; RSA 483-B:18; RSA 485-A:22; RSA 485-A:42; or RSA 485-A:43.

**Source.** 1989, 339:1. 1996, 228:106. 2010, 295:11, eff. Sept. 11, 2010.

## **Section 485-A:32**

### **485-A:32 Prior Approval; Permits. –**

I. No person shall construct any building from which sewage or other wastes will discharge or construct a sewage or waste disposal system without prior approval of the plans and specifications of the sewage or waste disposal system by the department. Nothing herein shall be construed to modify or lessen the powers conferred upon local authorities by other statutes; provided, however, that in all instances the requirements contained in this chapter shall be considered as minimum.

II. Any person submitting an application and plans for construction approval shall also certify in writing that he has complied with all local government requirements as relate to water supply and sewage disposal which must be complied with prior to application to the department of environmental services in those municipalities where regulations require prior local approval; and, at the same time, a copy of the certification shall be sent to the board of selectmen of the town or the city council of the city.

II-a. Any person submitting an application and plans for construction approval to replace a subsurface sewage disposal system in failure as defined in RSA 485-A:2, IV shall be exempt from presenting a certification of compliance with local government requirements as required by paragraph II.

III. No person required to submit subdivision plans pursuant to paragraph I shall commence the construction

of roads within the lot, tract, or parcel proposed to be subdivided, by clearing the land thereof of natural vegetation, placing any artificial fill thereon, or otherwise altering the land, nor shall he do any other act or acts which will alter the natural state of the land or environment, unless the subdivision plan relating thereto has been submitted and approved in accordance with the requirements of this chapter. Nothing in this paragraph shall be construed to prevent the taking of test borings, the digging of test pits, or any other preliminary testing and inspection necessary to comply with the requirements of the department of environmental services relative to information necessary for review and approval of the subdivision plans.

**Source.** 1989, 339:1. 1996, 228:106, 108, eff. July 1, 1996. 2017, 238:2, eff. Sept. 16, 2017.

## **Section 485-A:33**

### **485-A:33 Exemptions. –**

I. No plans and specifications shall be required whenever the proposed sewage or waste disposal system will be connected to any public sewer system operated by any municipality or other governmental body within the state.

II. No plans and specifications shall be required whenever land is subdivided and the purpose of such subdivision is to correct or conform boundary lines or when land is exchanged between abutters and no building is contemplated on the exchanged land.

III. No plans and specifications shall be required for subdivision whenever land is proposed to be subdivided solely for the purpose of a bona fide gift of a lot or lots, and the person intending to subdivide the land certifies upon forms provided by the department that the proposed subdivision is a gift; provided that this limited exemption shall not relieve the donee of the lot, or lots, of the responsibility, and it shall be the responsibility of such donee to submit plans and specifications in accordance with this chapter in the event that such donee subsequently intends to (1) convey to others for consideration any such lot, or lots, or (2) intends to construct thereon a structure from which sewage or other waste will be discharged.

IV. (a) The repair or replacement in-kind of a sewage effluent disposal area shall qualify for a permit by rule, provided all of the following criteria are met:

(1) The existing system receives only domestic sewage.

(2) There is no increase in sewage loading proposed for the repaired or replacement system.

(3) The bottom of the bed is located no less than 24 inches above the seasonable high water table.

(4) The system is located 75 feet or more from an abutter's well unless there is a standard well release form recorded with the registry of deeds in accordance with RSA 485-A:30-b or there is an existing department waiver to the distance for the abutter's well.

(5) The system is located 75 feet or more from the owner's well unless there is an existing department waiver to the distance for the owner's well.

(6) The existing system received prior construction and operational approval from the department and the replacement or repaired system will conform to the provisions of such approval, provided the department may by rule require a minimum septic tank size of 1,000 gallons.

(7) The system is not within 75 feet of any surface water, water supply well, or very poorly drained soil unless authorized by the prior departmental approval described in subparagraph (6).

(8) No new waivers to the department's rules are requested.

(9) The system has not been previously repaired or replaced under a permit by rule in accordance with the provisions of this paragraph.

(b) Construction of the system may proceed upon the submission of an application to the department by a permitted designer under RSA 485-A:35 and receipt of the permit by rule from the department.

(c) The repaired or replacement system shall not be covered or placed in operation without final inspection

and approval by an authorized agent of the department. All inspection by the department shall be accomplished within 7 business days after receipt of written notice from the installer that the system is ready for inspection. The installer shall provide the authorized agent of the department, at the time of the inspection, a copy of the previously approved plan bearing the state approval stamp and associated operational approval, and an existing conditions plan bearing the seal of the permitted designer performing work under the permit by rule.

(d) The applicant submitting the permit by rule application shall assume all liability and responsibility for the components of the design that are part of the system being repaired or replaced under the permit by rule.

(e) The installer constructing the system shall assume all liability and responsibility for the construction of the system components repaired or replaced under the permit by rule.

(f) For purposes of this paragraph, "in-kind" shall mean a repair or replacement of the effluent disposal area in strict accordance with what is shown on the previously approved plan.

**Source.** 1989, 339:1. 1996, 228:106. 2012, 174:2, eff. June 11, 2012.

## **Section 485-A:34**

### **485-A:34 Soil Testing; Inspections. –**

I. The department shall require soil data describing soil types and their physical and related characteristics as exist in the proposed subdivision. Such soil data will consist of soils maps and charts as prepared by the U.S. Department of Agriculture, Natural Resources Conservation Service, or equivalent. The data provided by the soils map will supplement the information obtained by percolation tests and such other independent examination as the department may require to establish the adequacy of the proposed sewage or waste disposal facilities.

II. Lot sizes will be in accordance with the type of soil and its ability to absorb wastes without polluting water supplies or adjoining waters.

III. In all cases involving inspection of sewage or waste disposal systems in cities or towns which employ a full time health officer and/or building inspector, the department may delegate to such officer or inspector the responsibility for inspecting the proposed system as required under paragraph I of this section. In cities and towns which do not maintain full time health officers and/or building inspectors, the department may delegate the responsibility for such inspections to any local official deemed qualified by the department to fulfill the requirements of paragraph I of this section. All inspections delegated by the department under this paragraph to health officers, building inspectors or any other local officials shall be accomplished within 2 business days after receipt of written notification from the builder that such system is ready for inspection.

IV. The department may reject applications for septic tank disposal systems in those areas where there is already a high concentration of septic tanks on adjacent, contiguous or nearby areas or if the application is an obvious expansion, addition or annexation to an area which has already reached the maximum allowable concentration of sewage disposal through septic tanks and leaching systems.

**Source.** 1989, 339:1. 1995, 206:2. 1996, 228:106, eff. July 1, 1996.

## **Section 485-A:35**

### **485-A:35 Permit Eligibility; Exemption. –**

I. (a) All applications, plans, and specifications submitted in accordance with this chapter for subsurface sewage or waste disposal systems shall be prepared and signed by the individual who is directly responsible for them and who has a permit issued by the department to perform the work. The department shall issue a

permit to any individual who applies to the department, pays a fee of \$80, and demonstrates a sound working knowledge of the procedures and practices required in the site evaluation, design, and operation of subsurface sewage or waste disposal systems. The department shall require an oral or written examination or both to determine who may qualify for a permit. Permits shall be issued from January 1 and shall expire December 31 of every other year, subject to the grace periods specified in subparagraphs (c) and (d). Permits shall be renewable upon proper application, payment of a biennial permit fee of \$80, and documentation of compliance with the continuing education requirement of subparagraph (b). A permit issued to any individual may be suspended, revoked or not renewed only for just cause and after the permit holder has had a full opportunity to be heard by the department. An appeal from a decision to revoke, suspend, or not renew a permit may be taken pursuant to RSA 541. All fees shall be deposited in the subsurface systems fund established in RSA 485-A:30, I-b.

(b) Permitted designers shall complete a minimum of 6 hours biennially of continuing education approved by the department. Any permitted designer who is also a permitted septic system installer under RSA 485-A:36 may fulfill the continuing education requirements for both permits with the same approved 6 hours of continuing education.

(c) A permitted designer who fails to file a complete application for renewal, the biennial permit fee, and documentation that the required continuing education has been completed with the department prior to the expiration of the permit shall pay an additional late renewal fee of \$80 with the renewal application, biennial permit fee, and documentation, provided such fees, application, and documentation are filed with the department within 30 days of the permit expiration date.

(d) If the renewal application, biennial permit fee, late renewal fee, and documentation are not filed within 30 days of the permit expiration date, the permit shall be deemed suspended. The permit holder may request reinstatement of the permit within 60 days of the suspension by submitting a complete application for renewal, the biennial permit fee specified in subparagraph (a), the late renewal fee specified in subparagraph (c), documentation that the required continuing education has been completed, and a reinstatement fee of \$80. If the individual does not request reinstatement within 60 days of the suspension, the permit shall be deemed void. Any individual whose permit has become void who wishes to obtain a designer's permit shall apply as for a new permit pursuant to subparagraph (a).

(e) No individual whose permit has been suspended or voided pursuant to subparagraph (d) shall submit any design to the department for a subsurface sewage or waste disposal system. Submittal of such a design after the designer's permit has been suspended or voided pursuant to subparagraph (d) shall constitute a violation of the provisions of this subdivision that is subject to the penalties specified in RSA 485-A:43.

II. Any person who desires to submit plans and specifications for a sewage or waste disposal system for the person's own domicile shall not be required to obtain a permit under this paragraph provided that the person attests to eligibility for this exemption in the application for construction approval. The commissioner shall adopt rules, prepared under the supervision of a professional engineer licensed to practice engineering in the state of New Hampshire, pursuant to RSA 541-A, relative to requiring a permit holder to be a licensed professional engineer with a civil or sanitary designation in order to submit applications for construction approval in certain complex situations. All fees collected pursuant to this section shall be deposited in the subsurface systems fund established in RSA 485-A:30, I-b.

**Source.** 1989, 339:1. 1994, 312:1. 1996, 228:80, 106. 2008, 349:4. 2009, 144:44. 2010, 342:1, 2, eff. Sept. 18, 2010.

## **Section 485-A:36**

### **485-A:36 System Installer Permit. –**

I. (a) No individual shall engage in the business of installing subsurface sewage or waste disposal systems under this subdivision without first obtaining an installer's permit from the department. The permit holder shall be responsible for installing the subsurface sewage or waste disposal system in strict accordance with the approved plan. The department shall issue an installer's permit to any individual who submits an application provided by the department, pays a fee of \$80 and demonstrates a sound working knowledge of RSA 485-A:29-35 and the ability to read approved waste disposal plans. The department shall require an oral or written examination or both to determine who may qualify for an installer's permit. Permits shall be issued from January 1 and shall expire December 31 of every other year. Permits shall be renewable upon proper application, payment of a biennial permit fee of \$80, and documentation of compliance with the continuing education requirement of subparagraph (b). The installer's permit may be suspended, revoked or not renewed for just cause, including, but not limited to, the installation of waste disposal systems in violation of this subdivision or the refusal by a permit holder to correct defective work. The department shall not suspend, revoke or refuse to renew a permit except for just cause until the permit holder has had an opportunity to be heard by the department. An appeal from such decision to revoke, suspend or not renew a permit may be taken pursuant to RSA 21-O:14. All fees shall be deposited in the subsurface systems fund established in RSA 485-A:30, I-b.

(b) Permitted installers shall complete a minimum of 6 hours biennially of continuing education approved by the department. Any permitted installer who is also a permitted designer under RSA 485-A:35 may fulfill the continuing education requirements for both permits with the same approved 6 hours of continuing education.

(c) A permitted installer who fails to file a complete application for renewal, the biennial permit fee, and documentation that the required continuing education has been completed with the department prior to the expiration of the permit shall pay an additional late renewal fee of \$80 with the renewal application, biennial permit fee, and documentation, provided the fees, renewal application, and documentation are filed with the department within 30 days of the permit expiration date.

(d) If the renewal application, biennial permit fee, late renewal fee, and documentation are not filed within 30 days of the permit expiration date, the permit shall be deemed suspended. The permit holder may request reinstatement of the permit within 60 days of the suspension by submitting a complete application for renewal, the biennial permit fee specified in subparagraph (a), the late renewal fee specified in subparagraph (c), documentation that the required continuing education has been completed, and a reinstatement fee of \$80. If the individual does not request reinstatement within 60 days of the suspension, the permit shall be deemed void. Any individual whose permit has become void who wishes to obtain an installer's permit shall apply as for a new permit pursuant to subparagraph (a).

(e) No individual whose permit has been suspended or voided pursuant to subparagraph (d) shall install any subsurface sewage or waste disposal system. Installation of such a system after the installer's permit has been suspended or voided pursuant to subparagraph (d) shall constitute a violation of the provisions of this subdivision that is subject to the penalties specified in RSA 485-A:43.

II. Any person who desires to install or repair a waste disposal system for his own domicile shall not be required to obtain an installer's permit as provided in paragraph I, provided he complies with rules adopted by the department relative to such systems.

**Source.** 1989, 339:1. 1996, 228:106. 2008, 349:5. 2009, 144:45. 2010, 342:3, 4, eff. Sept. 18, 2010.

## Section 485-A:37

**485-A:37 Maintenance and Operation of Subsurface Septic Systems.** – Any person who has installed or otherwise acquired a subsurface sewage or waste disposal system installed in accordance with the provisions of this subdivision is required to operate and maintain said system in such a manner as to prevent a

nuisance or potential health hazard due to failure of the system. Failure to so operate and maintain shall be considered a violation of this chapter and shall be subject to the penalty as provided in RSA 485-A:43, IV. The department or its duly authorized agents are authorized to enter any and all premises at all reasonable hours for the purpose of inspecting and evaluating the maintenance and operating conditions of subsurface sewage or waste disposal facilities. As circumstances warrant, the department or its duly authorized agents are empowered to issue compliance orders in writing under the provisions of this section. Nothing in this section shall be construed to limit or modify the authority conferred upon the department or local health officers under the provisions of RSA 147 or upon local officials certified by the department under the provisions of RSA 485-A:42.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

## Section 485-A:38

### **485-A:38 Approval to Increase Load on a Sewage Disposal System. –**

I. Prior to expanding any structure or occupying any existing structure on a full-time basis, which would increase the load on a sewage disposal system, the owner of such structure shall submit an application for approval of the sewage disposal system to the department. Application for approval shall include one of the following:

- (a) Evidence that the existing sewage disposal system meets the requirements of the department for the intended usage or the town's minimum standards for use or occupancy prescribed under RSA 48-A:11, whichever is more stringent.
- (b) The design for a new system which meets the requirements of the department for the intended use or the town's minimum standards for use or occupancy, whichever is more stringent.

II. The fee for application under this section shall not exceed fees charged for new design applications.

II-a. (a) No construction or operational approval shall be required from the department prior to expanding, relocating, or replacing any structure that does not increase the load on a sewage disposal system, as long as all of the following conditions are met:

(1)(A) The lot is served by a sewage disposal system that received construction and operational approval from the department within 20 years of the date of the issuance of a building permit for the proposed expansion, relocation, or replacement; or

(B) The lot is 5 acres or more in size; or

(C) The lot is served by an off lot effluent disposal area.

(2) If the property is nonresidential, no waivers were granted in the construction or operational approval of any requirements for total wastewater lot loading, depth to groundwater, or horizontal distances to surface water, water supply systems, or very poorly drained soils.

(3) When applicable, the proposed expansion, relocation, or replacement complies with the requirements of the shoreland water quality protection act, RSA 483-B.

(b) An owner of a project that requires department approval to proceed because neither of the conditions of subparagraphs (a)(1)(A) or (B) are met, may either submit for approval a design for a new sewage disposal system or apply for a permit by rule for in-kind replacement under RSA 485-A:33, IV. Under either approach, once approval for the sewage disposal system is received from the department, work may commence on expanding, relocating, or replacing the structure. Construction of the sewage disposal system is not required to satisfy the requirements of this subparagraph.

III. The commissioner shall adopt rules under RSA 541-A requiring a person to comply with the provisions of paragraph I before taking any action which would increase the load on a sewage disposal system.

**Source.** 1989, 339:1. 1996, 228:106, 110. 2010, 342:5. 2011, 224:411. 2012, 147:1, eff. June 7, 2012. 2017, 238:3, eff. Sept. 16, 2017.

## **Section 485-A:39**

### **485-A:39 Waterfront Property Sale; Site Assessment Study. –**

I. Prior to the execution of a purchase and sale agreement for any developed waterfront property using a septic disposal system, the owner of the property shall, at the owner's expense, engage a permitted subsurface sewer or waste disposal system designer to perform a site assessment study to determine if the site meets the current standards for septic disposal systems established by the department. The site assessment study shall include an on-site inspection. If the site assessment is not complete prior to the time that the buyer and seller enter into a purchase and sale contract, the contract shall be subject to the buyer's acceptance of the completed site assessment.

II. The site assessment study form shall become a part of the purchase and sale agreement.

III. The site assessment study form, with stated findings, shall be given to the buyer and the seller and receipt of the form shall be acknowledged in writing by the buyer and the seller.

IV. Failure of the seller or the seller's agent to notify the buyer of the findings or deliver the completed site assessment study form pursuant to paragraph III of this section shall be a violation and, notwithstanding RSA 651:2, shall be punishable by a fine not to exceed \$500.

V. The site assessment study shall consist of 3 sections:

(a) Section A shall include the name, address, and telephone number of the seller and the seller's agent and the location and a brief description of the property, including the tax map reference and lot number.

(b) Section B shall include the lot size, slope, loading (based on the number of bedrooms in the structure), water source, soil type, and estimated seasonal high water table information from U.S. Natural Resources Conservation Service maps. A space shall be included on the form for the permitted designer to write his assessment of the site for the current use of the system, based upon the criteria and information required in this subparagraph.

(c) Section C shall include information about the present septic disposal system, if available. If the installed system was approved by the department, a copy of the approval form, approval number and plan shall be attached to the site assessment study.

VI. The department shall design the site assessment form pursuant to paragraph V of this section. The commissioner shall adopt rules pursuant to RSA 541-A relative to the procedures for the availability and distribution of the form to interested parties.

VII. An assessment indicating that the site fails to meet any of the criteria established under this section shall not prohibit the sale of the property but shall be disclosed to the buyer as full and proper notice of the possible limitations of the site for a septic disposal system.

VIII. If the septic disposal system designer, during the course of a site assessment, discovers evidence that there is sewage discharge on the ground surface or directly into surface waters, the designer shall notify, in writing, the department and the local health officer, and shall include that information in the site assessment report.

**Source.** 1989, 339:1. 1992, 278:2. 1995, 206:2. 1996, 228:81, 106. 2007, 177:1. 2008, 349:1, eff. Jan. 1, 2009.

## **Section 485-A:40**

### **485-A:40 Reconsideration and Appeal Procedure. –**

If any person submitting plans and specifications to the department for its approval is aggrieved or dissatisfied with its decision, he may file a motion for reconsideration and shall have a right of appeal from the decision of the department in the following manner:

- I. Within 20 days after any decision of the department, any person whose rights may be directly affected may apply to the department for reconsideration of any matter determined by the department in its decision, specifying in the motion for reconsideration the grounds therefor, and the department may reconsider and revise its decision if in the opinion of the department good reason therefor is stated in said motion.
- II. Such motion shall set forth fully every ground upon which it is claimed that the decision of the department is unlawful or unreasonable. No appeal from any decision of the department shall be taken unless the appellant shall have made application for reconsideration as provided in this section, and when such application shall have been made, no ground not set forth in such application shall be urged, relied on, or given any consideration by the court, unless the court for good cause shown shall allow the appellant to specify additional grounds.
- III. Upon the filing of a motion for reconsideration, the department shall within 30 days either grant or deny the motion, and, at the same time, shall affirm, modify or reverse its decision.
- IV. Within 30 days after the application for reconsideration is denied, or if the application is granted, then within 30 days after the decision on such reconsideration, the applicant may appeal by petition to the superior court.
- V. Upon the hearing, the burden of proof shall be upon the party seeking to set aside the decision of the department to show that the same is unreasonable or unlawful, and all findings of the department upon all questions of fact properly before it shall be deemed to be prima facie lawful and reasonable; and the order or decision appealed from shall not be set aside or vacated, except for errors of law, unless the court is persuaded by the balance of probabilities, on the evidence before it, that the decision is unjust or unreasonable.
- VI. Any person whose rights may be directly affected by said appeal may appear and become a party, or the court may order such persons to be joined as parties as justice may require.
- VII. Upon the filing of an appeal, the clerk of court shall issue a summons requiring a certified copy of the record appealed from to be filed with the court. The filing of an appeal shall not suspend the decision appealed from, unless the court, on application and for good cause shown, shall grant a restraining order.
- VIII. All evidence transferred by the department shall be, and all additional evidence received may be, considered by the court regardless of any technical rules which might have rendered the same inadmissible if originally offered in the trial of an action at law.
- IX. The final judgment upon every appeal shall be a decree dismissing the appeal, or vacating the decision complained of in whole or in part, as the case may be; but in case such decision is wholly or partly vacated the court may also, in its discretion, remand the matter to the department for such further proceedings, not inconsistent with the decree, as justice may require.
- X. An order of court to send up the record may be complied with by filing either the original papers or duly certified copies, or of such portions of such papers, as the order may specify, together with a certified statement of such other facts as show the grounds of the action appealed from.
- XI. The court may take evidence or appoint a referee to take such evidence as it may direct and report the same with his findings of fact and conclusions of law.
- XII. Costs shall not be allowed against the department unless it shall appear to the court that it acted with gross negligence, or in bad faith, or with malice in making the decision appealed from.
- XIII. All proceedings under this chapter shall be entitled to a speedy hearing. If such hearing cannot be had within 30 days after the filing of the appeal, upon request of the appellant the matter shall be referred to a master.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996. 2014, 204:30, eff. July 11, 2014.

## **Section 485-A:41**

### **485-A:41 Rulemaking; Duties of the Commissioner. –**

The commissioner shall:

- I. Exercise general supervision over the administration and enforcement of this subdivision.
- II. Employ necessary personnel.
- III. Prohibit construction of systems which would pollute the surface waters or groundwaters of the state, until an acceptable and practicable method exists which will prevent the pollution.
- IV. Adopt rules, pursuant to RSA 541-A and after public hearing, relative to the implementation of this subdivision. The commissioner shall adopt rules relative to the circumstances under which the commissioner may grant a waiver of any rule, except that no waivers of rules relating to site loading or set-back distances to ground or surface waters shall be allowed for sewage or waste disposal systems on lots in subdivisions created after September 1, 1989. A waiver must be consistent with the intent of this subdivision and have a just result. In particular, an encroachment waiver shall meet the following criteria:
  - (a) The proposed waiver shall not encroach upon the right of the owner of abutting property to fully utilize his land, unless said property owner has granted consent in the form of a signed waiver or deeded easement; and
  - (b) Denial of the waiver would result in unnecessary hardship to the owner due to special characteristics of the property.
- V. Adopt rules relative to the application for and granting of permits by rule for repair or replacement of certain sewage or waste disposal systems under RSA 485-A:33, IV.

**Source.** 1989, 339:1. 1996, 228:82, 110. 2012, 174:3, eff. June 11, 2012.

## **Section 485-A:42**

### **485-A:42 Enforcement. –**

- I. (a) The department may issue an order to any person in violation of this chapter, of rules adopted under this chapter, or of any condition of a permit issued under this chapter.
  - (b) The department may require such remedial measures as are necessary to correct the violation.
  - (c) Such order may be appealed in accordance with RSA 21-O:14.
- II. The written order issued under the provisions of paragraph I shall be recorded by the department in the registry of deeds for the county in which the property is situated and, upon recordation, the order shall run with the land; provided, however, that an appropriate description of the land involved including the accurate name of the land's owner shall be incorporated in the order. No fee shall be charged for recording such an administrative order; however, the fee for discharge of any such order shall be the same as for the discharge of a real estate lien.
- III. Upon certification by the department, local officials are hereby authorized and fully empowered to exercise concurrent jurisdiction in the enforcement of this subdivision.

**Source.** 1989, 339:1. 1996, 228:83, 106, eff. July 1, 1996.

## **Section 485-A:43**

**485-A:43 Penalties. –**

- I. Any person who shall violate any of the provisions of this subdivision or who shall knowingly fail, neglect or refuse to obey any order of the department or member or authorized agent of the department issued under the authority of this subdivision, or who shall knowingly make any misstatement of material fact for which said person is personally responsible in connection with an application for an approval pursuant to this subdivision shall be guilty of a misdemeanor if a natural person, or guilty of a felony if any other person.
- II. Any person who knowingly produces any erroneous or fallacious data with regard to any application or plan submitted pursuant to this subdivision shall bear the full responsibility for same, and shall be guilty of a misdemeanor if a natural person, or guilty of a felony if any other person.
- III. Notwithstanding any other penalty or fine for which liability is provided under this subdivision, any person may be liable to the state, in an action commenced in the name of the state, for a civil forfeiture of not more than \$10,000 per day per violation for such violation, failure, neglect, refusal or any misstatement for which said person is personally responsible. Such forfeiture may be levied by the superior court in connection with actions for injunctive relief commenced pursuant to RSA 485-A:44. The proceeds of any civil forfeiture levied under this section shall be utilized in the enforcement of this subdivision. In determining a civil forfeiture, the court may take into consideration all relevant circumstances, including the degree of noncompliance, the extent of harm caused by the violation, the nature and persistence of the violation, the time and cost associated with the investigation by the state and the economic impact of the penalty on the liable person. The cost of corrective action shall not be considered in determining the civil forfeiture.
- IV. Any person neglecting or refusing to comply with the provisions of RSA 485-A:37 shall be subject to a civil forfeiture not to exceed \$1,000 for each day of neglect or refusal after notice as provided for in RSA 485-A:37.
- V. The commissioner of environmental services, after notice and hearing pursuant to RSA 541-A, may impose an administrative fine not to exceed \$2,000 for each offense upon any person who violates any provision of this subdivision including any rule adopted under the provisions of this chapter. Rehearings and appeals from a decision of the commissioner under this paragraph shall be in accordance with RSA 541. Any administrative fine imposed under this section shall not preclude the imposition of further penalties under this subdivision. The proceeds of administrative fines levied pursuant to this paragraph shall be deposited by the department in the general fund. The commissioner shall adopt rules, under RSA 541-A, relative to:
- (a) A schedule of administrative fines which may be imposed under this paragraph for violations of this subdivision as provided above.
  - (b) Procedures for notice and hearing prior to the imposition of an administrative fine.

**Source.** 1989, 339:1. 1995, 217:8. 1996, 228:106. 2008, 169:1, eff. Jan. 1, 2009.

**Section 485-A:44****485-A:44 Injunction to Enforce. –**

- I. On application of the department, the superior court or any justice of the court, in term time or in vacation, may enjoin any act in violation of this subdivision.
- II. Municipalities may apply to a justice of the superior court for injunctive relief against existing or impending violations of this subdivision. The municipality shall give notice of any such action to the attorney general and the commissioner of environmental services, who may take such action as they deem necessary to ensure uniform statewide enforcement, including but not limited to joining the action, assuming sole prosecution of the action, or, as of right, dismissing the action without prejudice. Such notice shall be given at least 30 days prior to the commencement of any such action, unless more immediate action is necessary to prevent irreparable environmental damage or other serious public harm, in which case such notice shall be

given as soon as practicable, but in no event later than the date of commencement of the action. This paragraph shall not be construed to affect, in any manner, existing authority of municipalities to act based upon the provisions of other statutes or local ordinances.

### **Section 485-A:44-a**

**485-A:44-a Repealed by 2019, 30:3, eff. Nov. 20, 2020. –**

## **Winnepesaukee River Basin Control**

### **Section 485-A:45**

**485-A:45 Authority to Acquire, Construct, and Operate. –**

- I. The department is authorized and directed to acquire, plan, construct, and operate, to serve certain municipalities within the Winnepesaukee river basin (including, but not necessarily limited to Meredith, Laconia, Gilford, Belmont, Sanbornton, Tilton, Northfield, and Franklin) any and all sewage and waste disposal facilities (meaning only those facilities eligible for state aid) in accordance with basin and regional treatment needs consistent with federal and state requirements.
- II. The word "construction" shall include all engineering services in addition to the construction of new sewage or waste treatment plants, pumping stations, and intercepting sewers; the altering, improving or adding to existing treatment plants, pumping stations, and intercepting sewers (except those intercepting sewers and facilities retained by municipalities); or any other associated work, or both, the intent being to include within the department area of responsibility all construction work considered eligible for state financial assistance under the provisions of RSA 486, and including any necessary land acquisition, easements and rights-of-way.
- III. To achieve a high degree of reliability and to provide for efficient layout, construction and maintenance of pollution control facilities, the department is authorized to locate sewer and related facilities in all public roadways, whether owned or controlled by a municipality or the state subject to RSA 236:9.
- IV. The department is also obligated to restore the public roads, when disturbed for the purpose indicated in paragraph III, to a condition acceptable to local and state highway authorities.
- V. Nothing in this section shall be construed to impair or repeal the authority conferred upon municipalities, under RSA 149-I, to construct main drains and common sewers. Nothing in this section shall be construed to impair or repeal the authority conferred upon municipalities under RSA 147 to make and enforce regulations concerning disposal of wastes and abatement of nuisances. The municipalities served under this chapter may, by ordinance or regulation, increase the 100 foot distance contained in RSA 147:8 and RSA 147:11. Such regulations shall apply to the municipal sewerage system and to the regional facilities located within the municipality.
- VI. Nothing contained in this section shall be construed to entitle municipalities to receive state aid in excess of their entitlement as provided for in connection with construction as defined in RSA 486.
- VII. To produce maximum benefits with the least expenditure of federal, state, and local funds, the department, or any municipality served under this subdivision, is authorized, under terms mutually agreed upon, to accept full responsibility for the planning of sewerage projects involving a mixture of eligible and ineligible facilities as defined in RSA 486. The department and the particular municipality involved will bear their pro-rata share of the associated costs for the work performed under such an agreement.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

### **Section 485-A:46**

**485-A:46 Existing Disposal Systems.** – Any future payments due from a municipality which has undertaken construction (or engaged in engineering study, planning or design), as outlined in RSA 485-A:45, since July 1, 1947, to pay for such construction, study, planning, or design, and the facility involved is acquired by the department, shall automatically become the obligation of the state, including engineering services and contract costs. With respect to payments for engineering services and contract costs in connection with contracts entered into after July 1, 1967, it is the intention of this section to obligate the state only if the contract giving rise to such obligations has been entered into pursuant to the provisions of RSA 485-A:4, XII.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

### **Section 485-A:47**

**485-A:47 Administration.** – To administer the provisions of this chapter and to perform such other related duties as may be required, the department of environmental services is designated as the agency to receive and utilize any federal or other aids which may at any time be made available in the interest of water pollution control in the basin. The department is empowered to hire consulting engineering firms for purposes of project design and to employ such professional, technical, clerical, accounting, or other staff or consulting personnel as are required to implement the provisions of this subdivision and to arrange for the orderly transfer of ownership and operation of existing pollution abatement facilities to the department on behalf of the state of New Hampshire within the limits of legislative appropriations. Any personnel (other than consultants) employed by the department shall be subject to the personnel laws of the state. This subdivision shall in no way impair or render null and void existing contracts between municipalities, contractors or other parties, or any of them, in connection with pollution control projects or sewerage, sewage or waste service contracts within the basin. Nothing in this subdivision shall be construed as prohibiting future sewerage or waste service contracts otherwise authorized by law between municipalities directly connected to the regional facilities provided for by this subdivision and other persons, including but not limited to municipalities, served or to be served by such facilities but not directly connected to such facilities. All such future contracts, however, shall be submitted at least 60 days in advance of their effective dates to the department, which is empowered to disapprove the terms of any such future contract in whole or in part when in its judgment the efficient administration or the purposes of this subdivision would be adversely affected, and such contract shall not be valid to the extent it is disapproved. In any such contract, unless otherwise specifically provided in the contract, the person or persons served by such regional facility but not directly connected to such facility shall have strict responsibility for the accurate measurement of the amount of sewage or waste disposed of by such person or persons and shall be liable to the municipality directly connected to such regional facilities for the entire amount of sewage or waste, as measured, if any inaccuracy is in favor of such municipality, and for the actual amount of sewage or waste, as estimated, if any inaccuracy is in favor of such person or persons. The commissioner is authorized to adopt, pursuant to RSA 541-A and after public hearing, such rules as are necessary to implement the provisions of this subdivision.

**Source.** 1989, 339:1. 1996, 228:84, eff. July 1, 1996.

## Section 485-A:48

**485-A:48 Application of the Statutes.** – All present powers, duties and functions conferred upon municipalities within the basin in connection with the planning, construction, financing and operation of sewage or waste treatment facilities (excepting common sewers and other collector facilities considered ineligible for state grants under the provisions of RSA 486), or both, as are contained in RSA 485, 485-A, 149-I and applicable statutes, are transferred to the department. Personnel of municipalities engaged in the operation of sewage or waste treatment facilities, or both, as referred to in this subdivision, shall be given an opportunity to become employees of the department (with all benefits previously accrued) upon the effective date of the transfer of the municipal sewage or waste treatment facilities, or both, to the department. In no case shall personnel accepting state employment, as provided under this subdivision, be paid less than the salary paid such individuals as of January 1, 1973, nor shall they suffer a loss or reduction in benefits associated with tenure of service. It shall be the responsibility of the municipality previously employing the individual to supplement such state of New Hampshire benefits if they are less than the employee might have received if his employment had continued uninterrupted with the municipality.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

## Section 485-A:49

### **485-A:49 Expenditures.** –

I. With the approval of the governor and council, the department may use state, federal or other funds accruing to the department and funds borrowed from the state water pollution control and drinking water revolving loan fund established under RSA 486:14 for the acquisition of existing sewage or waste treatment facilities, design and construction of new sewage or waste treatment facilities, alteration, improvement or additions to existing sewage or waste treatment facilities, pumping stations and intercepting sewers, inclusive of operation and maintenance of same; the terms operation and maintenance of treatment facilities shall include maintenance of all buildings, equipment, supplies, and administrative costs associated with the management of the treatment facilities, and for such other purposes as may be involved in the operation of an effective regional pollution control program. The department may purchase, take and hold for the state such materials, lands, easements and rights-of-way as may be required for the purposes of this subdivision. If the department is unable to purchase lands, easements or rights-of-way at what is deemed reasonable compensation, the department shall request the governor and council to appoint a commission to assess the damages sustained by the owner, and thereupon proceedings shall be conducted in the same manner and in accordance with provisions of RSA 230.

I-a. In addition to the uses set forth in paragraph I, and with the approval of the governor and council, the department may evaluate the most cost effective operation of such systems, including evaluating the cost effectiveness of alternative governance structures for the Winnepesaukee River basin control program under this subdivision. The department may not make any changes to the current governance structure unless specifically authorized by statute. The department may present any recommendations concerning alternative governance structures to the general court for consideration.

II. To provide funds for the municipal share of the costs involved pursuant to this subdivision, the state treasurer is authorized to borrow upon the credit of the state not exceeding the sum of \$3,000,000 and for said purposes may issue bonds and notes in the name and on behalf of the state of New Hampshire in accordance with the provisions of RSA 6-A.

III. The payments of principal and interest on the bonds issued under paragraph II shall be made when due from the special fund established by RSA 485-A:50, VI.

**Source.** 1989, 339:1. 1996, 228:106. 2005, 117:1, eff. Aug. 14, 2005. 2016, 125:1, eff. July 19, 2016.

## **Section 485-A:50**

### **485-A:50 Municipal Assessments. –**

- I. The department shall annually, at the beginning of each fiscal year, assess each municipality served by the regional sewage disposal facilities provided for by this subdivision, a sum sufficient to recover its proportional share of the total in relation to the total costs estimated to be incurred during said fiscal year in treating, transporting and disposal of sewage of the communities served and those to be served; the proportional share of each community shall be determined by the procedure provided for in paragraph IV.
- II. The department shall annually, at the beginning of each fiscal year, assess each municipality served or to be served by the regional sewage disposal facilities provided for by the provisions of this subdivision the costs estimated to be incurred during said fiscal year in administering this subdivision, plus a charge for amortization charges on such costs of all facilities amounting to 5 percent of the total amortization charges, meaning principal and interest, on such charges. The proportional share of each community's costs shall be determined by the procedure provided for in paragraph IV.
- III. The respective share of the assessments made in paragraphs I and II shall be paid to the department by each municipality quarterly on July fifteenth, October fifteenth, January fifteenth, and April fifteenth of that fiscal year, except for capital cost recovery assessments which shall be paid annually on July fifteenth. After the close of each fiscal year, the department shall ascertain its actual total expenses in accordance with the foregoing provisions, and then shall adjust the assessment for the second quarterly payment of the new fiscal year for each such municipality served for any under-payment or over-payment by each such municipality served for the prior fiscal year.
- IV. The assessments provided to be made by this section shall be made by taking into account the volume and strength of the industrial, domestic, commercial, and all other waste discharges treated or the estimated volume and strength of the industrial, domestic, commercial and all other waste discharges to be treated and techniques of treatment required. Proportional costs as determined by the department, associated with transporting raw and treated sewage through a major interceptor from a municipality at which it is generated or is to be generated to the point of treatment or discharge shall be allocated to the municipality which uses or will use the interceptor on the basis of volume and distance traveled or estimated volume and distance traveled. In determining said assessments for each municipality, the department shall abide by federal regulations which govern the allocation of costs and receipt of payments by industry for industrial discharges. Any operating and maintenance costs over and above what has been determined to be proportional by the department shall be an obligation of the state.
- V. The municipality may recover charges assessed by means of user charges, connection fees, or such other techniques as may be utilized under state and local law, including sewage, sewerage, and waste service contracts, except that municipalities with industrial waste must abide by federal and state regulations which govern recovery of costs from said industries.
- VI. All funds collected by the department by virtue of the assessments authorized under this section shall be paid to the state treasurer who shall keep the same in a special fund.
- VII. Any municipality aggrieved or dissatisfied with any annual assessment levied against it under the provisions of this section may file a motion for reconsideration by the department control in the same manner and as provided in RSA 485-A:40.
- VIII. The charges assessed by the department shall be made against the municipalities which are directly connected to the regional facilities provided for by this subdivision and shall include:
  - (a) any sewage or waste generated within the municipality and transported to such regional facilities, and
  - (b) any sewage or waste generated outside the municipality and being transported through such municipality's

sewage system. Such municipality may recover the charges assessed in accordance with paragraph V.

**Source.** 1989, 339:1. 1996, 228:106. 2007, 5:1, eff. July 1, 2007.

## **Section 485-A:51**

### **485-A:51 Replacement Fund Established. –**

- I. There is established a nonlapsing, revolving fund to provide capital for repair and replacement of major components of the water pollution control facilities administered under this subdivision which cannot be absorbed as regular budgetary items. The replacement fund is to be capitalized by contributions from the members served by the facilities based on each member's projected usage of the facilities.
- II. The fund shall equal 5 percent of the equipment and other depreciable assets of the treatment facilities. The value of the equipment and other depreciable assets shall be computed every 5 years, beginning in 1990, and shall be based on current replacement costs.
- III. Each member's share of the total fund shall be contributed over a period of 10 years after the initial establishment of the fund and shall be paid as a yearly surcharge to the member's operating charges. Thereafter, each member's surcharge shall be prorated as membership and design changes require.
- IV. Once a member has fully funded its share of the replacement fund, the member shall make no further contributions until the fund is utilized for repair or replacement of a facility used by that member. Expenses for which the fund is used shall be proportionally charged against each member's contributions to the fund for the facilities utilizing the fund, which will subsequently be reimbursed by the member in successive years in addition to the member's yearly contribution to the fund, until the member's share of the fund is fully restored.
- V. If a repair or replacement cost exceeds the value of the fund established for that particular facility, the repair cost shall be paid out of the portion of the fund established for other facilities, but reimbursement to the fund shall always be assessed back to members based on their projected usage of the facilities needing repair.
- VI. As new facilities, if any, are added to the system, additional assessments shall be made to the members benefiting from these facilities, prorated on the basis of projected use.
- VII. If a new member joins the system, the assessments shall be modified to reflect the new member's benefit from the facilities, and excess prior payments made by other members, if any, shall be credited to their accounts.
- VIII. All contracts paid for using the fund shall be submitted to the governor and council for approval.
- IX. This nonlapsing, revolving special purpose fund is continually appropriated to be used by the department in accordance with this subdivision. All moneys shall be deposited with the state treasurer who shall keep this money in a separate fund, notwithstanding RSA 6:12. The state treasurer shall invest the moneys deposited with him as provided by law. Interest received on investments made by the state treasurer shall also be credited to the fund. All such interest shall be added to each member's share of the fund based on each member's contribution to it.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996.

## **Section 485-A:52**

### **485-A:52 Advisory Board Established. –**

- I. There is established a Winnepesaukee River advisory board consisting of one member, from each community, appointed by the board of selectmen of a town or the city council of a city involved. The term of office of each member shall be one year commencing July 1, 1972, and each member shall serve until his or

her successor shall have been appointed. The advisory board shall annually elect a chairman by majority vote of its members, and the board shall meet at least quarterly upon the call of the chairman or at least 3 members of the board in order to consider matters properly coming before it for attention. The advisory board shall meet with the department at suitable intervals to review matters of mutual concern. An annual budget shall be submitted to the advisory board by the department, for review and comment, 60 days prior to the beginning of the new fiscal year. Members of the advisory board shall receive no per diem but shall be entitled to reimbursement for expenses including mileage when in the performance of duties required under this subdivision. Each municipality shall provide funds necessary to reimburse its members to the advisory board.

II. The advisory board shall make a recommendation to the governor and executive council on each request for a contract to plan, design, or construct capital improvements using moneys for expenditures under RSA 485-A:49. The department of environmental services shall include a letter from the advisory board to the governor and executive council documenting the decision and recommendations of the advisory board on such contract for the governor and executive council's consideration before approving or denying such contract.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996. 2016, 104:1, eff. July 18, 2016.

### **Section 485-A:53**

**485-A:53 Insurance.** – The department shall purchase insurance, including extended coverage insurance, to protect the pollution control facilities administered under this subdivision against fire, vandalism, and malicious mischief. The cost of the insurance shall be included in the user fee. If the department determines that any of the foregoing insurance is unavailable or uneconomical, it may request the governor and council to waive the provisions of this section for the term of the coverage. Nothing in this section shall be construed as a waiver of the state's sovereign immunity regardless of the department's ability to procure the types of insurance described in this section.

**Source.** 1989, 339:1. 1996, 228:106, eff. July 1, 1996. 2014, 327:69, eff. Aug. 2, 2014; 146:1, eff. Aug. 15, 2014.

### **Section 485-A:54**

#### **485-A:54 Enforcement and Penalties.** –

I. The department may issue an order to any person in violation of this subdivision, a rule adopted under this subdivision, or any condition in any contract or permit issued or entered into under this subdivision. This order may require such remedial or corrective measures as may be necessary. Any person to whom such an order is directed may appeal in accordance with RSA 21-O:14.

II. If the department determines that the discharge to any state-owned treatment facility presents an imminent threat to the environment or to the operation of the treatment facility, the department may issue an order requiring such action as may be necessary to meet the emergency, or may take necessary action to block the public sewer to prevent the discharge of the waste into the treatment facility. Any order issued under this authority shall take effect immediately. A person to whom such an order is issued or any person affected by action taken by the department under this paragraph may appeal to the commissioner or designee for a hearing on such order or action, which shall be held within 2 working days after receipt of the request for the hearing. The person may appeal the decision on such hearing pursuant to RSA 21-O:14.

III. Any person who violates any of the provisions of this chapter, or any rule adopted or order issued under this subdivision, shall be subject to a civil penalty not to exceed \$10,000 for each violation, or for each day of

a continuing violation.

IV. Any violation of the provisions of this subdivision, or of any rule adopted or order issued under it, or of any condition in any permit issued or contract entered into under the authority of this subdivision, may be enjoined by the superior court upon application by the attorney general.

V. The commissioner of environmental services, after notice and hearing pursuant to RSA 541-A, may impose an administrative fine not to exceed \$2,000 for each offense upon any person who violates any provision of this subdivision, any rule adopted under this subdivision, or any permit or contract entered into under the authority of this subdivision. Rehearings and appeals from a decision of the commissioner under this paragraph shall be in accordance with RSA 541. Any administrative fine imposed under this section shall not preclude the imposition of further penalties under this subdivision. The proceeds of administrative fines levied pursuant to this paragraph shall be deposited by the department in the replacement fund established pursuant to RSA 485-A:51. The commissioner shall adopt rules, under RSA 541-A, relative to:

(a) A schedule of administrative fines which may be imposed under this paragraph for violations of this chapter as provided above.

(b) Procedures for notice and hearing prior to the imposition of an administrative fine.

**Source.** 1989, 339:1. 1995, 217:9. 1996, 228:85, 106, eff. July 1, 1996.

## Certain Household Cleansing Products Prohibited

### Section 485-A:55

#### **485-A:55 Definitions. –**

In this subdivision:

I. "Household cleansing product" means any product, including but not limited to, soaps and detergents used for domestic cleaning purposes, including, but not limited to, the cleansing of fabric, dishes, food utensils and household premises.

II. "Phosphorus" means elemental phosphorus.

III. "Trace quantity" means an incidental amount of phosphorus which is not part of the household cleansing product formulation, is present either as a consequence of manufacturing, to assure product performance for purposes other than cleansing, or to assure container stability, and does not exceed 0.5 percent of the content of the product by weight, expressed as elemental phosphorus.

**Source.** 1994, 303:1, eff. Jan. 1, 1995.

### Section 485-A:56

**485-A:56 Products Prohibited. –** No household cleansing products except those used for lead exposure hazard control purposes shall be distributed, sold or offered for sale in this state, which contain a phosphorus compound in concentrations in excess of a trace quantity.

**Source.** 1994, 303:1. 1995, 306:7. 2009, 282:1, eff. July 1, 2010.

### Section 485-A:57

**485-A:57 Penalty. –** Any person who violates the provisions of this subdivision shall be subject to a civil

penalty not to exceed \$50.

**Source.** 1994, 303:1, eff. Jan. 1, 1995.

# TITLE LXIV

## PLANNING AND ZONING

### CHAPTER 674

### LOCAL LAND USE PLANNING AND REGULATORY POWERS

#### Building Codes

#### Section 674:51

See Emergency Order #23 (NH LEGIS E.O. 2020-23-Emerg. (2020, 2023:1.)), issued pursuant to Executive Order 2020-04 (NH LEGIS E.O. 2020-04 (2020, 1004:1.)) as extended by Executive Orders 2020-05 (NH LEGIS E.O. 2020-05 (2020, 1005:1.)); 2020-08 (NH LEGIS E.O. 2020-08 (2020, 1008:1.)); 2020-09 (NH LEGIS E.O. 2020-09 (2020, 1009:1.)); 2020-010 (NH LEGIS E.O. 2020-010 (2020, 1010:1.)); 2020-014 (NH LEGIS E.O. 2020-014 (2020, 1014:1.)); 2020-015 (NH LEGIS E.O. 2020-015 (2020, 1015:1.)); 2020-016 (NH LEGIS E.O. 2020-016 (2020, 1016:1.)); 2020-017 (NH LEGIS E.O. 2020-017 (2020, 1017:1.)); 2020-018 (NH LEGIS E.O. 2020-018 (2020, 1018:1.)); 2020-020 (NH LEGIS E.O. 2020-020 (2020, 1020:1.)); 2020-021 (NH LEGIS E.O. 2020-021 (2020, 1021:1.)); 2020-022 (NH LEGIS E.O. 2020-022 (2020, 1022:1.)); 2020-023 (NH LEGIS E.O. 2020-023 (2020, 1023:1.)); 2020-024 (NH LEGIS E.O. 2020-024 (2020, 1024:1.)); 2020-025 (NH LEGIS E.O. 2020-025 (2020, 1025:1.)); 2021-01 (NH LEGIS E.O. 2021-01 (2021, 1001:1.)), and related to the COVID-19 State of Emergency, for potential impact on the terms of this section.

#### **674:51 Power to Amend State Building Code and Establish Enforcement Procedures. –**

The state building code established in RSA 155-A shall be effective in all towns and cities in the state and shall be enforced as provided in RSA 155-A:7. In addition, towns and cities shall have the following authority:

I. The local legislative body may enact as an ordinance or adopt, pursuant to the procedures of RSA 675:2-4, additional provisions of the state building code for the construction, remodeling, and maintenance of all buildings and structures in the municipality, provided that such additional regulations are not less stringent than the requirements of the state building code. The local legislative body may also enact a process for the enforcement of the state building code and any additional regulations thereto, and the provisions of a nationally recognized code that are not included in and are not inconsistent with the state building code. Any local enforcement process adopted prior to the effective date of this paragraph shall remain in effect unless it conflicts with the state building code or is amended or repealed by the municipality.

II. Any such ordinance adopted under paragraph I by a local legislative body shall be submitted to the state building code review board for informational purposes.

III. The local ordinance or amendment adopted according to the provisions of paragraph I shall include, at a minimum, the following provisions:

(a) The date of first enactment of any building code regulations in the municipality and of each subsequent amendment thereto.

(b) Provision for the establishment of a building code board of appeals as provided in RSA 673:1, V; 673:3,

IV; and 673:5.

(c) Provision for the establishment of the position of building inspector as provided in RSA 673:1, V. The building inspector shall have the authority to issue building permits as provided in RSA 676:11-13 and any certificates of occupancy as enacted pursuant to paragraph III, and to perform inspections as may be necessary to assure compliance with the local building code.

(d) A schedule of fees, or a provision authorizing the governing body to establish fees, to be charged for building permits, inspections, and for any certificate of occupancy enacted pursuant to paragraph III.

IV. The regulations adopted pursuant to paragraph I may include a requirement for a certificate of occupancy to be issued prior to the use or occupancy of any building or structure that is erected or remodeled, or undergoes a change or expansion of use, subsequent to the effective date of such requirement.

V. No municipality or local land use board as defined in RSA 672:7 shall adopt any ordinance, regulation, code, or administrative practice requiring the installation of automatic fire suppression sprinklers in any new or existing detached one- or 2-family dwelling unit in a structure used only for residential purposes.

Notwithstanding any provision of law to the contrary, no municipality or local land use board shall enforce any existing ordinance, regulation, code, or administrative practice requiring the installation or use of automatic fire suppression sprinklers in any manufactured housing unit as defined in RSA 674:31 situated in a manufactured housing park as defined in RSA 205-A:1, II. Nothing in this paragraph shall affect the ability of an applicant for a local land use permit to include the installation of fire suppression sprinklers pursuant to RSA 674:36, IV, or affect the validity or enforceability of such inclusion.

1. Brookline PB Finding Petition Warrant Article
2. Brookline NH 3.28.2021Special Town Meeting - Results

Town of Brookline Planning Board Written Finding and Recommendation for Temporary Moratoria  
(RSA 674:23)

Pursuant to RSA 674:23, the Brookline Planning Board finds that the legislative body of the Town of Brookline should adopt an ordinance establishing a moratorium on the issuance of building permits for new single-family or multi-family housing and the granting of site plan and subdivision approvals for a period of one year.

These findings are forward-looking. Applications that have been approved prior to the date of any ordinance adopted based on these findings are exempt from the proposed ordinance.

Based on information provided by the Brookline School Board and the School Administrative Unit 41 (SAU 41) (Attachments 1 and 2), continued development will significantly impact the ability of the Town of Brookline to provide adequate school services within the Brookline School District.

Per the Office of the Superintendent of SAU41, the K-6 enrollment in Brookline is projected to increase from 557 to 618 over the next 18 months. According to the Superintendent's letters, this could require potentially 3 additional classroom sections; some of the projected class sizes for the next school year exceed the specifications outlined in School Board Policy IIB.

Due to the potential for unplanned stress on the capacity of the Brookline schools, the Planning Board recommends that any ordinance(s) adopted by the legislative body under RSA 674:23 include the following:

- Establish a moratorium on the approval of site plans and subdivisions for a period of one year.
- Establish a moratorium on the issuance of building permits for new single-family or multi-family housing for a period of one year.
- Building permits for Accessory Dwelling Units as defined in section 2000 of the Brookline Zoning Ordinance are exempt from this moratorium.
- Building permits for lots created by subdivisions approved prior to the adoption of any ordinance based on these findings are exempt from this moratorium.
- Applications that have been approved prior to the date of the adopted ordinance are exempt from this moratorium.
- Applications submitted as Housing for Older Persons as specified in Brookline Zoning Ordinance section 2200 are exempt from this moratorium
- The Brookline Planning Board may provide for the exemption from the moratorium of those types or categories of development that have minimal or no impact on the ability of the Town of Brookline to provide adequate school services within the Brookline School District.
- The Brookline Planning Board may provide special permit or conditional use permit to allow development that has minimal or no impact on the ability of the Town of Brookline to provide adequate school services within the Brookline School District.

- The Brookline School District shall establish a facilities study committee to address classroom space issues. Preliminary findings shall be submitted to the Brookline Capital Improvements Committee no later than 30 September 2021 for inclusion in the scheduled publication of the 2022-2027 Capital Improvements Plan. Any warrant articles required to implement the recommendations of this facilities committee shall be included on the Brookline 2022 warrant.
- The Brookline Planning Board shall commission a study of school and town services to be performed in accordance with RSA 674:22 to determine if there is a demonstrated need to regulate the timing of development based upon the Town's lack of capacity to accommodate anticipated growth. A report shall be submitted to the Planning Board no later than 30 September 2021.

**SPECIAL MEETING TOWN WARRANT  
TOWN OF BROOKLINE  
THE STATE OF NEW HAMPSHIRE**

**Meeting starts at 1:00pm on  
Sunday, March 28, 2021**

**At Captain Samuel Douglass Academy  
24 Townsend Hill Road**

To the inhabitants of the Town of Brookline in the County of Hillsborough in said State, qualified to vote in Town Affairs:

You are hereby notified to meet at the Captain Samuel Douglass Academy in said Brookline on Sunday, the twenty eighth (28<sup>th</sup>) day of March at 1:00pm to act upon the following subjects:

AMENDED  
(SEE  
ATTACHED)

1.) *(By petition)* Shall the Town of Brookline impose a 365 day moratorium on any development that is intended to qualify as workforce housing under the Town of Brookline, NH Zoning and Land Use Ordinance? The moratorium shall be effective immediately upon the vote and shall include but not be limited to: approval of any development that is intended to qualify as workforce housing by the Planning Board, land acquisition, surveying, tree removal, or any other physical alteration of any land within the Town of Brookline for a development that is intended to qualify as workforce housing.

AMENDED  
(SEE  
ATTACHED)

2.) *(By petition)* Shall the Town of Brookline vote to establish a Study Committee for the review of the Town's compliance with RSA 674:59 or any other business related thereto? The Study Committee would consist of 5 members (1 member from the Planning Board, 1 member from the Selectboard or their designee, 1 Member from either the Police or Fire Department and 2 Registered Voters who do not hold an elected position within the Town). The Members of the Study Committee shall be appointed by the Selectboard. The Study Committee shall, at a minimum, review the Town's compliance with RSA 674:59 and specifically determine if the Town meets its compliance under the provisions of RSA 674:59 III and to determine any and all necessary changes to the Town of Brookline, NH Zoning and Land Use Ordinance related to any development that is intended to qualify as workforce housing for compliance with RSA 674:59 including the repeal of such ordinance. The Study Committee shall file its recommendations at a date and time as determined by the Chair of the Study Committee with enough time for a Zoning and Land Use Ordinance change to be placed on the 2022 Annual Town Meeting Warrant in accordance with RSA 39:3 and RSA 675:4.

PASSES

3.) *(By petition)* Shall the Town of Brookline vote to direct the Planning Board to enforce Reasonable Standards and Conditions of Approval in accordance with RSA 674:59 IV, including but not limited to Environmental Protection, Water Supply, Sanitary Disposal, Traffic Safety and Fire and Life Safety Protection on any development that is intended to qualify as workforce housing under the Town of Brookline, NH Zoning and Land Use Ordinance.

PASSES  
AS  
AMENDED

4.) Shall the Town of Brookline vote to direct the Planning Board to not approve any development that is intended to qualify as workforce housing under the Town of Brookline, NH Zoning and Land Use Ordinance if the Town meets its fair share of the current and reasonably foreseeable regional need for such housing under the provisions of RSA 674:59 III?

Additionally, to further direct the Planning Board to not approve a development that is intended to qualify as workforce housing under Town of Brookline, NH Zoning and Land Use Ordinance if, when combined with the current housing stock, the development would exceed the Town's fair share of the current and reasonably foreseeable regional need for such housing under the provisions of RSA 674:59 III.

~~PARAGRAPH  
DELETED~~

Additionally, to further direct the Planning Board to require a report acceptable to the Planning Board from an applicant of a development that is intended to qualify as workforce housing under the Town of Brookline, NH Zoning and Land Use Ordinance demonstrating that the Town's existing housing stock is not sufficient to accommodate the Town's fair share of the current and reasonably foreseeable regional need for such housing under the provisions of RSA 674:59 III. Such report shall include all the available options of workforce housing in the Town's existing housing stock as defined under RSA 674:58.

Given under our hands and seal this eighth (8th) day of March 2021.

Selectboard of Brookline

PASSES AS  
AMENDED

## Motion under Warrant Article 1

Shall the Town of Brookline, in accordance with RSA 674:23 and upon the recommendation and written finding of the Brookline Planning Board adopt the following ordinance establishing a moratorium on development in The Town of Brookline?

### Ordinance Establishing a Moratorium on Development in The Town of Brookline (RSA 674:23)

This ordinance hereby establishes a moratorium on the issuance of building permits for new single-family or multi-family housing and the granting of site plan and subdivision approvals within the Town of Brookline for a period of 365 days which shall be effective immediately upon the vote of the legislative body and is based on the recommendation and written finding of the Brookline Planning Board (Appendix A) which describes the unusual circumstances that justify the ordinance and recommends a course of action to correct or alleviate such circumstances.

#### Statement of the circumstances giving rise to the need for the moratorium.

Based on information provided by the Brookline School Board and the School Administrative Unit 41 (SAU 41) continued development will significantly impact the ability of the Town of Brookline to provide adequate school services within the Brookline School District.

Per the Office of the Superintendent of SAU41, the K-6 enrollment in Brookline is projected to increase from 557 to 618 over the next 18 months. According to the Superintendent's letters, this could require potentially 3 additional classroom sections; some of the projected class sizes for the next school year exceed the specifications outlined in School Board Policy IIB.

#### Planning board's written findings

See Appendix A

#### Term of the ordinance

The Term of this ordinance shall be 365 days and shall be effective immediately upon the vote of the legislative body.

#### Types or categories of development to which the ordinance applies.

This ordinance shall apply to issuance of building permits for new single-family or multi-family housing and the granting of site plan and subdivision approvals for all types and categories of development unless exempted by or in accordance with this ordinance.

#### Description of the area of the municipality

This ordinance shall apply to the entire Town of Brookline.

### Exemptions from the Moratorium

1. Building permits for Accessory Dwelling Units as defined in section 2000 of the Town of Brookline, NH Zoning and Land Use Ordinance are exempt from this moratorium.
2. Building permits for lots created by subdivisions approved prior to the adoption of this ordinance are exempt from this moratorium.
3. Applications that have been approved prior to the adoption of this ordinance are exempt from this moratorium.
4. Applications submitted as Housing for Older Persons as specified in section 2200 of the Town of Brookline, NH Zoning and Land Use Ordinance are exempt from this moratorium.
5. The Brookline Planning Board may provide for the exemption from this moratorium of those types or categories of development that have minimal or no impact on the ability of the Town of Brookline to provide adequate school services within the Brookline School District.
6. The Brookline Planning Board may provide special permit or conditional use permit to allow development that has minimal or no impact on the ability of the Town of Brookline to provide adequate school services within the Brookline School District.

Further, this ordinance establishes the following course of action to correct or alleviate the unusual circumstances that affect the ability of the Town of Brookline to provide adequate school services and requires prompt attention to develop or alter a growth management process under RSA 674:22, a zoning ordinance, a master plan, or capital improvements program:

The Brookline School District shall establish a facilities study committee to address classroom space issues. Preliminary findings shall be submitted to the Brookline Capital Improvements Committee no later than 30 September 2021 for inclusion in the scheduled publication of the 2022-2027 Capital Improvements Plan. Any warrant articles required to implement the recommendations of this facilities committee shall be included on the Brookline 2022 warrant.

The Brookline Planning Board shall commission a study of school and town services to be performed in accordance with RSA 674:22 to determine if there is a demonstrated need to regulate the timing of development based upon the Town's lack of capacity to accommodate anticipated growth. A report shall be submitted to the Planning Board no later than 30 September 2021.

# APPENDIX A

For Special Planning Board Meeting – Wednesday, March 24, 2021

## Town of Brookline Planning Board Written Finding and Recommendation for Temporary Moratoria (RSA 674:23)

Pursuant to RSA 674:23, the Brookline Planning Board finds that the legislative body of the Town of Brookline should adopt an ordinance establishing a moratorium on the issuance of building permits for new single-family or multi-family housing and the granting of site plan and subdivision approvals for a period of one year.

These findings are forward-looking. Applications that have been approved prior to the date of any ordinance adopted based on these findings are exempt from the proposed ordinance.

Based on information provided by the Brookline School Board and the School Administrative Unit 41 (SAU 41) (Attachments 1 and 2), continued development will significantly impact the ability of the Town of Brookline to provide adequate school services within the Brookline School District.

Per the Office of the Superintendent of SAU41, the K-6 enrollment in Brookline is projected to increase from 557 to 618 over the next 18 months. According to the Superintendent's letters, this could require potentially 3 additional classroom sections; some of the projected class sizes for the next school year exceed the specifications outlined in School Board Policy IIB.

Due to the potential for unplanned stress on the capacity of the Brookline schools, the Planning Board recommends that any ordinance(s) adopted by the legislative body under RSA 674:23 include the following:

- Establish a moratorium on the approval of site plans and subdivisions for a period of one year.
- Establish a moratorium on the issuance of building permits for new single-family or multi-family housing for a period of one year.
- Building permits for Accessory Dwelling Units as defined in section 2000 of the Brookline Zoning Ordinance are exempt from this moratorium.
- Building permits for lots created by subdivisions approved prior to the adoption of any ordinance based on these findings are exempt from this moratorium.
- Applications that have been approved prior to the date of the adopted ordinance are exempt from this moratorium.
- Applications submitted as Housing for Older Persons as specified in Brookline Zoning Ordinance section 2200 are exempt from this moratorium
- The Brookline Planning Board may provide for the exemption from the moratorium of those types or categories of development that have minimal or no impact on the ability of the Town of Brookline to provide adequate school services within the Brookline School District.
- The Brookline Planning Board may provide special permit or conditional use permit to allow development that has minimal or no impact on the ability of the Town of Brookline to provide adequate school services within the Brookline School District.

- The Brookline School District shall establish a facilities study committee to address classroom space issues. Preliminary findings shall be submitted to the Brookline Capital Improvements Committee no later than 30 September 2021 for inclusion in the scheduled publication of the 2022-2027 Capital Improvements Plan. Any warrant articles required to implement the recommendations of this facilities committee shall be included on the Brookline 2022 warrant.
- The Brookline Planning Board shall commission a study of school and town services to be performed in accordance with RSA 674:22 to determine if there is a demonstrated need to regulate the timing of development based upon the Town's lack of capacity to accommodate anticipated growth. A report shall be submitted to the Planning Board no later than 30 September 2021.

March 17, 2021

Dear Members of the Planning Board,

I am writing to you on behalf of the Brookline School Board with regards to the potential workforce housing development proposed for route 13 in Brookline. The School Board held a special meeting on Tuesday, March 16, 2021 to deliberate on the impact this proposed housing would have on the School District. The Board unanimously supported the following two motions:

1. MOTION BY MEMBER SARRIS TO SUPPORT THE MORATORIUM ON THE 80-UNIT WORKFORCE HOUSING DEVELOPMENT (5-0).
2. MOTION BY MEMBER MARSANO TO SUPPORT A STUDY COMMITTEE TO REVIEW THE IMPACT OF THE 80-UNIT WORKFORCE HOUSING ON THE BROOKLINE SCHOOL SYSTEM (5-0).

The School Board utilizes the New England School Development Council (NESDEC) to complete the District's enrollment projections on an annual basis. The K-6 projected enrollment in Brookline is projected to go from 557 to 618. Depending on where those students fall (assuming the grade level projections are accurate), this could require potentially 3 additional classroom sections. Looking into next school year, some of our projected class sizes are greater than the specifications outlined in School Board Policy IIB and other projected class sizes are just below the specifications.

After discussing available spaces within our existing elementary buildings, we would have to re-evaluate how our specials (music, art, and computers) are taught. We would have to consider options such as taking back the computer labs, the STEM lab, the music classrooms, and/or the art classrooms to become traditional classrooms and move specials to a cart.

Trying to accommodate more than the NESDEC projections would require vastly different considerations. The School Board has been provided two presentations regarding facilities upgrades for RMMS during this school year. As a result of these two presentations the formation of a facilities study committee has been in process and will be officially formed at the School Board's next regular meeting on March 24, 2021. This committee is scheduled to provide regular feedback to the School Board during the upcoming school year as we prepare to make recommendations for potential warrant articles in March of 2022.

*Robert Thompson*  
Assistant Superintendent of Student Services  
[Robert.thompson@sau41.org](mailto:Robert.thompson@sau41.org)

Our neighbors in Amherst recently completed a thorough study to analyze similar needs (<https://ifac.sau39.org/>). The end result includes two building projects: the construction of a new PreK-5 school with a price tag of \$66 million, and a complete overhaul of the middle school with a price tag of \$31 million.

This projected NESDEC enrollment increase will also impact transportation and at a minimum result in an additional bus being added to the fleet to meet the increase in ridership both in Brookline and for the Cooperative District.. The cost of adding an additional bus route calculates to somewhere between \$45,000 - \$55,000 (based on time and mileage) increase to our transportation budget. Any additional enrollment increase will most likely result in the need to further increase our bus fleet.

As Superintendent my goal is to provide information for your discussion and allow all factors to be considered regarding the potential impact further housing units could have on the School District(s). I appreciate your taking the time to review this letter submitted on behalf of the Brookline School Board and would be most happy to make myself available to answer any questions that the Planning Board may have.

Respectfully,

  
Andrew F. Corey  
Superintendent of Schools

March 22, 2021

Dear Members of the Planning Board,

On Thursday, March 18, Town Administrator Tad Putney reached out to me seeking clarification on two items. The first item was regarding when I anticipate the enrollment increase happening? I believe the NESDEC projections indicate that the increase in student enrollment will occur over the next 18 months. As with all of our enrollment predictions much of what is projected is based on the economy and regional employers continuing to maintain or expand their work force. The second question was related to our historical enrollments being greater than the recent projections and why we cannot accommodate the projected increase? The two significant items that have reduced available classroom space are the Board's passing of policy IIB which dictates class sizes by grade. Prior to this policy we had class sections that in some cases approached the State maximum of thirty students per class. The second area that has reduced available classroom space has been the District's decision to create in-district special education programming which has reduced our need to place students out of district. These in-district programs allow us to provide an outstanding education to specific students while also avoiding substantial tuition and transportation costs associated with an out of district placement.

I hope you find this information helpful as you deliberate on the potential workforce housing development proposed for route 13 in Brookline.

Respectfully,

  
Andrew F. Corey  
Superintendent of Schools

## Motion under Article 2

Shall the Town of Brookline vote direct the Brookline Planning Board to commission a study of school and town services to be performed in accordance with RSA 674:22 to determine if there is a demonstrated need to regulate the timing of development based upon the Town's lack of capacity to accommodate anticipated growth. Further, at the discretion of the study, to review the Town of Brookline, NH Zoning and Land Use Ordinance to determine any changes that may be necessary to address development within the Town of Brookline or any other business related thereto. Further, that the Members of the Study Committee shall be appointed by the Planning Board. Further, that a report shall be submitted to the Planning Board no later than 30 September 2021?

Further, to direct the Brookline School District to establish a facilities study committee to address classroom space issues. Preliminary findings shall be submitted to the Brookline Capital Improvements Committee no later than 30 September 2021 for inclusion in the scheduled publication of the 2022-2027 Capital Improvements Plan. Any warrant articles required to implement the recommendations of this facilities committee shall be included on the Brookline 2022 warrant

## Motion under Article 4

Shall the Town of Brookline vote to direct the Planning Board to not approve any development that is intended to qualify as workforce housing under the Town of Brookline, NH Zoning and Land Use Ordinance if the Town meets its fair share of the current and reasonably foreseeable regional need for such housing under the provisions of RSA 674:59 III?

Additionally, to further direct the Planning Board to not approve a development that is intended to qualify as workforce housing under Town of Brookline, NH Zoning and Land Use Ordinance if, when combined with the current housing stock, the development would exceed the Town's fair share of the current and reasonably foreseeable regional need for such housing under the provisions of RSA 674:59 III.
